MUNICIPAL JOURNAL

INDEX

VOLUME XXX

JANUARY—JUNE

1911

General Index

Abattoir in Amsterdam, Municipal.....	889	Crematories at Houston, Refuse.....	84	Illinois Water Survey.....	855
Aberdeen, Wood Block Paving in.....	357	Cresote, Analyzing Coal Tar.....	520	Illumination, Street.....	17
Accounting, Street Cleaning.....	813	Crossing Wood Blocks in England.....	122	Imhoff Patents, The.....	324
Aims and Purposes, Our.....	25	Curbs and Sidewalks, Repairing.....	250	Tanks, The—An Explanation.....	55
Aqueduct, Elizabeth Tunnel, Los Angeles.....	411	Street Names on.....	481	Improvements in Mexico, Municipal.....	575
Architecture, High Buildings and City.....	814	Dam Construction, Masonry.....	829	Incinerator, Milwaukee.....	118
Ashes, Removal of Domestic.....	542	Data on Request, Furnishing.....	165	Information Bureau, City.....	579
Asphalt Oils, Wood Preserving with.....	158	Dayton Water Works.....	256	Kansas City, Concrete Paving in.....	776
Pavement Construction.....	744	Daytona, Water Rates at.....	288	Rapid Road Building in.....	50
Plant, Denver Municipal.....	668	Death Rates, Diminishing.....	447	Laboratory and Field Investigations.....	889
Repairing in Reading.....	777	Dedication of Platted Streets.....	479	Ohio State Road.....	700
Streets, Oils on.....	410	Delaware, Road Building in.....	711	Lebanon, Sanitation at.....	26
Assessments, Excess Condemnation.....	920	Denver Municipal Asphalt Plant.....	608	Liability for Impure Water.....	259
Association for Highway Improvement.....	711	Street Signs.....	415	for Water Supply.....	165
Atlanta, Wood Block Pavements of.....	355	Disinfecting Swimming Pools.....	571	of Municipal Officers.....	51
Automobile Service, Municipal Garage and.....	223	Dredge for Sewage Channels, Small.....	118	Libraries, Municipal Reference.....	82
Baths, Pollution of Water in Public.....	260	Duluth, Water Rates in.....	416	Life of Water Works Construction.....	155
Beautifying Municipal Property.....	746	Dust Prevention and City Streets.....	811	Light Plant, Greenwood Water and.....	609
Berlin Waste Utilization Plant.....	291	East Orange, Water Rates in.....	287	Lighting a Small City, Paving and.....	194
Bidding in Toronto, Municipal.....	477	Efficiency Records.....	774	Automatic Street.....	776
Bids for Municipal Work, Low.....	485	Electric Plant, South Norwalk Municipal.....	411	by Porch Lights in Greenwood, Street.....	52
Billboard Decision, Missouri.....	888	Plant, Wallingford Municipal.....	518	Chicago Street.....	196
Binder and Aggregate, Bituminous.....	85	Electrolytic Purification.....	193	During 1910, Street.....	19
Bituminous Binder and Aggregate.....	85	Emscher Tanks for Erie.....	228	Gas and Electric Street.....	26
Concrete and Macadam.....	123	Erie, Emscher Tanks for.....	228	in Cincinnati, Street.....	289
Concrete Roadways.....	231	Water Situation in.....	323	in Several Cities, Street.....	923
Road Work, Terms Used in.....	359	Esthetic and Commercial Characteristics.....	858	in Wichita, Cheaper Street.....	664
Bordentown, Sewage Disposal Works at.....	441	Estimates, Reliability of.....	260	Intense Street.....	47
Boston, Smoke Abatement in.....	890	Excavation and Concrete.....	292	Unsatisfactory, Private Street.....	31
Boulevards, St. Louis Parks and.....	79	Exhibit and Conference, City Planning.....	739	Los Angeles Aqueduct, Elizabeth Tunnel.....	411
Bozeman, Concrete Pavement in.....	10	by Sewerage Commission.....	917	Louisville Water Works Filters.....	775
Brick Pavement Details.....	197	Canadian Public Health.....	197	Macadam in California, Oil.....	357
Pavements, Motion in.....	197	Filter, Chimney for Ventilating.....	258	Macadam Roads, Specifications for.....	707
Paving Specifications.....	544	Covered Sprinkler.....	258	Specifications, Oil.....	702
Rattler, New Standard.....	353	Experiments, Sprinkling.....	635	Madison, Wis., Street Work in.....	701
Bridge, Concrete Arch Roadway.....	771	Plant, A Russian Trickling.....	158	Wis., Water Notes.....	666
Bridges in Colorado, Road.....	706	Plant for Suburban Community.....	1	Magnesium Chlorate for Removing Snow.....	122
Bronx Experimental Road, The.....	691	Sprinkling.....	1	Manholes in Winnipeg.....	448
Budget Exhibit in Hoboken.....	670	Grand Forks Rapid Sand.....	883	Market House, Fort Wayne.....	409

GENERAL VIEW OF SEWAGE PURIFICATION PLANT. PRIMARY SEDIMENTATION BASINS IN FOREGROUND

SPRINKLING FILTER PLANT FOR SUBURBAN COMMUNITY

Filters Enclosed in Building—Provision for Two Hundred Thousand Gallons a Day—Preliminary and Final Sedimentation Basins and Dosing Tanks—Details of the Plan—Cost of Construction

By PAUL HANSEN, Assoc. Mem. Am. Soc. C.E., State Sanitary Engineer of Kentucky

In June, 1910, there was completed and placed in operation a small sewage purification plant of the sprinkling filter type at the village of College Hill, a residence suburb of the City of Cincinnati. This little installation involves no new principles or novelties of design not hitherto known to the sanitary engineering profession, but it does present a rather interesting object lesson in the solution of a sewage disposal problem.

GENERAL CONSIDERATIONS

The village of College Hill lies about one mile to the northward of the northern corporation line of Cincinnati. It is built on a rather level tableland of the highlands bordering the valley of Mill Creek, a fairly large stream which discharges into the Ohio River within the Cincinnati borders. The natural drainage of College Hill is toward the southward into a number of deep ravines which have hilly slopes and are generally sparsely inhabited. Most of the drainage within the built-up portion of the village may be readily conducted toward one of these ravines, which reaches nearly to the central part of the village. A small water course (see photo, page 2) occupies

this ravine, and after flowing a distance of about two and one-half miles discharges into Mill Creek. The ravine has been taken advantage of for the location of an electric traction line which follows the general course of the stream.

The present population of College Hill is estimated at 2,000. In the way of public improvements there is a public water supply obtained from the Cincinnati Water Works, a number of miles of good sidewalks, and many roadways paved with well constructed macadam. The village in general presents a very picturesque and attractive appearance and is one of the most popular of the more recently developed suburban towns.

One of the necessary requirements of a suburban community near Cincinnati is a good sanitary sewerage system, and it was to meet this requirement that early in 1908 the village authorities took active steps toward the installation of such a system.

SEWERAGE SYSTEM

While the sewage purification works form the subject matter of this article, yet a brief description of the sewerage system

STREAM WHICH RECEIVES EFFLUENT

proper is essential to an understanding of certain phases of the purification problem. The sewers are, of course, built upon the strictly separate plan, that is to say, all wastes that are not offensively putrescible are conveyed through storm water drains to the nearest water course, while only house sewage is permitted to enter the sanitary sewers. The sanitary system is designed to ultimately meet the demands of a population of 10,000, but the present installation covers only about half of the territory that may ultimately be covered. The design is such that all the sewage is conveyed by gravity into a main trunk sewer occupying the ravine above described.

While the sanitary sewerage system is, for the most part, substantially constructed, no attempt was made to underdrain the sewers in wet ground. For this reason the sewers receive a considerable quantity of ground water leakage which averages about 30,000 gallons per 24 hours. It seems that most of the ground water enters at one point on the main sewer and may, therefore, be eliminated at comparatively small expense. The village officials in charge of the sewerage system have had great difficulty on account of numerous rain water leader connections to the sanitary sewers, and a determined effort is now being made to eliminate these connections.

SEWAGE PURIFICATION

Owing to the inadequacy of the small stream occupying the ravine into which the main trunk sewer is carried for sufficiently diluting the sewage flow to prevent a nuisance, it was at once evident that sewage purification works were necessary. The problem of selecting the type of purification works now presented itself, and it was soon found that the peculiar local conditions would constitute the determining factors in the solution of this problem.

Based upon experience in other Ohio villages similarly located, the assumption was made that purification works capable of caring for the sewage of 2,000 persons tributary to the sewers and representing a sewage flow of perhaps 200,000 gallons per 24 hours would meet the needs of the village for about ten years. The growth of the village, however, has been so very rapid and the general desire for sewerage facilities is so great that it now appears that a safer assumption would have placed the time required to make the sewerage system available to 2,000 persons at five years instead of ten years. The quantity of sewage flow will probably also exceed the assumed quantity on account of ground water leakage, permitted by the absence of underdrains, even though the worst places be reconstructed. In considering possible future extensions it was assumed that the ultimate population that can be made tributary to the sewers is 10,000, representing a sewage flow of 1,000,000 gallons per day. It is not expected that these conditions will obtain before fifty years hence, and moreover, before this period has expired connections will have

been made with the steadily widening sewerage system of the City of Cincinnati. Consequently a doubling or trebling of the present installation is all that need be looked forward to.

Having determined upon the capacity of the first installation and the possibility of future extensions it next became necessary to decide in a general way upon the degree of purification that must be obtained in order to place limiting conditions upon the type of purification devices that might be considered. Fortunately conditions were such that no rigorous restrictions were imposed by this aspect of the problem. While the stream which receives the sewage effluent is small, yet it has a rapid fall so as to cause the water to pass over a series of small cascades. Further the ravine contains but a few houses, and these are at considerable distance from the stream, nor is the water of the stream used for cattle watering or any other purpose until it has reached a distance of two and one-half miles from the village. Such facts as these led to the conclusion that all that could be reasonably demanded was a merely non-putrescible effluent practically free from suspended matter.

In considering the type of plant it was, of course, recognized that intermittent sand filtration for a community of this size and character would prove the most all around satisfactory method of purification that could be adopted, but this method was ruled out of consideration almost at the start, for the reason that there was no site available which could be utilized without involving an excessive amount of excavation and grading, and this mostly in difficult material.

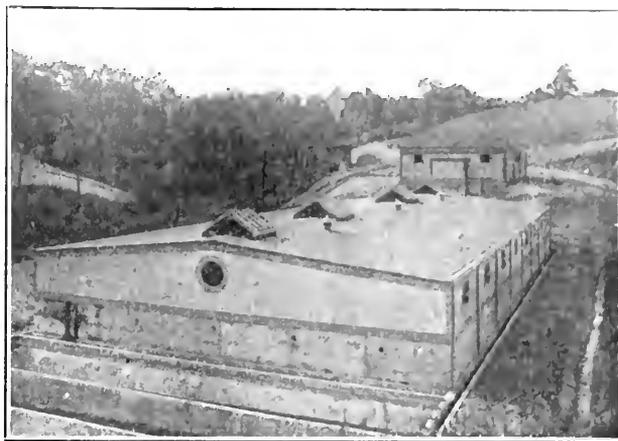

The use of contact beds, assuming the necessity of using one-tenth acre of bed 5 ft. in depth, for each 500 or 600 persons tributary to the sewers, was considered as practicable, but even this involved a large amount of excavating and grading. Moreover, there had to be taken into consideration the difficulty of conveying materials during construction to any available site, for this involved a long and difficult wagon haul from the nearest steam railroad siding.

While sprinkling or percolating filters are not likely to give best results for small communities, owing to their relative complexity of design as compared with intermittent sand filtration and contact beds, yet it appeared that this type of plant was the only one that could be built without excessive expense. There were several considerations which further encouraged the adoption of sprinkling or percolating filters. First was the fact that the village of College Hill is a moderately wealthy community and can afford to employ a competent person to operate the plant; and, moreover, the character of the citizenship is such that public utilities are not likely to suffer neglect. In the second place, a recently enacted law enables the State Board of Health to effectively demand the proper operation of all water purification and sewage purification works. All things considered, therefore, a sprinkling filter plant was deemed most suitable.

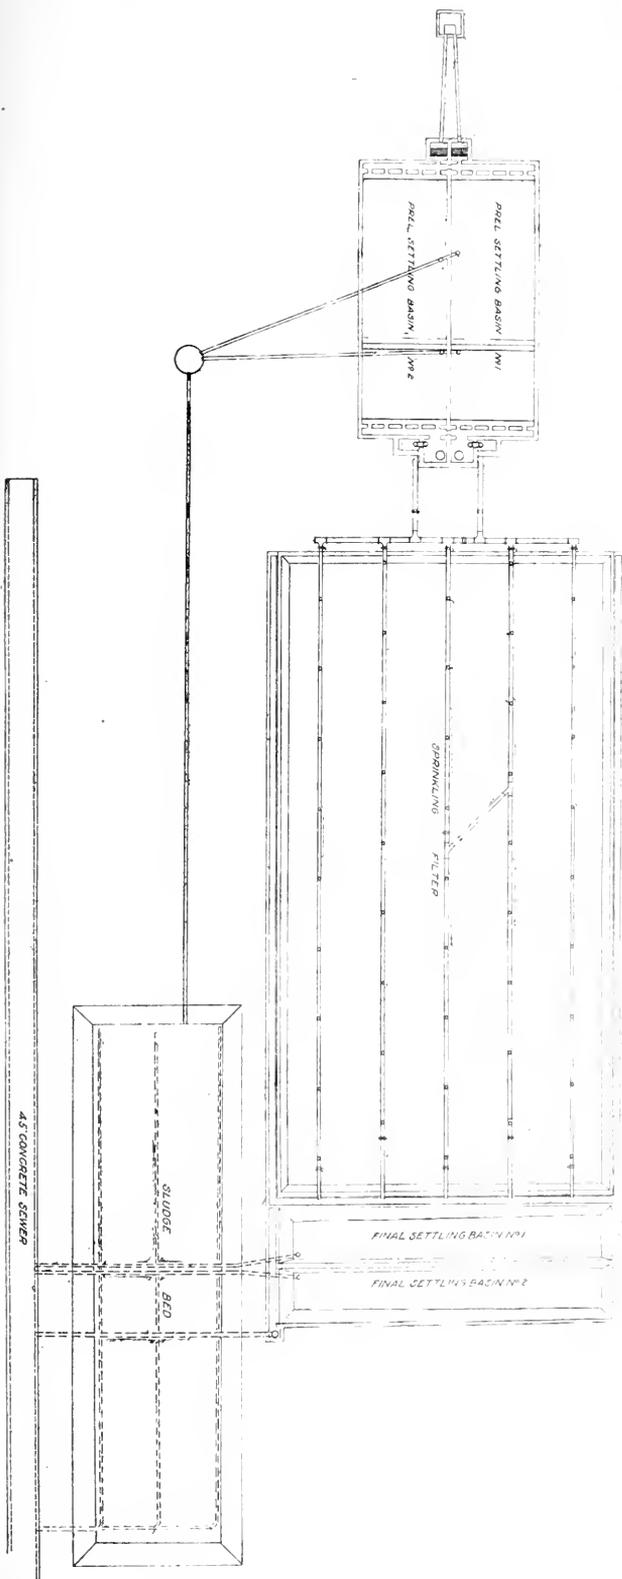

There was selected as the most suitable site for the construction of the purification works a plot of land near the upper end of the ravine, at a point where one side of the ravine has a comparatively gentle slope. This site is not a good one in one important respect, namely: it is rather too near the buildings of a sanatorium, the nearest of these buildings being about 300 ft. distant. In addition there are twenty residences within a radius of 1,000 feet of the plant. While it was doubtful whether odors from contact beds or intermittent sand filters would be carried 300 feet, it was a certainty that odors from sprinkling filters would be carried a much greater distance than this. Computation, however, showed that this type of plant on the site selected would still prove by far the most economical, even though it became necessary to cover the filters. Accordingly superstructures were decided upon which thus far have been eminently successful in confining odors to the immediate neighborhood of the plant. The striking feature of the superstructures is that while they are not unreasonably expensive, they have been designed with such artistic skill as to render this plant one of the most sightly of the smaller plants in the country.

GENERAL ARRANGEMENT OF PURIFICATION WORKS

Before proceeding with a description of the several parts of the purification works it will be well to make a brief statement of the general arrangement. The plant occupies an area of about 210 ft. by 65 ft. and lies in such a position that its capacity may be increased in the future by moderate additions on either side and by longitudinal extensions. Sewage enters the plant by gravity from the main trunk sewer and is received into one or both of two small screen chambers. After screening, the sewage passes to one or both of two sedimentation tanks and thence into syphon chambers, from which it is rapidly discharged at intervals by means of automatic syphonic

PURIFICATION PLANT. FINAL SETTLING BASINS AND FILTER HOUSE IN FOREGROUND

GENERAL PLAN OF PURIFICATION PLANT

apparatus. The discharge of the syphonic apparatus is into so-called equalizing chambers, which are of such shape as to equalize the distribution of the sewage over the surface of the filter beds by the sprinkling nozzles. The effluent from the sprinkling filter is collected in suitable channels and conveyed to final sedimentation basins designed to retain the coarser suspended matters. A sludge bed is provided for draining and drying the sludge from the primary sedimentation tanks.

Screen Chambers. The two screen chambers are each 3 ft. by 3 ft. in plan and 2 ft. 6 in. in depth, inside dimensions. Each chamber is provided with two screens placed at an angle of 60 degrees to the horizontal and sloping backward from the incoming sewage. These screens are built of wrought iron bars of $\frac{3}{8}$ -in. circular sections and spaced with $\frac{3}{8}$ -in. clear openings. The design of the screen chambers might have been improved upon by making them considerably longer, thus giving greater accessibility to the screens. A valuable accessory to screen chambers of this sort is stop plank grooves which may serve to support a measuring weir.

Preliminary Sedimentation Basins. The two preliminary sedimentation basins are built of reinforced concrete, each 45 feet long, 15 feet wide and 10 feet in total depth. The depth to the flow line is 7 feet 6 inches. The basins thus each have a capacity of 50,000 gallons, representing a flow period of 6 hours or a total flow period of 12 hours based upon the nominal capacity of the plant. The tanks involve no novel features of arrangement, but the design of the reinforced concrete is such as to require for the structure a minimum of excavation. Provision is made for distributing the inflow evenly across the width of the tanks by means of distributing channels provided with a number of gate-controlled openings into the tanks and equidistantly spaced. A similar channel is provided for drawing off the sewage from the outlet end. The distribution of sewage across the tanks is further assisted by hanging baffles placed 2 feet from inlet and outlet ends. At a point two-thirds distant from the inlet to the outlet ends is placed one hanging and one submerged baffle within a foot of each other for the purpose of intercepting sludge and scum and thereby preventing in a measure ebullition near the outlet of the tanks. Suitable sludge drains are provided near the center of the bottoms of the tanks. In order to prevent the dissemination of odors the tanks are covered with a superstructure which is designed primarily to give ready accessibility to all parts of the tanks as well as the automatic apparatus. The satisfactory appearance of the exterior of the superstructure has already been commented upon.

Dosing Tanks. There are two dosing tanks each 4 feet by 4 feet in plan and 2 feet 6 inches in depth to the flow line; the capacity of each is thus 300 gallons. Based upon the average rate of flow when the plant is operating at its nominal capacity, these tanks would be filled every 5.4 minutes when both are in use, or once in every 2.7 minutes when one is in use. Under ordinary operating conditions it is proposed that

only one tank be used and the other held in reserve for use in case of break-down or stoppage. In order to permit a free discharge of the syphons uninfluenced by the back pressure from the sprinkling nozzles on the filters, and furthermore to assist in the equal distribution of the sewage by the nozzles over the surface of the filter, an equalizing chamber was provided for receiving the syphon discharge from each dosing chamber. The syphonic apparatus used is that manufactured by the Merritt Company of Philadelphia, Pa.

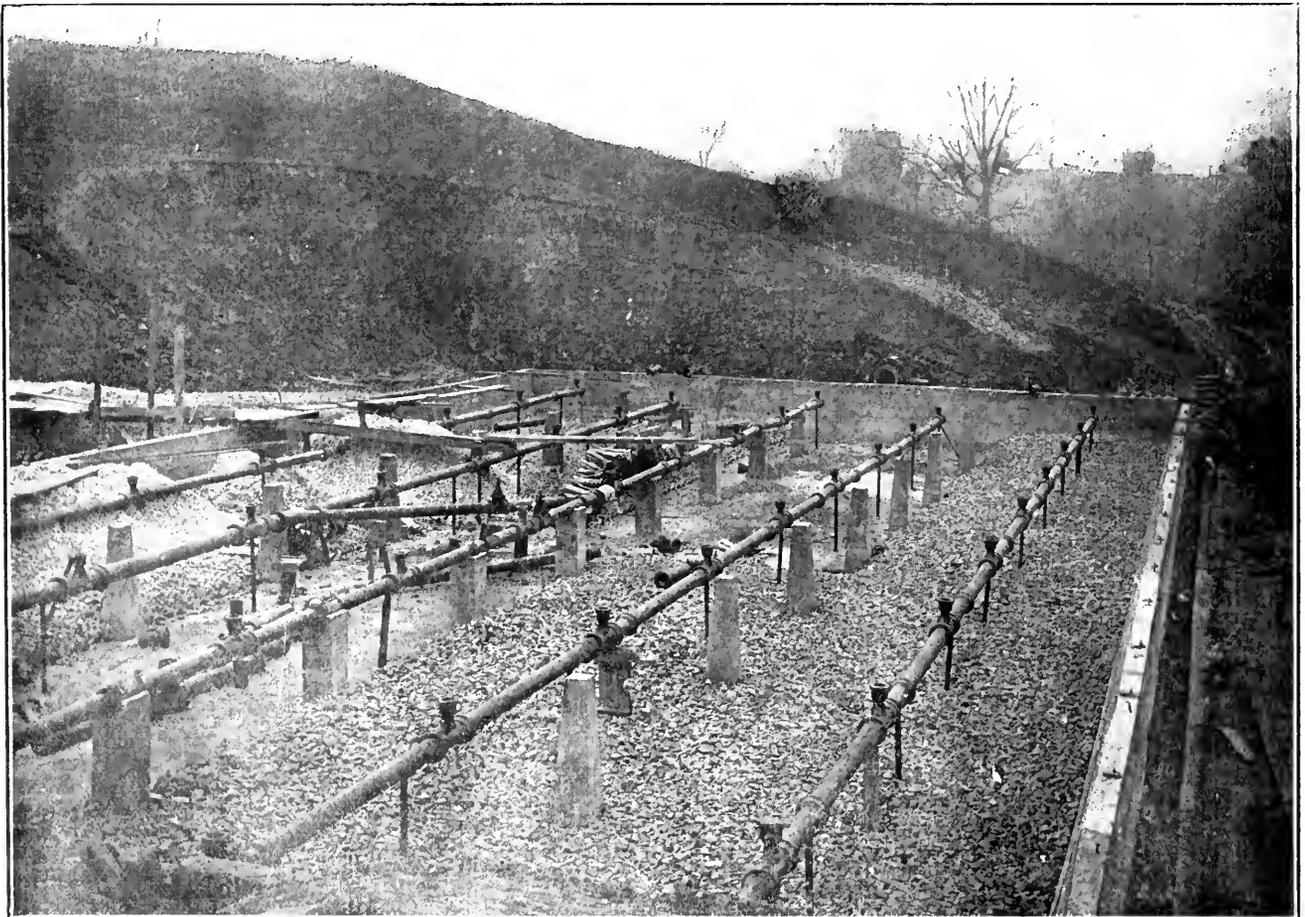

The proper shape for the equalizing chamber was a matter which could not be definitely settled without some preliminary experimentation. Accordingly, under the general direction of the writer, a small experimental plant was devised which comprised in prototype a small dosing chamber and an equalizing chamber of sufficient size to supply a single nozzle. One side of the equalizing chamber was made adjustable in order to secure some indication of the best form to give this chamber. The funds and time available did not permit of these experiments being exhaustive in character, but they did serve to furnish practical assistance in arriving at the design ultimately to be adopted. The above experiments also were utilized to obtain data which would assist in the selection of the type of nozzle to be used. Inasmuch as the experimental methods and results are of considerable interest they will be made the subject of another article by Mr. W. H. Dittoe, Assistant Engineer of the Ohio State Board of Health, under whose immediate supervision the experiments were carried out.

Sprinkling Filter. The sprinkling filter is rectangular in plan, 115 feet long and 60 feet wide, which gives an area of 6,900 square feet or 0.158 acre. Based upon the nominal capacity of the plant, namely, a capacity for treating the sewage of 2,000 persons, the above area would represent one acre for each 12,660 persons tributary to the sewers. The filtering material, for the most part, consists of broken stone such as will pass a 3 inch ring and be retained by a $\frac{1}{2}$ inch ring. The lower

12 inches of filtering material is made somewhat coarser than this to facilitate drainage. The total depth of the filtering material is 5 feet. The bottom of the filter consists of a concrete floor 4 inches in thickness with a slope of one foot in 90 in either direction from a central ridge.

The underdrains consist of 6-inch half tile 2 feet in length and provided with notches at the sides to permit the ready entrance of the effluent. The design of the underdrains is quite similar to that used at Columbus, O., but the ends of the pipe are provided with half bells which permits of an over lapping of the joints which facilitates obtaining alignment of the pipe and possibly prevents more or less solid material from entering them. Unfortunately the mistake was made of having the tile burnt after they were split. This resulted in excessive warping so that but few of the tile lie with an even bearing. While it is likely that a great many of the tile will be broken by the weight of the stone, it is not probable that underdrainage will be greatly interfered with since the effect of the warping will be to cause the pipes to break transversely rather than longitudinally. To secure the best results with half tile underdrains in sprinkling filters the writer would recommend floating the surface of the floor of the filter with $\frac{1}{2}$ to $\frac{3}{4}$ of an inch of cement mortar and, placing the drain tile while the cement is still soft, pressing the edges down into the cement until they have an even bearing. This method not only insures the drain tile against breakage by superincumbent weight but also holds them firmly in alignment while the filtering material is being placed and provides smooth channels for carrying off the effluent. By all means the tile should be burnt whole and split afterwards.

The walls surrounding the filter are made of concrete. The underdrains are carried directly under the wall and discharged into open gutters extending longitudinally along either side of the filter. This arrangement permits of accessibility to the under drains for cleaning by flushing or other means.

SPRINKLING FILTER DURING CONSTRUCTION

The sewage from the equalizing chamber is conveyed to the filter through a system of cast iron pipe. The main pipe leading from the equalizing chambers are 10 inches in diameter; these in turn enter a header, also 10 inches in diameter, which extends across the upper end of the filter just outside the filter wall. Leading off from this header are five lines of 6-inch and 8-inch cast iron lateral pipe extending longitudinally across the filter bed and at a depth of 12 inches below the surface of the stone. The laterals have a spacing, center to center, of 11 feet 3 inches. An interval of 12 feet 6 inches along these are placed uprights which rise to a few inches above the filtering material and support the sprinkling nozzles. The spacing of the nozzles brought about by the above described arrangement brings the nozzles approximately at the vertices of the equilateral triangles into which the bed is thus divided. The several laterals are provided with valves at both ends. Those next the headers will permit the laterals to be used independently, and those at the opposite ends permit of the laterals being flushed out. It may be mentioned that the laterals extend through the filter walls, as shown in the accompanying photograph. A valve-controlled cross-over between the central and one of the adjacent laterals permits an even division of the filter into two parts. A valve in the header permits the independent operation of the two equalizing chambers.

The elevation of the orifices of the sprinkling nozzles is such that they will operate under a head varying from a maximum of $7\frac{1}{2}$ feet down to zero. The equalizing chamber has its bottom 2 feet above the nozzles, so that practically the entire discharge through the nozzles takes place above this head.

Final Sedimentation Basins. The effluent from the sprinkling filter is conveyed by means of the troughs already mentioned to the final sedimentation basins. There are two of these basins, built of concrete, each 59 feet 6 inches long, 10 feet wide and 4 feet 6 inches deep to the flow line. The basins each have a capacity, making due allowance for sloping sides, of 7,000 gallons, thus giving a total capacity of 14,000 gallons, which represents a flow period, based upon the nominal capacity of the plant, of a little over 2 hours. The effluent is admitted to one end of the sedimentation basins by means of a distributing channel having four rectangular 8-inch openings equi-distantly spaced across the width of each basin. The effluent is drawn off at the opposite end over weirs extending the entire width of the basins. The flow from the weirs falls into a collecting trough of concrete which in turn discharges into a 12-inch vitrified pipe which conveys the sewage to the creek. Provision was made for cleaning the basins by placing 6-inch

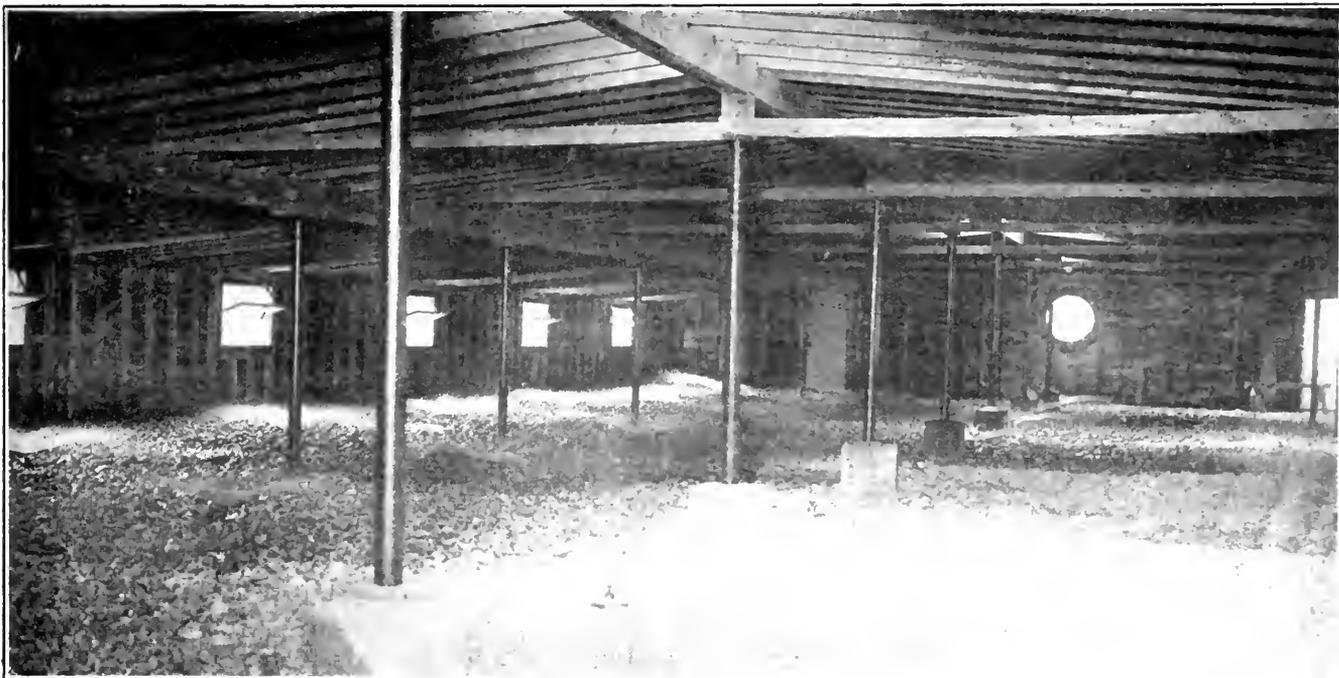

SPRINKLING FILTER. WALLS AND SOME TIERS IN PLACE

sludge outlets in the bottoms, which outlets in turn have connecting pipes leading to the creek. Cleaning of the final sedimentation basins will not be attempted except at times when the stream is carrying a large volume of water.

Sludge Bed. The sludge bed is located near the lower end and at one side of the purification works. This bed is simply a sand filter constructed essentially the same as would be an intermittent sewage filter. It is 30 feet by 100 feet in plan at the sand line, thus giving it an area of 3,000 square feet. This area is such that it may receive the entire contents of one of the preliminary sedimentation tanks without covering it to a depth greater than $1\frac{3}{4}$ feet. If the bed is kept in proper condition the thin liquid will pass through in the course of a few hours and leave the sludge to dry. It is to be expected that the process of removing sludge from the preliminary sedimentation tanks will be accompanied by some odor, but if the process is well managed, this odor need not result in an objectionable nuisance.

OPERATION.

At the present time it is estimated that there are 800 persons tributary to the sewerage system at College Hill and the flow, as measured on Nov. 28th, 1910, was 92,400 gallons per 24 hours. The maximum rate observed was 105,000 gallons per 24 hours and the minimum 82,000. As these measurements extended but from 1 P. M. to 4 P. M. the actual minimum for the day was not obtained, but this minimum presumably occurred during the early morning hours. When it is considered that about 30,000 gallons of the day's flow is clear ground water the comparative weakness of the crude sewage as shown in the accompanying table of analyses will be under-

INTERIOR OF SPRINKLING FILTER HOUSE. SPRINKLERS IN OPERATION

stood. Three-fifths of the filter area was in use at the time of the test and while this does not represent a rate of treatment for which the plant was nominally designed yet the results as indicated by the analyses may be taken as an indication that the plant is good for a much heavier burden than is now being imposed upon it. The analyses of the water from the stream into which the effluent is discharged are interesting as showing the practically negligible effect which the sewage has on the character of the water.

Costs.

The total cost of the sewerage system proper was \$44,522.00. The cost of the disposal works was \$20,700.00. The unit costs of the purification works as presented in the bid of the contractor are given in the following table:

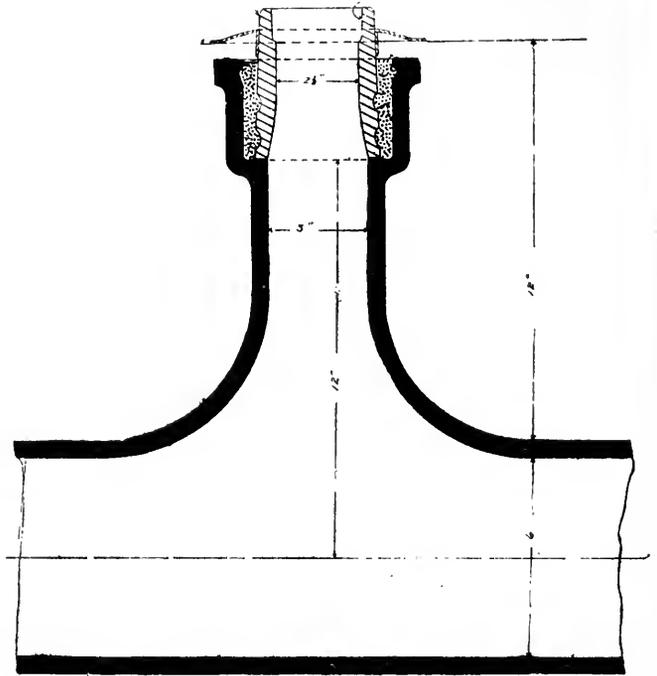

STATEMENT OF COST OF SEWAGE DISPOSAL PLANT

10,300 cu. yds. grading, at 49c. per cu. yd.....	\$5,047.00
1,890 cu. yds. broken stone, at 52c. per cu. yd.....	982.80
317 cu. yds. sand, at \$1.60 per cu. yd.....	507.20
404 cu. yds. plain concrete, at \$4.55 per cu. yd.....	1,838.20
158 cu. yds. reinforced concrete, at \$6.50 per cu. yd....	1,027.00
507 lin. ft. 6-in. vitrified pipe, at 21c. per lin. ft.....	106.47
161 lin. ft. 8-in. vitrified pipe, at 32c. per lin. ft.....	51.52
334 lin. ft. 12-in. vitrified pipe, at 55c. per lin. ft.....	183.70
7,000 lin. ft. 6-in. split pipe, at 10c. per cu. yd.....	700.00
31.61 tons cast iron pipe, at \$49 per ton.....	1,548.89
7.50 tons special castings, at \$25 per ton.....	187.50
7.50 tons special castings, at \$50 per ton.....	375.00
(Allowance for error in bid.)	
1 fire hydrant, at \$19 each.....	19.00
6 8-in. shear valves, at \$18 each.....	108.00

Nozzles.....	200.00
Dosing siphons.....	400.00
Printing, etc.....	94.10
TOTAL COST OF IMPROVEMENT.....	\$20,700.00

An examination of the above figures will show that the bid

was unbalanced—the price for concrete is especially low. It may be noted that the contract price was a close one and that in all probability the contractor lost two or three thousand dollars. Moreover, the contractor, after the death of one member of the firm, proved unenterprising and it was with great difficulty that the engineers could force him to complete the work. It is unfortunate also that some of the work suffered in quality, due to the inefficiency of the contractors; but except for the placing of some soft and friable stone in the filter beds it is not likely that any of these defects in construction will materially affect the results obtainable.

Mr. J. A. Stewart of Cincinnati was consulting engineer, and Mr. C. A. Riggs, also of Cincinnati, was assistant engineer in direct charge of the work. The contractors were Meridith & Deckebach of Cincinnati. Some of the early work in connection with preliminary inspections and preparation of plans was done in co-operation with the writer, then of the engineering department of the Ohio State Board of Health.

SEWERAGE AND SEWAGE DISPOSAL

Materials Used for Sewers and Joints—Pipe Tests—Amount of Sewage Purification Necessary—Methods Available—Possibilities and Limitations of Each—Most Recent Developments

IN the line of sewerage, aside from sewage disposal, there has been little change in ideas during the past few years. The removal of household wastes in underground pipes by gravity will undoubtedly continue to be practically the only method employed for many years to come; a very potent reason for this, if there were no other, being that the ever-increasing use of water in city buildings calls for conduits for removing it after such use (by which time it has become more or less polluted), and for this the ordinary water carriage sewer seems to be the best practicable means.

A generation ago there was a public scare about the dangers of sewer gas, but investigations made in the light of more advanced scientific knowledge indicated that this was largely imaginary. Again about a year or so ago an English investigator announced that he had learned by experiments that pathogenic bacteria could be carried into dwellings through house connections with sewer air. Further and apparently more practical experiments indicated, however, that the danger of this was infinitesimal. It appears from our present knowledge that sewer air is as dangerous as, but no more so than, other foul air; but it is objectionable and should certainly be excluded from all residences. A much greater danger lies in the possibility of flies coming in contact with excremental matter in sewers or elsewhere, since thus disease germs may become attached to the flies and be brought into contact with human food. This furnishes a very powerful argument in favor of sewerage systems in all communities.

In the construction of pipe sewers, vitrified clay is the standard, but there is an increasing tendency toward the use of concrete in the larger sizes, and in this reinforcement is being employed with more intelligence as its possibilities and limitations are more generally understood. For the smaller sizes of sewers—say, up to 3 or 4 feet in diameter—there appears to be little, if any, economy or other benefit in the use of reinforcement, while the practical difficulties in its use are much greater in these smaller sizes. In the construction of concrete sewers much improvement along the line of economy is noticed, the most important examples being in the use of mixers better adapted to this work and the carrying of the concrete from the mixer to its place in the sewer through troughs or by other labor-saving devices.

The use of reinforced concrete pipe (made outside the trench in 2 to 5-foot sections) is becoming more general, and improvements in its manufacture have been arrived at by experience. The weak place in any pipe sewer is the joint, and concrete sewer pipes have this disadvantage, as compared to monolithic sewer construction. On the other hand, the pipe has the advantage that it can be laid in wet trenches, even those in which water enters under a head, under which conditions monolithic construction is very difficult. In Toronto a tight line of concrete pipe conduit was obtained last year by covering the joints on the outside with alternate layers of building paper and hot tar, and finally with a strip of burlap bound with two iron wires, one on each side of the joint. Several materials for making water-tight joints with vitrified pipe sewers have been placed upon the market, the one which has appeared this year being really a pipe dip composed of vulcanized linseed oil, which is said to have given very promising results in two or three towns. With the increasing number of purification plants and of pumping plants, the matter of water-tight sewers is becoming of more and more importance.

In the specifications for sewer pipe of various kinds, requirements as to smoothness of surface and trueness of form are common, but few contain any requirements as to strength of the pipe. During the past few months committees of two or three societies, notably the Society for Testing Materials, have

been endeavoring to formulate special requirements covering this, and such requirements have already been embodied in the specifications of Brooklyn, N. Y., where they originated, and quite recently in those of one or two other cities. These tests were described in our issue of Feb. 2, 1910.

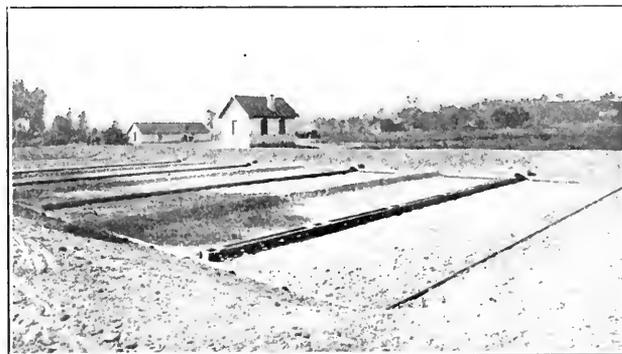

SEWAGE DISPOSAL.

The growth of communities both in size and in number is making more intense the difficulties in the way of disposing of sewage; and especially in view of the advanced stand being taken by more States every year in requiring purification of sewage to a greater or less extent before discharging it into streams.

Perhaps the most important and significant development in sewage purification ideas during the past year or so has been the almost unanimous agreement among sanitarians that it is not practicable—perhaps not even so desirable as it was at one time thought to be—to bring sewage effluents to a high degree of purification before being discharged into streams. The consensus of opinion among the leaders in sanitation appears to have practically reached the point foreshadowed in this journal editorially for a year or two past—that the most generally economical and logical treatment of the combined subjects of sewage and water purification was to consider the aim of sewage purification to be the preventing of all nuisance, and looking to the filtration of water supplies for the elimination of pathogenic bacteria or any other causes of disease which might exist in a stream or other source of supply. The old theory that no individual or city had any right to pollute a stream in any way is no more tenable in a densely populated country than that an individual has no right to pollute the air of a public building, although he does so with every breath exhaled.

In the matter of sewage purification a great deal has been done quite recently in the way of clearing the field of misconceptions, of determining the possibilities and limitations of various devices and methods, and of assigning to each of these its proper place in the general field of sewage purification. It is now pretty well realized that there is no one system or plan which is best under all conditions, but that there are a dozen or more of the methods which have been devised during the past twenty-five years which have most excellent features, each of which is probably best under certain conditions.

In general, it may be said that there are three aims in sewage purification—the removal of suspended matter so as to leave a clear effluent; the removal of practically all organic matter so as to give a comparatively pure effluent; and the elimination of pathogenic bacteria. The first is almost always necessary; the second almost never so; the third is necessary under certain

INTERMITTENT FILTER BEDS AT WAUWATOSA, WIS.

GLENVILLE, G., PRECIPITATION TANKS
Coke and sand filters in background. Population, 10,000

conditions, such as the presence of beds of oysters or other shell fish below the outlet, propinquity of water-works intakes, etc. "Purification" as used in connection with sewage should be recognized to mean "removal of impurities" and not "rendering pure." Almost any plant will do the former to a greater or less degree; no process practicable outside of the laboratory can effect the latter. Parties who claim, as some have done during the past year, that they can construct septic tanks which will furnish an effluent suitable for drinking are worthy of no reliance whatever, but are either the greatest of fools or are intentionally deceiving those to whom they are endeavoring to sell their processes.

In too many cases the city official becomes persuaded that a certain purification process, because it is working satisfactorily in or has been advised by experts for a neighboring city, is therefore the one which should be adopted for his own; whereas, as stated above, there is no one method which is best for all cities, and only a study of the conditions affecting the

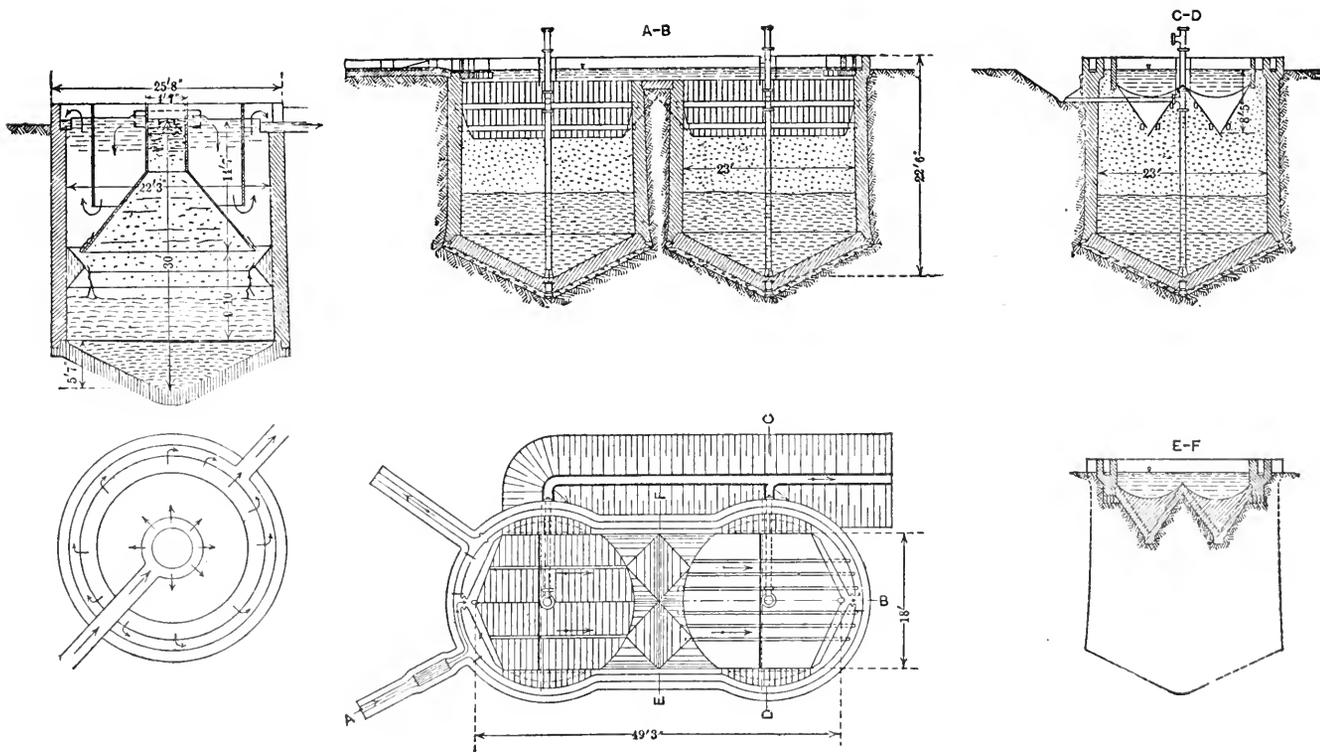

problem in the locality in question can enable even an expert to determine which is best adapted for it.

A greater or less clarification is given by every purification process, but the producing of an effluent even comparatively pure would seem to be practicable only by the use of intermittent sand filters. These require larger areas than are practical for most cities of any size.

The destruction of bacteria, pathogenic and others, can be secured by the use of hypochlorites; also by other agencies which at the present time appear to be less effective and less economical; but it appears to be necessary to remove a considerable proportion of the suspended matter before applying the hypochlorite if favorable results are to be obtained.

For removing suspended matter and delivering a clear and non-putrescible effluent we have available precipitation tanks (including the modifications known as the septic tank, the Emscher tank, etc.), contact beds and sprinkling filters. The last named requires preliminary clarification, its special purpose being that of producing non-putrescibility; while the contact bed works to much better advantage on a liquid at least partially clarified.

All tank methods, whether septic, Emscher or plain precipitation, give only a partially purified effluent and seldom one which is non-putrescent. But unless a large area for comparatively low-rate filtration is available anything better than a tank effluent can be secured only by processes which require tank treatment as a preliminary. The primary function of the tank is the removal of suspended matter by sedimentation. Any other service performed by it is along the line of assisting in the problem of disposing of the matter which settles out—the sludge—either by changing it into a liquid form or by getting it into a more compact and less offensive form, so that it can be more readily disposed of. The best that the septic tank can be expected to do is to liquefy two-thirds of the suspended matter, leaving one-third to be disposed of otherwise. The chief advantage of the Emscher tank appears to be that the sludge (which may be slightly less than that produced by the septic tank) is in a form more readily handled and less offensive.

EMSCHER TANK FOR POPULATION OF 5,000.

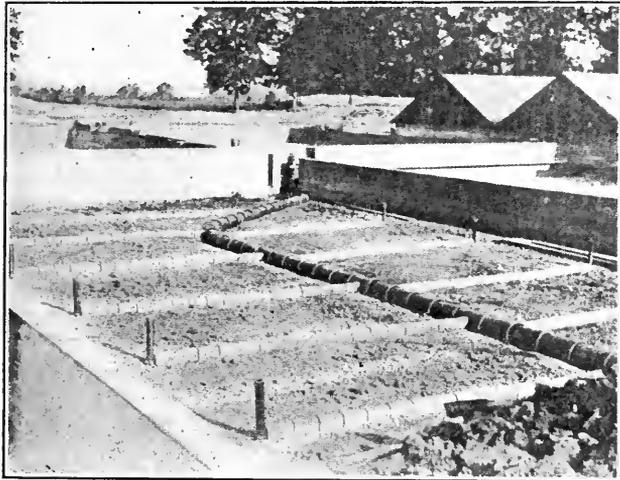

EMSCHER DOUBLE TANK FOR POPULATION OF 10,000.

GENERAL PLANS OF EMSCHER TANKS

We see, therefore, that all plants, except sand filtration, produce a resultant sludge which remains to be disposed of, and this is the most serious problem of sewage disposal yet remaining to be solved. In fact, even the sand filter produces almost as much residuum as the septic tank, but surrenders it in a dry and inoffensive form, so that it can be used for filling, with little danger of objectionable features.

Probably only two or three distinctly novel ideas have been advanced recently, and these are but variations on much older ones. The greatest prominence has been given to the Emscher tank of Mr. Imhoff, which has been used in Germany for two years or more. One or two experimental tanks of this kind have been under operation in this country, and the year 1911 will probably see two or more put into actual service. Another idea which is being tentatively adopted and experimented with is that of artificial aeration of filters or tanks by the introduction of air either by blowers or by outside air currents blowing into ventilating cowls.

More thoroughly established than these, although not quite so new, are sprinkling filters, several of which have been put into operation during the past few months in both large and small plants. One such installation is described in this issue. The difficulty due to freezing of the spray from the sprinklers (which, however, does not appear to have been a serious one at Columbus) has been avoided in two or three of the small plants by enclosing the sprinkler beds in superstructures. The principal feature of the sprinkling filter plants which requires further study and improvement is the matter of the sprinkler

MARION, O., CONTACT FILTERS
Showing underdrains in place. Population, 20,000

itself. No sprinkler head has yet been found which gives an entirely satisfactory, uniform distribution of sewage over the entire surface of the bed. Even theoretically this seems possible only by the use of movable sprinklers similar to those used in most of the English plants; but so far we believe no attempt has been made to use such movable sprinklers in this country. The objection to these usually offered is the danger of the probable interference of ice with the movement of the sprinkler arm or trough; but enclosing the sprinklers would seem to meet this objection.

This suggests ideas which have not been sufficiently considered in this country—the influence of climate upon the action and availability of the several sewage purification methods. There are a number of methods found or believed to be impracticable in the northern section of the country which it seems probable would give excellent results in more southerly climates, where the temperature seldom falls much below the freezing point. Outdoor sprinkling filters and the providing of abundant air of outdoor temperature in various ways are two features which find conditions more favorable for success in a southern than in a northern climate.

SEWAGE DISPOSAL PROBLEMS

Necessity for Reliable Automatic Hypochlorite Apparatus— Better Sprinkler Nozzles—Intensive Sand Filtration —Disposal of Sludge—Utilization

In December, 1910, a discussion was had before the Institute of Chemical Engineers in New York City on the general subject of sewage disposal, papers being read by Messrs. Rudolph Hering, George C. Whipple and C. E. A. Winslow. The last entitled his paper "Unsolved Problems of Sewage Disposal," and gave in connection therewith some information concerning recent experiments which is of more than usual interest. An abstract of his paper is given below.

The first unsolved problem which he mentioned is in connection with the use of bleaching powder for disinfecting sewage. In this, he says: "There is one difficulty which deserves the serious attention of the engineer. In a large plant it is comparatively simple to arrange automatic devices which will deliver a fairly constant supply of bleaching powder solution, and in such plants attendants are usually at hand to make up for any deficiencies which do arise. In a small plant, on the other hand, it is impossible to secure constant supervision. We must rely to some extent on automatic apparatus. It is exceedingly difficult, however, to apply a strong solution of bleach in small amounts without using devices which are liable to be frequently out of order. Small holes quickly clog, small weirs crust over, and it is a common experience to find such chlorine plants stopped up and entirely inoperative. Improvements along this line are greatly to be desired.

"The problem of distribution on the trickling filter is still, of course, a mooted one. The English moving distributors of various types give good results, but are costly and frequently out of order. Fixed sprinkler nozzles, if of small opening like that used at Birmingham, require much care (the constant attention of one man to an acre and a half of beds). Nozzles of large opening, like that devised at Columbus, give imperfect distribution and discharge such a large volume of liquid that they must be operated under a variable head. If the necessity for intermittency be granted (and the writer is not acquainted with any large-orifice nozzle which gives even distribution without it), it seems more logical to adopt a nozzle like the one worked out at Waterbury by Mr. Taylor, which is particularly designed to discharge in a thin restricted sheet which, under intermittent operation, moves back and forth over the wetted area. The gravity distributor, designed at the sewage experiment station of the Massachusetts Institute of Technology, in which the sewage drops down onto a concave disk from which it splashes upward and outward, seems to have justified itself as an alternative to the nozzle system which is worthy of consideration. Mr. Hammond at Mt. Vernon has made an important improvement in the splashing disk by turning it over at the edge; and the plant now in operation at Mt. Vernon shows that the gravity system may yield excellent results in practice and on a large scale.

"One other point which deserves attention in future studies of the oxidizing phase of sewage purification concerns the intensive possibilities of the intermittent sand filter. The original experiments at Lawrence pointed to a maximum rate of 100,000 gallons per acre per day, and in practice the Massachusetts plants have fallen below this figure except perhaps at Gardner and at Worcester. Many of them have operated at less than one-half this rate. With the Massachusetts practice of applying crude sewage to the beds, such low rates are necessary, for the winter clogging sets a sharp limit to their capacity. If, however, suspended solids were removed by proper preliminary treatment it seems probable that a much higher efficiency could be maintained. A dose of 100,000 gallons on an acre corresponds to a depth of less than 4 inches of sewage. With a clean bed of fairly coarse sand, well leveled and equip-

ped with good distributors, such a dose disappears in half an hour and may be repeated once in every six hours without the slightest interference with nitrification. In the Middle Western States (as at Wauwatosa, Wis., for example) plants designed on this principle, with a septic tank preceding the sand filter, are said to operate with success at a rate of 400,000 gallons per acre per day. Analytic data are, unfortunately, in most cases not available." Mr. Winslow then described an experimental outdoor sand filter studied at the sewage experimental station of the Massachusetts Institute of Technology. This was under the charge of Professor Phelps and himself. From August, 1909, to May, 1910, septic effluent was applied to a rectangular bed 21 x 22 feet, containing 3.5 feet in depth of beach sand having an effective size of 0.36 mm. The rate was between 220,000 and 340,000 gallons per acre per day, applied in doses six hours apart. The effluent averaged 3.1 parts per million of free ammonia, 5.9 parts of organic ammonia and 19.1 parts of nitrates, with a relative stability of over 96. During the ten months the sewage of the bed was raked six times, but no material was removed nor was there any apparent deterioration in the character of the surface. From these experiences he believed that the possibility of considerably multiplying the rated efficiency of sand filters was certainly worth further investigation.

The removal of suspended solids from sewage he believed to be the problem which still presents the most serious difficulties. For the destruction of pathogenic bacteria and the oxidation of putrescible organic matter there is a choice between alternative promising methods; but for the disposing of the solid constituents of sewage there is no method which has been developed to a point of real efficiency, in this country at least. In fact, at many plants in this country the whole problem is ignored as if it did not exist.

The difficulty is not so much in separating the solids from the liquid as in disposing of the resultant sludge. Even in sand filtration from five to ten tons of dried sludge per million gallons is strained out and must be disposed of. The watery sludge from sedimentation processes amounts to fifteen or twenty tons when chemicals are used and from ten to fifteen with plain sedimentation, with a minimum of five tons with the most successful septic tanks. Maritime cities can carry this sludge to sea; those on large rivers may perhaps discharge it into these during floods; but for the majority of inland cities disposing of it is a serious problem. Land disposal is available for small plants, for a time at least; large plants have adopted mechanical drying or pressing followed by land disposal or burning. But all these are expensive and objectionable in other ways.

Mr. Winslow considers the possibility of obtaining more perfect liquefaction as being the most apparent possible solution. He states that, of fourteen septic tanks of which careful records have been kept, both in this country and in England, "Five show a solution of deposited solids of 30 per cent or less, four are between 30 and 40 per cent, three between 40 and 50 per cent, and only two over 50 per cent." Theoretically the percentage should be much higher and experiments have indicated that the most important factor in checking the liquefaction was the accumulating of the waste products of the septic process itself; and experiments were conducted by Professors Winslow and Phelps with a view of determining some method for continuing the liquefying action much further; those during the past year or two having been with a tank of the Dortmund shape, or one having a conical bottom, with the inflow at the bottom and the outflow at the top; the sludge, which collects at the bottom, thus being constantly washed in a current of fresh sewage so that the products of decomposition may be removed. Sludge has been removed from this only once in fifteen months, and then only for the purpose of analysis. The effluent has not suffered in quality from passing through the sludge, and the tank removes 50 per cent of the total solids it received. This effluent was the one used in the intensive sand filter experiments just described. Analysis of the sludge and tank contents for eight months of operation (most of them during cold weather) showed that 72 per cent of the

total deposited solids and 80 per cent of the deposited organic solids had been liquefied.

In commenting on the Imhoff tank Mr. Winslow stated that exactly the opposite principle appears to be applied here, in that fresh sewage is cut off as much as possible from the sludge; in spite of which fact it is reported that liquefaction is carried out to a very satisfactory degree and the sludge is well digested. He suggests, however, that the frequent removal of sludge—twice a week or oftener in some cases—accomplishes the same results by removing the inhibiting septic products and also by the greater or less stirring up of the remaining sludge which takes place. At any rate, the quiescence found in the ordinary septic tank appears to be unfavorable for complete liquefying action.

Concerning utilization of sewage Mr. Winslow expressed some ideas different from those which have been commonly entertained. He said: "With the improvements which are being made in drying and separating machinery nothing can be called impossible. The disposal of factory wastes is already recognized as primarily a problem of utilization rather than of disposal. Even ordinary domestic sewage sludge contains, when dried, two or three per cent of nitrogen and five to ten per cent of fat, and on distillation yields ammonia, tar, oil and a more or less luminous gas. There is a field which I am inclined to believe may yet at some future time be occupied by the industrial chemist." Garbage contains about the same percentage of grease, but is twenty to thirty per cent solid matter, whereas sewage sludge contains only about one-fourth as much solid matter. The grease recovered from garbage makes the utilization of the latter more or less profitable. Whether or not equal profit could be derived from the treatment of sewage sludge, with its very much larger percentage of water, is one of the important problems to be solved by the chemist and other investigators along these lines.

CONCRETE PAVEMENT IN BOZEMAN

In our issue of March 10, 1909, there was described the method of constructing a concrete pavement in Bozeman, Mont., in 1908. Last year another section of concrete pavement was laid as a continuation of the 1908 construction. This new section was one block, or 540 feet long and contained 3,313 sq. yds. The work was constructed by S. Birch & Sons Construction Company of Salt Lake City, the prices being: excavation, 50 cts. per cubic yard; gravel fill, \$1.50 per cubic yard, and concrete pavement (not including excavation or fill), \$2.05 per square yard. The total cost was \$2.39 per square yard. Red Devil cement was used, manufactured by the Three Forks Portland Cement Company at Trident, Mont., and costing \$2.50 per barrel. Sand cost \$2.50 to \$2.75 per cubic yard, and gravel from \$1.25 to \$1.50. Labor was \$2.50 per day of eight hours.

After grading, the street was rolled with a ten-ton roller. Grade stakes were driven to the finished grade and from three to four inches of gravel was then placed on the rolled surface and tamped and gaged, allowing seven inches for the concrete. Templates of inch boards which exactly fitted the crown of the street were then placed every 50 feet at right angles to the curb; these being withdrawn after the placing of the concrete to provide expansion joints. Concrete was then laid to a depth of 5½ inches mixed 1 cement to 6 of natural gravel in which the stones were limited to 2½ inches diameter. Before the concrete had set, the grade stakes were withdrawn and a 1½-inch top finish was applied of 1 cement, 1 sand and 1 pea gravel, the latter limited to 1½ inches diameter. This wearing surface was not trowled or marked, but was given a rough float finish. The expansion joints were filled with an asphaltum compound and the pavement covered with sand and earth and traffic kept from it for three weeks. Both concrete and top coat were mixed very wet and placed with wheel-barrow.

According to city engineer Will S. Hartman, this pavement is not so noisy nor so slippery as the 1908 one, which was trowled and marked off into blocks. Moreover the pavement laid this year was constructed in continuous strips across the street, while the other was not, and wear is occurring at the longitudinal joints.

PURIFICATION OF WATER SUPPLY

Methods Available—Slow and Rapid Sand Filters—Where Each is Most Effective—Cleaning Filter Sand—Double Filtration and "Prefilters"—Coagulation—Hypochlorite Sterilization—Ozone Treatment

THE past two or three years have seen considerable advance in the matter of water purification, both improvements in the methods previously in use and also the devising and practical adoption of new methods. The first methods to be employed in American cities were sedimentation and, more commonly, that ordinarily known as slow sand filtration; which were followed by mechanical or rapid sand filtration. These three were used for a number of years as practically the only methods of purifying municipal water supplies. Recently, however, coagulation (which is essential with rapid sand filtration) has been used to assist sedimentation. For certain classes of water intermittent or non-submerged filters have been recommended by European sanitarians but have not been adopted in this country. For sterilizing water, either filtered or unfiltered, hypochlorite of lime has come into very extensive use within the last year or two. Ozone treatment for the same purpose as well as for removing color and even a certain amount of suspended organic matter has been widely advertised, but there are no plants in this country, and probably only one or two in the world, which are successfully treating municipal supplies by this method.

A brief review of the present knowledge concerning these various processes is given below. In preparing this we have drawn largely on a report on "Purifying the Water Supply of Montreal," published a short time ago by Hering and Fuller, because in this has been collected together probably the best recent summary of the latest information on this subject.

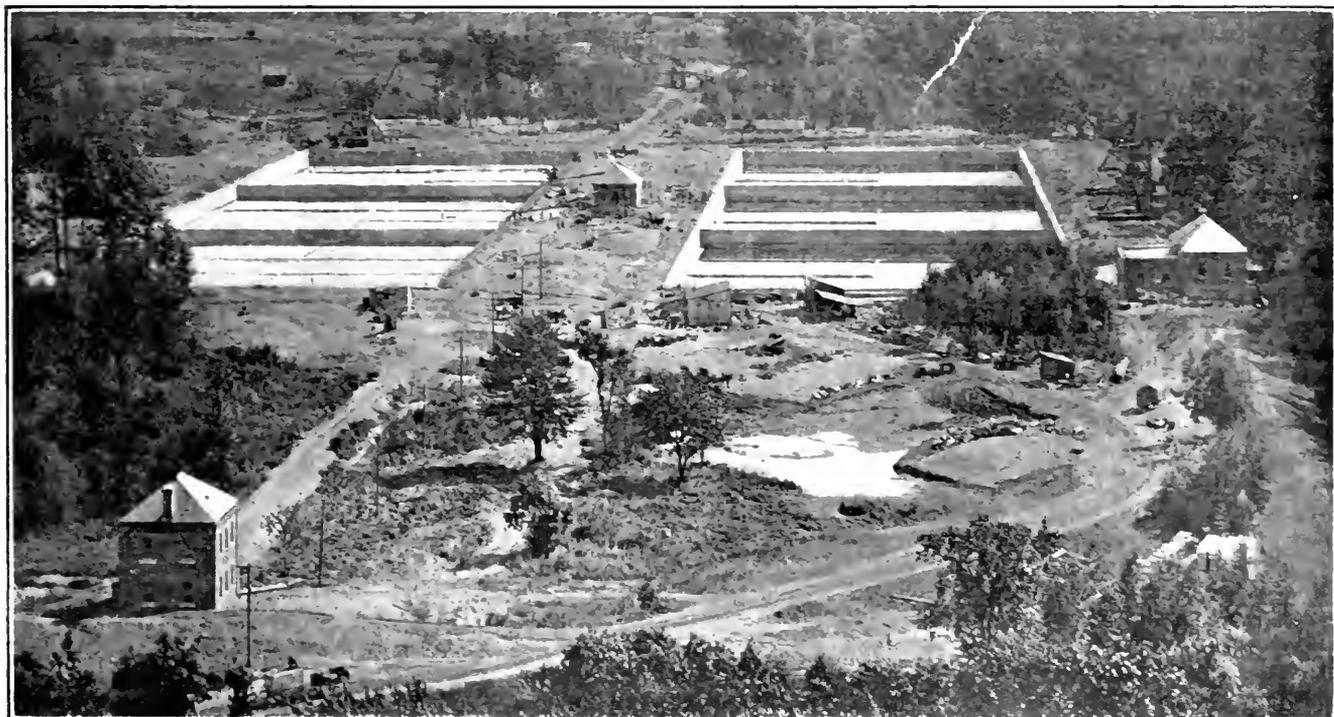

Sand filtration has been practised for about eighty years in Europe and thirty-five years in some American cities. It was until very recently considered that the velocity of flow through these could not exceed two or at the most three million gallons per acre per day with satisfactory results. Recent experiments and improvements, however, have demonstrated the practicability of securing the best of results with a flow of two and one half to five million gallons, and this has been carried up to even six or eight million gallons when the water has

been given preliminary treatment. Slow sand filters contain sand usually to a depth of 36 to 60 inches. Except in the smaller plants they are usually divided into beds of about one acre each.

While slow sand filters are not germproof, they are very nearly so under favorable conditions of construction and operation. They are especially adapted to the purification of waters which contain but little vegetable stain or color and which are comparatively free from mud. They will ordinarily remove from 20 to 30 per cent of the vegetable color or stain from a water. They will regularly remove turbidity to the extent of some 50 to 75 parts per million, and for short periods will remove quantities considerably in excess of this. They are not capable, however, of coping with the muddy waters of the Central West and Southern portions of the United States, unless the water is first subjected to expensive clarification methods. Such filters ordinarily show a removal of some 98 to 99 per cent of the bacteria contained in the unfiltered water.

Mechanical or rapid sand filters are frequently known as American filters, the type having been developed in the United States. These are especially applicable to the treatment of muddy waters and those deeply stained with vegetable matters. Its field of usefulness, however, extends to nearly all types of water, and it offers especial advantages where land is very expensive or that available is limited in area. These filters consist of sand layers 30 to 36 inches deep of a very uniform sized grain. They are arranged in comparatively small units, generally less than 1,000 square feet each, through which water is passed at a much more rapid rate than is the case with slow sand filters; the ordinary rate for mechanical filters being 125 million gallons per acre per day, which is equivalent to about 16 feet of vertical velocity per hour.

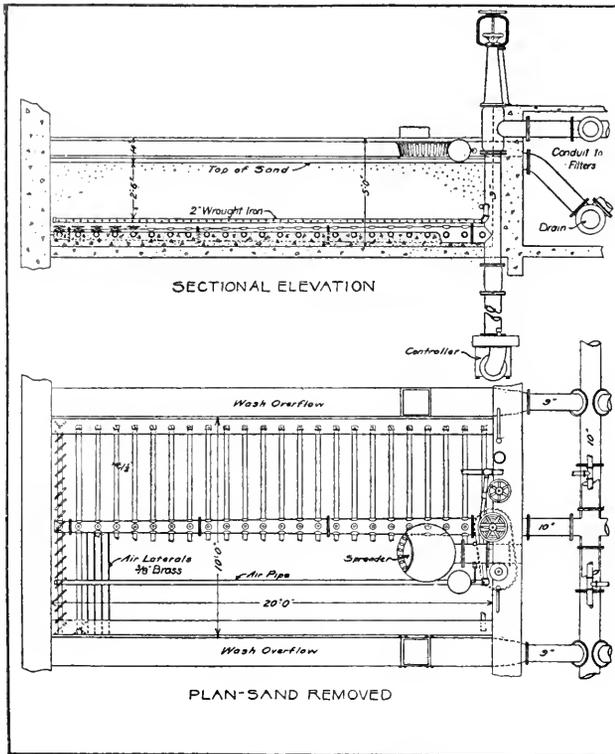

This type of filter depends very largely for its efficiency upon the gelatinous precipitate obtained from the decomposition in the water of a small quantity of sulphate of alumina or iron

GENERAL VIEW OF PROVIDENCE, R. I., WATER FILTRATION PLANT. POPULATION 220,000.

(about one grain per gallon). The resulting precipitate of alumina hydrate forms the necessary gelatinous films so as to permit the bacteria to be retained there until removed later by the process of sand cleaning or washing.

There are now in service in America for the treatment of municipal supplies approximately 350 mechanical or rapid sand filtration plants; this in addition to a number of other such plants, some of them of considerable size, for industrial establishments, clubs, etc. About fifty of these cities have a population of 50,000 or more. Some of the best known filters of this type are those at Little Falls, N. J., New Milford, N. J., Watertown, N. Y., Binghamton, N. Y., York, Pa., Harrisburg, Pa., South Pittsburg, Pa., Youngstown, Columbus, Cincinnati and Toledo, O., Louisville, Ky., Birmingham, Ala., and New Orleans, La.

GRAVITY MECHANICAL FILTER, MARIETTA, O.

One of eight units, each 20 x 10 feet and one-half million gallons daily capacity, or 109 million gallons per acre. Air wash

The use of slow sand filters has resulted in a very considerable decrease in typhoid death rates in most if not all cities where they have been installed; three such instances being those of Lawrence, Mass., where the typhoid death rate per 100,000 was reduced from 114 for the seven years before filtration was introduced to 25 for the fifteen years following; Albany, N. Y., where the death rate was reduced from an average of 90 for the ten years preceding filtration to an average of 22 for the nine years following its introduction; and Pittsburg, Pa., where an average rate of 133 for the eight years preceding filtration was reduced to 47 in the year following the introduction of filters for purifying a part of the supply only.

Well built and well operated rapid sand filters not only reduce turbidity and color but remove bacteria as well and thus greatly reduce the typhoid death rate, as is shown by the experience of several cities, among them being Binghamton, N. Y., where the death rate per 100,000 was reduced from an average of 47 for the five years before filtration to an average of 15 for the five years following its introduction; Cincinnati, O., where the death rate was reduced from an average of 50 for the four years before to 16 the year following; Columbus, O., where the rate was reduced from 78 for the eleven years before to 20 for the year following; Paterson, N. J., where the rate was reduced from an average of 32 for the five years before to an average of 10 for the seven years following; Watertown, N. Y., from an average of 109 for the five years previous to an average

of 38 for the five years following; York, Pa., a reduction from an average of 76 for the two years before to an average of 22 for the eight years following.

Possibly in no other branch of investigation has more money from city treasuries been expended than in that of filtration, and to this expenditure is largely due the advance which has been made in knowledge of the subject. During the past few years more than half a million dollars has been spent in water purification investigations which have been conducted by Louisville, Ky., Pittsburg, Pa., Cincinnati, O., Washington, D. C., New Orleans, La., Philadelphia, Pa., Harrisburg, Pa., Providence, R. I., West Superior, Wis., Richmond, Va., and New Orleans, La.

In several cities water has been subjected to double filtration, generally for the purpose of removing more or less turbidity from waters which seem to occupy an intermediate class between the clear waters which can be treated at high rates in slow sand filters and the muddy waters of the South and West which require constant coagulation. Among the earliest of these to attract attention were those at the lower Roxborough filtration plant of the city of Philadelphia, at Lancaster, Pa., and at Wilmington, Del. All of the purification plants in Philadelphia have been provided with preliminary filters substantially equivalent to rapid sand filters in which no coagulant is used; the effluent from these being further treated in slow sand filters operated at practically double the ordinary rate. Preliminary filters have recently been completed at Albany, N. Y., embodying the latest ideas in preliminary filtration. A careful estimate of the costs and relative rates of purification shows that, while equally good results might have been possible in most of these cases by single filtration, the higher rates thus made possible have effected an economy in the total process.

Coagulation, which is one of the essential features of rapid sand filters, has also been employed in several plants as an auxiliary of sedimentation. This is accomplished ordinarily by the use of sulphate of alumina and objection has been entertained in some cities against the "dosing of water with chemicals," although this material can hardly be considered any more of a "chemical" than the salt used in cooking. The use of this material for coagulation in an effort to clarify water dates back for several thousand years. It has been used for a number of years in the south and by the armies of European countries for clarifying muddy or polluted water when no better was available for drinking. Its use is generally recognized by experts in this country as being perfectly safe, and urgently necessary for many very muddy and highly colored waters. Its use preliminary to treatment in slow sand filters is carried on successfully in Springfield, Mass., Ferncliff and Poughkeepsie, N. Y., Washington, D. C., Indianapolis, Ind., and is included in the plans for the slow sand filter for the Croton supply of New York City. Coagulation alone, without the use of sand filters, is used at Omaha, Neb., Leavenworth, Kan., Kansas City, Mo., St. Louis, Mo., Nashville, Tenn. The basin in which sedimentation assisted by coagulation is to take place ordinarily holds a flow of 18 hours; although the capacity may vary with the nature of the material to be precipitated.

The hypochlorite of lime treatment and several plants in which it is used have been described in a number of issues of MUNICIPAL JOURNAL AND ENGINEER during 1910. Strictly speaking it is not a new process, but has been employed fifteen or eighteen years for eliminating the effect of sewage pollution from certain tributaries of the New York Croton supply. It was used at the time of a cholera epidemic at Hamburg in 1892 and as an emergency treatment in several places in Europe and Asia. It is only within the past two years, however, that substantial progress has been made in our understanding of the nature and accomplishments of this treatment for public water supplies, both alone and in connection with filtration. The material used is what is known commercially as chloride of lime or bleaching powder. Its action is largely if not wholly that of oxidation, its introduction into water being followed by several chemical changes, among which is the formation of hydrogen oxychloride, which is a most powerful oxidizing agent. As a

by-product calcium chloride and several more or less inert compounds are formed. The method is now used in more than 100 cities of the United States, this widespread use dating from the early autumn of 1908, when it was applied to the Boonton supply of the Jersey City, N. J., water supply and at the filtration plant of the Union Stock Yards at Chicago. Among the cities where it is now being used are Milwaukee, Minneapolis, Omaha, Council Bluffs, Indianapolis, Nashville, Cincinnati, Columbus, Pittsburg, Harrisburg, Philadelphia, and numerous other smaller cities.

It should be understood that this treatment is not a substitute for filtration in the removal of turbidity, color, tastes or odors, but only for destroying bacteria and a certain amount of suspended organic matter. Its special advantages are that it can be applied at little expense and on a few hours' notice as an emergency treatment when a water becomes suddenly polluted with disease germs; and also that it can be used as an additional precaution, permitting rapid filtration when a slower rate would be demanded for the purpose of bacterial reduction only.

There are a number of electrolytic processes which have been or are being used for the purification of water supplies. These in most cases rely largely if not wholly upon the electrolytic decomposition of salts in the water and the formation of hypochlorites. While there may be instances where electric current is so cheap and commercial hypochlorite so expensive that the electrolytic process is cheaper than the hypochlorite, in the majority of sections this is not the case. There are however, certain advantages in connection with electrolytic processes which would make them even more desirable than the use of bleaching powder if they can be made economically practicable.

OZONE TREATMENT

Much interest has been displayed, especially among the non-technical public at large, in the ozone treatment of water. As this is one of the most recent processes, and one concerning which it is difficult to obtain unprejudiced statements, we quote in full the Hering and Fuller report on this subject.

Ozone is a modified form of oxygen, and serves as a most powerful oxidizing agent for the destruction of organic matter, including living bacterial cells. It is found more or less in nature, particularly after thunderstorms, and is manufactured commercially through the use of electricity discharged through the atmosphere under very high voltage. It has been actively before the people as a prospective water purifying method for some fifteen years, and has attracted widespread attention.

We have followed its developments closely from the beginning, and have personally inspected its standing in Europe, particularly at Paris in 1900, 1905, 1906, 1908 and 1910.

Ten years ago this process was considered capable of sterilizing a water which was substantially free from readily oxidizable organic matter at a cost in the neighborhood of \$5 to \$6 per million Imperial gallons. There is no question as to the efficiency of ozone under suitable conditions in destroying bacterial life. There are some questions as to the degree of concentration of the ozone which must be present in the ozonized air which is to be mixed intimately with the water to be treated. The expense of the ozone treatment seems to increase materially with increases in the concentration of ozone in the ozonized air.

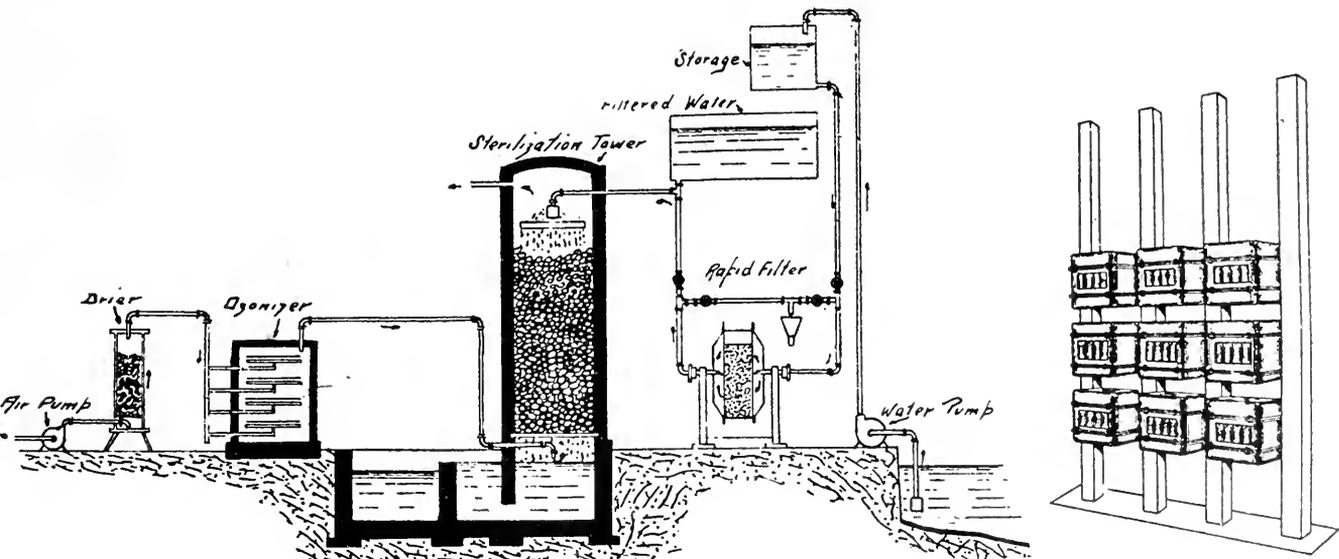

Marked progress has recently been made in perfecting ozonizers so as to render their performance cheaper and also much more reliable. Investigations as to the use of ozone were conducted at the Jerome Park Reservoir in New York City in 1907-08, but the result was unsatisfactory, partly owing to the irregularity with which the ozonizers performed, and partly on account of the prohibitive expense of the treatment.

In Europe there has been comparatively little development on a working basis in the past decade. Plants in regular service on a commercial scale are practically confined to the small town of Paderborn, in Westphalia. We have also seen a small plant in commercial operation at Breda, a small village in Holland. Another plant is at Wiesbaden, Germany, where it is held in reserve for the treatment, in case of emergency, of water from certain wells near the Rhine which contain contaminated water and which are not used regularly.

While numerous investigations at various places in Europe have been made with ozone, developments have been practically confined to the places above mentioned, and at St. Maur, one of the suburbs of Paris, where is located a sand filtration plant from which, after treatment with ozone, a portion of the city water supply is derived. The source of this water is the River Marne, a tributary of the Seine. For a dozen years or so St. Maur has been the scene of almost uninterrupted investigations as to the utilization of ozone for the treatment of the Paris water supply. Its use is proposed in connection with what are called preliminary filters, or roughing filters of the Puech-Chabal type. These preliminary filters are intended to act simply as clarifying devices, and it is the ozone which is relied upon to remove the bacteria.

A year or two ago it was decided to install at St. Maur an ozonization plant with a capacity of 20 million Imperial gallons daily. Plans for the installation of this plant, with a division of the contract equally between the De Frise and Otto systems, have been approved by the Minister of the Interior and by the Superior Council of Public Hygiene, but they have not been ratified by the Municipal Council. That is to say, no contract has been closed for these ozone devices. At present the works at St. Maur are temporarily out of service owing to damage caused by the recent severe flood, but are under process of repair. It is understood that still further tests are to be made, or are being made now, at St. Maur, on the Gerard system of ozonization, and that if this method or device proves satisfactory the 20-million-gallon contract will be divided equally among the three companies instead of the two above mentioned.

The construction cost of ozonization at Paris, according to the different systems, runs from \$6,000 to \$15,000 per million gallons daily capacity. The operating cost is estimated at

SIEMENS' LAYOUT FOR STERILIZING WATER

BATTERY OF SIEMENS' OZONIZERS

about \$6 to \$7 per million gallons, these figures being set forth in a report by Colmet-Daage, City Engineer of Paris.

There is no doubt about the Paris authorities being determined to get the best water obtainable from the local river water as distinguished from further developments of distant gravity sources, and that there has been substantial progress made there as to the use of ozone as an adjunct to filtration.

Comparing the cost and reliability of ozone with the electrolytic decomposition of salt in order to obtain hypochlorite of soda, or upon comparing it with hypochlorite of lime, we see no justification whatever on the ground of cost, to say nothing of irregularity of performance, to recommend the ozone treatment at this stage of development. We formally reported to that effect to the Water Commissioners at Niagara Falls, N. Y., last February. Mention is made of this fact as illustrating our conviction in this regard for a project where electric power is available in large quantities at prices which can scarcely be lower elsewhere.

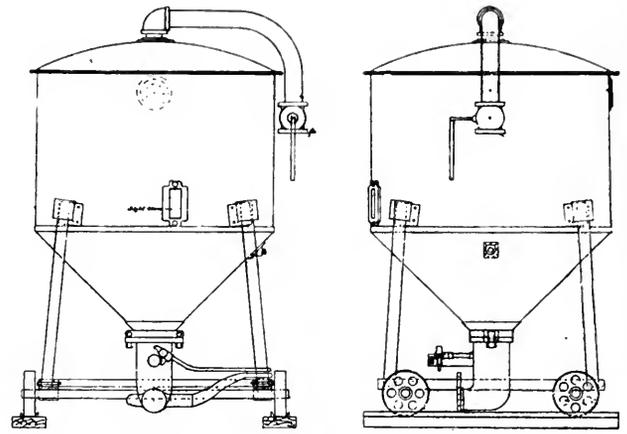

In our investigations of the Montreal project we have taken occasion to visit with Mr. Janin the ozone plants at Lindsay, Ont., and Ann Arbor, Mich. We consider them to be interesting plants, showing that ozonizers can be built and operated with fewer interruptions than we were led to believe possible from our observations of the developments three years ago at Jerome Park Reservoir, New York City. They are now being used at these towns above mentioned with filtration devices which are very crude and inexpensive. At Lindsay the Provincial Board of Health authorities of Ontario, under date of February 8, 1910, unqualifiedly condemned the ozone plant as a sterilizing process. They reported it to be unreliable, and attributed substantially all of the success of the plant to the arrangements and devices other than the ozone. At Ann Arbor it is claimed that the bacterial results obtained are on a more satisfactory basis than at Lindsay, but official reports have not been made public. At both of these places the ozone gives no indication of having any practical efficiency in the removal of color or vegetable stain from the water. At Ann Arbor the final treated water had a noticeable amount of vegetable stain, notwithstanding that use is made of a slight quantity of sulphate of alumina in the unfiltered water. Our experience with the use of oxidizing agents leads us to believe that ozone as a decolorizing agent offers practically no hope for successful results at a reasonable cost.

While we are keenly interested in the development of the ozone process we have no hesitancy in stating to you in unqualified terms that it has not reached a state of development where a city of the size of Montreal can afford to figure on its installation under present conditions.

NEW IDEAS IN FILTER CLEANING

One of the great novelties introduced during the past few years in connection with slow sand filtration is in the method of washing the sand. Originally the sand was scraped from slow sand filters by hand and removed by wheelbarrows to a point outside the filter, where it was washed and removed to the filter in the same way. In 1900 the city of Philadelphia began the design of the largest filtration works in the world and in doing so provided for the removal of the dirty sand by portable ejectors, employing water under pressure for transporting the sand to the sand washer. This method of ejecting sand has been copied by practically all the filter plants built since that time. Since 1909 the city of Washington has also been returning the washed sand to the filters by ejector hoppers similar to those used in removing it from the filters; a slow upward movement of filtered water through the sand in the bed being maintained while the washed sand is being placed by this process.

Since 1907 there has been used at the small filter plants in the Borough of Brooklyn the so-called "Brooklyn method." In this the water is allowed to fall in the filter until it stands

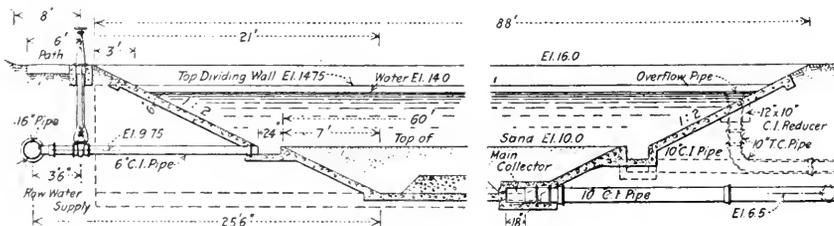

NICHOLS SEPARATOR FOR WASHING FILTER SAND

but a few inches above the sand surface, when outlets are opened which permit the water remaining above the surface to go to waste. The wash water is then applied at one end of the bed and is allowed to flow over the surface of the sand and escape into the drains, the direction of the flow being guided by boards set on edge, forming channels about 15 feet wide. As the water flows over the sand the surface is raked by men standing on the sand, this continuing until the wash water flows clear. Water is then applied through the usual inlets and filtration is resumed.

Since then two other methods have come into use for washing sand without removing it from the filter. The Nichols method, adopted at some of the Philadelphia filters in 1909, consists of ejecting dirty sand and water by an ordinary movable ejector hopper into a separator which is moved into the filter during the process of cleaning. This separator consists of a closed cylinder having a cone-shaped bottom in which are placed a valve and hose connections through which the sand is forced from the separator. The interior of the separator is arranged with a system of baffles and a disc, so that there is a down-flowing stream of sand and an up-flowing stream of wash water, and these are so proportioned that practically no sand is carried away in the wash water, which passes out at the top of the separator and is removed to a drain. The clean sand is discharged from the separator through a hose onto the surface of the filter from which the dirty sand has been removed. The separator is mounted on wheels and is moved from point to point in the filter as the cleaning progresses.

A third method of cleaning the sand without removing it is known as the Blaisdell method. It was first tried at Yuma, Ariz., then at the experimental filtration plant at Jerome Park reservoir, New York, and is now in use at the recently completed filtration works at Wilmington, Del. The plans for the filtration of New York's Croton water supply, which will be the largest plant in the world, are designed to provide for the use of the Blaisdell method. In this there is a washing machine consisting of an inverted box which is sunk under the water in the filter to the filtering surface and is held in position and operated from a movable platform supported from the walls or piers of the filter. This box contains a revolving hollow axle and head from which perforated teeth project into the filter any desired distance. The box can be raised or

lowered and the platform moved longitudinally or laterally, all motions being electrically operated and controlled by one man. The box is moved over the surface of the filter while at the same time the teeth are made to revolve slowly. Water under pressure is introduced through the axle, head and teeth, passing in fine streams into the box through the holes in the teeth. A centrifugal pump connected with the top of the box drains away a little more water than is supplied through the teeth and discharges it to a drain.

SAND FILTER IN BROOKLYN, N. Y., ARRANGED FOR CLEANING BY THE "BROOKLYN METHOD"

STREET CLEANING AND REFUSE DISPOSAL

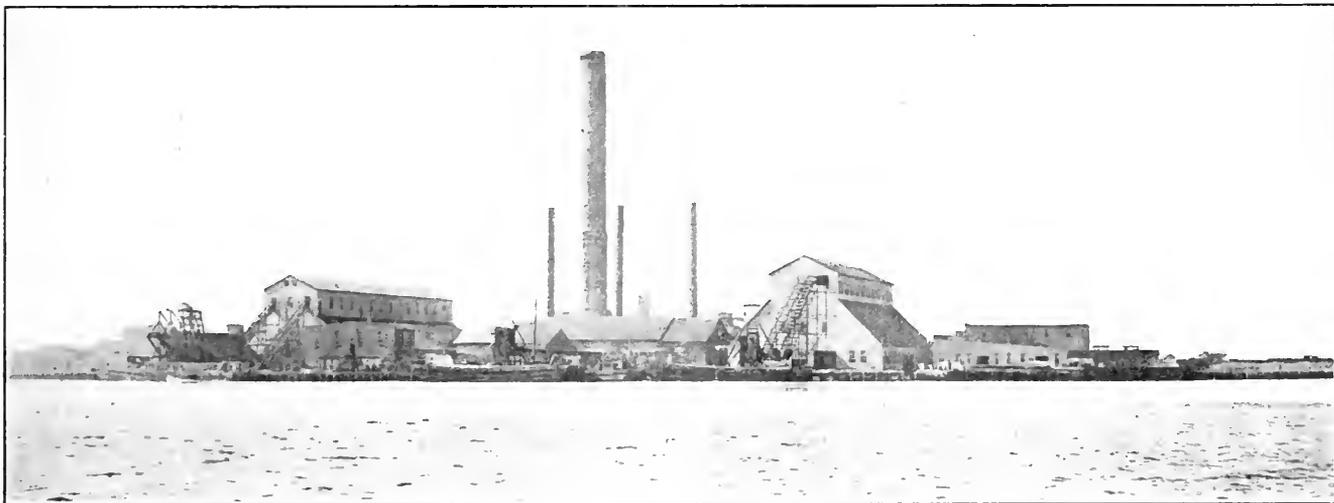

Flushing Methods of Cleaning—Collecting Ashes and Garbage—Refuse Destruction by High and Low Temperature Furnaces—Garbage Utilization—Disposal Methods for Small Cities

In the matter of street cleaning the most important developments during the year have been the increasing number of cities which have adopted the use of water for removing street dirt to the gutters, this ordinarily being effected by the use of special flushing machines. The principal advantages claimed for this are three—that it removes the dirt from the pavement without creating dust; that it removes the fine dust much more completely than does any method of sweeping, and that it is cheaper. Certain city officials have objected to their use, however, claiming that deposits are formed in the sewers and that the flushing washes filler from between the paving blocks of whatever substance and hastens their destruction. It is to be hoped that within another year some actual data on these points may be obtainable; also on the matter of cost, only a few cities apparently having made accurate estimates of the relative costs of the different processes. New York City has made extensive tests of this, which appear to demonstrate the lower cost of the flushing method of cleaning.

Every few months sees patents obtained for more or less complicated machines for both collecting and removing street dirt; the general principal in all being that of a revolving brush which sweeps the dirt onto a moving belt, moving buckets or some such contrivance, which raises it and deposits it into cans, which are removed from the wagon when full; or in some cases the dust is thrown by the broom to the bottom of

from each house the can as well as the garbage it contains has, we believe, been abandoned because of the great cost of the system due to the capacity and number of collecting wagons required, and the necessity of duplicate sets of cans. The city of Minneapolis requires all garbage to be drained and then wrapped in paper before being placed in the cans. This both prevents the garbage from decomposing rapidly and to a considerable extent keeps the can clean, thus minimizing the odors. We do not know that this idea has been adopted by any other cities.

Considerable progress is being made, in the larger cities at least, in systematizing the removal of city refuse of all kinds and reducing to a minimum the amount of street haul required. This is effected by establishing a number of collecting stations throughout the city, each in the center of a fixed area to which all the refuse from that area is conveyed by horse-drawn or motor wagons. At these stations the material is discharged into cars drawn by either steam or electric motors, as branches of either a trolley road or a steam road, and in these cars is taken to some one point for treatment or to a distant section for use in filling land or otherwise being disposed of. With open garbage carts and uncovered dust carts this would make each collecting station a nuisance to the neighborhood; but, if properly covered carts are employed, this can be avoided, the station itself being a fully enclosed and ventilated building.

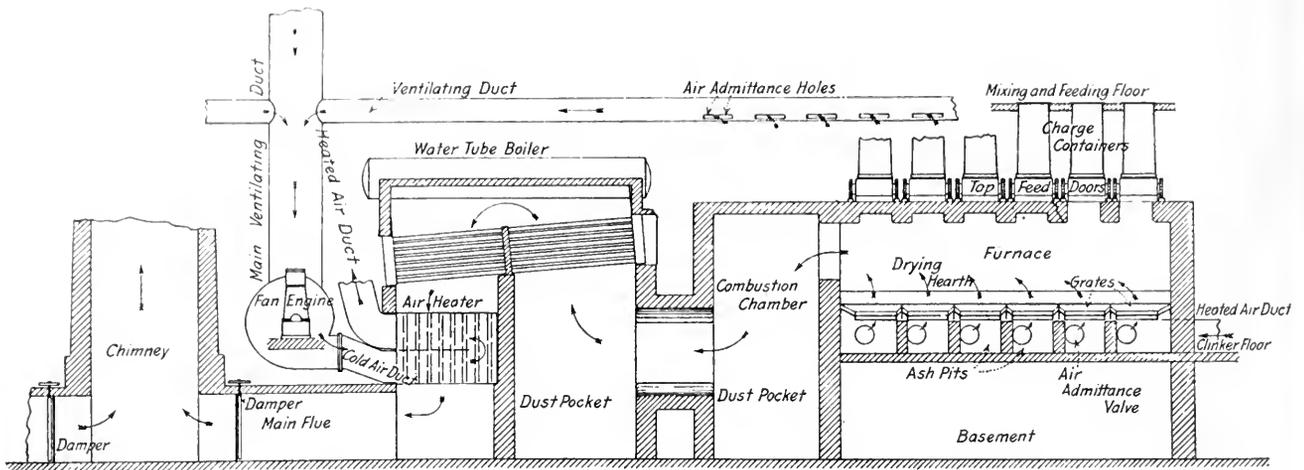

BARREN ISLAND REFUSE DISPOSAL PLANT, NEW YORK

a suction pipe, where it is drawn up by air suction and collects in tanks either by gravity or precipitated by fine spray. So far as we can learn, only one or two of these various machines have met with any success—in fact, most of them have never been actually tried. This journal is continually receiving inquiries concerning such machines, however, indicating that when one arrives which is really practicable and economical it will find considerable sale.

In the matter of collection of ashes and garbage some progress is being made, but not nearly as much as is desirable: one of the greatest nuisances now encountered in city streets being the dust from the ash collecting wagon and the unpleasant odors from garbage wagons. In this line also some inventions are being made, however: two or three wagons having been described by us which are so designed as to make it almost impossible to uncover the garbage wagon at any time except when the buckets are being emptied therein; but these have not come into general use outside of the cities where they originated. The method tried in two or three cities of removing

More change is perhaps being made in the practice of disposing of refuse than in the methods of collecting and transporting; the most important one being the increasing use of the English high temperature furnaces, or those in which the temperature is raised to at least 1,500 to 1,700 degrees, as compared with furnaces in which the temperature seldom reaches 1,000 degrees; it being claimed by the advocates of the former that such high temperature is necessary to prevent the clinker from containing organic matter not fully incinerated, and the discharge of gases from the stack not entirely deprived of their odors. Such plants have been established at the Borough of Richmond, N. Y., Seattle, Wash., Montreal and Vancouver, Can., Milwaukee, Wis., and Montgomery, Ala., and bids for the same for the city of San Francisco were received a few weeks ago. In each of these it is claimed as one of the advantages that a part of the heat created by the burning of the refuse can be utilized for power purposes; but so far the Montreal plant appears to be the only one on this side of the Atlantic where any real use has been made of this heat.

MILWAUKEE REFUSE INCINERATOR. LONGITUDINAL SECTION OF ONE UNIT

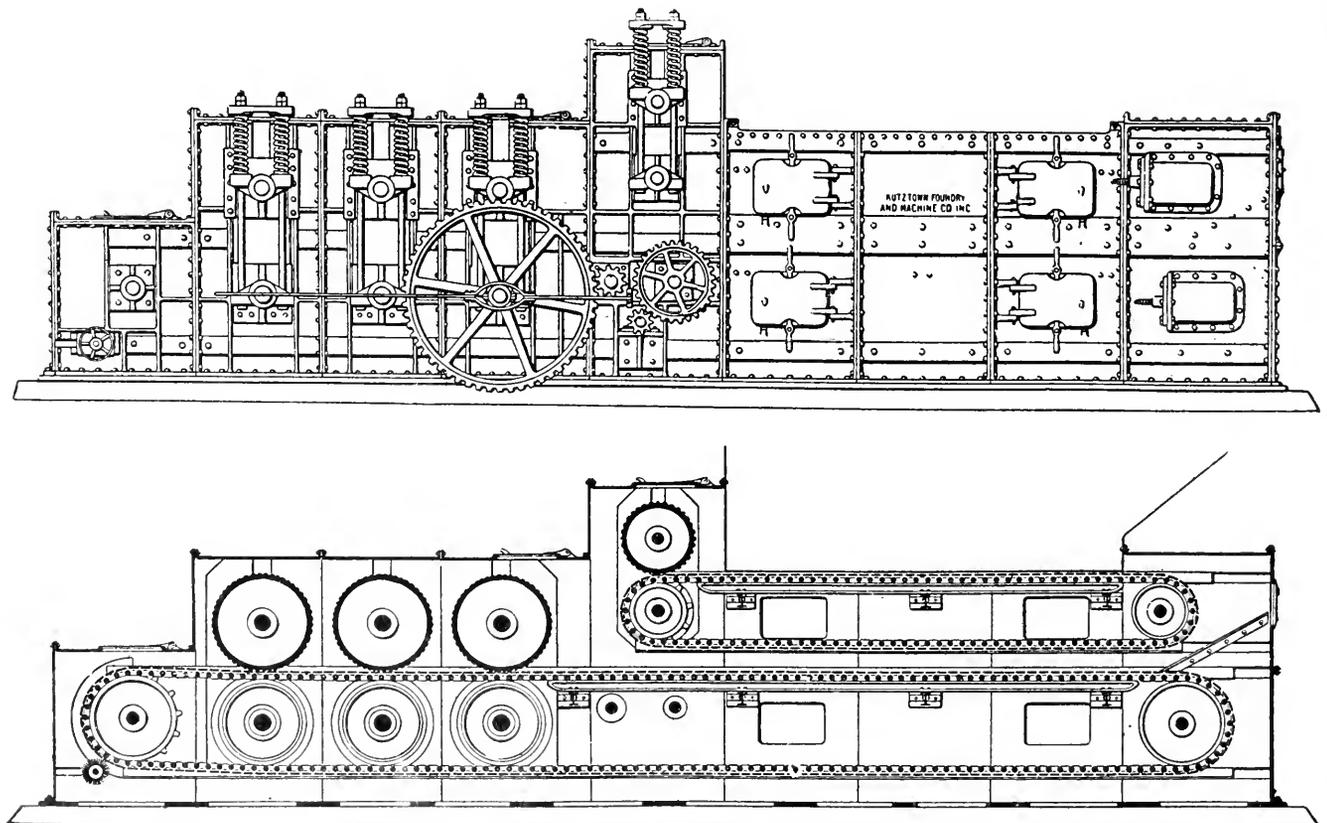

A method of disposing of garbage which seems to be practicable for large cities only is reduction by which the grease contained in the garbage is separated out and used for high-grade soaps, and the remaining portion is used by fertilizer manufacturers. The plants for this process are expensive, but when the amount of garbage to be treated is sufficiently great to keep a large plant in full service, there appears to be some actual profit in its operation. Most of these plants are in private hands, and receive a payment from the city for disposing of the garbage. However, two large cities now own utilization plants, Cleveland, O., having purchased one four or five years ago and later enlarged it, and Columbus having constructed one outright from plans prepared by experts.

In our issue of March 30th other methods of utilizing garbage were suggested, one of these, a plan employed in France, being that of composting and compressing garbage to be used by farmers as fertilizer, which might be adopted in the large cities of this country where market gardeners might find use for such fertilizer in intensive farming. Another idea is that

of using the combined ashes, garbage and rubbish for the manufacture of producer gas, which gas could then be used for operating electric lighting or power plants. So far as we know, this method has never been tried.

In general it may be said that the methods of incinerating garbage or utilizing it by extracting the grease can be employed only by large cities where the quantities of garbage are considerable; or else—an idea which we believe has not yet been put into practice—of collecting the garbage from a number of small towns into special railway cars, which could be filled at a collection station located in each town, these cars then being carried by rail to a centrally located utilization or incinerating plant operated either in common by the several municipalities, or by a company which should arrange with these municipalities for such service.

For the smaller cities, say those of less than 25,000 to 40,000 population, other methods must generally be found for disposing of the refuse; although it may be said that low temperature furnaces have been used by much smaller communities,

SIDE ELEVATION AND LONGITUDINAL SECTION OF CONTINUOUS ROLLER PRESS FOR GARBAGE

their use being common in the army posts of the United States, and when properly operated, these small furnaces have given very good satisfaction. For the small community, however, methods are available which are ordinarily cheaper than incineration or utilization, but which would not be practicable for the large city. The only ones which can be commended are burying in the soil and feeding to hogs. If fed to hogs, the garbage should be fresh when so fed, which means that it must be collected regularly at intervals of not more than two or three days in winter and daily in summer, and must be fed to the hogs without being stored on the farmer's premises long enough to even begin putrefaction. Some small communities in New England and also in Great Britain find this method satisfactory. When buried in the soil the garbage may be either spread broadcast and plowed under as a fertilizer, or it may be deposited in trenches to a depth of one or two feet and then covered with about 12 inches of soil, which may be that excavated from a parallel trench a few feet away. Garbage thus covered will slowly be reduced without offensive odors, the comparatively light covering of earth permitting the access of some oxygen. This reduction underground requires some time. If garbage is covered with a considerable depth of earth, ashes, etc., it may not reach a stable condition for many years and it would be unsafe to build residences upon land filled in in this way.

Experience of practically all cities seems to have demonstrated that it is very difficult to permit garbage to be collected by farmers and other private parties and so regulate

collectors that collections will be made regular and that no nuisance will be created in the city streets. It is therefore generally found that collection by the municipality is desirable, even where the garbage is privately disposed of or is taken by farmers; some cities collecting the garbage and delivering the same to farmers at stations along the outskirts of the city.

It is becoming quite generally recognized that practice along any lines which can be considered as progressive demands the study of the problem by those who have more knowledge of the subject than can be possessed by a city official, unless he himself has previously made a special study of the subject. It is consequently desirable that the question be submitted to engineers or other practical men who have had wide experience or made broad investigation of the subject. This should include not only the designing of plants, but also the location of them and the methods of collecting the refuse. These last are especially important since the cost of collecting refuse and transporting it to the furnace or incinerator is usually greater than the cost of disposing of it at these plants, and the difference between a proper and improper location of plant and method of disposal may mean a difference of thousands of dollars each year in the demands upon the city treasury. But most important of all, perhaps, in connection with incineration, is the skillful operation of the plant. The majority of plants fall far short of their intended efficiency and economy because they are put in charge of inexperienced, careless and ignorant men, who will work for low salaries, but do not earn even those.

STREET ILLUMINATION

Increasingly General Adoption of Electricity—Disadvantages of Gas—Efficiency of Electric Lamps Doubled in Last Five Years—Proportioning Illumination to Street Needs—Location of Lamps

PROGRESS during the past year or two has been made in the efficiency of street lights used, in the brilliancy of illumination and in the more effective general illumination of city streets. The greater part of the brilliant illumination has been confined to business streets and is largely due to private initiative, and in the majority of cases is supported by private funds.

Although in several respects gas lamps give a more pleasing light and are better adapted to units of low illuminating power than electricity, improvements during the past few years in styles of lamps and what may be called the mechanical side of electric lighting generally has so increased the efficiency and decreased the cost of this kind of lighting that in the majority of cities gas cannot compete with it on equal terms. In spite of the introduction of the gas arc and the incandescent mantle for street illumination, these have not been adopted as generally during the past year as was the case a few years ago. The mantle gives greater brilliancy at less cost than the open flame, but the cost of replacing mantles and the greater care necessary in lighting and attention to keeping the lamps in order largely offset this advantage. The facility with which wires can be strung at low cost for installing new electric lights where wanted, as compared to the cost of laying gas mains and the delay and tearing up of streets required, are additional arguments in favor of electric lighting. Partly on account of the same objections, various kinds of lamps burning gas generated at each lamp from gasoline or other liquid are employed more or less commonly for outlying sections of cities and small communities not provided with electric plants.

One illustration of the competition which electric lighting companies are furnishing, as compared with gas lighting, is the fact that they can now furnish tungsten street lamps of the same candle-power as gas mantle burners at the same or lower cost. The tungsten incandescent lamps are made of various sizes for street lighting, generally from 32 to 250 horizontal candle-power. They can be used on ordinary standard series street lighting currents, the same as are already

used for series arc and incandescent lamps; their introduction is therefore a simple matter in most cities and does not require a complete reconstruction of the plant.

For brilliant lighting, several improvements in the electric arc have been made and brought to a point of commercial practicability quite recently. The first change from the old open arc lamp was the enclosed arc, which came into general use about ten or twelve years ago. This has a small enclosing globe around the arc, which makes the carbons last longer, makes the light more steady, and, although the total amount of light is reduced by the double globe, it gives somewhat greater candle-power for the same amount of energy in directions a little below the horizontal, which directions are most effective for street lighting. The latest arcs, the flaming and magnetite, are referred to at length in another article in this issue. The electrodes are not composed of carbon, but, in the case of the magnetite, one is of copper and the other of various metallic salts, including magnetite. It seems unquestionable that the latter is a much more effective light, both as to actual brilliancy and in the number of candle-power, than the enclosed arc; but its general introduction is greatly retarded by the fact that its adoption in old plants requires a complete change in the whole installation. The most common practice with the older arcs is the use of a 6.6 or 7.5 ampere alternating circuit current, whereas the magnetite arc is generally used on a 4-ampere constant current direct-current circuit. The change to magnetite lamp therefore involves new transformers at the generator plant and expensive mercury vapor rectifying apparatus for changing alternating to direct current at the power station.

Another arc which is just beginning to bid for popular favor is the titanium carbide arc. This is more efficient than the magnetite, but the electrodes are more expensive, and, although it is adapted to operation on an alternating current circuit, existing alternating current standard transformers cannot be used, because these give a larger volume of current than is necessary for the titanium carbide arc.

It is safe to say in general that the efficiency of the illuminants now available is about double that of those used five years ago, with the same cost per lamp—that is, the same appropriation per mile can now secure double the illumination.

There are two general elements of street lighting, aside from the lamps to be used, which should receive more attention—in fact, which have not been sufficiently studied to make available the data needed for correct solution. One of these is the proportioning of illumination to the requirements of each street; the other is the location of the individual lamps. In designing a sewerage or water supply system, engineers carefully consider the population to be supplied or other factors going to determine the local demands upon the system, and regulate the sizes of mains accordingly. Something the same study should be made in designing a lighting system. To draw a partial parallel between this and a water distribution system, the use of light as an aid to policing the streets may be compared to the fire protection afforded by the water system; and the difficulty or importance of policing a given street should be recognized as an important factor in deciding upon the amount of illumination to be furnished. Streets frequented by a more or less unruly class or those where the temptations to robbery are greatest should be brightly lighted, even though the residents upon them do not ask or even wish this. In general, however, it may be said that probably the chief factor in deciding the amount of light should be the number of people using the street in question at night, such number occupying a similar place in this calculation to the population drawing upon the street mains in the case of water distribution system. The use of brilliant lighting on business streets, more than that necessary to permit safe and convenient use of the sidewalks and roadways, is largely a demand of merchants for advertising purposes and usually is and probably should be paid for by them.

In estimating upon the number or intensity of lights required, the point considered should not be that at the lamp, where the light is brightest, but rather the points midway between lamps, where there is the least illumination. Moreover, the fact that the eye is so constituted that the point fairly well illuminated may appear dark when one is facing a bright light or has just passed one should be borne in mind; and this calls for as uniform illumination as possible. The exact amount of minimum illumination necessary for streets of various degrees of importance, as well as the relation between this and the intensity of the lights employed, are subjects which have never received the study which they deserve. It is to be hoped that some of our wealthier cities will appropriate funds and employ experts for making a systematic study of this point, as has been done in the case of sewage and water purification, for instance.

In the matter of location of lights, there are three general classes of localities, each with its own problem. In the open park or square the illumination is desired equally on all sides of one or more points which may be established for the location of lights. On the business or other streets devoid of trees the space which it is desired to illuminate is bounded by the houses on two sides, but is unlimited lengthwise of the street. In streets provided with shade trees the problem becomes much more difficult because of the interference of these with the diffusion of the light. In general, it may be said that the first is especially favorable for the use of high-power lights; that, in the second, lights of medium high intensity can be employed to advantage, but in the case of the third the interference of trees necessitates the multiplication of centers of illumination and consequently lower intensities.

One thing which is not sufficiently realized is the fact that the modern brilliant lights should be placed much higher above the sidewalk than they usually are, this both because the greater altitude permits a wider distribution of the light and consequently more illuminating efficiency, at the same time increasing the uniformity of illumination, and also because in this way is avoided much of the glare in the eyes of those on the street level, which glare is not only unpleasant, but tends to make less effective to the observer the illumination

of the street which is actually secured. Modern arc lights should be not less than approximately 25 feet above the surface; abroad 30 to 35 feet is common practice. Even the incandescent gas lamps are usually placed too low, the temptation to economize by substituting them for the old open flame lamps on the same posts being largely responsible for the almost universal failure to give them the desired elevation.

For outlying streets probably the best location for the brightest lights is at the intersection of the roadway centers, where the illumination can be carried in all four directions; the brighter the light, the greater its height. Where the blocks are so long or the lights of such low candle-power that intermediate lamps are needed, these should ordinarily be of less intensity and placed lower, the presence of shade trees frequently making it desirable to use lamps of quite low candle-power placed along the curb and below the over-hanging branches. Under such conditions it will frequently, however, furnish better illumination, we believe, and be even more economical to provide separate lamps for roadway and sidewalk, suspending, say, one 60 to 100 candle-power tungsten lamp at considerable height in the center of the roadway midway of the block, and placing along the inside of each sidewalk as many low candle-power lamps as may be necessary for lighting it. Forty candle-power tungstens may be used where it is not desired to do much more than provide markers for the pathway; but 60 or 80 candle-power tungstens would give much better illumination at little increased cost.

STREET LIGHTING DURING 1910

Lighting by Private Enterprise—Decorative Lighting—
Arches, Lamp Clusters and Brilliant Arcs—Tung-
sten, Flaming Arc and Magnetite Lamps

By E. L. ELLIOT, Editor *The Illuminating Engineer*

THE movement for better public lighting which began some five or six years ago has steadily gained in impetus until it has become so widespread as to amount almost to a public fad.

Several factors have contributed to this general result. The marvelously impressive illuminations of the several world's fairs held in this country since 1893; the rapid growth and development of the electric sign; the large use made of illumination in decorations for carnivals and civic celebrations, and the commercial introduction of electric lamps of vastly greater candle-power and efficiency than the older forms have all contributed to the common result.

On the other hand, the time was ripe—even a little over-ripe perhaps—for a general reform in the matter of public lighting. America had undoubtedly fallen behind in this civic improvement as compared with European countries. Furthermore, exterior lighting had been neglected, as compared with interior lighting, in which America unquestionably leads the world.

Perhaps the most remarkable feature of the case is the extent to which the new public lighting has been installed and maintained by private enterprise. It seems that the public became convinced of its value so suddenly and so completely that it was too impatient of results to await the delays requisite to that degree of public education necessary to bring about the reform through the regular channels of politics and civic government. By far the larger part of all the installations of the new type that have been put in for the past five years owe their existence to the initiative of private citizens and civic organizations.

It is worthy of note in this respect that during the past year there have been several definite attempts to turn over lighting installations that had been put in and maintained by private contributions to the charge of the cities in which they are located. This is the logical outcome of the general movement; sooner or later it is inevitable that the public lighting installations that are now being maintained by private enterprise will become a public charge, the same as other civic improvements.

The difference between this and ordinary civic reforms is simply that private enterprise was willing to educate the public by actual object-lessons instead of waiting to persuade by argument alone. Decorative, or, as it is frequently called, "White Way," lighting accomplishes two definite purposes—it furnishes a better illumination, which facilitates trade and traffic, and it acts as a general advertisement for a city. Both of these purposes pertain to the city as a whole, and the expense involved is therefore properly chargeable to the public account.

Minneapolis was one of the first large cities to put in an extensive decorative street lighting system as the result of private subscriptions. The installation has been increased from year to year, and it is generally conceded that it has enhanced real estate values in the sections lighted to such an extent as to make it profitable for the city to take over its maintenance on the basis of increased taxation alone, and an effort has been recently made to have the city take such action, the private citizens who contributed the installation being willing to donate it to the city.

Philadelphia is the most conspicuous example of a large city that has remodeled its lighting along modern lines within the past two years, almost entirely at public expense. New York City, which contains the original "Great White Way" and more miles of fine, modern street lighting systems than perhaps any other city in the world, is seldom given any special consideration, probably because it is a matter of course in the metropolis, and has not been used as a means of publicity, for the reason that New York does not need to use any special means of general advertising, the fact that it is the social and financial capital of America being sufficient. But this argument applies to no other American city, and it is quite as legitimate for the city or town to advertise itself as it is for the individual or corporation.

What may be called the new public lighting has thus far been accomplished by three different methods—viz., arches or festoons of incandescent lamps over the streets; decorative lamp posts supporting clusters of tungsten lamps; and the new high-power arc lamps on decorative lamp posts placed along the curbs.

One of the first, if not the first, decorative lighting system in the country was of the first-mentioned type—the arch, or festoon—and was put up in Columbus, Ohio, as the result of a temporary illumination for a public celebration. In the first years of the new street lighting movement a number of installations of this kind were put in, but the method has very generally been discarded. It possesses several serious objections—the arches, or festoons, during the daytime cannot possibly be made decorative, and are usually positively ugly. In the evening the rows of light-sources give the street the appearance of being roofed over, thus creating the effect of a long, low-roofed building. While this arrangement of lights is satisfactory for street fairs and carnivals, it lacks the dignified effect which should characterize permanent municipal improvements. Very few installations of this kind have been put in during the year, and it is probable that the method will be entirely dropped in the near future.

The use of lamp posts or standards of a more or less ornate design, according to the funds available, supporting a cluster (usually five) of tungsten lamps, has been most favored during the past year. The tungsten lamp has proven very satisfactory in its performance as a street lighting unit, and its use in the manner described meets the demand for decorative effect very fully. As commonly designed, the posts are provided with four projecting arms at the top, each supporting a lamp in a globe of diffusing glass, with a single lamp in the center. In the smaller towns the posts are so wired that the four lamps may be switched off at midnight, or any hour desired, and the single central lamp left burning for the remainder of the night. The effect of an installation of these posts placed fairly close together along the curbs is satisfactory both by day and by night. By daylight they suggest a long colonnade, which is more or less impressive, according to the character of the standards, and in any case is an embellishment to the street. At night the lamps add greatly to the effect of perspective,

producing a vista that would be lost with the old methods of illumination; the numerous light-sources, furthermore, add greatly to the general decorative effect, lending an air of dignified festivity to the scene. It is a significant fact that every installation of this kind that has been put in thus far has led to the extension of the system, which is the surest proof of its intrinsic merit.

In considering the third system it may be of interest to state that at about the same time the new tungsten incandescent lamp made its appearance two new forms of arc lamps were also put upon the market. The first one to appear was the so-called "flaming arc," which was introduced from Germany. In this lamp the carbon electrodes used are charged with certain chemicals, which are volatilized in the arc, producing a vapor filled with suspended particles, both of which become intensely luminous. With the carbons generally provided the color of the light is a deep, golden yellow. Lamps of this type not only produce five or six times as much light for a given amount of current as the old form of carbon arc, but give individually a proportionately greater volume of light. Owing to their distinct color and enormous light-power, these lamps are conspicuous objects wherever they are placed. Their one shortcoming is the fact that they require frequent trimming, a single set of carbons lasting from 15 to 17 hours, which means daily attention if they are to be run all night, or trimming every other day at the furthest. This has been one condition that has tended to retard their use for street illumination in this country, where labor is expensive. There has been a greater tendency shown to consider this lamp for the past year than any time previous, and there are now several quite extensive installations. Newark, N. J.; Atlanta, Ga., and some smaller Western cities have such installations, the first two dating back more than a year, however. Where brilliant illumination of the pavement and surrounding objects is desired rather than a multitude of light-sources, the flaming arc stands at the head of all electric lamps.

The distinctly yellow color of the light of the flaming arc as generally used has met with some objection as giving too great a contrast with the carbon arc and the tungsten lamp, both of which are often in close proximity in private installations; and also as being too near to the lurid and spectacular. The use of carbons giving a nearly pure white light, which harmonizes perfectly with the tungsten lamp, is consequently coming into favor. Trial installations of this kind have been put up in the two open squares at the termini of the White Way section of Broadway and are eminently satisfactory. Copley Square, Boston, is another example of flaming arc illumination which demonstrates the special adaptability of this type of lamp to the lighting of large open spaces. Efforts are being made to obviate the one fault of the short life of the carbons of the flaming arc, with much promise of success; and if this can be accomplished the flaming arc will rapidly forge ahead as a luminaut for wide streets and open squares. Even with its present handicap, it can successfully compete with all other light-sources for this class of lighting.

The latest of the new electric lamps, the so-called "luminous arc," or magnetite lamp, has made rapid strides in public use during the past year. In this lamp the electrodes are of two different substances—the positive, which is the source of light, consisting of an iron tube filled with magnetite (black oxide of iron); the negative being a simple copper rod. In efficiency of light production the luminous arc stands about midway between the carbon arc and the flaming arc. It has the advantage, however, of being of the long-burning type, and this has done much to bring it into favor with the lighting companies. This is partly offset by the fact that it can be used only on direct-current circuits, which necessitates certain additional expenses in transmission. The luminous arc has one very serious fault, from the illuminating engineering, or, perhaps we would better say, the hygienic standpoint; it is the most intensely glaring of all commercial light-sources. The light is a cold, blue-white color and contains a large amount of violet and ultra-violet rays, which are the most trying of all radiations to the eyes. The ultra-violet—invisible—rays are largely filtered out by the

glass globe with which the lamps are provided; but it is a remarkable fact, in view of the known danger of glare of any kind, and especially from light of this quality, that in most installations of this type of lamp clear globes are used. As a result, what otherwise might be a brilliant but soft white illumination is only a blinding glare of intolerably dazzling lights. Without the use of a heavily frosted or fairly dense opal globe the luminous arc lamp is unfit for use as an illuminant. Toledo, St. Louis, Baltimore and Syracuse are among the cities having large installations of luminous arcs.

One of the curious aspects of the movement for better public lighting in this country is the complete monopoly of the field by the electric light; gas has been entirely sidetracked. This is the more curious from the fact that the most brilliant public lighting in the world is produced by gas—in Berlin, Germany; and gas fully holds its own for this purpose throughout Europe. Notwithstanding the revolutionary improvements in electric lamps, the modern gas lamp—which also represents some substantial if not so spectacular improvements—still has a decided lead over its electrical competitors in point of economy of cost, while in quality of illumination it has never had a superior. The explanation of this fact may probably be found

in certain commercial conditions which prevail in America and also to the lack of enterprise on the part of the gas companies, who have let the case go by default. While there are some signs that gas may make a showing in this field in the future, it is not likely to regain any large portion of the ground already surrendered. Those who are looking over the various available light-sources for decorative public lighting should not leave gas out of the list, however, for it is not out of the race by reason of its own limitations.

While we have spoken only of the progress of decorative, or spectacular, lighting, it must not be inferred that the less conspicuous but equally important field of general street lighting has been neglected during the year. It is inevitable that the public interest aroused by special installations should result in general improvements; and such has been the case. One notable innovation is the extension of street lighting to interurban country roads. A beginning has been made in this direction, and where the ending will be it were rash to prophesy.

In conclusion, it may be said that the movement for better public lighting has shown steady progress during the year just past, and that the year to come is sure to witness a continuation of this very desirable improvement.

PAVING STREETS AND ROADS

Materials in Common Use, and Where Each Is Most Effective—Improvements in Construction Details—
Bituminous Binders for Broken Stone Roads—Experience Not yet Crystallized—Importance of Aggregate

CONSIDERABLE progress has been made during the past few months in certain details of several of the older pavements; also a better understanding of the conditions under which each of these is most applicable and serviceable. In general it may be said that for very heavy hauling there is no substitute for granite block pavements. For ordinary heavy hauling, sandstone block, the best construction of brick, wood block and concrete are particularly fitted. For medium heavy traffic, sheet asphalt and asphalt block, brick (which may be given a lighter construction than when used for the heaviest traffic), wood block, or bitulithic are generally selected; wood block where noiselessness is an important consideration. Granite, sandstone and concrete can be used satisfactorily on any ordinary city grades; brick also can be so used, especially if beveled edges or depressed joints be used on the steeper grades. Wood block and asphalt, since they both present a very smooth surface without joint depressions, are apt to give trouble on grades of over 3 to 5 per cent. Asphalt block is in some cases used as being less slippery than sheet asphalt; and bitulithic is generally even less slippery than asphalt block.

For light traffic city streets and suburban roads, brick and bitulithic are used where a fairly expensive construction is warranted by the amount of traffic; but in the majority of cases broken stone is used, generally combined with a bituminous binder in the form of so-called bituminous macadam or bituminous concrete in the more recent construction. For ordinary country roads bituminous macadam is now being commonly used, the bitumen being either mixed with the aggregate or applied upon the surface, or as the cheapest improvement, either bituminous or hygroscopic dust layers are applied to ordinary broken stone roads.

In the matter of details of construction, there are certain improvements in practice which have been adopted more or less generally during the past few months. In the case of granite block pavement, the best pavements are now being laid with blocks squared much more truly than heretofore and laid with comparatively close joints, the same being filled flush with the pavement with Portland cement grout. These pavements are much smoother and less noisy than the old rough granite block pavements, and probably will prove more durable also.

In the laying of other block pavements, whether of stone, brick, wood or asphalt, it is doubtful whether any conditions warrant the use of sand for filling the joints, but Portland cement or bituminous filler should be used in all cases. The only possible exceptions would be where the paving is confessedly laid as a temporary one with the idea of replacing it within a year or two.

It is the function of all these materials to take the wear and the blows and transmit the pressure of traffic to the foundation, but not themselves to carry the loads. Consequently, unless the soil is a solid, compact one which has never been disturbed or, if disturbed, has been thoroughly settled, a concrete foundation should be used; and this is also necessary where excavations for house connections or other trenches are to be dug and pavement replaced over them. In streets where there is little of such excavating, and where the soil is fairly firm, however, pavements of brick or stone blocks laid without a concrete foundation have given good satisfaction, especially if the soil be compacted by the addition of more or less gravel and a thorough rolling with a heavy steam roller; or, better still, if a foundation of macadam be laid.

Brick street construction has practically been reduced to standard uniform methods, but effort is being made to improve the methods of testing the brick themselves, and it is hoped that during the coming year a much more satisfactory rattler test will have been settled upon.

The construction of sheet asphalt pavements some years ago reached the point where a general standard was universally adopted. However, during the past few years artificial asphalts, or those obtained by distillation from asphaltic oils, have come into quite general use and modifications of the mixtures employed have necessarily been adapted to the different forms and grades of such artificial asphalts.

Wood block paving has been increasing in popularity during the past year more than ever before, and there are many more firms competing for the business. As has been the case from the first, southern yellow pine is the most popular wood (originally long leaf yellow pine was demanded, but there is little of this now available and, moreover, it is generally believed that the short leaf gives practically as good service). Certain other

woods have appeared as competitors with yellow pine, however, for paving blocks, the most promising of these in the north being tamarack. None of these, however, has stood the test of sufficient time to demonstrate its worth. In the matter of the preservative to be used for wood blocks there is a radical disagreement and animated dispute among experts and manufacturers, the principal points of difference being as to the desirability of permitting the use of any creosote except that derived from pure coal tar, and the specific gravity which should be demanded, whether this should be slightly below or slightly above 1.10. It is claimed by certain manufacturers (and denied by others) that the creosote preservative required by certain of the more recent specifications is a monopoly in this country and can be obtained from only one firm, if indeed it is obtainable at all.

While these details leading to more perfect use and adaptation of old paving materials are of great importance, the greatest amount of attention in the paving field has recently been devoted to the use of bituminous substances as binders and dust layers in connection with broken stone roads. The entire matter is still in the experimental stage, although this does not mean that there is any doubt as to the possibility of securing excellent results under proper manipulation. The questions which have not been satisfactorily settled are the proper principles of selection and manipulation of materials under varying conditions and requirements. In many cases bituminous treatment has given the best of satisfaction, in many others it has proved almost a total failure. It would seem that the determining factors must lie in the nature of the bitumen, the nature of the aggregate and the manner in which the two are combined. So far, each one of these has entered into the problem in different localities affected by so many varying conditions that no satisfactory solution has yet been reached. Little attention has been paid to the question of the aggregate, and it is possible that a more painstaking study of this may offer considerable help toward the solution. It cannot be said as yet, however, that there is any general unanimity of opinion as to the desirable characteristics of the bituminous binder to be used under any of the various conditions, nor as to the methods and proportions of applying this to or combining it with the aggregate. The United States Department of Agriculture, departments and bureaus of several of the States, together with many county and town highway departments, the engineers connected with companies making a business of road construction, chemical engineers and others are all working on the problem with more or less intelligence and with comparison of results among themselves, and it is hoped that the next year or two will see something like definite agreement on most points in place of the more or less chaotic conflict of opinions which appears to exist at present.

PRIVATE STREET LIGHTING UNSATISFACTORY

Girard, Kans., with a population of 2,800, for more than a year lighted its streets with 34 arc lights and numerous private lights on porches, in yards or over the sidewalks, the current for the latter being furnished by a municipal plant. There were still too many dark spots, however, and the cost of supplying current for the private lamps was disproportionately great, partly because these lamps were consuming current during several hours each day before dark and after dawn. The city is being conducted under the commission form of government, with a mayor and two commissioners, and owns and operates its own water and light plants. The commissioner of public utilities is now endeavoring to increase both the effectiveness and the economy of street illumination by discontinuing the private lights, and installing in place of them 100-watt tungsten street series lights, one at each street intersection. These lamps cost less than \$5 each and are operated on the arc light circuits. The cost in current consumption is approximately one fifth of that required for the arc lamps, while it gives a more satisfactory light. We are indebted to city clerk Fred A. Gerken for this information, which indicates commendably intelligent enterprise for so small a city.

OHIO EXPERIMENTAL ROAD TESTS

Results on Columbus Experimental Road—Seventeen Materials and Methods Tested—Condition After a Year—Additional Experiments

The Highway Department of Ohio, of which Mr. James C. Wonders is Commissioner, has recently issued a bulletin describing the appearance early in the fall of this year of the several sections of an experimental road which was constructed by the department on Nelson avenue, Columbus. This is one of a number of experimental roads which have been built in various sections of the country, and several of which have been described in this journal. If properly conducted there should be much valuable information obtainable from such experimental roads, and their construction in various sections of the country is by no means unnecessary duplication of efforts, since methods or materials probably will not all act in the same way in different sections of the country where climate, traffic and even the mineral substances available for road metal may all differ.

So far the public have been informed concerning the construction of several of these, but little information has yet been available concerning the results obtained. This report is an excellent one not only because of the definiteness with which the condition is described, but also because of the excellent illustrations accompanying the same, being reproductions of photographs taken of the road material itself and not, as is the case with most photographs of roadway improvements, a picture of the scenery and surroundings of the road with little to indicate the condition of the surface itself unless this may be unusually uneven. The report contains photographs of each of the seventeen kinds of treatment, of which we produce the nine of which the photographs were the clearest, together with the report in full, which is as follows:

THE experimental road on Nelson avenue was constructed during the summer of 1909, and was described in Bulletin No. 12 of the State Highway Department. The real value of this work will be found in the information that may be obtained as to the wearing qualities of the different methods of construction that entered into it. At the end of a year's service most of the sections are in good condition, and in order that we may clearly present this condition to the reader, photographs have been made of typical parts of the surface of each section. These photographs were made by placing the camera vertically over the surface and at a height of about three feet. It is believed that a better idea can be obtained from these pictures than it will be possible to present by written words. There was but little dust on any of the sections, but before making the photographs the surface was swept clean so as to clearly show the arrangement of the stones in the surface of the road and the manner in which the binder is holding them. A six-inch scale is shown on the plates.

A description of the present condition of these sections follows:

EXPERIMENT NO. 1—GLUTRIN

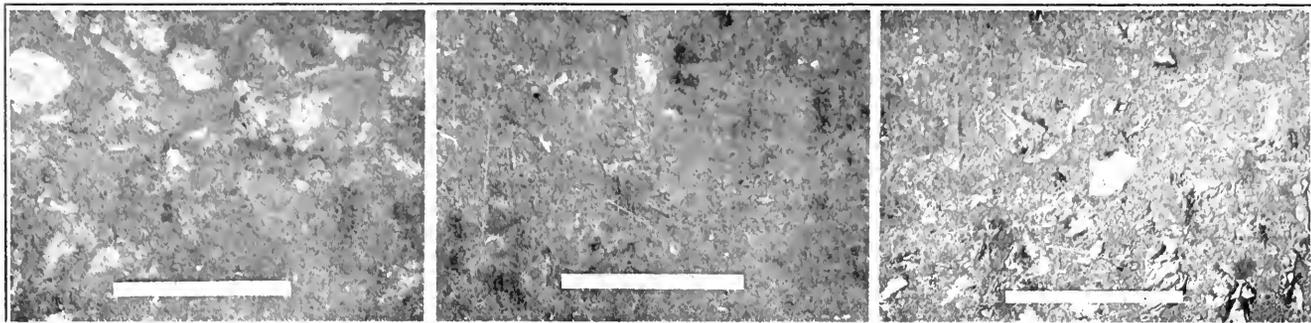

Except for a brownish discoloration, this work has the appearance of water-bound macadam. Undoubtedly the application of Glutrin hardened the surface at the time it was applied, but by the end of the winter this condition had disappeared. Good results could doubtless be obtained by the application of this material each year.

EXPERIMENT NO. 2—STANDARD ASPHALT BINDER

This section is in good condition. The asphalt has exuded to the extent that it covers about one-half of the surface and shows plainly the marks of the horses' shoes.

EXPERIMENT NO. 3—PIONEER ASPHALT

In this section all of the pieces of stone are perfectly bound. No excess of binder is in evidence, the surface is smooth, and its whole condition is excellent.

EXPERIMENT 1—GLUTRIN

EXPERIMENT 2—STANDARD MACADAM ASPHALT BINDER

EXPERIMENT 5—TARVIA B

EXPERIMENT NO. 4—TARVIA "X"

The stones are all well bound in this section, and no excess of tar appears on the surface.

EXPERIMENT NO. 5—TARVIA "B"

This was the only bituminous surface treatment applied, and the result far surpassed our expectations. A thin coat of tar remains over the surface of the road. Its appearance is fine and it has been more nearly dustless than any of the other tar or asphalt-treated sections.

EXPERIMENT NO. 6—LIQUID ASPHALT

On this section the stone forms the wearing surface, but it is all firmly bound in place. Its condition is very similar to that of Experiment No. 3.

lar to that of a sheet asphalt pavement on an extremely warm day. The part thus covered is dustless and provides an ideal road surface.

EXPERIMENT NO. 10—WADSWORTH MACADAM

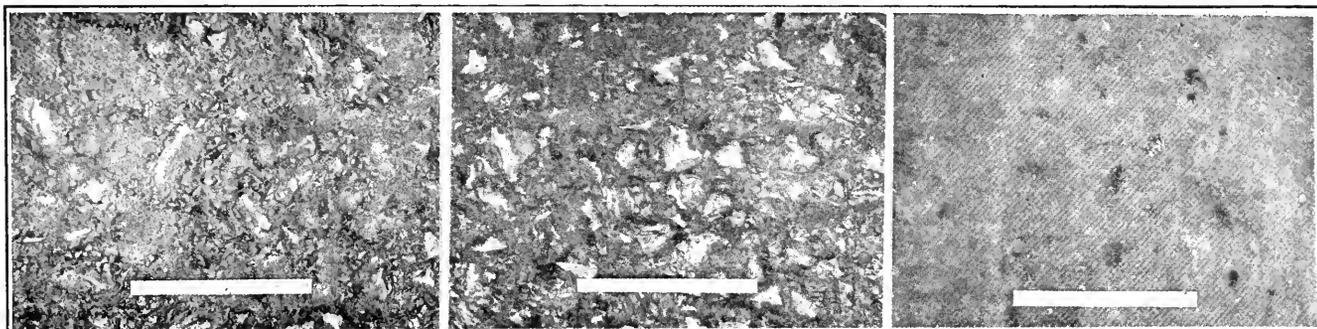

This section is surfaced with Kentucky Rock Asphalt, and at the present time is in as fine a condition as the best sheet asphalt pavement, and it is in better condition than when first constructed.

EXPERIMENT NO. 11—CARBO VIA

This section is in good condition, in appearance being very similar to Experiment No. 4.

EXPERIMENT NO. 12—CONCRETE MACADAM

This section has the appearance of a water-bound macadam,

EXPERIMENT 6—LIQUID ASPHALT

EXPERIMENT 9—ASPHALTOLENE

EXPERIMENT 10—WADSWORTH MACADAM

EXPERIMENT NO. 7—UGITE

In the construction of this section the binder was applied on part of the work in one coat and on the remainder in two coats, but at the present time no difference in its condition can be observed. The stone now furnishes the wearing surface; each piece is firmly bound and the condition of the section is very satisfactory.

EXPERIMENT NO. 8—FAIRFIELD ASPHALTIC CEMENT

This section is in perfect condition, with the surface very similar to that of Experiment No. 3.

EXPERIMENT NO. 9—ASPHALTOLENE

About one-half of the surface of this section is covered with the binder, and on the remaining part the stone furnishes the wearing surface. Where the binder covers the surface of the road, the imprints of the horses' shoes show in a manner simi-

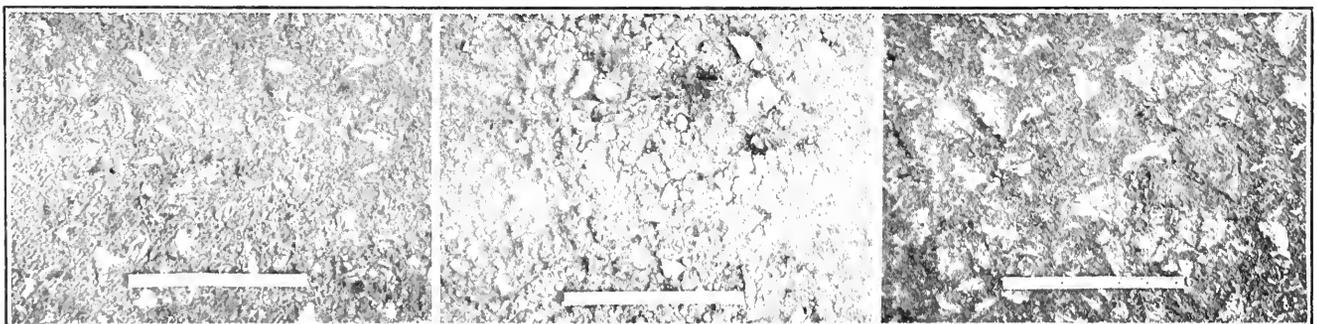

and the addition of the cement to the binder has not produced any apparent benefit.

EXPERIMENT NO. 13—TAROID

The traveled surface of this section is in excellent condition. There seems to have been an excess of tar used as it has been bleeding at the sides until the surface of the ground is covered to a width of about two feet.

EXPERIMENT NO. 14—PETROLITHIC PAVEMENT

With the beginning of the warm weather this summer, the asphalt exuded on the surface of this section to such an extent that vehicles avoided it, traveling in the ditches on both sides of the road. Its condition became so objectionable and so many complaints were received that we were obliged to have it repaired. It was accordingly covered to a depth of about two inches with screened gravel ranging in size from

EXPERIMENT 13—TAROID

EXPERIMENT 14—PETROLITHIC

EXPERIMENT 17—WATER-BOUND MACADAM

one-eighth of an inch to one inch, which was well rolled with a ten-ton macadam roller. The cost of this repair, exclusive of the rolling, was \$50.15.

At the present time the road is rutted by the vehicles that pass over it. Outside of the line of ruts the gravel still covers the surface.

EXPERIMENT NO. 15—LIMESTONE CONCRETE

A few places at the joining of different days' work in this section are beginning to show the effects of wear. About one-half of the section is in a very good condition, and it indicates that a satisfactory road could be produced by the methods used in its construction.

EXPERIMENT NO. 16—GRAVEL CONCRETE

This section is in good condition and shows but very little signs of wear. The surface is sufficiently rough to afford a good footing for horses.

The transverse cracks that developed last winter do not up to this time show any greater wear than the other parts of the road, the cracks showing only as lines across the surface. This section is dustless, and it is one of the most interesting of these experiments.

EXPERIMENT NO. 17—WATER-BOUND MACADAM

The automobile travel has removed all of the binder that was left on the surface of this section. The larger stones in the macadam provide the wearing surface. They are all perfectly bound and the condition of the road is satisfactory.

In order to provide a record of the wear on the different sections, levels were taken over the road soon after the completion of the work. The points at which the levels were taken were carefully located so that it is possible to ascertain the amount of wear by releveling at any time. Readings were taken on the center line, and at four feet and eight feet, both east and west of centers, at five stations on each section, making a total of twenty-five readings on each section of four hundred feet.

The work was relevelled in September of this year, and the result shows approximately a year's wear. The wear is shown in hundredths of a foot in the annexed table, and the amounts are the average at five points in each section.

Table Showing Wear on the Nelson Avenue Experimental Road One Year After Its Construction

Section.	8 ft. east.	4 ft. east.	Center line.	4 ft. west.	8 ft. west.
1. Glutrin	.07 ft.	.07 ft.	.00 ft.	.00 ft.	.00 ft.
2. Standard asphalt	.02 ft.	.06 ft.	.06 ft.	.08 ft.	.09 ft.
3. Pioneer asphalt	.07 ft.	.07 ft.	.05 ft.	.03 ft.	.03 ft.
4. Tarvia "X"	.02 ft.	.04 ft.	.04 ft.	.05 ft.	.03 ft.
5. Tarvia "B"	.08 ft.	.04 ft.	.03 ft.	.00 ft.	.00 ft.
6. Indian asphalt	.01 ft.	.03 ft.	.01 ft.	.03 ft.	.02 ft.
7. Ugite	.04 ft.	.05 ft.	.05 ft.	.03 ft.	.05 ft.
8. Fairfield asphalt	.04 ft.	.04 ft.	.04 ft.	.05 ft.	.00 ft.
9. Asphaltolene	.05 ft.	.04 ft.	.04 ft.	.05 ft.	.03 ft.
10. Rock asphalt	.00 ft.	.00 ft.	.02 ft.	.03 ft.	.04 ft.
11. Carbo-Via	.03 ft.	.09 ft.	.07 ft.	.08 ft.	.07 ft.
12. Concrete Macadam	.04 ft.	.05 ft.	.05 ft.	.01 ft.	.00 ft.
13. Taroid	.02 ft.	.01 ft.	.03 ft.	.00 ft.	.00 ft.
14. Petrolithic	.03 ft.	.01 ft.	.06 ft.	.00 ft.	.00 ft.
15. Limestone Concrete	.04 ft.	.06 ft.	.02 ft.	.00 ft.	.00 ft.
16. Gravel Concrete	.00 ft.	.00 ft.	.00 ft.	.00 ft.	.01 ft.
17. Water-bound Macadam	.01 ft.	.03 ft.	.03 ft.	.01 ft.	.01 ft.

A census of the travel was also taken from July 31 to August 13, 1910, and the results are recorded in the table at the foot of this page.

DARKE COUNTY EXPERIMENTAL ROAD

The department has this year constructed another experimental road in which it has experimented with tar and asphalt in binding the gravel of Darke County, taking for this purpose a section of road opposite the fair grounds at Greenville. This work was begun on July 20 and continued up to August 13 of

the present year. Nine hundred gallons of tarvia X and the same amount of Indian Refining Company's asphalt were used in the work. The only roller available was one weighing fifteen tons, without water or coal, belonging to the city of Greenville. A ten-ton roller would, it was believed, have given better results, but none was available. The surface treated was uniformly 16 feet wide. There was a good bed of gravel on the old road and this was prepared for receiving the top course by spiking up the surface with the steam roller and harrowing and grading to bring it to the proper cross section, after which it was thoroughly rolled and watered.

Six hundred feet of road was treated in six sections, these varying in length from 72 to 130 feet. The tarvia was applied at a temperature of 340 deg. to 400 deg. Fahr. and the asphalt at from 400 deg. to 450 deg.

In the first section three inches of washed gravel was spread and rolled, and then about 1½ gallons per square yard of tarvia X was applied. This was then covered with about one inch of ½-inch to 1-inch gravel, which was allowed to stand over night and then rolled until buckling commenced. Three-fourths of a gallon of tarvia per square yard was then poured over the surface and a ½-inch layer of ⅛ to ½-inch gravel was applied, and after standing over night this was rolled for one and one-half hours. Whenever tarvia was found to be "bleeding" in spots sufficient gravel was applied to these to take up the tar.

In the second section the first two courses were prepared as in the first section, except that on top of the second course about one-half of the section was covered with one gallon per square yard of equal parts of tarvia and unrefined coal tar mixed, and the other half with three-quarters of a gallon per square yard of asphalt binder. The former was covered with ¾ inch of ⅛ to ½-inch gravel and the latter with ½ inch of boulder chips. This was rolled the next morning as in section one.

The third section had a bottom course similar to the first section, except that 1¾ gallons of tarvia X per square yard was used in place of 1½ gallons. This was covered with ¾ inch of ⅛ to ¾-inch gravel and rolled the next morning and then covered with ¾ gallon per square yard of tarvia X and this covered ¾ inch with ⅛ to ½-inch gravel, which was rolled for two hours.

The fourth section had a bottom course of 4½ inches of 1 to 2-inch gravel with 30 per cent of broken boulders. This was poured with 2½ gallons of asphalt binder covered with 1½ inches of ½ to 1½-inch gravel and rolled the next morning for half an hour. It was then poured with ¾ gallon of asphalt binder and the north one-half was covered with ⅛-inch to ½-inch gravel and the southern half with ¼ to 1-inch boulder chips. This was rolled the next morning for about one-half hour.

The fifth section had a bottom course of 1-inch to 2-inch crushed boulders spread four inches thick and partly filled with a clay filler, the filling being completed with limestone dust rolled in with the steam roller until all voids were completely filled. This bottom course was then thoroughly watered and rolled until a grout appeared on the surface. Next day it was again watered and rolled thoroughly, sand being added during the rolling.

The sixth section consisted of one course four inches deep composed of 1-inch to 2-inch watered gravel to which 30 per cent of crushed boulders had been added. The filling, watering and rolling were similar to that of the fifth section.

In the case of the first four sections the rolling was con-

Table Showing the Daily Travel on Nelson Avenue Experimental Road from July 31 to August 13, 1910, Between the Hours of 7 A. M. and 8 P. M.

Days	31	1	2	3	4	5	6	7	8	9	10	11	12	13	Total

tinued in each case until buckling commenced. In addition to the rolling mentioned, the roller was run over the completed work each day until the last section was finished. One month after completion all of the road was in perfect condition except two or three small spots which had raveled in the part where unrefined tar had been mixed with the tarvia.

The total cost of the experimental road work was \$669.70. The gravel was furnished by the Greenville Gravel Company free of charge on board cars at their plant. The roller was hired from the city. The Indian Refining Company made no charge for the asphalt furnished by it.

CITY AS A BUSINESS PROPOSITION

Assessment of Percentage of "Unearned Increments" in Land Values Proposed—Dividends Instead of Taxes—American and European Examples

UNDER the title "Conservation in Municipalities," Hon Wm. Dudley Foulke, in a paper before the 1910 convention of the National Municipal League, presented arguments in favor of a city's profiting by the appreciation in value of the land within its boundaries due to its own growth. The justice of this and method of carrying out the idea he illustrated as follows:

If my own city of Richmond, Ind., were not built the land on which it rests might be worth, for farm purposes, \$100 or \$150 an acre. Practically the whole present value of the land is conferred by the city, and if the city merely charged rent or interest upon the value it conferred it could collect more than our entire taxes and could give a considerable dividend, not only to land holders, but to those citizens who owned no land at all. All a city needs to do, if it starts out right, is to assess a proper percentage upon the unearned increment of the land it occupies. Now, what is that unearned increment? If I own a cheap lot in a remote suburb and do nothing with it, but the city expands in that direction and people build all around me, this adds to its value many times. I have done nothing myself to make it worth any more, but the people who come and build around me have done it all. Yet I get the increased value which I have not earned, and the city whose growth gave the value gets nothing except a trifling tax from year to year. The city ought to have that increase and make me pay rent upon it, instead of taxing other things which I earn myself. In other words, if the city taxes what the city gives at its proper value there need be no taxes imposed on what it does not give—upon the product of industry, such as buildings, improvements and personal property.

I learned upon investigation that a city actually exists in this country where there are no taxes, and where all charges for necessary expenses are met in this manner. That is the city of Fairhope, on Mobile Bay.

A few emigrants from Iowa settled there on a sandy beach. As others joined them they formed a corporation and they adopted the initiative and the referendum. The land was owned by the city as a whole, and leased to the citizens. When one of these paid into the treasury the annual ground rent for his leasehold and the cost of installing a telephone there were no further taxes. After a decade and a half that city is said to be prospering under this system. There are free schools, a water system without rates, a public dock, a free library and a telephone service with no charges, all established out of the ground rent after paying state and county taxes and the cost of administration and improvements.

But our experience in this country is very meager compared with that of Europe. Orson, a town in Sweden, imposes no taxes. Moreover, the local railway is free to every citizen, and there is no charge for telephone service, schools, libraries and the like. This state of affairs is due to the wisdom of a former generation that planted trees on all available ground. During the last thirty years the town authorities have sold young trees and timber to pay the city's expenses, and judicious replantings have provided for a similar income in the future.

An article by R. Ockel, in the *Westminster Review*, states that in Germany no fewer than 1,500 towns and villages own so much common land that their inhabitants pay neither rates nor taxes, and 500 of these have so great a rental from their lands that they can pay each citizen on New Year's day a bonus of from \$25 to \$100. Much of this income is derived from communal forest land. In Forbach, for instance, the communal church was built with a forest nursery and is supported by a forest estate producing an income of \$15,000 to \$20,000 annually. In these European municipalities the trees are

not cut faster than they are replaced by the growth of new timber, yet even thus the forest of the Swiss city of Zurich yields an annual income of \$12 an acre.

In general, a city without taxation can exist only where the municipality owns a considerable portion of its land and takes advantage of increased values. The city must be "caught young" to make such a result possible. Our American cities have not been caught young enough for that, but is there therefore nothing we can do to approximate such a consummation? If we cannot eliminate taxes can we not lessen them by the profitable investment and management of what the city yet owns or can acquire? It owns its streets, and these, under proper management, ought to be constantly increasing sources of revenue. The right to use these streets for telegraphs, for telephones, for heating and lighting purposes, for water mains, for street car tracks, in short, for any profitable purpose, ought to be carefully guarded and the utmost possible secured by franchise from any person or corporation who uses them. In the past we have always been so eager to get the new system, gas, electricity, tramway or whatever it might be, that we have granted franchises with little regard to the future growth in the value of our streets. This must now cease. There is just as much unearned increment in a system of street car tracks, of water mains or gas pipes as there is in a city lot. Each year its value increases with the growth of the city, the increase of patrons and the establishment of new connections. The franchise which ties up for a long period this use of the streets for a fixed sum is pretty certain to be one from which the city in the lapse of years is bound to lose. The term of a franchise ought therefore not to be too long, and the price demanded ought to be graduated so as to increase with the increasing value of the thing granted. The immediate result may seem unimportant, but it will not be long before the city begins to enjoy the providence which thus insures the participation of the public in the increased values that the city itself confers. If we cannot catch our cities very young let us catch them before they grow any older than they are. Many of the most important franchises are still to be granted and should be guarded in accordance with the best models, not only of our own country, but of cities abroad, where they do these things much better than we do them in America.

A side light on the effect of population in increasing land values, and on the value of a life to the city, is shown by some remarks recently made by Mr. Frederic C. Howe, member of the Cleveland, O., Board of Assessors. He stated:

We found that in ten years' time land values increased \$177,000,000, and that the population in the same time increased by 172,000. That is, that for every man, woman and child who came into the city during that period \$1,000 was added to the value of the land. That is a fact of substantial value to the single taxer. We confirmed the estimate which has been frequently made that land values not only respond to population, but respond in a definite and discoverable ratio.

CITIES HAVING COMMISSION GOVERNMENT

We are continually receiving letters asking for the names of cities which have adopted the commission form of government, and offer the following list on the authority of the Short Ballot Organization. If there are any omissions we would be glad to be informed of them.

Alabama: Birmingham. *California:* Berkeley, Modesto, Riverside. *Colorado:* Colorado Springs, Grand Junction. *Idaho:* Boise, Lewiston. *Iowa:* Burlington, Cedar Rapids, Des Moines, Fort Dodge, Keokuk, Marshalltown, Sioux City. *Kansas:* Abilene, Anthony, Coffeyville, Cherryvale, Caldwell, Emporia, Girard, Hutchinson, Independence, Iola, Kansas City, Leavenworth, Marion, Newton, Neodesha, Parsons, Pittsburg, Topeka, Wichita, Wellington. *Louisiana:* Shreveport. *Massachusetts:* Gloucester, Haverhill, Lynn, Taunton. *Michigan:* Port Huron. *Minnesota:* Mankato. *Mississippi:* Hattiesburg. *Missouri:* St. Joseph. *New Mexico:* Roswell. *North Carolina:* Charlotte. *North Dakota:* Bismarck, Mandan, Minot. *Oklahoma:* Ardmore, Bartlesville, Duncan, Enid, Miami, McAlester, Muskogee, Sapulpa, Tulsa, Wagoner. *South Carolina:* Columbia. *South Dakota:* Dell Rapids, Huron, Pierre, Rapid City, Sioux Falls, Vermilion, Yankton. *Tennessee:* Bristol, Clarksville, Etowah, Memphis, Richard City. *Texas:* Austin, Beaumont, Corpus Christi, Dallas, Denison, El Paso, Fort Worth, Galveston, Greenville, Houston, Kenedy, Lyford, Marshall, Marble Falls, Palestine, Port Lavaca, Sherman, San Antonio, Waco. *Washington:* Tacoma (modified). *West Virginia:* Bluefield, Huntington. *Wisconsin:* Eau Claire.

General Review and Outlook

A LARGE part of this issue is devoted to a general statement of the present condition of knowledge and practice in connection with the more important municipal utilities and functions. This, it appeared to us, would be more useful—especially to the new officials, whom in particular we had in mind—than a mere review of what had been done along each line during the year. In each case an effort has been made to explain what the most recent experiences have demonstrated can be done, and how.

In every branch of municipal construction, invention and

enterprise are more active than ever before. City officials are continually having urged upon them new methods and devices, many of them untried, and are at a loss how to choose. The only safe way is to obtain the decision of an unprejudiced expert. But it is believed that the synopses here presented will indicate what practices are unquestionably safe and what dangerous to adopt.

Our Aims and Purposes

As this issue comes out at a time when a great many municipal officials are for the first time entering upon their new honors and duties, it seems timely for us to give for their information a statement regarding the purposes and aims of the MUNICIPAL JOURNAL AND ENGINEER.

We endeavor to keep this the standard periodical for officials of cities and water works and other corporations conducting public utilities; also for contractors engaged in constructing such work. We publish practical information of all kinds which will be useful to all of these in their official or business capacities, the news of municipal doings, and nothing else.

The subjects covered include water supply, sewerage, street and road paving, cleaning and lighting, refuse disposal, public health and sanitation, police and fire protection, and others. While occasionally an article is published dealing in a technical way with new ideas in engineering science as applied to municipal improvements, in the main the reading matter is expressed in plain terms which are easily understood by mayors, councilmen, chairmen of committees and all others who are interested in municipal improvements.

The contents consist each week of illustrated descriptive articles giving useful information concerning the subjects named above; of current news regarding the various municipal doings of cities throughout the country; recent legal decisions; news of bids to be received and of contracts awarded; brief descriptions of appliances used in municipal work and of patents recently granted for such; news of civic and technical societies, and discussions between readers upon subjects of general interest. Once a month a carefully prepared index is published, giving information concerning every article dealing with municipal topics which appeared during the previous month in all American periodicals of any importance and many foreign ones, for the purpose that our readers may be kept informed of all current municipal literature.

We realize that if the publication is to serve its readers in the best manner it is necessary that information be obtained from those who are actually doing things, and contributions are urgently solicited from such and gladly paid for. We desire this paper to be used as a medium of communication between all earnest men engaged in this field. It is not necessary that a contributor be a literary genius. *Facts* indicating how any problem connected with public necessities has been worked out are what are wanted. Just as you have profited by the experience of others, it is your duty to make public such information as you possess which will help your fellow workers to overcome similar difficulties.

Discussions of important subjects are requested, whatever the views expressed. While the editor has opinions of his own on most municipal subjects, and occasionally expresses them editorially, he does not allow them in any way to influence him in the acceptance for publication of discussions or opinions sent in by correspondents. In fact, we desire to receive and publish opinions differing from those expressed by ourselves in order that our readers may have both sides of all questions presented to them.

We endeavor to furnish in these columns such information as our readers want. But it is impossible for us to anticipate the wants of all, and to meet individual needs this office acts as a Bureau of Municipal Information. When, for instance, an important subject is under consideration in any city and special information is desired regarding it, an inquiry addressed to the editor will be cheerfully and promptly answered. All subscribers are invited to make free use of this Bureau.

SANITATION AT LEBANON

The city of Lebanon, Pa., is located over a limestone foundation which, like the surface strata of most limestone, is filled with crevices of greater or less width and depth. This formation underlies a considerable part of northeastern Pennsylvania, and the practice throughout this section, as well as in Lebanon, has been to dispose of the waste water from houses by excavating cesspools down to the rock at points where such crevices existed. The waste water poured into the cesspool then passed down into the crevice and disappeared so far as this property owner was concerned.

Recently Lebanon has found, as have other cities which have followed the same practice, that the capacity of the rock for receiving the suspended matters in this waste water has its limits, and in a great many cases these crevices have refused to receive any more house wastes and it has been necessary to empty the cesspools by hand from above. In speaking of this, City Engineer T. R. Crowell says: "For the last thirty-eight years we have been pouring into the ground an average of something over one million gallons a day. Now crude sewage is coming to the surface." This condition of affairs is to be remedied and the city expects to award a contract next Spring for sewerage about one-fourth of the city.

This method of disposing of sewage is not unique or peculiar to that section of Pennsylvania. There are at least two cities in the country—possibly more—which have constructed a system of sewers for removing the household wastes from practically the entire city which discharges them into a crevice in the limestone rock. In at least one of these the crevice is becoming choked and another sewer outlet must be found.

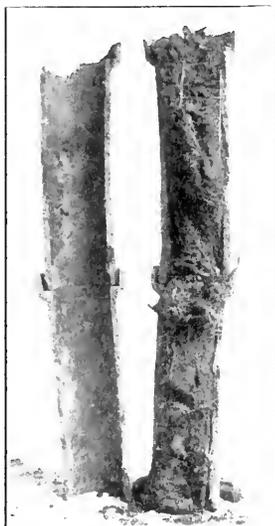

The limestone deposits also are utilized for the disposal of garbage in Lebanon, the garbage being as a rule collected by private arrangement with individual collectors who dispose of it sometimes in hollows formed by these limestone crevices, but perhaps more often in abandoned stone quarries. An effort is made to avoid a nuisance by covering these deposits with layers of earth.

The voters at the last election gave a handsome majority in favor of bonds for constructing the sewerage system above referred to, and this encourages the city authorities to hope that they will be supported in further efforts toward improving and modernizing the sanitation of the city.

POPLAR TREES TO GO

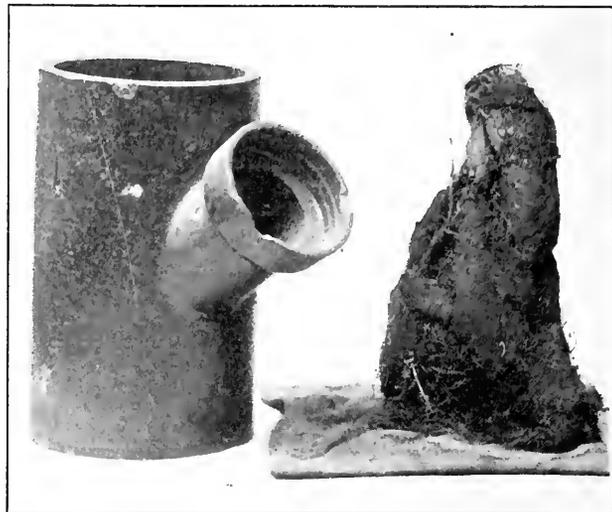

At a recent meeting of the Board of Street and Water Commissioners of the City of Newark, N. J., a motion was passed requesting the Shade Tree Commission to discontinue their own planting of poplar trees on the city streets and to prohibit the planting of them by private individuals.

This action was taken on account of the large and increasing number of obstructions to the city sewers and particularly to the house connections by the roots of these trees penetrating the joints of the pipes. Out of 56 obstructions of all kinds in house connections reported in 1909 15 were caused by poplar roots. Up to the first of December, 1910, 23 out of a total of 64 obstructions since January 1 had been from the same cause, and in November, 1910, the roots were responsible for 5 out of 12 obstructions.

TWO LENGTHS OF 6-INCH HOUSE CONNECTION, SPLIT LENGTHWISE TO SHOW COMPLETE STOPPAGE BY POPLAR ROOTS.

The accompanying photographs show two views of a root which had worked through the joints of a 6-inch house connection and through that into the 12-inch main sewer in the street. A 12-inch pipe with 6-inch branch is shown for comparison. The tree stood at a distance of 19 feet from the point at which the root was removed. We are indebted to Mr. E. S. Rankin, Superintendent of Sewers, for the photographs and information.

ELM ROOT FROM SEWER PIPE.

GAS AND ELECTRIC STREET LIGHTING

In six of the largest German cities—Berlin, Hamburg, Amsterdam, Dresden, Charlottenburg and Cologne—the amounts of gas and electricity used for street lighting in 1908 were 48,270,601 cubic meters of the former and 4,423,529 kw-hours of the latter. As a cubic meter of gas will furnish approximately the same illumination as a kilowatt-hour of electricity, it is seen that gas was used for about ten times as much illumination as electricity in all the cities combined, and the ratio varied from four in Charlottenburg to twenty-four in Hamburg.

NEWS OF THE MUNICIPALITIES

Current Subjects of General Interest, Under Consideration by City Councils and Department Heads—Streets, Water Works, Lighting and Sanitary Matters—Fire and Police Items—Government and Finance

ROADS AND PAVEMENTS

State Takes Over Frederick Turnpike

Annapolis, Md.—The State Roads Commission has paid \$100,000 over to the stockholders of the Baltimore & Frederick Turnpike Company and taken possession of the old highway from Baltimore to Boonsboro, Washington County, a distance of 63 miles. The collection of toll has ceased. Since the highway was begun early in the last century it has been a toll road, and before the day of steam it was one of the most traveled thoroughfares in all the United States.

Route Followed by Pioneers Superior for Modern Highway

Fort Dodge, Ia.—H. Huebinger, a civil engineer in a party of men who are making a map of the Hawkeye Highway from Dubuque to Sioux City, declared the highway presents 100 per cent better opportunities for good road making than does the river-to-river road from Rock Island to Council Bluffs. He commended the skill of the emigrants to the west in pioneer days in picking out a natural highway. Huebinger declared he has found but half the hills he found on the southern trans-State route and that the highway has much better drainage than the southern route. Enthusiasm along the route, he declared, is intense, already equaling that along the other river-to-river road. Residents along two roads from this city to Manson each signed long petitions to the township trustees. Huebinger and his party made a careful examination of both roads.

Nearly \$2,000,000 Expended on Streets

Oakland, Cal.—Street improvements, including permanent pavements, macadam streets, sewers, sidewalks and culverts, have cost the city of Oakland \$1,758,956.08 during the past year, according to Street Commissioner Walter C. Howe's annual report. The following figures show in detail the work accomplished and the cost:

	Miles	Cost
Permanent pavements, completed 1910.....	8.52	\$603,986.17
Permanent pavements, under contract.....	3.20	249,611.00
Macadam, plain	11.80	238,323.01
Macadam, oil	4.37	129,514.40
Macadam streets, outside tracts	10.70	201,867.59
Sewers, sanitary vitrified pipe.....	9.10	89,691.55
Sewers, storm, reinforced concrete and vitrified pipe (Bd of Wks. contracts).....	2.7	52,478.36
Sidewalks (city permits).....	21.2	73,921.00
Sidewalks, private tracts.....	20.4	56,777.00
Concrete culverts, etc.	5,368.00
	106.39	\$1,758,956.08

The increase in the amount of work over the year 1909 is given as \$229,517. In 1909 the cost of the work accomplished was \$1,529,439, and in 1910, \$1,758,956.08. The report shows the following amounts expended in street cleaning on macadam streets and material carted away: Number of blocks cleaned, 5,860; number of loads of material carried away, 32,880; amount expended, \$46,572; approximate cost per mile, \$140. Fifty-six thousand miles of street watering was done at a cost of \$530 per day, the cost for the year's work (200 days) being \$106,000, or \$190 per mile. The report shows a total mileage in improved and unimproved streets, including the annexed district, of 504.32.

Separation of Grades in Cleveland

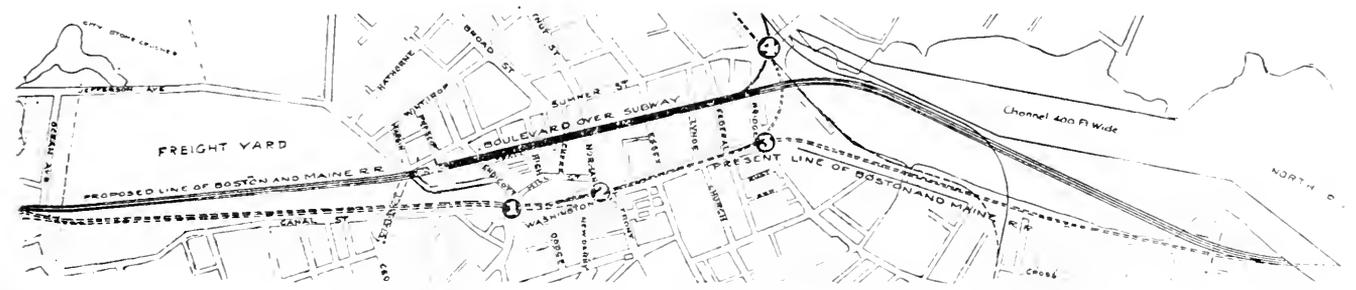

Cleveland, Ohio.—The estimated cost of the Pennsylvania grade crossing improvement is \$2,875,000. As the division of the expense is 65 per cent for the railroad to the city's 35 per cent, the city will have to assume \$912,000 of the expense. July 22 the electors of Cleveland at a special election authorized the expenditure of \$2,000,000 for grade crossing improvements. The resolution declaring it to be the city's intention to proceed with the improvement has already been made by Councilman Spooner. After it is adopted notices must be served on affected property owners and an ordinance authorizing the expenditure of the necessary funds must be passed. This must lie over for 60 days in order to give citizens an opportunity to circulate and file a referendum petition. The referendum must be awaited because of the fact that piers are called for in the streets at a number of the crossings.

Refuse to Pay for Patchwork Pavement

York, Pa.—More trouble is in store for York in connection with its "patchwork" asphalt paving on South George street, where some property owners refused to authorize the work and the contractors were instructed to pave before the residences of the others only. Property owners who had signed for the paving will now refuse to pay it, declaring that they had bargained for an improved highway and not for a checkerboard. Suit will probably be instituted.

Plan for Grade Crossing Elimination in Salem

Salem, Mass.—Engineer George W. Harriman, of the Boston & Maine Railroad, has made the plan reproduced below, which has been approved by Council, for the elimination of grade crossings in Salem. The distance covered by the proposed new route is about 10,000 feet, of which some 7,000 feet will be over land at present under the control of the railroad. The plan provides for four tracks to connect with the proposed four-track system from Boston to Beverly. The new line will diverge from the existing trunk line just south of the Broadway bridge, with no increase in curvature at Castle Hill, thence over the freight yards of the railroad on territory known as the Millpond reservation to the entrance of a subway beginning near the junction of Summer and Margin streets, and extending along a line under Crombie and Sewell streets, with the northern terminal on Bridge street to the trunk line opposite March street. The plan provides that this subway shall be 75 feet wide, 16½ feet in the clear from trackbed to arch of the subway cover, with an 80-foot boulevard above, extending from Federal street to the southern end of the tunnel. The boulevard, it is claimed, will prove of inestimable value in opening up a large area of waste land in the congested section of the city and make probable the erection of a large number of desirable buildings for trade purposes, as it is the avowed policy of the Board of Trade to enlarge the zone of the retail trade section and make this city one of the largest trade centers in the State. That no harm will come from plans to enlarge the trade center by removal of the station to another site is illustrated by cities like New Haven, Portland, Hartford and other places where removal of stations in no way disturbed long-established centers of trade.

PROPOSED RELOCATION OF RAILROAD IN SALEM, MASS., DOING AWAY WITH GRADE CROSSINGS

Boston Wants Teaming Tunnel

Boston, Mass.—Former Alderman Giblin, of East Boston, chairman of the executive committee of the East Boston Improvement Association, says a tunnel for teaming between the city proper and East Boston would solve the transportation problem of his district. He says the ferry system has been run at a loss of \$150,000 annually for 20 years, and that this \$150,000 loss would pay the interest on \$1,600,000, the cost of building the tunnel, and also the cost of operation. This tunnel would have a capacity of 4,000 teams per day, with escalators for pedestrians. He says that if a large fire started in East Boston the district would go before the apparatus could arrive from Boston proper over the ferries.

Query as to Application of State Law to Grade Crossings

New York, N. Y.—The city of New York will be out over \$1,000,000 if a motion heard before Supreme Court Judge Paige is sustained. The Central Trust Company, as trustee for Jason Rogers, asked that the city be compelled to pay interest on an award for change of grade made in 1903, which award has just been affirmed by the courts. The trust company moved under a section of the State highway law passed by the last Legislature providing that interest must be paid in such cases from the time the physical change of grade was made. Charles J. Nehrbas, for the city, said the petitioners had the law passed themselves, but that they had their trouble for nothing because the State highway laws do not apply to the streets and avenues of New York, which are subject to special statutes. The interest in the present case amounts to only \$15,000, but on other awards it would amount to more than \$1,000,000, Mr. Nehrbas said.

SEWERAGE AND SANITATION

Denies that Imhoff Tank Infringes on Cameron Patent

Atlanta, Ga.—City Attorney James L. Mayson has written the Cameron Septic Tank Company, Chicago, that acting on the advice of Dr. Rudolph Hering, the city's consulting engineer, and City Engineer R. M. Clayton, to the effect that the Imhoff system is not an infringement on the Cameron patents, there is nothing for the city to do but proceed with the construction of the sewage disposal plants along the lines recommended by Dr. Hering.

Wants Bureau of Sanitary Engineering in State Department

Austin, Tex.—In the annual report of Dr. Brumby, State Health Officer, attention is directed to the great need of active measures being taken to eliminate the now almost universal pollution of the soil through lack of sewerage and the prevalence of the open closet on the one hand and the contamination of our streams and waterways on the other as a plea to the establishment of a division of sanitary engineering in the Health Department, whose duty shall be the supervision of water and sewage nuisances and public building constructions.

Think New York Sewer Suit Is Near an End

Newark, N. J.—With the refusal of the United States Supreme Court to permit New York City to intervene in the suit brought by the State of New York against the State of New Jersey and the Passaic Valley Sewerage Commission, the latter body is inclined to think that in the near future the entire litigation will be ended.

Annual Inspection of Dairies

Syracuse, N. Y.—Inspector Lees is now engaged in making the annual inspection of the more than 500 herds supplying Syracuse with milk. On this inspection every producer is given a score based on the conditions disclosed. If the score is not up to the requirements the milk from the farm will be barred from the city's supply. "For three years," said Inspector Lees, "we have been giving instructions to the producers how they should keep their stables and cows and how they should cool, strain and otherwise handle the milk. Where the conditions were bad we have helped the farmers to remedy them and given the reasons. By this time they should know what is demanded, and if they do not care to come up to the requirements they have only themselves to blame."

WATER SUPPLY

Value of Plants Increases under Commission

Austin, Tex.—City Commissioner E. C. Bartholemew, in his monthly report on the earnings of the water and light plant, showed the property to be worth \$732,877, with outstanding indebtedness of \$145,730. The amount in cash reported on hand was \$68,683, this amount having accumulated since Austin took the commission form of government, in spite of two reductions in the water and light rates by the commission, as well as the payment of \$29,000 on the old dam debt. Austin has had the commission government less than two years, but its water and light plant makes a splendid showing under it.

Ultimatum Regarding Filtration Plant

Bellaire, O.—An order of the State Board of Health directing the city of Bellaire to place the filtration plant in operation has been received by Director of Public Service William Schramm. There is no other recourse for the city but to get busy and complete the plant at any cost. The matter has been in the hands of the State Board of Health for some time, and after investigating conditions in Bellaire, the Board decided the plant must be operated and laid the matter before Governor Harmon and Attorney General Denham, who approved the action of the board. The order is in the nature of an ultimatum and directs the city of Bellaire to have the plant in operation in six months after the order has been approved by the Governor and Attorney General. For failure to comply with the order, under the laws of Ohio, the city and city officials can be fined \$500, and the statute further provides for the removal of such city officials as fail to carry out the instructions of the State Board of Health. The filtration plant was completed about four years ago at a cost of \$80,000, and it is estimated that it will require a considerable additional amount to place it in operation.

Covered Reservoir Soon Ready to Use

Brookline, Mass.—Brookline's new \$100,000 covered reservoir, which is to become a valuable adjunct of the high pressure service, is completed and within a short time will be ready for a partial filling of water which will be allowed to stand until the reservoir is brought into regular service next spring. The reservoir is located on the summit of Single Tree Hill, in the upper section of the town, which is generally considered an ideal place for it. The reservoir is 23 feet deep and 180 feet in diameter, with a holding capacity of 4,000,000 gallons. It is constructed wholly of concrete and reinforced steel, and practically forms a watertight basin with a roof. The entire work has been completed well within the appropriation. The outside of the reservoir has been given a shapely appearance by the use of loam, which has been graded and seeded. Work was started on the reservoir in May, 1909. The first thing that had to be done was to construct a roadway from Boylston street to the reservoir location.

Competition for Municipal Water System in Colusa

Colusa, Cal.—The Colusa water works has announced that it will continue to furnish water to its old customers, as in the past, and advises consumers that it is not necessary to make a change. The new municipal system is now in operation and connections are being made.

Fitchburg's Water Failing

Fitchburg, Mass.—Meetinghouse pond, Westminster, from which the water for Fitchburg is being drawn, dropped eight inches during one week. Wachusett Lake, the usual source of supply, is not being drawn, but it has not filled up in a week and is not expected to. Fitchburg uses 4,000,000 gallons of water a day. The commissioners intend to serve notice on the consumers to use care. According to an estimate made by Superintendent Arthur W. F. Brown, of the water department, enough water remains in Meetinghouse pond to supply Fitchburg about a month. That does not include the water below the pipe line. At the end of a month, if conditions do not change, pumping apparatus will have to be put in, at a heavy expense, to force the water from below the pipe line in Meetinghouse pond and at the lake into the service pipes.

Broken Main 56 Years Old

Cincinnati, O.—The twenty-inch main which burst last week, tearing up Central avenue, between Fifth and Longworth streets, for a hundred feet or more, was laid in 1854, according to the records found recently by Waterworks Superintendent Laidlaw, who had specimens of the broken pipe brought to his office for examination. Very little damage resulted from the break because the overflow ran down a steep street into the river, not far away.

Water Famine Relieved by Private Works

Port Chester, N. Y.—Residents of Port Chester, Rye and Greenwich awoke Dec. 22 to find that their water supply had entirely failed. The towns have been supplied from the Rockwood Lake reservoir by the Greenwich Water Company. Edmund C. Converse, a New York banker, came to the rescue of the towns by turning over his private lake on the Converse Manor estate for the use of the villagers. The lake was connected by piping with the Greenwich Water Company's mains, and the water which is being pumped in the reservoir is being supplied to the public. The Converse lake contains 350,000,000 gallons and will give the towns a supply of water for three months. Mr. Converse declined to take pay for the water.

City Water Fever Cause

Rutland, Vt.—In a report made to the Board of Alderman the State Board of Health declares that, as result of a hearing in this city a few weeks ago, when testimony was taken from doctors and a number of officials, and from previous investigations, they are of the unanimous opinion that Rutland's recent typhoid fever epidemic, with its 80 cases and three deaths, was due primarily to the city water. It is pointed out that other factors such as milk and personal contact may have helped in the spread of the disease but that all the trouble for 10 years is primarily due to the water. The fact is cited that just prior to the last epidemic the examinations of Rutland water at the State Laboratory showed increased contamination. There is a good deal of feeling between certain doctors who lay the trouble to water and the city officials, who have made a big effort to prove their milk theory. The aldermen took no action on the report.

Special Tax on Lots Having Unused House Connections

Spokane, Wash.—As a result of a conference between Water Commissioner George W. Armstrong, Councilmen John Gray and A. J. Cartwright, an ordinance will be introduced in the City Council and urged for passage assessing a special water tax against every vacant lot in Spokane having city water available but not using it. The tax is expected to net the city \$100,000 per year. That the city Water Department is facing bankruptcy within 10 years owing to immense expenditures for extending the system, from which no return is had from vacant property which is benefited by enhanced value, but which is not using the water, was the statement made by Mr. Armstrong to the Councilmen.

Restricting Use of Water

Waterbury, Conn.—The serious view taken by the City Engineer and the Board of Public Works regarding the city water supply was shown last week when a vote was passed instructing the Superintendent of Water to prohibit the running of hydraulic elevators in all buildings about the city. Clerk Lawlor was instructed to notify the two local hospitals that their employees should use every reasonable effort to conserve the city water now used by the hospitals and prevent its waste. The clerk was also instructed to notify the Board of Education to co-operate with the Water Department in preventing any waste of the water supply in the school buildings.

An Unusual Water Supply

Woodward, Okla.—The city has a peculiar source of water supply, believed to be of great value. State Geologist C. N. Gould pronounces the supply good from every standpoint, and unrivaled in America. Woodward itself has an elevation of 2,000 feet, and the water range is more than 100 above the city. It is a barren, sandy country, having a number of springs, only a few of which are utilized. The level of the underground water rises to within a few feet of the ground over a wide area. It has been proposed to pipe water from this point even as far as Oklahoma City.

STREET LIGHTING AND POWER

Wants Sliding Scale of Charges for Gas and Electricity

Baltimore, Md.—Mayor J. Barry Mahool has announced his intention of petitioning the Public Utilities Commission for the adoption of the sliding scale method of determining the general commercial rates in Baltimore for gas and electric service. Briefly stated, the plan provides for a certain percentage of earnings which the company is allowed to earn on its capital stock after deducting as much as possible of the watered portion of the company's capitalization. With such a percentage of earnings the plan provides that the company shall be allowed to charge a certain rate for gas or electricity which will, under economic administration, produce these earnings. With such an arrangement as a starting point the plan provides that for every reduction of a certain amount in the gas or electric rate the company shall be allowed to increase its distribution to stockholders 1 per cent. In other words, once established, the plan works automatically.

Electric Lights in Prospect Park

Brooklyn, N. Y.—Last week for the first time in its history Prospect Park had a modern, artistic system of illumination. Up till now the illumination of the park at night has been supplied by 150 gasoline lamps, mounted on posts of no particular artistic value. C. F. Lacombe, chief engineer of lighting and power, was possibly the chief instrumentality in bringing about the change, replacing the gasoline lamps with 750 ornamental iron posts, surmounted by symmetrical lanterns, in each one of which is inclosed an 85-watt tungsten electric incandescent lamp. The design of the posts is the work of the Municipal Art Commission, and is practically the same in appearance as the one used in Central Park, although there are some improvements in the mechanical construction which make it easier and simpler to clean the lanterns and substitute new lamps for old. Along all the drives these posts are placed 100 feet apart on alternate sides of the road. On the walks they are installed according to the best judgment of the engineers. One advantage these electric lamps possess over the old gas lamps is that it is so much easier and more economical to light them. Whereas it was necessary to light each gas jet separately by hand, the electric lamps are controlled in groups of from 20 to 50, according to location and distance apart. Thus as many as 50 lamps are lighted instantaneously from one point.

Street Gas Lamps Operated at Loss

Cincinnati, O.—President N. G. Kenan, of the Union Gas and Electric Company, has sent a letter to Service Director Sundmaker, in which he states that his company has hitherto operated the street gas lamps at a loss and that any contract made for the future must be at a much higher price. The maintenance charge hitherto has been \$5, and this includes lighting and extinguishing gas lamps, cleaning globes and repairs to service pipes.

Fails to Sell Bonds for Lighting Plant

Marion, Ind.—Not a single bid was offered for the \$50,000 issue of 4 per cent bonds offered by the city of Marion for the construction of a municipal light plant, at the meeting of the City Council, at the time set for opening bids for the bonds. It is said the reason no bids were offered was because the City Council had failed to rescind a former order of bond issue, on which the Fletcher National Bank, of Indianapolis, had bid \$325 premium on a \$75,000 issue of 4 per cent bonds to be issued for the same purpose as those offered recently. The Fletcher National Bank later recalled its bid, for the reason that information had reached the buyers that the taxpayers of Marion proposed to contest the bond issue. Edward Herbel, Councilman at Large, charged that "somebody had been putting a rail in the wheel to stop the progress of the municipal light bond issue." Though Marion owns a municipal plant for street lighting, the question of the city's maintaining a plant for commercial lighting carried at the ratio of five to one in a city election four years ago. The Marion Light and Heating Company, a plant of the American Gas and Electric Company of New Jersey, supplies Marion with commercial lighting at 10 cents a kilowatt hour.

Gas Supply Flows Into Open Air

Bridgeton, N. J.—A stoppage in some of the outlets of the Bridgeton Gaslight Company's plant was discovered December 27, and there was imminent danger of a terrific explosion that would wreck the plant and damage a good part of the city. The employees were kept constantly busy all day watching the gas, allowing thousands and thousands of feet to escape into the open air. The tanks were thus nearly emptied, and people dependent upon gas for illumination were obliged to dig up oil lamps and candles. Many people had no lamps, and there was a rush to the stores for them, practically everything in the line being sold.

City Light Plant in Bad Repair

Marion, Ind.—Superintendent Weesner has reported to the Board of Works that the lighting plant is in a bad state of repair and the boilers are so weak that he has had to order the steam pressure reduced from 100 to 90 pounds. Moreover, he says that one boiler is in such bad shape that he is afraid the State Boiler Inspector will soon order its use discontinued.

New Street Lights

Philadelphia, Pa.—Market street between Fifty-first and Fifty-third streets was made bright as day on December 26, when the new high-power gas lamps, which have been installed at short intervals along the sidewalk, were lighted for the first time. From now on this section, which is West Philadelphia's busiest center, will be illuminated nightly. Since the elevated railroad was placed along the street several places have been in its shadow, but the new lamps will dispel all darkness. The lamps have been placed on the street through the efforts of the merchants whose stores line the thoroughfare, led by Frank L. Davis, chairman of the Executive Committee of the Fifty-second and Market Streets Business Men's Association. The property owners have paid one-half of the cost of installation and the merchants the other half. An agreement was then made with the United Gas Improvement Company, whereby the gas company erected new poles of a pattern not heretofore seen in this city. They are in the shape of a shepherd's crook and are most attractive in appearance. Each pole carries an incandescent lamp of great power.

Strawberry Point Has Electric Lights

Strawberry Point, Ia.—The switch which sent the electric current through the wires in the streets and into the homes of the town has just been turned on, and Strawberry Point is at last electric lighted. The system is giving excellent satisfaction, with Electrician Andrew Stiles in charge of the plant.

Lighting Department Better Managed under Commission

Tacoma, Wash.—All the dead wood in the city's Light Department has been cut out by Commissioner Lawson of the Water and Light Department. By requiring the men to work full eight hours each day Mr. Lawson has been able to make a saving of the people's money. The following is a comparative statement of the wages paid in the Light Department during September, October and November of 1909 and 1910:

	1909	1910
September	\$10,375.75	\$9,076.95
October	11,177.90	9,330.64
November	10,763.55	9,431.70
Totals	\$32,317.20	\$27,839.29

The figures may be better appreciated when it is made known that many of the employees are being paid better wages than in October and November, 1909. The common clerks in the office, who make out the bills and help keep other records, were advanced \$10 a month Jan. 1, 1910; the linemen were advanced from \$3.85 to \$4 a day; linemen's helpers were given an increase of 50 cents a day; the men who trim the arc lamps were advanced 30 cents a day; the drivers of the wagons in its department were raised from \$2 to \$2.75. By paying the men a little more money the commission found that it was able to get much more work done. An increase of 10 per cent in wages increased the amount of work accomplished 50 per cent. Fewer men were found to be needed.

FIRE AND POLICE

Civil Service for Birmingham Police

Birmingham, Ala.—Chief George Bodeker, of the Police Department, has had prepared a Civil Service bill to be presented to the Legislature, which, if adopted, will entirely remove the Police Department from politics, and protect the members of the department from removal without cause. The terms of the bill include the Chief of Police as well, making his term and that of all other officers indefinite so long as he is not convicted on due trial of bad behavior or inefficiency.

May Use Freight Tunnels for High-Pressure Pipes

Chicago, Ill.—Plans for a high-pressure water system for fire protection are being made under the direction of Commissioner of Public Works Mullaney. Henry A. Allen, consulting engineer for the city, has been making a study of the subject for weeks. George M. Wisner, engineer for the sanitary district, has suggested that a great saving in cost of laying the pipes could be effected by placing them in the freight tunnels of the Illinois Tunnel Company. Electricity to be supplied by the Sanitary District is the only motive power being considered for operating the high-pressure pumps.

Corpulent Policemen Must Go

Columbus, O.—No more corpulent policemen are to be retained on the Columbus police force. Mayor George S. Marshall has given his ultimatum to that effect. "We simply cannot keep these physically deformed and inefficient men on the force," said the Mayor. "But we will give them a chance to qualify. They have free use of the gymnasium at the police headquarters, where by proper exercise they may reduce their weight and make themselves available; if they don't do it they must retire."

Truck Breaks Guy Wire; Fire Alarm System Out

Elizabeth, N. J.—A truck said to belong to McCloud & Brennan struck a guy wire attached to a pole near the Cherry street bridge, and caused the fire alarm system throughout the city to become demoralized for more than an hour. The accident occurred at 3:10 p. m. The truck, which bore a large housing to be used in covering an engine used to hoist sewer pipes, had just crossed the bridge and was going up the Cherry street hill when the horses, losing their foothold, slipped, and the wagon was thrown against the guy wire. The pole, having no support and containing a large number of wires and a fire alarm station, fell over and caused an open circuit. The authorities were at once notified of the accident and soon had a force of men on the scene. At 4:31 p. m. the damage had been repaired, and a test was made, which showed that the fire alarm system was again in working order.

Trolley Cuts Fire Hose in Two

Long Branch, N. J.—At a recent fire one length of chemical hose was cut to pieces and the couplings on another length destroyed by a trolley car. The motorman paid no attention to Fire Marshal Durham's warning to stop the car. The matter is being investigated by Chief of Police Layton.

Leggins to Be Tried Next Week

New York, N. Y.—Trial of leggins on patrolmen on the traffic and bridge squads is to be made next week. A few will be purchased and the general effect noted. The comfort of the men and their appearance will be taken into consideration in arriving at a decision.

Motor Truck for Brooklyn

New York, N. Y.—That the New York Board of Fire Underwriters is convinced that the day of horse-drawn fire apparatus is past is evidenced by the fact that within a few days there will be in operation at Station No. 1 of the fire patrol, until recently known as the salvage corps, No. 12, Dean street, Brooklyn, a new 40-horsepower automobile fire truck, the first motor-driven fire apparatus provided for that city. A duplicate of this truck was installed by the New York Board of Fire Underwriters in Manhattan about six months ago, and proved so valuable in a short time that no time was lost in providing one for Brooklyn.

Accidents Due to Confusion of Auto Horn Sounds

Fort Worth, Tex.—Fire Chief Bideker is much perturbed over causes for which he sees no remedy. Several recent collisions between street cars and fire apparatus is due, the Chief thinks, to the closed vestibules of the street cars which prevent the motormen from hearing the gongs or auto horns of the approaching fire wagons. As the State laws required the closed vestibules for the protection of the motormen and conductors in inclement weather the fire department will have to run the risk. When there was an audible alarm it was the common practice for drivers of vehicles and motormen on the cars to stop until the fire apparatus had passed. Now unless the coming of the fire machines is heralded in some way they are not advised of the coming of the fire wagons, to which all are disposed to accord the right of way. Therefore, the chief is helpless in this matter. What makes the whole matter worse in his opinion is the fact, as he asserts, that several automobiles in the city have horns in tone exactly like that of the fire chief's auto, and the big combination fire auto. The motormen, when their cars are not closed, may hear those auto horns, but having heard them so often merely as automobile horns, have ceased to associate that peculiar style and tone of horn with the fire department, and hence pay no attention to the fire apparatus until it is too late. Chief Bideker is now asking if he can not have an ordinance passed that will prevent the use of a horn on an auto other than the fire apparatus of the same tone and style of blowing. He has invented for his auto a peculiar staccato style of tooting that is distinguished from any other in the city, unless imitated. If it is he will try, if it is possible, a prosecution for malicious mischief.

Stops Hydrants' Use in Street Cleaning

Newark, N. J.—Fire Chief Astley was incensed by the discovery that street cleaners in the vicinity of the "Four Corners" and elsewhere in the city are drawing upon fire hydrants for water used in sprinkling before cleaning. Supplemented by General Superintendent of Works Shipman he ordered the cessation of this practice. The policemen were instructed to arrest any street cleaner who violates the order. The discovery was made while the chief was on a tour of inspection. Subsequently, with Mr. Shipman, in an automobile, further evidence was obtained. The chief complains that this opening of hydrants by men unskilled in the knack of closing them properly invites the peril of freezing, that would be disastrous in case of fire.

High Pressure on East Side

New York, N. Y.—The great East Side is soon to be included within the high-pressure zone. Inside of two weeks, Fire Commissioner Waldo says, three new areas of high-pressure service will be ready. One of the new areas is on the West Side and is bounded by Twenty-second and Sixteenth streets and Tenth and Seventh avenues. Another new area is bounded by Twentieth and Fourteenth streets, Broadway and Lexington avenue. The largest of the three new lots is bounded by East Houston street, the Bowers, James street and the East River. This includes territory that is the most congested as regards population of any part of the city, and the chance of any fire therein getting away from the firemen is very slim. The pumping stations already constructed and operated in connection with the high-pressure pipes now in use will supply ample pressure for the new system.

Fine Black Team for New Engine

Grand Rapids, Mich.—The Board of Police and Fire Commissioners has purchased three handsome black horses for the new engine at No. 1 fire headquarters on La Grave street. The horses weigh 1600 pounds each, and cost \$300 apiece. Captain Isaac Louke and ten men will have their quarters in the building, which is also new.

Fire Protection for Unincorporated Village

Old Fort, O.—This town will soon be on equal footing with its neighbors in the way of fire protection. Although not incorporated, the citizens subscribed to a fund and purchased a chemical engine, hose and ladders. A building to house the same is now under construction and will soon be ready for occupancy.

GOVERNMENT AND FINANCE

Commission Government Loses in Chickasha

Chickasha, Okla.—Out of a total vote of 1,183 the proposed charter carrying the commission plan of government lost at the special election by a majority of 87. The defeat is ascribed directly to the labor organizations, which, though favoring a commission government for the city, refused to accept various terms of the proposed charter.

Concord Holds Novel Election

Concord, N. H.—The first municipal election in Concord under the new city charter was held Dec. 20. Under the new arrangement two candidates for mayor are selected at a preliminary election open to all persons declaring their candidacy, and the field of candidates for minor offices is similarly narrowed by the preliminary election. The new city government will consist of a mayor, three assessors and a single board of aldermen consisting of six aldermen-at-large and one alderman from each of the nine wards.

Louisville Has a New Seal

Louisville, Ky.—Mayor W. O. Head has signed the ordinance which made the design, secured by the Convention and Publicity League in competitive contest for a \$50 prize, the official seal. Among those who voted for the repeal of the old seal ordinance, enacted May 6, 1861, was Councilman Charles G. Russman, a nephew of Henry Miller, designer of the old seal, who died March 30, 1905. It was decided to supplant the old seal device because it was no longer representative of Louisville's motto, "Progress," inasmuch as the central figure was an old, antiquated,

wood-burning locomotive of the type used in '61. The seal which has become the official signature of Louisville was designed by J. R. Bausched, and was selected from more than 100 drawings.

Belton Combines City Offices

Belton, Tex.—The City Council is practising economy in municipal affairs by adopting an ordinance consolidating the offices of Mayor and City Recorder, effective April, 1911, upon the expiration of the term of office of the present City Recorder. An ordinance has also been adopted placing the salary of the Mayor at \$5 a month, with fees of office and allowing the Aldermen a stipend of the same amount minus the fees.

Want Salaries Reduced

Denison, Tex.—Notice has been published that application will be made to the next Legislature to amend the charter of the city to reduce the salaries of aldermen from \$1,500 a year to \$600 a year and to reduce the salary of the mayor from \$1,800 a year to \$900 a year, also to increase the number of aldermen from two to four. Mayor Acheson recently published a statement advocating a change of this kind, but the application to the Legislature will be made by private citizens, according to the notice published. The present city government consists of a mayor and two aldermen.

Bond Issues Invalid

Jamestown, N. Y.—At the last meeting of the Jamestown Common Council the aldermen were startled by an opinion by Corporation Counsel Benjamin S. Dean to the effect that bond issues of the city of Jamestown aggregating nearly a million dollars were invalid because in none had provision been made for raising a sinking fund and interest by annual tax as required by the general municipal law. A \$600,000 issue of water bonds is not included in this opinion. Attention has been called to the defect by the law firm of Caldwell & Reed, attorneys for W. C. Langley & Co., of New York, who examined the records for a \$40,000 issue of hospital bonds which the firm had agreed to purchase. Mr. Dean recommends a legislative enactment to validate the other bond issues on which the city has secured and used the money.

Recall Feature Applied to Appointive Officers

Los Angeles, Cal.—A new feature in the revision of the city charter now going on applies the recall feature to all offices, whether elective or appointive.

STREET CLEANING AND REFUSE DISPOSAL

Garbage Disposal and Hog Feeding

Los Angeles, Cal.—An ordinance has been prepared regulating the disposal of garbage and the feeding of hogs throughout Los Angeles county. It provides that no garbage can be burned except in a furnace or crematory, unless dry, so that there will be no offensive odors from it; that it cannot be transported except in water-tight, metal-lined receptacles, wagons or cars, which must be cleaned daily and disinfected at least once a week; that if fed to hogs, it must be in trays and not on the ground, and that all refuse must be removed and not allowed to generate offensive odors. Hog yards are regulated by the proposed ordinance only when more than 100 hogs are kept, and then a permit must be obtained from the board of supervisors. The yards must be large enough to permit 60 square feet for each hog, not counting young pigs. Penalties for violation of the ordinance are provided in fines not exceeding \$500 or imprisonment not exceeding six months, or both.

Drain Your Garbage

Milwaukee, Wis.—Health Commissioner Kraft has appealed to housekeepers to drain garbage to prevent it from freezing in the cans. Considerable difficulty was experienced by collectors last week. He also advises the substitution of wooden receptacles for the metal cans during the winter months.

Much Sickness Due to Dust in St. Paul

St. Paul, Minn.—Continued high winds and the absence of snow or rain have created an almost intolerable dust nuisance, and an unusual amount of sickness. Such ailments as sore throat, bronchial coughs, la grippe, and some forms of skin disease are said to be more prevalent than ever before. City Engineer Rundlett says he is keeping the downtown district pretty well covered with calcium chloride, but the material has been used so much faster than usual that the supply on hand is short. The use of the chloride is expensive, too. When the temperature is moderate one tank will cover five or six blocks. In cold weather a tank will only cover three or four blocks. Each tank costs \$7 applied to the street. One sprinkling lasts five or six days under the prevailing conditions.

RAPID TRANSIT

Cannot Prohibit Smoking Without Aid of Ordinance

Fort Worth, Tex.—So many complaints have come into the offices of the Northern Texas Traction Company that the officials are seriously considering the prohibition of smoking on the cars, according to Assistant Manager W. C. Forbess, who says:

The complaints come from women, non-smokers and the smokers who have a discriminating taste which revolts at the combination of odors from "men smoking rank pipes, cabbage leaf cigars, cigarettes of all brands, good domestic, or genuine Havanas in the front vestibule of the P-A-Y-E type of cars, where the smokers can use the front vestibule. It is the opinion of the officials of the company that they can not enforce a rule of that kind; that is, to prohibit smoking on the cars without the aid of a city ordinance. If the Commission will enact the ordinance, the company will do its best to enforce it.

Recommends Interborough Plan

New York, N. Y.—The joint committee of the Chamber of Commerce and the Merchants' Association, of which Seth Low is chairman, has recommended the acceptance by the city of the offer of the Interborough company for subway extension and operation. The report is unanimous and is to the effect briefly that this offer ought to be accepted because the Interborough system would make a great addition to the present subway system, which the city owns, and the city could make better terms with the Interborough company on new operating leases than it otherwise could; and for the further reason that the city would get control of an improved subway system many years earlier than under other conditions.

Discovers Provision for Mileage Tax

North Yakima, Wash.—Rummaging among the city documents, City Clerk Brooker has discovered that the street car company has a clause in its franchise providing for the payment of a certain percentage for each mile traversed by its cars within the city limits, the payments to begin at the expiration of 10 years from date of franchise.

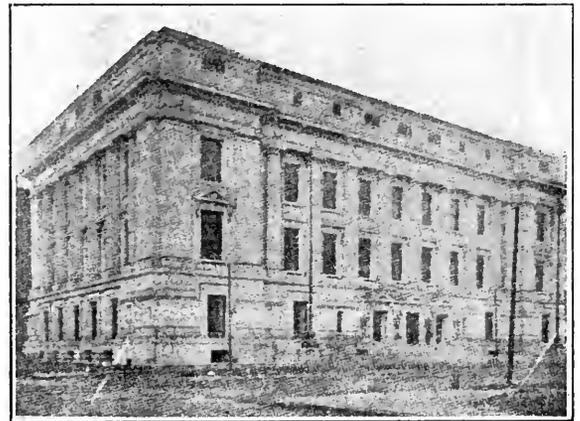

MISCELLANEOUS

Boston Wants Curfew Back

Boston, Mass.—Mayor John F. Fitzgerald has sent to Police Commissioner Stephen O'Meara a draft of the proposed curfew law. The ordinance was drawn up by the Boston Home and Social Association, and provides that all children under 14 found loitering on the streets or parks of the business district after 9 o'clock at night shall be subject to arrest and to a fine not exceeding \$5 for each offense. The ordinance provides that at 8:50 each evening a whistle shall be blown from the City Hall. This gives the children ten minutes to reach home before they are liable to arrest. Members of the association seriously believe the curfew law is necessary for the welfare of the city. Neither the Mayor nor the Commissioner has made public his opinion of the proposed ordinance.

Indianapolis' New City Hall Dedicated

Indianapolis, Ind.—The new City Hall at Alabama and Ohio streets was dedicated last week. Governor Marshall, Mayor Shank and six former mayors made addresses at the ceremonies in the quarters that are to be occupied by the

NEW CITY HALL, INDIANAPOLIS, IND.

public office of the city controller. The building is a four-story and basement structure, the exterior being of Indiana Bedford stone on a granite base. The public lobby or corridor of the first floor is of marble with large imitation marble pillars. The cost of the building was about \$670,000, exclusive of furniture and grounds. The very satisfactory architectural treatment will be noted in the illustration.

Four Towns May Make City

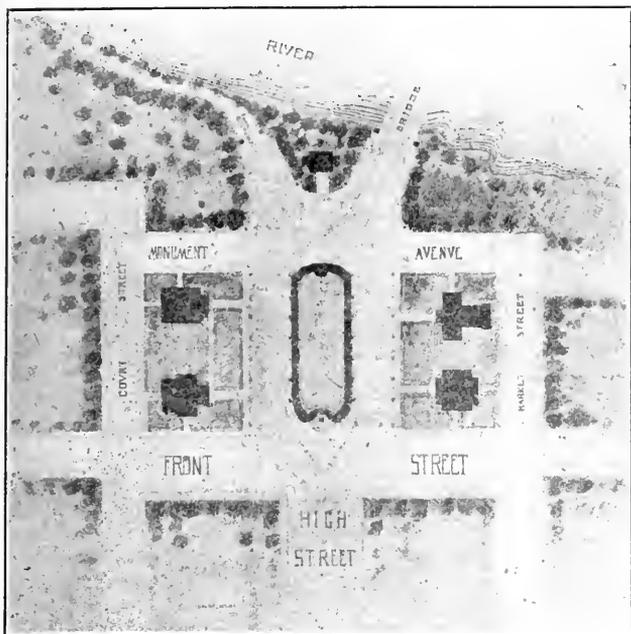

Scranton, Pa.—There is a well-defined movement on foot to give Lackawanna County another city of the third class. The inhabitants of the boroughs of Olyphant, Blakely, Dickson City and Jessup seek to carve a city out of their respective municipalities. These four boroughs are among the largest in the county and are built together. Fathers of the city movement point out that the area of the proposed municipality would be a trifle over four square miles, and that the town would start existence with a population of over 25,000. Better police, fire and school service are the arguments being used by the promoters of the plan.

Municipal Cemetery for Milwaukee

Milwaukee, Wis.—A municipal cemetery is the latest proposed innovation of the administration, according to plans being discussed in the City Hall. It is said that the plan has attained sufficient encouragement to warrant the Council in asking the Legislature to pass a bill which will give the city the right to engage in such an undertaking. Surveys of land beyond the limits have been made by one of the assistants in the engineer's office with a view of securing a site of about 100 acres. The proposition is to sell burial lots at cost, the same as land for dwellings will be sold if a bill which will be presented to the Legislature is passed. Administration members say the high cost of burial lots sold by churches warrants the city in entering such a field.

Proposed Civic Center for Hamilton

Hamilton, O.—Architect F. G. Mueller, Hamilton, has planned the civic center in the accompanying illustration for the city of Hamilton. It includes the land west of the east side of Front street to the river, the south side of Court street, to the north side of Market street, together

PROPOSED CIVIC CENTER, HAMILTON, O.

with the west river bank. It affords sites for six public buildings, three of which will probably soon be built, City Hall, Library and High School. Questions of cost and method of procedure will be considered by a committee appointed by George T. Reiss, president of the Chamber of Commerce.

Talking Up Public Parks in Middletown

Middletown, Conn.—A special meeting of the Common Council was held last week, at which the report of the special Committee on Parks was made. It was a lengthy report, and after relating the occasion of their appointment and the meetings they have held, the majority of them declared in favor of an amendment to the city charter that will permit the establishment here of a Park Commission. They submitted a table showing that the extra tax caused by the establishment of the commission and the carrying out of plans for a Park Commission would need to be but three cents on \$100 and 30 cents on \$1,000. In a general way the proposed amendment is patterned after the Hartford charter, except that the commission is not made self-perpetuating. This report was accepted and later will be submitted to the people.

Municipal City Plan Approved

Minneapolis, Minn.—Plans for a civic centre and the development of Minneapolis, as prepared by E. H. Bennett, Chicago, which, if carried out, may make Minneapolis the most beautiful city in the world, were last week approved by the Civic Commission, an advisory body of representative citizens from various public organizations, which has had the matter in hand for nine months. The draft submitted and approved was a completed one, embodying every feature of a scheme which members of the commission believe would result in a perfect city. Hitherto the plans have been considered in fragments. The scheme provides for the elimination of grade crossings and equalization of the river banks, the widening and beautifying of Lake street and the parking of Franklin avenue from Nicollet avenue across the river to the eastern city limits. Other streets are to be widened and numerous boulevards provided for, while a wall will be laid out around which the park systems and cross boulevards will be linked. Fred B. Snyder is chairman of the commission, and William Pierce Cowles, consulting engineer.

Parks and Playgrounds for Cincinnati

Cincinnati, O.—Children can have playgrounds and grown-ups can have parks because the Supreme Court of Ohio has decided that the Hamilton County \$1,800,000 bond issue, representing breathing places for many, is valid. The decision is sweeping, in that it affirms the Common Pleas Court and the Circuit Court. It is the official stamp on the bond issue. The Board of Commissioners received notice through City Solicitor Ballard that if a purchaser is found in the course of a few weeks park improvements will be started in the spring. Many bonding companies are anxious to float the securities. Back of the playground movement is the Cincinnati Turngemeinde. It is the desire of that organization that the city may be provided for well, but the congested districts must be taken care of first. Policing of the parks will be reorganized. The park commission will employ its own police. The reorganization of the board because of the new term of Commissioner Gilbert was effected with L. A. Ault, president; William Gilbert, vice-president. Secretary Longenecker was re-elected by the board. The lighting of the parks, heretofore carried in the general street lighting contract, hereafter must be provided for by the park commissioners, as the city solicitor has held that the director of public service cannot enter into a contract for the park board. The new lighting contract goes into effect June 1, 1912, when at the same time the park board will have to enter into a contract for the parks.

Want Municipality to Publish Newspaper

Los Angeles, Cal.—With a charter mapped out providing for public ownership of public utilities, even including a steam railway and a steamship line, the latest idea of the Good Government city administration is a municipal newspaper. The question whether the charter shall be amended to give the city authority to maintain such a publication will be submitted to the voters at a special charter election in February. The Good Government people decline to give out any details regarding the proposed unique journal, which would be the first of its kind in the country, but it is understood the plan is to make it a daily, handled along metropolitan journalistic lines, with the City Council as a board of directors, the heads of the principal city departments, such as the Board of Public Utilities, of which Meyer Lissner is chairman, as editors, and the Mayor as editor in chief. A department of printing would, of course, be created. Among the daily items would be the municipality's advertisements, but these are trifles to be adjusted after provision is made in the charter.

Plan Municipal Exhibit

Philadelphia, Pa.—In preparation for the municipal exhibit which is to show the achievements of the present administration and unfurl the comprehensive plans for a greater Philadelphia, two rooms in the third floor of the City Hall have been placed at the disposal of the Survey Bureau, which is to direct the preparation of drawings, blue prints, clay models and photographs that will enter into the collection that will eventually be displayed in a public hall or auditorium. The idea advanced by the Mayor, when he sent his request to Councils a few weeks ago for an appropriation of \$30,000, was to place \$20,000 of this for use by the Survey Bureau and \$10,000 at the disposal of his office for the furtherance of plans for the exhibit. It is said that the original and advance plan is to have an exhibit about the time that the National City Planning Association meets in this city. The date is fixed for some time in March, but the Mayor, for the purposes of displaying his exhibit, desires that this convention be held in May. Later, during the week of October 4, at the Founder's Week celebration, it is proposed to have an elaborate exposition of the municipal government. This is to include a display of model sewer sections, showing the method of construction, specimens of materials used in street repairs, and the supplies, such as uniforms of policemen and firemen, and other materials purchased by the city. One of the principal features is to be an exhibit of a model municipal transportation system, including subways and suburban systems connected with a central system. The entire exhibit is to show that the present administration has accomplished more than the public is inclined to credit it with, and the solution of the transit problems is to be the monument of the Rebyburn administration.

LEGAL NEWS

A Summary and Notes of Recent Decisions—Rulings of Interest to Municipalities

Comfort Station—Injury to Person Using

Pitman vs. City of New York.—Where New York City authorities, under power expressly granted by Greater New York Charter, established a comfort station in accordance with plans calling for rough-axed granite steps leading thereto without a handrail or tooling or protection of the steps by metal or rubber treads, and it appears that two years after the station was opened the steps were "pretty smooth," and that at the time of an accident from slipping thereon one year later they appeared very smooth, slippery and damp, it was for the jury to determine in an action for the injuries, if they found that they were caused by the condition of the steps, whether such condition was due to the negligence of the city authorities in failing to tool the steps or otherwise protect the users thereof against slipping on them.—Supreme Court of New York, 125 N. Y. S., 942.

Public Improvements—Rights of Materialmen

National Iron Works vs. City of Monroe et al.—In the absence of collusion between a city and a contractor for a public work, entitled under the contract to partial payments, to defeat the claims of materialmen by making excessive payments on inflated monthly statements, the court must presume that the estimates on which the payments were made were correct, so that the payments were binding on the materialmen notwithstanding Civic Code, making the owner making excessive payments to the contractor liable to materialmen and laborers.—Supreme Court of Louisiana, 53 S. R., 563.

No Authority to Grant Perpetual Utility Franchise

City of Joseph vs. Joseph Water Works Company.—A municipality has no authority to grant a perpetual utility franchise. Where a municipality granted a water company in one section of its franchise unlimited rights to lay pipes, etc., and in another section limited this right to 15 years, the limitation will be upheld, for a municipality has not a right to grant a perpetual utility franchise and will not be presumed to have intended to so do, and another construction would render the latter section meaningless.—Supreme Court of Oregon, 111 P. R., 864.

Assessment—Right to Injunction

Jenkins vs. Oklahoma City et al.—Unless the whole assessment for the purpose of grading, draining, curbing and paving a street is void, a case for injunction cannot be maintained, for he who seeks equity must do equity. If any part of the assessment against the owner's land is valid, he cannot have an injunction unless he has paid or offered to pay such part as is valid.—Supreme Court of Oklahoma, 111 P. R., 941.

Public Water Rates—Discrimination

People vs. Albion Water Works Company.—In proceedings by the State to enjoin defendant water company from ceasing to deliver water to a public institution unless paid a certain rate, on the ground of unjust discrimination, it appeared that defendant was engaged in the business of furnishing water to the village of A., and it alleged that at its own expense, on request of public authorities, it laid a line from its main to said institution, situated in the town, but not in the village, of A., and that it was reasonably worth the sum sought to be charged to furnish water to the institution. Held that, while the rates charged in the village might be considered, the test was whether the rate sought to be charged was reasonable, and defendant was entitled to show facts tending to support its averments.—Supreme Court of New York, 125 N. Y. S., 589.

Contracts—Statutory Provisions—Surety

O'Rourke Engineering Construction Company vs. City of New York.—The surety of a contractor who was declared in default took over his work and completed it and did certain work on a supplemental contract. Before the executed contract was delivered, the requirements of Greater New York City Charter, Sec. 419, that there should

be an unapplied and unexpended appropriation and a certificate to the Comptroller to that effect, were completed, and the surety, without waiting for the city officials to perform the ministerial acts necessary to give validity to the contract, proceeded with the work. Held, that the surety could recover upon the contract, the requirements of section 419 having been complied with, the city not being harmed by the fact that the surety proceeded with the work, running the hazard of receiving fair treatment.—Supreme Court of New York, 125 N. Y. S., 664.

Damage to Property—Limitation

Harms vs. City of New York.—Section 261, Greater New York Charter, provided that claims against the city for damages for injuries to personal property or the destruction thereof by reason of the negligence of the city or its department shall be barred unless action be brought within one year. The plaintiff rented a scow to the city which was injured through its negligence. He then brought an action on the contract of bailment. Held, that the aforesaid rule did not apply, being limited by its terms to actions arising by reason of negligence, and this action was based on the contract.—Supreme Court of New York, 125 N. Y. S., 477.

Defective Streets—Contributory Negligence

Hunter vs. City of Montesano.—A pedestrian, who, on a dark stormy night, knowing that M street was being paved, contained piles of materials, was torn up and not in a condition to be traveled by teams, and that a barrier was across it on the south side of D street, and another a block further south, crossed it on the north side of D street, and, after going north a piece on M street, returned to D street, and, instead of recrossing where he had crossed, went further south and attempted to recross diagonally in the middle of the block between the two barriers, keeping his eyes on a light in a store, was guilty of negligence, barring recovery for his injury from running into a plank resting on material and rubbish.—Supreme Court of Washington, 111 P. R., 571.

Parks—Ocean Front—Boardwalks

Crossan vs. Ventnor City.—An act to enable cities in this State located on or near the ocean and embracing within their limits or jurisdiction any beach or ocean front to open and lay out a public park or place for public resort or recreation on and along the beach or ocean front of such city, etc., defines in its title and body "ocean front" as meaning as much of such front as is within the territorial limits or jurisdiction of such city. The proviso by which boardwalks theretofore constructed to the landward of the high water line are excepted from the prospective operation of the act does not make it special or in excess of the object expressed in its title.—Supreme Court of New Jersey, 78 A. R., 12.

Right to Drain Land—Consent of Property Owners

Hart vs. Village of Adams et al.—The assent of property owners to have water drained across their land by ditches dug by a village gave the village no right to continue such drains, after the owners objected to their continuance, so that their continuance could be enjoined; the village not having the right to maintain the ditch without the property owners' consent.—Supreme Court of New York, 125 N. Y. S., 652.

Civil Service—Illegal Removal of Veteran

Barton vs. Brennan et al.—Where relator, a veteran, was appointed General Inspector of Construction in Bellevue and Allied Hospitals, and his salary was duly fixed, and he was removed when the building to which he had been last assigned as inspector had been completed, and there was work requiring his functions, he was entitled to be reinstated and reassigned to it, in preference to another, appointed to the same office at a later date, who is not a veteran.—Supreme Court of New York, 125 N. Y. S., 691.

Notice of Injuries—Not Unreasonable Requirement

Tonn vs. City of Helena.—Revised Codes, requiring notice to municipalities of injuries received by reason of defective sidewalks, is not an unreasonable classification, and the act is not invalid as class legislation in not applying to all others who may be defendants in personal injury actions.—Supreme Court of Montana, 111 P. R., 715.

NEWS OF THE SOCIETIES

City Engineers of North Dakota.—City engineers of North Dakota will hold a meeting in Fargo January 17 and 18, City Engineer H. G. Lykken, of Grand Forks, being one of those backing the movement. The program arranged includes a number of topics of peculiar interest to the engineers of North Dakota cities. On the first day T. R. Atkinson, State Engineer, will speak on "Roads," E. S. Keene, of the Agricultural College, will read a paper, while Dean E. J. Babcock, of the School of Mines, will talk on "Lignite Coal and Its Possibilities." Prof. A. J. Booker, of the university, will speak on "Concrete," while Prof. H. R. Slocum and J. A. Jardine and F. L. Anders will carry out a series of concrete tests. On the second day City Engineer H. G. Lykken, of Grand Forks, will read a paper on "Modern Trend in Water Purification." Prof. E. F. Chandler, of the university, will talk on "Water Supply in North Dakota," while G. O. Sanford, project engineer, will deal with the Williston irrigation project.

Minnesota Surveyors and Engineers Association.—The annual meeting was held in the Senate chamber of the old capitol, St. Paul, Minn., when the following program was carried out:

Morning—President's address, Prof. W. R. Hoag; Report of the Secretary and Treasurer, Charles A. Forbes; paper, "Government Corners," Nathan Butler; paper, "Drainage Project with 250 Miles of Highway," Prof. W. R. Hoag; paper, "Minnesota Resources," George A. Ralph, State Drainage Engineer.

Afternoon—Opening at 2 P. M.—Paper, "Necessity of Good Roads and How the State Should Aid in Building Them," Senator James T. Elwell; "Good Road Instructions," George W. Cooley; paper, "Tonecan Metal," F. N. English, of the Stark Milling Co.; paper, "Sheet Steel," American Sheet and Tin Plate Co.; "Peat and Its Usefulness," Max Tolz, St. Paul; Reports of Committees, Election of Officers, Question Box.

League of Third Class Cities of Pennsylvania.—The subcommittee of the Law Committee of the League met at Harrisburg December 30, with Chairman D. S. Seitz, City Solicitor. This committee was named by the Law Committee on Tuesday, following the convention of the league. The committee will direct a measure that will provide for all of the provisions of the 1909 amendments to the constitution relating to the government of third class cities. The general committee has already provided a bill extending the tenure of office of city officials whose terms expire in April to the first Monday in December; also a measure for the election of one assessor next fall and two at the election two years hence.

Municipal Engineers of the City of New York.—At the meeting of December 28 a paper on "The Construction of the Croton Falls Reservoir of the New York City Water Supply" was presented by Mr. Frederick S. Cook, of New York City.

Albany Society of Civil Engineers.—At a meeting at the Ten Eyck December 20 C. V. Merrick gave an address on the rapid rise of the skyline of skyscrapers in the past 25 years and their usefulness from a business standpoint.

American Society of Civil Engineers.—Three meetings for topical discussion will be held January 20 and 21 at the society's house in New York

City. The general subject for the three meetings is to be road construction and maintenance. All engineers, whether members of this society or not, are invited to attend. At the first meeting, on the morning of January 20, three subdivisions will be taken up: (1) Preliminary investigations. (2) Relative value of three methods of carrying on work; (a) that in which both labor and material are furnished by the contractor; (b) that in which the material is supplied by the party of the first part and the labor by the contractor; (c) that in which both labor and material are supplied by the party of the first part. (3) Systems of maintenance. The discussion of the three divisions will be introduced respectively by Logan W. Page, Harold Parker and Hubert K. Bishop. At the second meeting, on the afternoon of January 20, the subdivisions taken up will be the use of water, calcium chloride, light oils, etc., as dust palliatives, and surface treatment with tars, heavy oils, etc. The discussion will be introduced by Samuel Whinery and Charles W. Ross. The use of bituminous materials by penetration and by mixing methods will be the subject for the third meeting, on the morning of January 21, at which the discussion will be led by Walter W. Crosby and Arthur H. Blanchard.

The society has chartered two steamers of the United Fruit Company for the trip to the Panama Canal. One steamer will leave New York on March 2 and will return to New York on March 24. The other will leave New Orleans on March 4 and return to that city on March 21. Both steamers will go directly to Colon, and after a brief stop proceed on the cruise, stopping again at Colon on the return trip. Visitors may take the entire cruise and thus spend but a few days on the isthmus or may remain on the isthmus while the vessel is away, thus affording plenty of time for a careful inspection of the work. The steamship company will reserve the vessel for members of the society until January 15, and each member must make his own reservation.

National Commercial Motor Car Show.—A comprehensive display of motor trucks, delivery wagons and self-propelled road machines for all sorts of industrial purposes is to be held in Chicago during the week of February 6-11 next. It will follow immediately after the annual automobile show, and will occupy the same building and be conducted by the same management, under the auspices of the National Association of Automobile Manufacturers. Power vehicles suitable for almost every kind of industrial and commercial business will be shown, from tricar parcel carriers for the quick delivery service of laundries, haberdashers, boot and shoe stores, confectioners and other retailers of light good to ponderous motor trucks of five tons load capacity or more. There will be light and heavy delivery wagons, express wagons, baggage wagons, mail transfer wagons, light and heavy trucks from one ton capacity up, with open platform, stake, slat and covered bodies. Special forms for unusual purposes will be displayed, such as self-propelled chemical and hose carts for fire fighting, trucks with power winches operated by the motor that propels the vehicle for loading and unloading heavy pieces of machinery and boxes, crates and barrels; trucks with self-dumping bodies for handling building materials,

ashes, etc.; self-discharging coal trucks; patrol wagons, ambulances, sightseeing cars and motor stages.

New England Water Works Association.—The following is the program for the annual meeting, Hotel Brunswick, Copley Square, Boston, January 11:

10:00 A. M.—The headquarters in Tremont Temple will be open for the use of members. 11:30 A. M.—Meeting of the Executive Committee at the headquarters, Tremont Temple. 1:00 P. M.—Lunch will be served at Hotel Brunswick, Copley Square.

2:00 P. M.—Address of Retiring President, Report of Secretary, Report of Treasurer, Report of Editor, Report of Auditing Committee, election of officers, report of tellers appointed to canvass ballots. 3:00 P. M.—Report of the following committees: Committee "To look after and keep track of legislation and other matters pertaining to the conservation, development and utilization of the natural resources of the country," M. N. Baker, Chairman, New York City. Committee "To prepare a standard specification for fire hydrants," H. O. Lacount, Chairman, Boston, Mass. Committee "On information as to the conditions under which extensions of water mains are made by town-owned water supplies," Charles W. Sherman, Chairman, Boston, Mass. Committee "On uniformity of hose and gate-nuts, and direction of opening," Frank L. Fuller, Chairman, Boston, Mass. Committee "To compile information relating to awards that have been made in water works valuation cases," H. W. Dean, Chairman, Boston, Mass. Committee "On library," Charles W. Sherman, Chairman. A paper will be presented on "The Gas Producer Pumping Plans at Manchester, Massachusetts," illustrated, by Raymond C. Allen, C. E., Manchester, Mass. George A. King, President, Taunton, Mass. Willard Kent, Secretary, Narragansett Pier, R. I.

Oregon Good Roads Association.—Oregon good roads workers are committed to creation of a highway board and selection of a highway commissioner to serve at \$4,000 a year; to appropriation of \$680,000 by the State for distribution equally among the counties in the coming two years for State-aid road construction; to the raising of \$1,360,000 among the counties for use with the State appropriation in the coming two years in starting good road construction; to the employment of convict labor and all prison labor available in good road work; to the establishment of at least three convict centers in the State, where great rock crushers shall be operated, and the product sold to the counties for road construction at actual cost and to several minor features in road construction, the substance of which was contained in the five bills submitted to the general Good Roads Convention, Portland, December 12, by Judge L. R. Webster.

For the present at least the Oregon road builders are not ready to enter into the interstate boulevard scheme suggested by the Pacific Highway Commission. They do not care to tax one-quarter or any other amount of the cost of road construction to adjacent land or to a specific road district outlined by the county road. They will not leave the selection of a road route to the people at large, but insist that the County Court is the proper power to make such selection. They have not limited the routes for road construction contemplated in the appropriations recommended to one market center, but insisted that the limitation should read "market centers."

In the five measures dissected and reconstructed there are a multitude of provisions which have deep interest. Some of these did not come to the surface in the controversies. One proviso, that the State Highway Commissioner shall have general and supervisory charge of the disbursement of work done with funds raised by selling county bonds, did not crop up for discussion, but is assured prominence in future developments, as many of the counties are going to insist upon at least theoretical independence in their own work which is being met by strict county funds.

The good roads men do stand for taxing automobiles 25 cents each horsepower a year for machines of 50 or less registered rating, and 50 cents each horsepower for all going above 50 horsepower.

Authority was granted the chairman to name two committeemen from each county of the State further to round out the bills discussed, and then to press these bills upon the Legislature at the coming session. Another committee of five, John H. Albert, of Salem; M. J. Lee, of Clackamas; H. W. Thompson, of Eugene; M. R. Ryan, of Douglas, and F. F. Eddy, of Coos, was named to frame a measure providing for wider tires in the State and to report this measure to the legislative committee.

No permanent Statewide organization was perfected. For the present the Oregon Good Roads Association, as it has been constituted for the last few months, will continue its labors. Dr. A. C. Smith, President; Judge L. R. Webster, Chairman of the Executive Committee, and Walter L. Priest, Secretary, will continue activities.

Colorado Association of Members of the American Society of Civil Engineers.—The association has arranged to have tables reserved at the Traffic Club, Denver, every Wednesday at luncheon for the members of the association and their guests. The privileges of the club will be opened to the association in connection with these luncheons. The first one was held Dec. 14.

Calendar of Meetings

- January 2-6.**
Canadian Society of Civil Engineers.—Annual Meeting, Winnipeg, Manitoba, Can.—C. H. McLeod, Secretary, 413 Dorchester street, West, Montreal, Que.
- January 4.**
American Society of Civil Engineers.—Regular Meeting.—C. W. Hunt, Secretary, 220 West 57th street, New York.
- January 6-7.**
Association of Kansas Police Chiefs.—Annual Meeting, Wichita, Kan.
- January 10-14.**
Organization of City Officials for Standardizing Paving Specifications.—Second Meeting, Engineering Societies Building, 23 W. 39th street, New York, N. Y.—John E. Hittell, Secretary-Treasurer, Chief Engineer of Streets, Chicago, Ill., Hotel Rector, New York, N. Y.
- January 11-13.**
Michigan Engineering Society.—Annual Meeting, Lansing, Mich.
- January 12-13.**
New York Tax Reform Association.—State Conference on Taxation.—A. C. Pleydell, Secretary, New York, N. Y.
- January 12-14.**
Montana Society of Engineers.—Annual Meeting, Helena, Mont.—Clinton H. Moore, Secretary, Leysen Block, Butte, Mont.
- January 12-14.**
National Civic Federation.—Annual Convention, New York, N. Y.—D. L. Case, Secretary, 1 Madison avenue, New York, N. Y.
- January 12-14.**
Indiana Engineering Society.—Annual Meeting, Hotel Denison, Indianapolis.—Charles Brossman, Secretary, Union Trust Building, Indianapolis, Ind.

- January 16-20.**
Canadian Cement and Concrete Association.—Annual Convention and Exhibition, Toronto, Ont.—R. E. W. Hagarty, Secretary, 662 Euclid avenue, Toronto, Ont.
- January 17.**
Engineers' Society of Western Pennsylvania.—Annual Meeting, Pittsburg, Pa.—Elmer K. Hiles, Secretary, 803 Fulton Building, Pittsburg, Pa.
- January 17-19.**
American Institute of Architects.—Annual Convention, San Francisco, Cal.—Glenn Brown, Secretary, Octagon, Washington, D. C.
- January 18-19.**
American Society of Civil Engineers.—Annual Meeting, New York.—C. W. Hunt, Secretary, 220 W. 57th street, New York.
- January 20.**
Illuminating Engineering Society.—Annual Meeting, New York, N. Y.—P. S. Millar, Secretary, 29 W. 39th street, New York, N. Y.
- January 24-26.**
American Society of Heating and Ventilating Engineers.—Annual Meeting, New York, N. Y.—W. M. Mackay, Secretary, P. O. Box 1818, New York, N. Y.
- January 24-26.**
Ohio Engineering Society.—Annual Meeting, Columbus, O.—C. J. Knisely, Secretary, New Philadelphia, O.
- January 25-27.**
Illinois Society of Engineers and Surveyors.—Annual Meeting, East St. Louis, Ill. E. E. R. Tratman, Secretary, 1636 Monadnock Block, Chicago, Ill.
- February 1-3.**
Nebraska Cement Association.—Western Cement Exposition, Omaha, Neb.—Peter Palmer, Secretary, Oakland, Neb.
- February 6-11.**
National Brick Manufacturers Association.—Annual Convention, Louisville, Ky. T. A. Randall, Secretary, Indianapolis, Ind.
- May 29.**
American Water Works Association.—Annual Convention, Rochester, N. Y.—J. M. Diven, 14 George street, Charleston, S. C.
- May.**
City Commission Congress.—Meeting, Galveston, Tex.—Mayor Lewis Fisher, Chairman of Committee, Galveston, Tex.

PERSONALS

BERGER, VICTOR, Alderman-at-large of Milwaukee, Wis., who has been elected to Congress as a Socialist, will qualify for Congress March 4, but will not draw his salary as a municipal officer after that date, even though he continues to serve the city until the convening of the new Congress next December. The National position pays \$7,500 and the city \$100.

BRUSKI, L. J., Winona, Minn., has been appointed Street Commissioner.

CHARLES, SALEM D., Chairman of the Street Commission, on which he has served for ten years has been certified to the Civil Service Commission for reappointment to a three-year term by Mayor John F. Fitzgerald, the other members are James J. Gallivan, recently reappointed, and John H. Dunn, whose term expires in 1912.

COUNTY ENGINEER.—The Road Commission of Union County, Mississippi, will receive applications at once for the position of County Engineer, to take charge of the construction of sand-clay and other roads. Applicants should state age, experience, education and salary desired, and give references. Communications should be addressed to Mr. W. G. Bias, Chairman of the Union County Road Commission, Route 1, New Albany, Miss.

FISHER, IRA M., Superintendent of the plant of the Massillon Electric & Gas Co., Massillon, O., for 25 years, has resigned in order to devote his entire time to the business of the Fisher Electric Company of Massillon, of which he is President.

FOYE, EDWARD H., Lowell, Mass., has been elected Purchasing Agent over Alderman Smith J. Adams.

HERING, RUDOLPH, and GEORGE W. FULLER, consulting engineers, New York, and Dr. L. L. Lumsden, of the Public

Health and Marine Hospital Service, are investigating the cause of typhoid fever in Des Moines, Iowa.

JENNE, FRANK A., Prosser, Wash., has been appointed supervising engineer in charge of the construction of the sewerage system of that city.

JOHNSTON, CLARENCE I., State Engineer of Wyoming, has been appointed professor of surveying in the University of Michigan. Mr. Johnston was graduated from this institution in 1895 and received the degree of civil engineer in 1899.

KELSEY, LOUIS C., Portland, Ore., consulting engineer, has opened an office in Portland and will give special attention to the designing of water-works, sewerage systems and pavements. Mr. Kelsey will be located in the Madison Building, 250 Third street, until March, after which his permanent office will be in the Selling Building. He will also retain his office, 412 Dooly Building, Salt Lake City, Utah.

MACVICAR, JOHN, Des Moines, Iowa, has been appointed commissioner general of the International Municipal Congress and Exposition, to be held in Chicago, September 18-30, 1911.

SEBASTIAN, CHARLES E., Los Angeles, Cal., has been appointed Chief of Police.

SEYGERLICH, CHARLES, Chicago, Ill., has been appointed Fire Marshal, succeeding the late James Horan.

SERM, ALFRED, Milwaukee, Wis., has been appointed free warden and superintendent of the new nursery and experimental garden in Evergreen Park.

STOLL, PAUL, Red Bluff, Cal., has been elected Chief of the Fire Department, succeeding H. C. Wietfeldt, who has been Chief for nineteen years. Mr. Wietfeldt declined another election.

THOMAS, J. BOSBY, Baltimore, Md., has been appointed chemist and bacteriologist for the water department.

WHITFORD, NOBLE E., Albany, N. Y., resident engineer of the New York State Engineer's office, delivered an address at Watkins, N. Y., December 14, on the construction of the Barge Canal.

WILCOX, W. F., Meridian, Miss., has resigned as superintendent of the Meridian water works system to accept the position of assistant chief engineer of the Tennessee Coal, Iron & Railroad Company, at Birmingham, Ala.

Massachusetts

Beverly—Frederick A. Dodge, former Alderman, over William Stafford, Sumner E. Glines and Jeremiah F. Desmond.

Chicopee—Sol. E. Fletcher, over Frank A. Rivers.

Everett—Herbert P. Wasgatt, without opposition.

Lowell—John F. Meehan, over former Policeman and Mayor George H. Brown and Carroll.

Lynn—William P. Connery over Mayor James E. Rich for Mayor and Commissioner of Public Safety; Frank A. Turnbull elected Commissioner of Finance; George H. McPhetres, Commissioner of Streets and Highways; Thomas Gambell, 2d, Commissioner of Water and Water Works; Herbert C. Bayrd, Commissioner of Public Property.

Malden—George H. Fall over Dr. George L. Farrell and Calvin M. Verbeck.

Medford—Charles S. Taylor, without opposition.

Melrose—Eugene H. Moore, for fifth term without opposition.

Newburyport—Robert E. Burke over Hiram L. Langford and Fred E. Green.

Newton—Charles E. Hatfield.

Salem—Alderman Rufus D. Adams over former Mayor J. F. Hurley, who will continue as Alderman; Alderman Wm. H. McSweeney, Herman F. Curtis and Alderman John J. Cahill; Mayor Arthur Howard was elected an Alderman.

Somerville—Charles A. Burns over Thos. F. Nolan.

Woburn—Hugh D. Murray over Alderman Harold P. Johnson by 28 votes.

Worcester—James Logan for fourth term, over David F. O'Connell by 124 votes; contest probable.

TRADE NOTES

Cast Iron Pipe.—Chicago: Western cities are slow in advertising their specifications. The more favorable market for municipal bonds is encouraging. Quotations: 4-inch, \$27; 6 to 12-inch, \$26; 16-inch and up, \$25, Birmingham. It is expected that competition for some large lettings in February at Pacific Coast points will be keen on account of the large accumulations of stocks. Quotations: 4 to 6-inch, \$19 to \$19.50; 8 to 12-inch, \$18 to \$18.50; over 12-inch, average, \$17, New York. Quotations: 6-inch, carload lots, \$22.

Lead.—It is now generally believed that lead is scarce. Quotations: New York, 4.50c.; St. Louis, 4.35c.

Oregon Fir for Pavements.—The Oregon and Washington Lumber Manufacturers' Association, Portland, Ore., has appointed a committee to take up a study of wood block pavement. It is hoped to greatly increase the use of fir for this purpose, though as yet but a comparatively small amount has been tried. In cutting fir there is a loss of about 25 per cent of every tree, as the tree tops are not now used, except to a small extent by box factories. It is this waste material which the lumbermen's organization hope to see used for paving blocks.

Road Machinery.—The addition to the boiler shops of the J. I. Case Threshing Machine Co., Incorporated, Racine, Wis., is just being completed. This is a building 60 ft. by 215 ft., which will be used exclusively for a stock room for the Case boiler shops. A boiler storage has been completed 230 ft. by 60 ft. This is equipped with a traveler for movement of boilers from one part of the building to another. Under the supervision of the Case architect the above work has been undertaken and completed, also the remodeling of the Garfield warehouse, which is 100 ft. by 250 ft. and two stories high. This building, when the remodeling is completed, will be used as a machine shop. Machine shop facilities have not been adequate. As soon as the weather will permit, other buildings will be put under construction by the Case architect and completed. The heavy business for the present year has necessitated all these changes.

Stone Crusher Patents.—Thomas A. Edison, the inventor, is suing the Allis-Chalmers Company, the Empire Limestone Company and the Caspan Stone Company in the United States Court, Buffalo, N. Y., for damages for alleged infringement on one of his patents for a stone crusher.

Concrete Surface Finisher.—The Vulcanite Portland Cement Company, Land Title Building, Philadelphia, Pa., has published with handsome colored illustrations a paper by Albert Moyer on concrete surface finisher. One of the most handsome finishes illustrated is made with ¼-inch white marble screenings, ½-inch red marble and ½-inch black marble and Cow Bay sand. The proportions used were: 1 part Vulcanite Portland cement; 2½ parts Cow Bay sand; 2 parts red marble and 1½ parts of black marble.

Pipe Joints.—The Best Manufacturing Company, Pittsburgh, Pa., in circular No. 3 illustrate the various types of pipe joints which this firm is prepared to furnish. The different styles include screwed joints, welded joints, the Van Stone joint, bronze unions and special types of joints for hydraulic work.

Water Company Reorganization.—A syndicate of local capitalists is seeking to purchase a controlling interest in the Bristol (Conn.) Water Company. The negotiations have been under way for some time, and it is stated that options have been secured on more than 51 per cent of the stock, the amount required. The necessary amount of money to take this stock over is practically subscribed for. The company was organized 26 years ago and is capitalized at the present time for \$200,000, one-half of which came through the issue of stock as dividends. There are outstanding bonds to the amount of \$100,000. The present dividend rate is 5 per cent. The company owns four reservoirs, situated in this town and Harwinton, and has storage capacity enough to meet the needs of the town for a number of years to come. There will be a petition presented to the next Legislature asking that an act be passed which will permit the town to purchase the rights and privileges of the company. If the syndicate gains control, as it now seems likely that it will, it is said that this measure will not be opposed. However, the town will be asked to desist from voting to take the company over until an opportunity is given the new interests to demonstrate that the company can furnish water to users as low as any municipal or private owned company in the State, in which event there would be no reason for the town to go into the water business.

Water Company Reorganization.—The Rochester & Lake Ontario Water Company was reorganized at a meeting of the Board of Directors December 21. Henry C. Brewster was elected treasurer and Alexander Russell was named secretary. The two positions were formerly held by George K. M. Clarke, who absconded after embezzling \$40,000 of the company's funds. Alvin H. Dewey was elected vice-president in place of William F. Balkam, resigned. The following is the new Board of Directors: Henry C. Brewster, president; Alvin H. Dewey, vice-president and general manager; Alexander Russell, secretary; Henry C. Brewster, treasurer; V. Moreau Smith, A. B. Lamber-ton, Frederick W. Zoller, William F. Balkam, Andrew H. Bowen and Merton E. Lewis. The new director is Frederick W. Zoller, of the Union Trust Company. Alvin H. Dewey will have general charge of the management of the company.

Water Company Increases Capital.—The Richmond City Water Works Company, Richmond, Ind., has increased its capital from \$375,000 to \$550,000. The increase is made to provide for future improvements of the plant and will be issued from time to time.

Gasoline Fire Engine Test.—William M. Johnson, engineer for the National Board of Fire Underwriters, has made the following report on tests of the Westinghouse gasoline fire engine, recently delivered to the city of Cohoes:

Drafting water through 20 feet of suction and pumping through two lines of 200 feet each, siamesed into a 3½-inch line with a 1½-inch nozzle, the engine developed a pressure at the pump of 82 pounds and threw an average of 491 gallons a minute, for twenty minutes.

Pumping from a hydrant with a pressure of 42 pounds, the engine threw an average of 705 gallons a minute for a test of sixteen minutes.

When attached to hydrants which give the engine about 30 pounds pressure to start with, it should be able to supply two good 1½-inch fire streams through 400 or 500 feet of hose.

Gurley's Manual.—The forty-fifth edition of Gurley's Manual of American Engineers and Surveyors Instruments, manufactured by W. & L. E. Gurley, Troy, N. Y., has been published. It is primarily a book of instructions in the adjustment and use of field instruments, and while it does not attempt to take the place of treatises on the subject, it is generally sufficient for students and young engineers and is frequently used by them. The illustrations in colors of the instruments are attractive and make it easy to understand the instructions. Some of the instruments described might be of practical use in their daily work to others than surveyors, for instance, contractors, superintendents and foremen. The telescopic hand level, the angle mirror and the talley register are among these. The book is ordinarily sold for 50 cents.

New Floor Preparation.—The Wilson & Baillie Manufacturing Company, 26 Court street, Brooklyn, has taken the agency for the United States of "Terrano," a magnesite floor preparation made according to a German formula and used to a considerable extent in Canada, where the rights are controlled by the Eadie-Douglass Company, of Montreal. The Wilson & Baillie Company will lay the floor by its own forces in Greater New York, but outside that territory it will sell the material ready mixed for laying and will supply an experienced foreman to direct the work. Practically all the material for the composition is imported and will be mixed in the company's plant in Brooklyn.

Trade Catalogue Library.—A library has been established in the Hudson Terminals at 50 Church street, New York City, which is accepting catalogues of American manufacturers, classifying and filing these catalogues and digesting them in card index form for reference and consultation of buyers, manufacturers, engineers, contractors, purchasing agents and other consumers, both resident in and visitors to the metropolitan district. The plan has filled a needed want in the way of providing a permanent and comprehensive collection of trade literature, which is resulting to the mutual benefit of the manufacturer and the buyer.

The custodian of the library is the Commercial Bureau Company, to which applications for space should be addressed. The total cost to the manufacturer will be \$10 per year, for which sum he is entitled to have placed on file any or all of his catalogues, photographs, drawings, etc. This fee also includes the insertion in card index files for buyers, of a card giving a printed index of the original catalogues placed on file by the manufacturer. These card index files are distributed to buyers and others interested for use in their own offices.

Change of Office.—The general offices of the Universal Road Machinery Company have been removed from New York to Kingston, N. Y., where its shops are located. The office of the President, Mr. George H. Ford, will be kept at 120 Liberty street, New York.

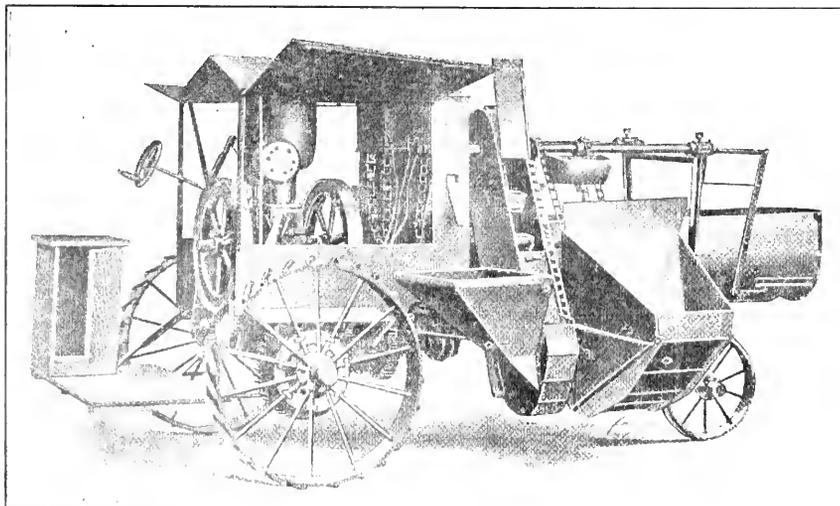

Menzies Street Cleaner.—The Menzies Street Cleaner Company, Glens Falls, N. Y., have issued a new catalogue, describing the Menzies Patented Sanitary Hand Cleaning Machine. The largest cities in the country have used them for years with entire satisfaction and the demand is rapidly increasing.

MUNICIPAL APPLIANCES

Continuous Concrete Mixer with Measuring and Elevating Devices

The Butler Concrete Machinery Co., Butler, Ind., manufacture concrete mixers of several sizes and types. Their model AA mixer is shown in the illustration. The mixing apparatus is of the pug-mill type; three hoppers receive the cement, sand and stone and deliver it by bucket elevators which do the measuring into the trough. The whole is mounted on a four-wheeled truck, propelled by a gasoline engine which also does the mixing.

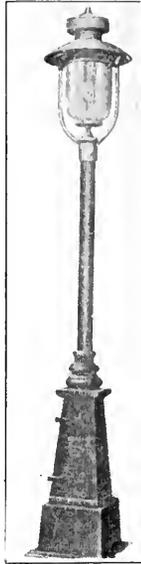

Capacity is from 150 to 200 cu. yd. per day with a 5-hp water-cooled Novo gasoline engine which is simple and compact and claimed to be reliable and easily operated. The main frame is constructed of 3 by 3½ by ½ steel angle to which the various parts are securely bolted and braced. The front bolster and axle are of the swivel type, allowing perfect freedom of the front trucks. These are guided and held in place by chains running back to the shaft which in turn is connected by a worm gear to the steering wheel. The rear axle is of the best steel shafting, size 2 inches, with differential gears and wide bearings. All the gears are of the Web pattern and four sets of steel back gears are used, including the special design clutch for operating the traction. The wheels are 38 by 8 inches wide and the rear 20 by 6 inches. The gears are of the best gray iron and steel of such dimensions as to require a minimum amount of power to operate the machine. The pug shaft is of square steel, making it easy to remove or replace the mixing paddles. The drum is made of 10 gauge steel boiler plate, 7 ft. 2 in. long, with 36 steel mixing paddles. The sand, stone and cement hoppers are made of 14 and 16 gauge steel and are located at the side of the mixing drum, 27 inches high to the top of the hoppers, where the elevating buckets pass through a special made boot, picking up the materials in just such quantities as the size and number of buckets will admit and deposits it into the mixing drum in plain sight in the propositions desired by the arrangement of the buckets on the links or chain belt. The elevating chain and steel buckets are of standard pattern.

TWENTIETH CENTURY CONTINUOUS CONCRETE MIXER

Gasoline Street Lamp

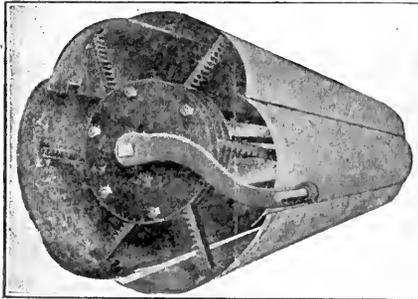

A GASOLINE street lamp of 1,000 candlepower, which is suited for lighting small town and suburban streets, is made by the Herz Manufacturing Company, of 388 Jackson street, St. Paul, Minn. The height of the lamp post, which is of cast iron, is 11 feet, the base is 2 feet square and the weight of the whole is 225 pounds. Each lamp is filled, as shown in the illustration, with a Herz Simplex generating tank, making each unit a gas machine in itself.

The base of the post is made larger than in the case of a gas or electric pole so that the door will provide free access to the apparatus. Although gasoline lighting is of special interest to towns desiring to light their streets for the first time, even the largest cities have not been able to dispense with the system in its suburban sections.

Adjustable Concrete Culvert Mold

A CONCRETE culvert mold having a simple mechanism for adjustment is made by the Township Supply Co., Garrison and Lawton avenues, St. Louis, Mo. The illustration shows the mold set for making a culvert 24 inches

ADJUSTABLE CONCRETE CULVERT MOLD

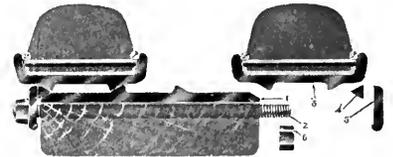

in diameter. The same mold makes all sizes, 14 to 24 inches, and any length required. A larger size molds culvert in all sizes from 30 inches to 5 feet in diameter. It is claimed that with these molds in many places concrete culverts can be built for less money than wooden ones.

The New Firestone Quick Removable Side-Wire Tires

A NEW tire and rim equipment that promises to revolutionize the present methods of changing truck tires has been placed on the market by the Firestone Tire & Rubber Company. This equipment does away with lay-ups for tire repairs or replacements by enabling the driver to change tires anywhere in a few minutes with no other tool than a wrench. It keeps deliveries going on with but slight interruption and cuts off the dead expense of having the vehicle out of commission on account of tires.

This illustrates a single tire mounted on the wheel.

The second cut shows sectional view of rear wheel equipped with dual tires, one of which has been removed. In order to change tires, the driver removes the nuts (No. 6), of which there are fourteen around the wheel. This releases the clamping flange (No. 5). He then slides off the tire, rim and all in one lateral movement. The clamping ring (No. 4) is split and comes off along with the tire. A spare tire already applied to rim is substituted by merely reversing the operation. One or two spare rims with tires already applied are kept at headquarters ready for use. Rims of equivalent size are interchangeable on all wheels, front and rear, single or dual. There is no risk of the tire not being firmly and properly applied in its rim, for the tire itself is applied by experts at any of the hundred-odd Firestone applying stations. The driver only changes the rim and does not tamper with the tire itself.

This equipment enables the removal of any tires at will to be rebuilt or repaired before they are too far gone. Such repairs to Firestone side-wire tires frequently double their length of service.

Like all other Firestone products, this equipment has been thoroughly tested, and its efficiency proved in actual service before offering to the public. One of the largest truck manufacturers has already adopted it as regular equipment. Demonstrations are given at the Madison Square Garden and Chicago and Boston auto shows and literature sent on request to any one interested.

Contractor's Motor Truck

AN automobile truck with an end dumping body suitable for contractors' use has been placed on the market by the White Company, Cleveland, O. One of these trucks has been used in New York City for several months by McDonald and Barry for hauling coal, ashes and gravel. When working on ashes the truck carried them from a power house situated on the Harlem River at 224th street to a new street that was being filled at Broadway and 24th street.

The truck carries a load of seven cubic yards of ashes a distance of over a mile. In comparison with horses, the regular teams which have been used on this work have been hauling three and a half cubic yards to a load. The daily trips average from five to six. The truck has been carrying twice as great a load and has averaged from 10 to 12 trips, or double the number. In other words, it has easily done four times the work, or taken the place of four horse-drawn wagons.

The main points in the specifications of the G T A, as it is called, truck is as follows:

Cylinders—Four cylinders cast en bloc, dimensions, 3¼-inch bore, 5½-inch stroke.

Motor Control—Throttle and spark advance controlled by levers mounted on steering wheel.

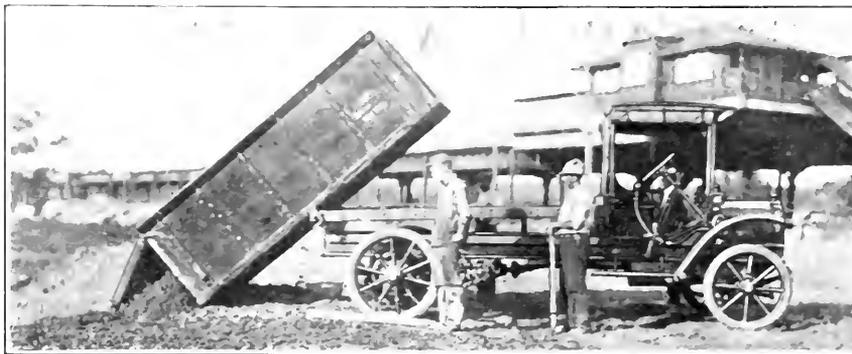

Transmission—Four forward speeds with direct drive in the third gear, and a reverse. The transmission is of the selected type. The gear shifting mechanism is enclosed within the gear case which forms an oil well and is free from dirt and grit. The gears are made of chrome nickel steel. All gear shafts are ball bearing.

Clutch—Leather faced, cone clutch.

Valves—Mechanically operated and interchangeable. Each valve with its valve-stem is a one-piece forging made of special nickel alloy of such a nature as to prevent distortion by heat. The valve lifters have fibre seats, thus reducing noise to a minimum and preventing the ingress of grit and sand.

Motor Cooling—Positive water circulation by gear-driven centrifugal pump. The radiator is so supported that it does not receive the strain to which the frame may be subjected on rough roads.

Lubrication—A combination of the splash system with positive speed.

3-TON END DUMPING CONTRACTOR'S TRUCK.

Ignition—Bosch magneto.

Carbureter—White, water-jacketed.

Crankcase—Made in two sections of special aluminum alloy. The upper section carries all the working parts of the motor. The lower section is simply an oil well and is easily removable for inspection or adjustment of connecting rods, cam-shaft, etc., without disturbing the crankshaft bearings.

Crankshaft—Forged of nickel steel. Is of unusually heavy construction.

Mechanism Protected—Mechanism incased in a heavy sheet metal dust pan. Universal joints protected in heavy leather shoe, which permits being packed in grease.

Steering—Worm and sector type with ball-thrust bearings.

Brakes—Internal, expanding, in rear; external, contracting brakes on the jackshaft. Very large.

Drive—Shaft drive from gearcase to jack shaft. This shaft is fitted with two universal joints. From jackshaft transmitted by a chain to rear wheels. Differential in jackshaft.

Frame—Standard "I" beam, six inches high.

Springs—Front springs semi-elliptic; rear springs platform type.

Front Axle—Solid drop forging, 40 carbon steel.

Rear Axle—Solid drop forging, 40 carbon steel, straight, springs hung from lower side.

Wheels—Steel casting reinforced by webs.

Wheel Base—144 inches.

Tread—Front wheels (center to center of tires) 63½ inches; rear wheels (center to center of tires) 65½ inches.

Tires—36 x 5 inches, solid in front; 40 x 4 inches, solid double tires in rear.

Measurements—Length over all 19 feet 7½ inches; dash to rear, 16 feet 10½ inches; length of platform, 12 feet 3 inches; width of platform, 6 feet 5 inches.

Digging Ditches with Dynamite

THE excavation of trenches with dynamite is a process which is being exploited by the E. I. du Pont de Nemours Powder Company, of Wilmington, Del. While the process is specially adapted for use in wet clay and hence has been used mostly in the digging of drainage ditches, there are many instances in which the process would be available for municipal work. Outfall sewers, for example, in sea coast cities often run through areas of marshy land before discharging into the ocean.

Every one who has had anything to do with excavating in rock, shale or frozen earth, knows that this work cannot be done rapidly or economically without explosives. Very few people know, and they have only found it out quite recently, that ditches and channels through clay, gumbo, sand, loam or other earth can be dug at a wonderful speed and at a low cost with dynamite. Ditches and channels can be cut through swamps, although several inches or even a foot of water covers the ground, just as well as or even better than through dry ground. A channel or ditch dug with dynamite, and particularly one cut through dry or sandy ground is not so even and regular just at first as one dug by hand or machine, but will even up very soon after water fills it, and as the banks have a good slope there is little caving afterward.

When a ditch is blasted there is no outlay for expensive equipment because the only machinery necessary is an iron bar pointed at one end. In hard dry ground a sledge or maul is needed to drive the bar down to the necessary depth. There is no delay and expense getting machinery in place through swamps and thickets. Not even a team is needed when ditches are dug with dynamite, for one or two men can carry sufficient dynamite to dig a ditch four or five hundred feet long, four or five feet wide and three or four feet deep. When ditches are dug with dynamite, the material taken from the ditch is practically all thrown out by the blast and little shoveling is necessary.

Ohio Road Machine Abroad

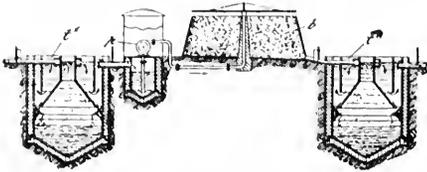

The accompanying photograph illustrates an Ohio reversible road machine in use in road making on the plantation of J. W. Bischodt, St. Thomas, Danish West Indies. The value of the machine is not limited to its use on roads. In fact, the machine illustrated has been used with great success in digging small canals from one part of the harbor to another. A number of types of grades are made by the Ohio Road Machinery Company, Oberlin, O.

BUILDING ROAD IN WEST INDIES WITH OHIO REVERSIBLE ROAD GRADER.

PATENT CLAIMS

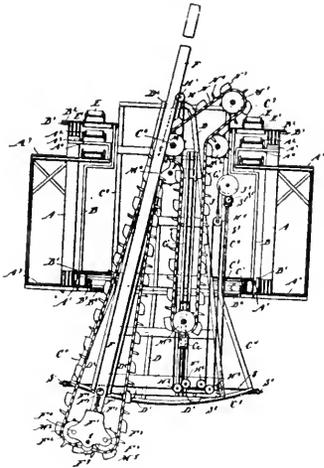

978,889. TREATING SEWAGE. Karl Imhoff, Bredenezy, near Essen, Germany. Serial No. 544,852.
The method of treating sewage consisting in passing it through a sedimentation

tank, thence to a biological filter, thence to a further sedimentation tank and periodically changing the direction of movement so that each sedimentation tank is alternately employed as the first and final tank respectively.

978,908. EXCAVATING APPARATUS. William J. Leary, New York, N. Y., assignor to W. J. Leary Manufacturing Co., Jersey City, N. J., a Corporation of New Jersey. Serial No. 497,589.

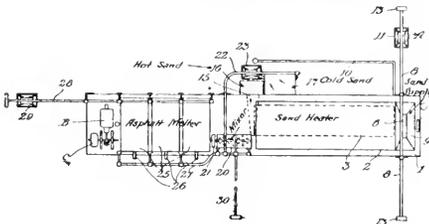

In an apparatus of the character set forth, a pair of girders disposed horizontally and parallel and provided with bottom stringers, a carriage supported by the bottom stringers only of said girders and mov-

able longitudinally thereof in the space between them, a turn table in said carriage, a boom having side bars, a conveyor of the chain and bucket type mounted on said boom, the buckets of which are movable between the side bars of said boom, cars movably supported on the turn table on said carriage, and a swinging frame in which said boom is mounted to slide, said frame being carried by and rotatable with said turn table.

978,973. ASPHALT-PAVING PLANT. Charles I. Williams, Utica, N. Y. Serial No. 383,128.

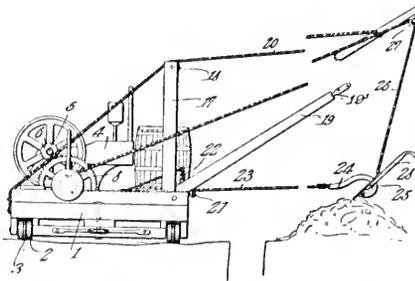

In a plant of the character described, the combination with an asphalt melter and a mixer, of a sand heating member, the

same comprising an automatic feeding supply, a receptacle for the heated output therefrom and a receptacle adjacent to the latter for cold sand, the two latter receptacles having outlets for discharge into a common receptacle whereby the sand may be mixed to supply the mixer with sand of desired temperature, substantially as described.

978,886. TRENCH-FILLING APPARATUS. William G. Howe, Butler, Ind. Serial No. 511,114.

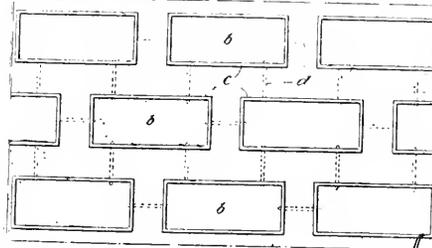

An apparatus as described comprising a wheel mounted platform, an engine located upon the platform, a shaft operatively connected with the engine, winding drums mounted upon the shaft, lever actuated clutch mechanisms mounted upon the shaft for engagement with the winding drums and being located between the adjacent

ends of the drums, a boom pivotally attached to the platform and restrained to swing in a vertical plane only between the adjacent ends of the drums, a cable arranged to wind upon each drum, one of said cables being guided along the boom and a guide for the other cable located upon the platform, a manually directible scraper with which both of said cables connect, a brace attached to the boom and pivotally connected with the platform, said cable guide being located upon the platform at a point between the end of the said boom and the end of the said boom.

978,994. PAVEMENT. Matthew E. Dunn, New York, N. Y. Serial No. 459,522.

A continuous street pavement having a foundation, a number of metallic reinforce sections placed on edge on the foundation and spaced from each other, said reinforce sections having openings in the walls thereof, metallic ties extending between the adjacent walls of adjacent reinforce

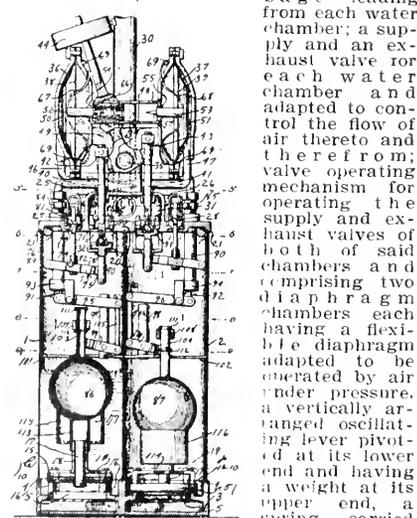

sections and provided at their ends with heads, said ends projecting through said openings and said heads being adapted to contact with the inner surfaces of said sections to prevent separation thereof and being removable through said openings, thereby joining the reinforce sections together and permitting any one of them to be removed without disturbing the others, and a sheet of paving material laid on the foundation and between the reinforce sections.

979,107. DEVICE FOR RAISING WATER. John M. Swanstrom, Chicago, Ill. Serial No. 519,397.

In a device of the class described, two water chambers; a valve controlled inlet passage for each chamber and through which water may enter thereinto; a valve controlled outlet passage for each chamber and through which water is discharged therefrom; a supply passage for air under pressure leading into each water chamber;

an exhaust passage leading from each water chamber; a supply and an exhaust valve for each water chamber and adapted to control the flow of air thereto and therefrom; valve operating mechanism for operating the supply and exhaust valves of both of said chambers and comprising two diaphragm chambers each having a flexible diaphragm adapted to be operated by air under pressure, a vertically arranged oscillating lever pivoted at its lower end and having a weight at its upper end, a spring carried by said lever and through

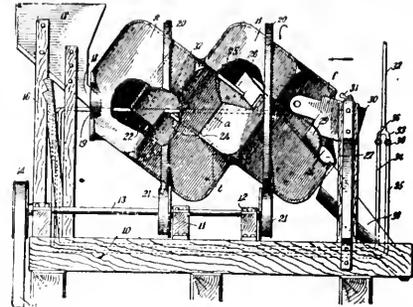

which movements of said diaphragm are

communicated to said lever, and means whereby movement of said lever is transmitted to said supply and exhaust valves; a conduit leading from within each water chamber and adapted to conduct air under pressure from the interior of the chamber from which it leads to one of said diaphragm chambers and which conduits constitute the sole connecting means through which fluid may flow with which said chambers are provided; a valve for each of said conduits and adapted to control the flow of air therethrough; a float within each water chamber; and lever mechanism interposed between each of said floats and one of said controlling valves and through which said valve is operated.

977,897. MIXING MACHINE. Alvin Flavel Nims, Philadelphia, N. Y. Serial No. 545,813.

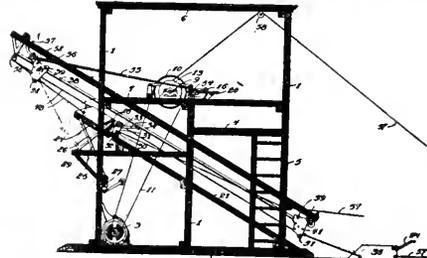

A mixing machine, comprising hollow sections communicating interiorly, and rotatably mounted, one of said sections having an inlet, the other of said sections having

an outlet, a partition in the first of said sections, having a part cut away and extending across said section, the first of said sections having a wall thereof extending into the second of said sections to form a partition within said second section.

977,920. EXCAVATING MACHINE. Vernon A. Younger, San Jose, Cal., assignor to Joshua M. Younger, San Jose, Cal. Serial No. 516,169.

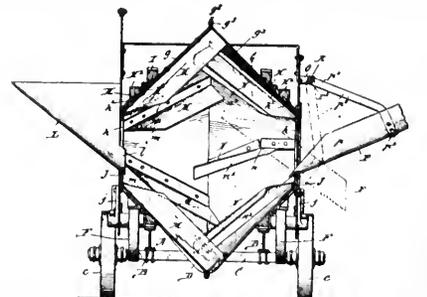

A device of the character described comprising a slideway, tracks raising and lowering drums carried by said slideway, separate cables for each drum, shovels connected to said cables, shovel dumping means at one

end of said slideway, tracks carried by said slideway, a carrier mounted on each track, and means carried by the cables of the hoisting drums for causing said carriers to render the hoisting drums idle and the lowering drums active after the shovels have been dumped.

978,011. MIXING MACHINE. Charles E. Foote and Chester T. Foote, Nunda, N. Y., assignors to The Foote Manufacturing Company, a firm consisting of Charles S. Warner, Wilson H. Willard, Oscar J. Willard, Charles E. Foote, Fred G. Olp and Chester T. Foote, Nunda, N. Y. Serial No. 389,551.

In a mixing machine, a tapering mixing drum having mixing-wings and discharge-wings secured to the inner sides of its walls and an opening through which the material

is discharged, said discharge-wings having their free longitudinal edges bent at an angle to form scoops, and at least one of said discharge-wings bent rearward at a point between its ends.

ing and graveling complete, (b) 37c per lin.
ft. for cement curb, (c) 18.05c per sq. ft.
for cement gutter, (d) 34c per sq. ft. for
vit. block gutter; H. O. Richwine, (a) \$3,
(b) 37c, (c) 17c, (d) 35c; M. S. Cum-
mings, (a) \$2.49, (b) 39c, (c) 19c, (d) 47c;
L. N. Davies, (a) \$2.35, (b) 38c, (c) 18c,
(d) 40c; T. F. White, (a) \$2.35, (b) 39c,
(c) 18c, (d) 45c; A. W. Beesmyer, (a)
\$2.21, (b) 38c, (c) 18c, (d) 50c; improving
Alta st., H. H. Curtis, 34c per lin. ft. for
cement curb, 13c per sq. ft. for sidewalk,
50c per sq. ft. for asphalt curb; improving
Ave. 18, Paul H. Ehlers, \$29.7c per lin. ft.
for cement curb, 9.7c per sq. ft. for side-
walk; David Joy, 35c and 11c; P. Heim,
34c and 12 1/2c and \$1.50 per lin. ft. for as-
phalt wearing surface for curbs.

Brooklyn, N. Y.—Paving with asphalt on
concrete foundation Blake ave., from Van
Siclen ave to Logan st., as follows: (a)
Barber Asphalt Paving Co., 30 Church st.,
New York City, \$28,391; (b) Cranford Co.,
52 9th st., Brooklyn, \$27,217; (c) Uvalde
Asphalt Co., 1 Broadway, New York City, \$25-
147, and (d) Borough Asphalt Co., Metro-
politan ave. and Newtown Creek, Brook-
lyn, \$24,935 (awarded contract); 14,084
sq. yds. asphalt pavt. (5 years' mainte-
nance), a \$1.02, b 88c, c 82c, d 82c;
1,969 cu. yds. concrete for pavt. founda-
tion, a \$5, b \$5.40, c \$4.75, d \$4.85; 1,030
lin. ft. new curb, set in concrete, a 94c,
b 95c, c 90c, d 89c; 5,810 lin. ft. old curb,
reset in concrete, a 55c, b 55c, c 52c,
d 50c.

Brooklyn, N. Y.—By Department of
Parks, for repairing asphalt pavement on a
concrete foundation the roadway of Eastern
Parkway extension and Glenwood ave: Bar-
ber Asphalt Paving Co., 30 Church st., \$8-

305; Uvalde Asphalt Paving Co., 1 Broad-
way, \$7,305; the Cranford Co., 52 9th st.,
Brooklyn, \$8,662.

New York, N. Y.—Regulating, grading,
setting curbstones, flagging the sidewalks,
building approaches and placing fences in
the following streets: (a) Cromwell ave.,
Jerome ave. to Macomber road, (b) Boston
road, White Plains road to north line of
city, (c) West 176th st., Aqueduct ave. to
Popham ave. (d) regulating, grading, set-
ting curbstones, flagging the sidewalks,
laying cross walks, building approaches and
drains, etc., and placing fences in Mt.
Veiron ave., East 233d st. to northerly
boundary line of the city, (e) constructing
sewers and appurtenances in Walker ave.,
Westchester sq. and covering streets, in

(c) \$8,914; P. J. Duffy, (a) \$18,583, (c) \$9-
231; Standard Construction Co., (a) \$18-
224, (c) \$8,234; J. J. Moran, (a) \$19,199, (b)
\$252,747, (c) \$9,517, (e) \$71,898; M. Di Menna
Contracting Co., (a) \$15,719; Jas. V. Tro-
lissi, (d) \$30,518; J. C. Rogers, Jr., (b) \$210-
082, (d) \$43,310; Lamurea Contracting Co.,
(b) \$222,201, (c) \$8,676; Venton Contracting
Co., (b) \$243,447, (e) \$75,689; Godwin Con-
struction Co., (b) \$247,882; C. W. McDonald,
(b) \$239,476; W. F. Murray, (b) \$276,672,
(e) \$79,229; Alegro & Spalini, (b) \$250,228;
J. Damina (c) \$8,574; S. Purificago, (c)
\$8,270; Geo. M. Dunn, (e) \$64,592; Leahy
Contracting and Construction Co., (e) \$66-
934; Standard Construction Co., (e) \$73,380;
Melrose Construction Co., (e) \$73,380;
Aneta Construction Co., (e) \$66,927; Alamo
Construction Co., (e) \$67,480; S. Amanna &
Lyons, (e) \$68,447.

Seattle, Wash.—Fifteenth ave. N. W. and
W. 65th st., grading and curbing; Hanson
& Co., 4100 25th st. S. W., \$7,987; East 45th
st., paving, Barber Asphalt Paving Co.,
\$17,661; P. J. McHugh, 3d ave. N. and
Mercer st., \$16,824.56; Ind. Asphalt Paving
Co., Northern Bank Bldg., \$16,969.85; wood
side stop, Barber Asphalt Paving Co., \$17-
661; P. J. McHugh, \$17,047.76; Ind. Asphalt
Paving Co., \$16,657.37.

SEWERAGE

Phoenix, Ariz.—Bids will be asked on
\$400,000 bonds for building sewer system.

Bakersfield, Cal.—City proposes to ex-
pend about \$15,000 for sewers, to include
about 1,500 ft. each of 6, 8, 10, 12, 14, 16
and 18-in. pipe.—C. B. Greely, P. O. Box
78, Engineer; H. F. Murdock, City Clerk.

Calexico, Cal.—I. B. Funk, Imperial, is
preparing plans and specifications for mun-
icipal sewer system; cost, \$35,000.

De Land, Fla.—Council is considering
construction of sewer system.

Galesburg, Ill.—City is considering con-
struction of system of sanitary sewers; cost
\$60,000.—Geo. Sanderson, President Board
of Local Improvements.

Hoopston, Ill.—Civil Engineer Frank
Payne, Danville, has prepared plans of
construction of drainage sewer system.—
Robert Rodman, City Attorney.

Danville, Ind.—Citizens will soon vote on
\$60,000 to \$75,000 bonds for construction of
sanitary sewer system.

Mount Vernon, Ia.—Council is consider-
ing installation of sanitary sewer system.

Nevaea, Ia.—Council has asked plans of
installation of sewer system and disposal
plant.

Auburn, Me.—City has awarded \$24,000
sewer bonds to Hayden, Stone & Co.

Albert Lea, Minn.—Plans are being pre-
pared by City Engineer Barneck for sewer
on William and other streets; cost \$17,696.

Joplin, Mo.—Council will consider ordi-
nance authorizing election on \$50,000 bonds
for construction of septic tank sewerage
system in South Joplin.—J. B. Hodgdon,
City Engineer.

Lincoln, Neb.—City Engineer Adna Dob-
son will prepare estimate of cost and plans
for sewer in District No. 107.

Sparks, Nev.—Louis C. Kelsey, 250 3d st.,
Portland, Ore., has been selected to design
and supervise construction of sanitary
sewer system.

Matawan, N. J.—Installation of sewer
system is being considered.—J. P. Lloyd,
Chairman Committee.

Corona, N. Y.—City is considering con-
struction of sewer system. D. W. Foley
is interested.

Frankfort, N. Y.—Cost of piping for proposed sewers has been estimated at \$55,608, and for disposal plant at \$28,769.

Hastings-on-Hudson, N. Y.—State Board of Health has approved plans of Ward, Carpenter & Co., of Tarrytown, for construction of sewer system; work will consist of approximately 19,000 lin. ft. of sewers, with small pump house and pumping plant.

Richmond Hill, L. I., N. Y.—Plans are now being prepared by John H. Weinberger, Ch. Engr. of Queens Borough, Sewer Dept., for proposed sewage disposal plant; contract will be let in spring.

Seacliff, L. I., N. Y.—Plans will be prepared by Clyde Potts, 30 Church st., New York City, for proposed sewer system and disposal plant.

Charlotte, N. C.—Water Commissioners have recommended to Board of Aldermen extension of sewer system.—Joseph Firth, City Engineer.

Durham, N. C.—Board of Aldermen will petition General Assembly of North Carolina for authority to vote on \$300,000 bonds for extension to sewer system.

East Liverpool, O.—Council is considering construction of sewers on the east end district; cost, about \$30,000. C. V. Beatty, Director Public Service.

Grand View, O.—Citizens have voted \$50,000 bonds to install sewerage and water system; village plans to lay pipes to Columbus sewage disposal plant and secure contracts with city for use of its improvements.

New Philadelphia, O.—Council has adopted resolutions for construction of sewers and sewage disposal plant.

Niles, O.—Council has decided to construct four miles of sanitary sewers in District No. 4.

Duncan, Okla.—Citizens will vote on \$45,000 bonds in January for construction of system of sanitary sewers, including disposal plant, and for extension of the present water works system.—W. L. Benham, 714-716 Campbell Bldg., Oklahoma City, Consulting Engineer.

Shawnee, Okla.—City will construct lateral sewers; bids asked; cost, about \$5,000.

Baker City, Ore.—Board of Commissioners has ordered construction of sanitary sewer in 5th st.

Gresham, Ore.—Sewerage system will be installed under direction of Consulting Engineer Louis C. Kelsey, 250 3d st., Portland.

Carrick, Pa.—Wm. McClurg Donley has completed and filed with the State Dept. of Health plans for 1½ miles of trunk sewer connecting Boroughs of Carrick, St. Clair and Mt. Oliver, and leading to disposal plant.

Collingdale, Pa.—Sewer Committee has recommended erection of sewage disposal plant at cost of \$50,000.

South Bethlehem, Pa.—Council has engaged under special contract R. E. Neumeyer, Borough Engineer, to prepare surveys, plans, designs and specifications for a sewage disposal plant, to be ready July 1, 1911.—Thomas Haney, Borough Secretary.

CONTRACTS AWARDED

Birmingham, Ala.—Installing \$300,000 sewer to J. W. Gurley & Co., Mobile.

Los Angeles, Cal.—Constructing sewer in Western ave., to John Genilla, at \$9,250; sewer work in Hope st., to John Balch & Co.; improving Ross Court, to Jones Bros., at \$3,250 per lin. ft. for grading and graveling, 33c. per lin. ft., cement curb, 15c. per sq. ft., cement gutter; sewer construction in Alvarado st., to Radisch & Zernlich, \$10,755.

Oakland, Cal.—Building main lake sewer, to Mery-Elwell Co., city; 36th st. sewer to same bidder, \$7,947.

Orange, Cal.—To E. R. Werdin, Los Angeles, for outfall sewer system; about \$16,000.

Atlanta, Ga.—To Chester A. Dady, Brooklyn, N. Y., to construct Peachtree disposal plant, \$195,363. Hering & Fuller, 170 Broadway, New York, Consulting Engineers; R. M. Clayton, City Engineer.

Dalton, Ga.—To Haig & Puryear, city, to construct 9 miles of additional sanitary sewer, \$28,700. H. S. Jaudon Engineering Co., Savannah and Atlanta, Ga., in charge.

Chicago, Ill.—Building sewers, to following contractors: East 104th st., Christino Tosco, 814 Des Plaines st., \$2,036; Balmoral ave., Jos. Davaino, \$3,818; Manistee ave., Thos. Burke, 4648 McLean ave., \$4,992; Phillips ave., Christino Tosco, \$3,438; N. 10th ave., Christino Tosco, \$5,519; W. 40th st., American Engineering and Construction Co., 112 S. Clark st., \$72,988.

Louisville, Ky.—Construction of sewers; Park ave. and Brook st., to R. D. Smith & Co., \$3,600; Jefferson st. and Baxter ave., to L. W. Hancock & Co., \$3,200; Green st. and Herp ave., to L. R. Figg & Co., \$3,800.

Baltimore, Md.—Wiring sewerage pumping station, East Falls ave., to Central Electric Co., \$3,526.

Philadelphia, Pa.—Erecting two operating houses for sewage disposal plant at Torresdale filtration plant to Costello & Co., \$18,725.

Waynesboro, Pa.—Installing 903 ft. of sewer in Gilberton tract, to A. R. Warner.

El Campo, Tex.—To Hicks & Lehland, 121 Campo, to construct sewer system, comprising 2,500 ft. of 12-in., 2,160 ft. of 8-in., 3,000 ft. of 6-in. pipe and septic tank, cost, \$2,650.—W. A. Hiddleston, City Clerk.

BIDS RECEIVED

Plainfield, N. J.—Constructing two sewage pumping plants, one at Monroe ave, the other at Plainfield ave., each consisting of motors, air compressors, ejectors and operating devices in duplicate, an air receiver with pipe connections, gates and valves complete, each unit to have capacity of 175 gals. per minute; Blaisdell Machinery Co., 90 West st., New York, N. Y., \$3,745 each; Merritt & Co., Camden, \$4,224 each, and Blackall & Baldwin Co., 39 Cortlandt st., New York, N. Y., \$3,980 each.—Andrew J. Gavett, City Surveyor.

Seattle, Wash.—Sewering 12th ave. N. et al., Walker & Plackay, \$20,190.75; V. Romaglia & Christopher, 6506 3d ave., \$25,420; Krogh & Jessen, \$27,265; Ferguson Construction Co., \$31,028.30; Wood slave, Walker & Plackay, \$29,718.25; W. Romaglia & Christopher, \$24,889; Krogh & Jessen, \$27,265; Ferguson Construction Co., \$30,211.80.

WATER SUPPLY

Hemet, Cal.—Lake Hemet Land & Water Co. will build steel pipe line in San Jacinto Canyon and large amount of new concrete work.—W. F. Whittier, President.

Lordsburg, Cal.—Bids will be received about Jan. 15 for \$36,000 bonds for water works; bids for construction will be received about Feb. 1. Frank Latrop, Los Angeles, Engineer.—J. A. McClellan, City Clerk.

Santa Ana, Cal.—Citizens will at once vote on \$35,000 bonds to improve water supply as follows: Well, \$3,000; pump, \$16,000; work on reservoir, about \$16,000.

San Francisco, Cal.—Pine Mountain Water Co. has been incorporated, capital \$3,000,000, to own and operate water and power plants. Duncan McDuffie, W. G. Vincent, Jr., C. L. Cory and others, all of Berkeley, and C. G. Dall, San Francisco, Directors.

Stockton, Cal.—National Board of Fire Underwriters has recommended following improvements at pumping plants: Station No. 1, two additional pumps, 5,000,000 gals. capacity each; two additional boilers, 80-h.p. each and minor work; Station No. 2, connections at earliest date to at least one additional power circuit, also installation of number of 12, 16 and 20-in. mains.

Stanford, Ill.—Engineers Melluish & Broxhill, Bloomington, has estimated cost of constructing proposed system of water works at \$6,458.—W. C. Murphy, Village Clerk.

Steamboat Rock, Ia.—Town is planning to install water works system.

Hoisington, Kan.—City has sold \$200,000 water works bonds.

Scammon, Kan.—Council has decided to extend water mains.

Stafford, Kan.—City has sold \$55,000 water and light bonds to Farmers' National Bank.

Lawrence, Mass.—Water Board has voted to adopt recommendation of Morris Knowles, Consulting Engineer, Pittsburg, Pa., to install new engine at pumping station; action will be taken later on appropriating \$9,000, estimated cost of engine.

Westfield, Mass.—City is considering construction of storage system in connection with Grantville system.

Homer, Mich.—P. A. Contrite, Lansing, has prepared plans for water works system.

Easton, Minn.—Citizens have voted to erect steel tower and tank.—S. R. Johnson, City Recorder.

St. Paul, Minn.—Dabney H. Maury, Consulting Engineer Municipal Research Commission, has recommended three new wells in the low ground near Mississippi River, to be equipped with electrically-driven pumps, cost \$30,000; electric pumps for six wells just completed at McCarron's Lake; laying a 36-in. main from the high service reservoir to Dale and Front sts., and a 20-in. main from that point to Lexington and University aves.; cost \$150,000.—H. P. Keller, Mayor.

Chaffee, Mo.—Bids will be received Jan. 15 for \$26,000 bonds for water works and city hall.—J. M. Massengill, Mayor.

Edina, Mo.—Construction of water works is being considered.

Cortland, Neb.—Village is considering installation of system of water works and electric lights.

Elizabeth, N. J.—James H. Fuentes, Consulting Engineer, is locating water supply in connection with proposed municipal water plant.

Gibbsboro, N. J.—Gibbsboro Improvement Association is interested in proposed installation of water works plant.

Raton, N. M.—G. H. Webster, Jr., Denver, Colo., is completing arrangements for the construction of a 500,000-gal. reservoir to be lined with cement, and 76,000 ft. of pipe, to bring water from Cimmanoncity River to Raton; distance, 7 miles.

Lockport, N. Y.—Bids will be asked for building drains and water pipes in three streets.

Asheville, N. C.—Buckeye Water Co. will lay additional pipe lines and construct storage reservoir.

Charlotte, N. C.—Water Commissioners have recommended to Board of Aldermen construction of pipe to Catawaba River to furnish additional water supply; about 10,000,000 gallons daily; cost, \$275,000 to \$300,000.—Joseph Firth, City Engineer.

Durham, N. C.—Board of Aldermen will petition General Assembly for authority to vote on \$500,000 bonds for purchase and improvement of water works.

Jonesboro, N. C.—White & Piatt, Consulting Engineers, Durham, are preparing plans for \$25,000 water works plant.

Statesville, N. C.—J. C. Steele desires prices, delivered, on 2,500 ft. of 4-in. water main, 2,500 ft. of 6-in. and 1,000 ft. of 4-in. sewer mains.

Sugar Creek, O.—Bids will be received about Feb. 1 for construction of water works.—L. E. Chapin, Canton, Engineer; W. A. Hahn, Village Clerk.

Ada, Okla.—Citizens have voted bonds for water works extensions.

Lamont, Okla.—Citizens will again vote on \$17,000 bonds for construction of water works.—W. F. Porter, City Clerk.

Oklahoma City, Okla.—Citizens will vote Jan. 10 on \$1,225,000 bonds to carry out recommendations of Dr. Alexander Potter, New York, for adequate water system.

Silverton, Ore.—City will expend about \$50,000 for gravity system of water works and \$20,000 for sewers, if citizens vote in favor of same.—C. H. Green, Spokane, Wash., Engineer; S. E. Richardson, City Recorder.

Huron, S. D.—Bids will be received about Feb. 1 for the construction of water works, including 750,000-gal. concrete reservoir, 200,000-gal. elevated tank, a 1,400-gal. per minute pumping plant; alternate bids will be received on steam, oil engine or gas producer plant; cost \$40,000.—L. P. Wolff, St. Paul, Minn., Consulting Engineer.

Austin, Tex.—Citizens rejected all bids for construction of reinforced concrete filtering trenches; cost, about \$10,000.—M. C. Welborn, Engineer-in-Charge; G. S. Iredell, City Engineer.

Elkhart, Tex.—Citizens will vote on bonds for construction of water works for fire and domestic purposes; nearby spring will be utilized for water supply; will build water tower.

Fort Worth, Tex.—Engineering Board has recommended immediate repair and improvement of Holly pumping station, cost \$67,500; erection of filter beds and settling basin, capacity 3,000,000 gals., \$60,000; early establishment of southside artesian field and minor improvements, \$6,300.—T. J. Powell, Commissioner Water, Streets and Light.

Rusk, Tex.—Citizens have voted bonds for construction of water works.

Midvale, Utah.—Salt Lake County Water Co. has asked for 50-year franchise from Council.

Norfolk, Va.—Preliminary plans have been prepared by Engineers W. K. Palmer Co., Dwight Bldg., Kansas City, Mo., for improvement and enlargement of water works.

Leavenworth, Wash.—Citizens have voted bonds for water system.

Port Townsend, Wash.—City will construct extension to water main.—Geo. Anderson, City Clerk.

Basin, Wyo.—Preliminary plans are being prepared by Burns & McDonnell, Scarritt Bldg., Kansas City, Mo., for proposed water works.

Upton, Wyo.—Burns & McDonnell, Scarritt Bldg., Kansas City, Mo., are preparing preliminary plans for water works plant.

CONTRACTS AWARDED

Chipley, Fla.—To Moore & Gammon, city, to rebuild water works; cost, \$20,000.

Huntington, Ind.—Laying 1,700 ft. of trunk sewer in 7th st. to Amos Tramor, \$8,500.

Youngstown, O.—To L. Adavasio, city, for building concrete work and removal of earth in connection with building of new dam and reservoir for Commercial Water Co.; total cost will be \$300,000.

Stilwell, Okla.—To Southwestern Engineering Co., Oklahoma City, for construction of water works.

Richmond, Va.—Cleaning out the new reservoir to A. W. Maynard & Co., \$6,294.
Walla Walla, Wash.—To Gilbert Hunt Co., city, for furnishing 6,000 ft. of 20-in. steel water main, \$5,996.

BIDS RECEIVED

Cimarron, N. M.—Construction of gravity system of water works, Cooke-Gregory Eng. Co., Joplin, Mo., lowest bidder, as follows: 13,350 lin. ft. 8-in. wood stave pipe, complete, 44.5c.; 23,560 lin. ft. 6-in. wood stave pipe, in place, 36c.; 1,350 cu. yds. excav. in reservoir; 40.5c. 200 cu. yds. concrete, \$6.50; 130 cu. yds. ground clay puddle, \$1.10; 4,565 lbs. cast-iron pipe, 3.5c.; 855 lbs. special castings, 5.75c.; 12,973 lin. ft. 8-in. wood stave pipe, complete, 55c.; 12,380 lin. ft. 6-in. wood stave pipe, in place, 44c.; 7,455 lbs. special air trap, 5.75c.; total, including valves, hydrants, etc., \$32,329. Total of other bidders: Midland Co., Ft. Scott, Kan., \$36,730; Hibbs Hardware Co., Raton, N. M., \$37,458; Marshall Bros., Las Animas, Colo., \$47,605; S. B. Morrison, Denver, Colo., \$41,880; McKay & Reed, Salt Lake City, Utah, \$45,198; Westcott-Doan Invmt. Co., Denver, Colo., \$45,067; MacArthur Bros. Co., Ancepio, Mo., \$45,805; P. O'Brian P. Co., Denver, Colo., \$46,938; W. D. Lovell, Minneapolis, Minn., \$46,958; T. A. Hayden, Santa Fe, N. M., \$49,576; H. B. Iklar, Greenwood Springs, Colo., \$43,000.—T. W. Jaycox, Denver, Engineer.

Fort Crook, Neb.—Construction of reservoir and well. J. W. Turner Improvement Co., 309 Youngerman Bldg., Des Moines, Ia., lowest bidder, \$14,000 for reservoir and \$5,000 for well.

Lincoln, Neb.—Furnishing water pipe: 170 tons of 16-in., 35 tons of 12-in., 150 tons of 6-in., 75 tons of 4-in. and five tons of specials, class C standard specifications; J. S. Cast Iron Pipe and Foundry Co., Chicago, Ill., \$10,645; Dominick Pipe Co., Kansas City, \$10,814; American Cast Iron Pipe Co., Scarritt Bldg., Kansas City, Mo., \$10,64.—James Tyler, Water Commissioner.

Portland, Ore.—By Water Board for 200 fire hydrants: Glamorgan Pipe and Foundry Co., \$7,000; J. Wood Iron Works Co., \$7,950; Ludlow Valve Mfg. Co., \$8,040; R. D. Wood & Co., \$8,200; Caldwell Bros. Co., \$8,296; Eddy Valve Co., \$8,700; Phoenix Iron Works, 6,900.—D. D. Clarke, Chief Engineer Water Department.

LIGHTING AND POWER

Elsinore, Cal.—M. L. Gamburn and Mrs. I. A. Gardner have applied for a 50-year franchise from Council; will drill for natural gas.

Jacksonville, Fla.—Jacksonville has purchased site for erection of proposed power house.

Indianapolis, Ind.—Southern Indiana Power Co. has been incorporated, capital \$500,000, to build and equip power plants or generating and distribution of electricity for lighting and power purposes. red E. Matson, Thos. N. Stillwell and Wm. J. Henley are Directors.

Adair, Ia.—Town has voted to establish electric light plant at cost of \$10,000.

Atlantic, Ia.—Bids will be received about March 1 for improving the electric light and power plant and combining it with the water works; cost \$40,000.—T. E. Nichols, City Clerk.

Hamburg, Ia.—Citizens have voted to grant E. E. Hillman, of Peoria, Ill., franchise for electric light plant.

Redfield, Ia.—Installation of electric light plant is being considered.

Kansas City, Kan.—Citizens will vote Feb. 7 on \$350,000 bonds to build and equip electric light plant.

Lexington, Ky.—Fayette Lighting Co. is having plans prepared under supervision of J. H. Peck, General Manager, for electric power plant.

Crowley, La.—Council has passed resolution for improvement of the electric light plant, authorizing purchase of a 110-h.p. engine and a 150-kw. dynamo and a 75-kw. dynamo.

Brown's Valley, Minn.—Citizens will vote on \$10,000 bonds for installation of electric light plant.

Fergus Falls, Minn.—City is considering installation of steam turbine or gas engine plant for electric lighting system.

Warsaw, Mo.—S. O. Morris, Continental Power & Development Co., Clinton, has purchased Arnolds mills property and will furnish electric light and power to city; power will be obtained from Niangua river.

Fallon, Nev.—Council is reported to be considering construction of electric light plant.

Gibbsboro, N. J.—Gibbsboro Improvement Association is interested in proposed installation of electric light plant.

Matawan, N. J.—Standard Gas Co. will make proposition for lighting streets.

Bolton, N. Y.—Public Service Commission has authorized Bolton Light & Power Co. to exercise franchise granted it for furnishing of electricity and also authorized company to issue \$125,000 capital stock and \$10,000 bonds for construction and equipment of plant.

Oswego, N. Y.—Mayor Fitzgibbons has been authorized to employ hydraulic engineer to examine plans for the new power house for city; plans were prepared by Timothy Buckley, of Water Department.

Carrington, N. D.—Stern Electric Co. has applied to Council for franchise to install electric light plant.

Stanley, N. D.—John I. Moore, Minot, has petitioned Council for franchise for electric light plant.

Kenton, O.—Kenton Gas and Electric Co. has requested extension of its franchise; company has given Council to understand that if extension is made a new \$65,000 plant will be built at once.

St. Mary's, O.—St. Mary's Machine Co., St. Mary's, has secured contract to construct gas producing plant at electric light plant; about \$18,500.

Stillwell, Okla.—To Southwestern Engineering Co., Oklanoma City, for construction of electric light plant; cost, \$5,000.

Canyon City, Ore.—Oregon Light and Power Co. is planning to install electric plant at Magoon Lake to furnish light and power for Day Valley. W. C. Parrish, Baker City, is interested.

McKeesport, Pa.—Home Light Co. will apply for charter to furnish light and power.—Simon F. Loeb, Henry Firestone and Jacob Roth, Incorporators.

Pittsburg, Pa.—Select Council has adopted resolution introduced by Dr. Dillinger, which instructs Director of Public Works to report estimated cost of constructing electric light plant.

Steeltown, Pa.—Steeltown Light, Heat and Power Co. is planning erection of electric plant and within next six months expect to be furnishing electric power from plant in borough.

Erwin, Tenn.—Nolichucky Power Corporation has plans and estimates for proposed power water electrical plant, to cost \$434,000.

Corpus Christie, Tex.—F. H. Lancashire, Dallas, will draw up form of gas franchise.

Fort Stockton, Tex.—Pecos County Commissioners have granted franchise to Clay Bros., San Angelo, to construct and operate electric light plant.

Georgetown, Tex.—Council has retained F. H. Lancashire, Dallas, to make plans and specifications and advise as to reconstruction of the old lighting and water plant.—R. E. Ward, Mayor.

Lexington, Va.—Rockbridge Power Corporation, John L. Rivers, Buena Vista, Engineer, has purchased water power, poles, wires, cables, etc., of Lexington Light & Power Co., and will extend lines to Lexington and operate plant.

New Market, Va.—J. D. Manor & Co. desire prices on 600-hp. producer gas plant, complete.

Roanoke, Va.—Roanoke Gas & Water Co. will purchase water gas set and 75,000-ft. gas holder during year.

Aberdeen, Wash.—Citizens Lighting and Power Co. will ask for franchise to furnish light and power.

Martinsburg, W. Va.—Martinsburg Power Co. will erect brick addition.

Bloomer, Wis.—Bloomer Electric Light and Power Co. has been incorporated to supply village with electric light and power; capital \$25,000.

Lena, Wis.—United States Manufacturing Co. will purchase producer gas plant and engine in near future.

Prairie du Sac, Wis.—Wisconsin River Power Co. is considering the construction of power dam.

Basin, Wyo.—Preliminary plans are being prepared by Burns & McDonnell, Scarritt Bldg., Kansas City, Mo., for proposed electric light plant.

Upton, Wyo.—Burns & McDonnell, Scarritt Bldg., Kansas City, Mo., are preparing preliminary plans for electric light plant.

CONTRACTS AWARDED

Elmo, Col.—Lighting streets during year, to Pacific Gas and Electric Co., only bidder, \$6.60 each for 16-c.p. lights per year and \$81 for each 2,000-c.p. light.

Jackson, O.—Improving electric light plant: To Ball Engine Co., for engine; to Scioto Valley Supply Co., heater and pumps; to Ft. Wayne Electric Works, for generator, switchboard and street lighting outfit.—Capitol Eng. Co., 48-50 N. Third St., Columbus, O., Engineers.

Brattleboro, Vt.—Village has voted to make 10-year contract with Twin State Gas and Electric Co. for 100 lamps to burn all night at \$20 per lamp per year.

Hoquiam, Wash.—Five-year lighting contract, to Grays Harbor Gas Co., by City Council; contract calls for installation of

boulevard gas posts erected on the main streets; outskirts will be lighted by Tungsten lamps.

Winnipeg, Man., Can.—Furnishing overhead line supplies for the Power Distribution System: To Northern Electric & Mfg. Co., Ltd., for western cedar poles, \$16,576; cross-arms, \$109; hardware supplies, \$2,129, and pins and brackets, \$195. To the Steel Co. of Canada, Winnipeg, Man., for 8,000 machine bolts, \$700, and for guy wire, \$471.

FIRE EQUIPMENT

Stockton, Cal.—National Board of Fire Underwriters has recommended purchase of following equipment: Two first-class engines and one second-class, auto chemical engine for auxiliary squad, auto combination chemical and hose wagons for three companies, either 3-horse hitch and quick-raising mechanism for present ladder truck or auto 75-ft. quick-raising aerial truck, chief's auto, turret pipe for hose wagon No. 2 and minor equipment.

San Francisco, Cal.—Fire Commissioners are considering erection of fire station on Brazil ave.

Augusta, Ga.—Fire Committee has recommended purchase of Webb combination auto engine and hose wagon for new engine house.

Gridley, Ill.—Bids will be received for purchase of 300 ft. of 2-in. fire hose.—C. R. Rowley, Village Clerk.

Belmond, Ia.—City will purchase quantity of hose in near future.—M. A. Holtzbauer, Chief.

Kansas City, Kan.—Citizens will vote Feb. 7 on \$50,000 bonds to build central fire headquarters.

Chicopee, Mass.—Special Aldermanic Committee is favorable to purchase of one or more motor-driven trucks for fire department.

Eveleth, Minn.—Council is considering erection of fire hall.

Meridian, Miss.—City is planning to erect three fire stations and repair central fire station.—I. F. Eldridge, Inspector.

Jefferson City, Mo.—City is considering purchase of 1,000 ft. of fire hose.—Geo. N. Winston, City Clerk.

Plainfield, N. J.—Fire Chief Doane has recommended purchase of either steam or motor fire engine and placing underground of at least one section of overhead wires during year.

Manchester, N. H.—Erection of fire telegraph station is being considered.

Akron, O.—Council has passed ordinance to issue \$3,300 bonds to purchase fire chief's auto wagon and chemical engine.—Dow W. Horter, Clerk.

Cleveland, O.—Public Safety Director Hogen is planning to erect two fire stations on east side and two on west side.

Norwalk, O.—Board of Control will ask for new bids for furnishing combination hook and ladder truck.—Mayor Venus, President.

Hood River, Ore.—Fire department is raising funds for purchase of new equipment.

East Providence, R. I.—Town is considering purchase of auto fire truck for Wall-market district; \$5,000 available.

Pawtucket, R. I.—Committee on City Property will investigate matter of site for fire station in South Woodlawn.

Fort Worth, Tex.—Citizens will vote Jan. 11 on \$120,000 bonds for fire and police departments.

Spokane, Wash.—Council has decided to erect proposed Altamont fire station at 17th ave. and Pittsburg st.

Random Lake, Wis.—Citizens have voted \$1,000 bonds for purchase of engine, hose cart and 1,500 ft. of hose; also for erection of fire station.

CONTRACTS AWARDED

Chico, Cal.—Furnishing second size steam fire engine, Metropolitan type, to American-Lia France Co., Elmira, N. Y., \$5,750.

Oakland, Cal.—Furnishing temporary cable for underground system for fire and police telegraph, to Standard Underground Cable Co., 37.7c. per ft.

Boston, Mass.—Furnishing 1,250 ft. 2½-in. 4-ply "Maltese Cross" rubber fire hose, coupled in 50-ft. lengths, capped ends, to Gutta Percha and Rubber Manufacturing Co., \$1.25 per ft.; to Combination Ladder Co., for 1,250 ft. "White Anchor" rubber fire hose, \$1.19.

Dallas, Tex.—Furnishing fire hose: 2,000 ft. Paragon brand, \$1.15 per ft., to Eureka Fire Hose and Manufacturing Co.; 500 ft. Ray State Jacket brand, \$1 per ft., to Boston Woven Hose and Rubber Co.; 500 ft. Goodrich brand, \$1 per ft., to the Chicago Fire Hose Co.

Weatherford, Tex.—Building fire station and city hall, to Johnson Sons & Co.

BIDS RECEIVED

New York, N. Y.—Furnishing and delivering two gasoline propelled and pumping engines: Webb Fire Apparatus, 50 West Broadway, city, \$16,500; Watrous Fire Engine Co., \$17,000.

Rochester, N. Y.—Furnishing 2,800 ft. of cable for Fire Department, Standard Underground Cable Co., only bidder, 27.5c. per foot.

BRIDGES

Corcoran, Cal.—Board of Supervisors of Tulare County, Visalia, have decided to build 600-ft. trestle bridge over Tule River.

Fullerton, Cal.—Bond election will be called on \$10,000 for construction of a concrete bridge.

Hanford, Cal.—Board of Supervisors of Tulare County have decided to construct 600-ft. trestle over Tule River.

Pasadena, Cal.—Bids are being taken by Long & Cary, 16 South Raymond ave., for construction of a 350-ft. concrete bridge across Arroyo Seco from Prospect Square to Arroyo st.; plans have been drawn by Engineers Williams & Niskhan, 423 Chamber of Commerce Bldg., Los Angeles.

Santa Ana, Cal.—Plans for the construction of highway bridge at Newport Bay have been prepared by Engineer S. H. Finley.

Macomb, Ill.—Special Committee McDonough County Board of Supervisors has recommended construction of proposed bridge.

Normal, Ill.—Board of Local Improvements is considering construction of proposed Sugar Creek bridge.—Melluish & Broyhill, Bloomington, Engineers.—J. H. Keyes, City Clerk.

Great Bend, Kan.—Liberty Township has voted bonds to build bridge across Arkansas River at Dundee.

Lawrence, Kan.—City has decided to construct 46-ft. bridge over Toy Creek.

Leavenworth, Kan.—County Commissioners have adopted plans for building nothing but concrete bridges.

Fitchburg, Mass.—City Engineer T. J. Sheehan has recommended erection of new bridge at Nassau St.

Holyoke, Mass.—City Engineer J. L. Tighe has recommended gradual replacing of old bridges with new, beginning with Cabot st. second level canal bridge.

Joplin, Mo.—Council will consider ordinance authorizing election on \$40,000 bonds toward construction of viaduct along Broadway across Kansas City bottoms; total cost, \$120,000.—J. B. Hodgdon, City Engineer.

Jersey City, N. J.—Boulevard Commissioners will expend \$15,000 in improving Boulevard bridge near Pennsylvania Railroad.

Syracuse, N. Y.—William S. Manning, Engineer, is planning the construction of a 250-ft. bridge in connection with Bridge st. extension work.

Webb, N. Y.—Town is considering erection of \$2,500 bridge across Mosse River.

Akron, O.—Plans are now being prepared for erection of a concrete bridge over Erie tracks at Brewster's crossing on South Main st.—John Payne, City Engineer.

Columbus, O.—Plans are being prepared by the County Surveyor of Franklin County for construction of a bridge over Blacklock Creek to provide the extension of East Broad st.; cost \$18,000.

Germantown, O.—Montgomery County is considering erection of reinforced concrete bridge over Twin Creek; preliminary plans being made.—Ed. Moritz, Dayton, Engineer.

Portland, Ore.—Tentative plans will be prepared by Waddell & Harrington, Consulting Engineers, Kansas City, Mo., for the construction of the bridge at Ellsworth and Mead sts.; cost \$600,000.

Pittsburg, Pa.—Council is considering resolution to place \$50,000 in appropriation fund for construction of bridge from Ruth st. to Washington ave.

Reading, Pa.—County Commissioners have decided to erect rein. concrete bridge 1,400 ft. long and 56 ft. wide over Schuylkill River.

Trechlers, Pa.—Lehigh and Northampton County Commissioners are considering making of repairs and alterations to bridge across Lehigh River; cost \$2,500.—R. S. Rathbun, Allentown, Engineer.

Plain City, Utah.—County Commissioners, Ogden, have granted authority to Road Supervisor, Plain City, to erect bridge across Dick's Creek.

Fond Du Lac, Wis.—Plans for steel and concrete bridge to be erected across De Neveu Creek on East Scott st. are being prepared by Assistant City Engineer A. H. Pitz.

Vancouver, B. C., Can.—Cost of the construction of concrete bridge at the foot of Burford ave., to Kitsilano has been estimated at \$922,400.—N. A. Clement, City Engineer.

CONTRACTS AWARDED

San Diego, Cal.—To Knight & Hyde, for constructing bridges as follows on coast road between Oceanside and Capistrano: Santa Margarita, \$7,765; San Onfre, \$6,016, and San Mateo, \$6,939.

Salmon, Ida.—Construction of new bridge across Lemhi River, at Barracks Lake, to E. L. Emigh.

Denison, Ia.—To Lana & Co., Harlan, for building bridges in county.

Chaumont, N. Y.—Constructing substructure and fender cribs for lift bridge over Chaumont River at Chaumont, to John M. Fitzgerald, Sackets Harbor, \$5,260.

Rome, N. Y.—Constructing a highway bridge over the Erie Canal at South Washington st., to Henry Tosh & Son, Port Byron, N. Y., \$14,777.

Allentown, Pa.—To George H. Hardner, re-award for widening Hamilton st. bridge, \$25,950; Nov. 28 contract was awarded to R. T. & C. D. Stewart Construction Co., Easton, Pa.—Robert S. Rathbun, County Engineer.

Providence, R. I.—Lumber for bridge work, to William M. Harris & Co., \$27.20 per M; bridge piles, to H. E. West, Seekonk, 15½c. per ft.; other bidders: C. A. Card, Groton, Conn., 20c. per ft.; John McLaughlin, Cumberland, \$6.50 each, and Alfred F. Morse, Boston, \$5.75 each.

MISCELLANEOUS

Napa, Cal.—Council is considering erection of garbage crematory.—O. H. Buckman, City Engineer.

Redlands, Cal.—City Trustees will call election on \$80,000 bonds for park purposes.

Denver, Col.—Appropriation of \$90,000 for sprinkling streets during year has been asked for by Thomas Phillips, Superintendent Highway Department; purchase of 10 new sprinklers is proposed.

Pensacola, Fla.—Bids will be received Jan. 16, noon, for \$250,000 improvement bonds.—John A. Merritt, Chairman, Board of Bond Trustees.

Denison, Ia.—Crawford County Supervisors will soon let contract for erection of \$25,000 building for county poor.

Kansas City, Kan.—Citizens will vote Feb. 7 on \$100,000 bonds to build auditorium annex to city hall; \$50,000 bonds to build two incinerating plants and \$50,000 to build dikes and boat landing on levee.

Leominster, Mass.—Frank Lent, of Leominster, is preparing plans for \$150,000 town hall.—P. H. Killalea and Geo. M. Kendall, Building Committee.

Chaffee, Mo.—Bids will be received Jan. 18 for \$26,000 bonds of city hall and water works.—J. M. Massengill, Mayor.

Jefferson City, Mo.—Cole County is considering erection of brick jail.—C. H. Dirclix, County Clerk.

Schenectady, N. Y.—Dr. Charles F. Clowe, Health Officer, has recommended construction of garbage disposal plant.

Troy, N. Y.—Architect Wm. J. Beardsley, 49 Market st., Poughkeepsie, will prepare plans for erection of proposed jail, workhouse and sheriff's quarters; cost \$111,680.—J. N. Palmer, Clerk Board of Supervisors Irenselaer County.

Muskogee, Okla.—Mayor McGarr will enter into negotiations with Expert Engineer Alexander Potter, of New York City, for preparation of plans and specifications for modern garbage disposal system.

Dumont, Pa.—Borough is considering bond issue for improvements.

Pittsburg, Pa.—City has awarded \$4,878,000 improvement bonds to National City Bank of New York, and N. W. Harris & Co., of New York.

Pittsburg, Pa.—Bureau of Parks has asked for following appropriations: Additional land for Highland Park, between the present boundaries of the park and Allegheny River, and adjoining the Hights Run Bridge, \$150,000; additional land adjoining the Murdock ave. entrance to Schenley Park, \$45,000; improvements to Riverview Park, \$16,000; golf grounds and shelter house in Schenley Park, \$73,795; brick building for stable and supply house for parks, \$50,000; grading, sewerage, curbing and macadamizing road from Beacon st. to connect with park road, \$81,000; artesian wells, \$1,000; music for summer concerts, \$10,000.

Sioux City, S. D.—Architect Jos. Schwartz has completed plans for erection of jail and sheriff's residence for Minnehaha County; cost \$50,000.

Fort Worth, Tex.—Citizens will vote Jan. 11 on \$120,000 bonds for police and fire departments.

Merrill, Wis.—Committee of the Lincoln County Board is repairing plans for county jail.

CONTRACTS AWARDED

Oakland, Cal.—Building levee in Key Route basin, to Pacific Coast Dredging and Reclamation Co., 5.4c. per cu. yd.; total cost about \$13,000.

Anderson, Ind.—Daniels & Lyst, city, have received contract for dredging small stream near Scottsburg, \$20,000.

Evansville, Ind.—To Henry Korff, Jr., for street sweeping for 1911 by Board of Public Works, 19½c. per 10,000 sq. ft.

Ventnor City, N. J.—To John W. Cooney, Atlantic City, for jetty; to Ingersoll & Weeks, Atlantic City, for pier, \$24,393, and to Wilbert Beaumont, Atlantic City, for building, \$26,000.

Providence, R. I.—Improving Providence river and harbor by dredging channel approach to the Coastwise Dredging Co., Norfolk, Va., about \$200,000.

Weatherford, Tex.—Building city hall and fire station, to Johnson, Sons & Co.

TOO LATE FOR CLASSIFICATION

STREET IMPROVEMENTS

Los Angeles, Cal.—Committee of Supervisors, with I. B. Noble, County Surveyor, will investigate question of building one mile and a half of macadam highway.

Elkhart, Ind.—Board of Public Works has decided to pave portions of Jackson, Vista and three other streets.

South Bend, Ind.—Paving of Michigan st. with asphalt at cost of \$250,000 is being considered.

Corning, Ia.—Council has decided to pave Davis ave., Adams and 8th sts.; work includes 2,550 ft. comb. curb and gutter; 247 ft. gutter to be laid to old curb; 14,133 yds. brick paving and 292 yds. concrete alley approach paving.—Theo. S. De Lay, Creston, Engineer in Charge; A. T. Wheeler, Mayor.

Wilkes-Barre, Pa.—Council has passed ordinance for paving Park ave., between Northampton and Hazle Sts.—F. H. Gates, City Clerk.

Tacoma, Wash.—Widening Pacific ave., to Keasel Construction Co., \$35,948.

CONTRACTS AWARDED

Bluffton, Ind.—By Board of County Commissioners for four gravel and stone roads in this county to Wilson A. Woodward, Ossian, for Calvin Kunkel, Orlando Kizer and the M. N. Newman roads, \$10,040; to Charles W. North, city, William Spade road, \$4,960.

Muncie, Ind.—To Wm. Birch, city, for building 2 mi. of brick roadway on Middletown pike; \$42,000.

SEWERAGE

South Bend, Ind.—Board of Public Works is considering installation of sewer in downtown district.

Vincennes, Ind.—Plans for construction of sewer system are being discussed.

Grand Rapids, Mich.—Health Officer Slemmons has recommended immediate construction of sewer in College ave.

Grand Rapids, Mich.—Council has decided to issue \$25,000 sewer bonds.

Pelham, N. Y.—Following propositions will be voted on Jan. 11: Village of North Pelham will vote as to whether village will enter into contract with Pelham and Pelham Manor to extend its sewer through Pelham and Pelham Manor to disposal plant, and also whether \$15,000 shall be expended in building extension; Pelham will vote as to whether it will also enter into contract with Pelham Manor to build sewer to extend to the disposal plant and if it shall allow North Pelham to go through village with its sewer system; Pelham Manor will vote to allow the village of North Pelham and Pelham to extend their sewer system into Pelham Manor to connect with disposal plant.

Quakertown, Pa.—Albright & Mebus, 1 and Title Bldg., Philadelphia, are preparing plans for sewerage system and disposal plant; cost, \$125,000.

Fort Worth, Tex.—Citizens will vote Jan. 11 on \$40,000 bonds for storm sewers.

Pecos, Tex.—Citizens will vote Jan. 30 on \$25,000 sewerage bonds.

ENCLOSED ARC LAMPS IN ROCHESTER, N. Y.

Lights low, street wet. Note distinctness of objects beyond light. Compare with view, page 49.

INTENSE STREET LIGHTING

Tungsten Incandescent and Flaming Arc Lamps Compared with Carbon Arcs—Arch Lighting Objectionable—Watts and Costs Per Foot of Street in Several Cities—Examples of Intense Lighting

By ALTON D. ADAMS

WHILE the efficiency of electric street lamps has been doubled and tripled during the past few years, the power devoted to this purpose has been multiplied by four or more in many instances, resulting in an intense street illumination of much higher cost. In many cases an increase of the power for illumination was necessary, in some it has become excessive, and often it is still applied.

Intense street lighting has been accomplished in the main with tungsten incandescent and flame arc lamps. The tungsten lamps give nearly three times the candle power of the carbon incandescent for an equal consumption of energy, and more

than twice as much illumination is obtained with the metallic as with the enclosed carbon arc and equal power. Until the advent of intense street lighting within the past two years it was the general custom to space carbon arcs 200 to 300 or more feet apart, the shorter distance between lamps being found as a rule only on important streets in fairly large cities. As the carbon arcs consume 300 to 500 watts each the old spacing commonly gave about 2.5 to less than one watt per foot of length in the lighted streets, and at points midway between lamps on the longer spacings the illumination was practically negligible.

Carbon incandescent lamps gave street illumination as bad or worse than that with the old arcs, for they were generally

ARCHES IN SOUTH BEND, IND.
Appearance in daylight not pleasing

spaced several hundred feet apart and mounted singly in units of not over 30 candle power, so as to consume less than one-half watt per foot of street.

Now the tungsten has displaced the carbon incandescent lamp in the great majority of instances, sometimes with more power or shorter spacings, and almost always with increased illumination. So, too, the metallic arcs have often displaced the carbon, not infrequently with a much larger number of lamps per mile of street. While lighting in the outlying streets of cities and towns has thus been materially improved, it is mainly in the central or business portions that intense lighting has developed. A striking feature of this intense street lighting is the mounting of two or more arc or tungsten lamps on a single post or cross-cable instead of the single lamp more common before, and it is this grouping of lamps that leads to the higher powers and costs per mile of streets.

Cables or arches carrying lines of tungsten lamps across the streets have been adopted for intense lighting in a number of cities of which Grand Rapids, Mich., and Norfolk, Va., are good examples. At Grand Rapids the arches cross the street at intervals of 100 feet and each carries 14 tungsten lamps of the 75-watt size, requiring 1,050 watts per arch, and 10.5 watts per foot in length of the street. Norfolk streets also have cross arches 100 feet apart and each arch in this instance carries 10 75-watt lamps giving a total of 750 watts per arch and 7.5 watts per linear foot of street lighted. In Grand Rapids the arch lighting is paid for by the merchants at the rate of \$7 per lamp, 98 cents per foot of street and \$98 per arch yearly. The Norfolk rate is \$15 per lamp and \$1.50 per foot of street per year.

An objection to the method of street lighting with cross arches of lamps is the striped or zebra effect produced unless the arches are very close together, which would require a large amount of power. Thus, in the case of Norfolk, if the street is as much as 90 feet wide the lamps of each arch are only 10 feet apart, while the distance between the arches is 100 feet, and there must therefore be alternate bands of light and darkness.

A method of arch lighting not open to the objection just named is that where the arches run along the center or each side of the street with lamps at short intervals, and this produces a very uniform illumination. This method of street lighting is in use at Belvidere, Ill., where 800 lamps are supported 4 feet apart on arches or cables that run along each side of the main street. Each of these lamps operates with 10 watts, so that the required power is 5 watts total per foot length of streets, or 2.5 watts per foot along each side, and there are 2 feet of street per lamp.

The more common and desirable method of locating the tungsten or flame arc lamps for intense lighting is on posts along both sides of the street alternately. Intense street lighting on this plan has been adopted in scores of places of which a few

of the more important are here mentioned. Among the notable installations of intense street lighting with more than one tungsten lamp per post those at Aurora, Buffalo, Chicago, Des Moines, Gary, Indianapolis, Los Angeles, Minneapolis and Vancouver are representative.

In Aurora there are 320 posts, each carrying three tungsten lamps, each lamp consuming 225 watts. The posts are 50 feet apart on each side of the street, so that the watts per foot of street are nine, and there is one lamp to each 16.6 feet on each side of the street.

On Genesee street, Buffalo, posts, carrying five 60-watt tungsten lamps each, are erected 120 feet apart on each side, giving 300 watts per post, 5 watts per foot length of street, and one lamp for each 12 feet of street. For the maintenance and operation of these lamps during 4,000 hours per year the rate is \$37.50 per post, or \$7.50 per lamp and 62.5 cents per foot in length of street lighted.

A number of streets in Chicago have groups of tungsten lamps on posts, and in one instance the posts are 50 feet apart and carry five 60-watt lamps each on both sides of the street, so that there are 300 watts per post, 12 watts per foot length of street, and 5 feet of length per lamp. For the maintenance and operation of these lamps the charge is \$109.10 per post per year, amounting to \$21.82 per lamp and 87 cents per foot length of street.

In Des Moines each post carries five 100-watt lamps and the distance between posts is 44 feet, so that the required watts are 500 per post and 22.7 per foot length of street, the posts being located on both sides. For this lighting the rate is \$69.50 per post, \$13.90 per lamp and 63 cents per foot of street. In this instance there is a 100-watt lamp for each 8.8 feet of street.

Gary, Ind., has posts along Broadway that carry two 60-watt and one 100-watt tungsten lamps, with four of the 60-watt and one 100-watt at corners. Even on the basis of the posts between corners, each requires 220 watts, and as the standards are on each side of the street there are 8.8 watts per foot of street and 8.3 feet per lamp. Corner posts increase the watts per foot. For this lighting service the rate is \$75 per post or \$3 per foot of street per year.

On Washington street, the long and wide highway of business in Indianapolis, groups of five 100-watt tungsten lamps are carried on posts 84 feet apart along each side, so that 500 watts are required per post and 9.5 watts per foot of street. With the distance of 84 feet between posts there are 8.4 feet in length of street per lamp, and the total number of posts on Washington and other streets is about 400, corresponding to 2,000 lamps.

Los Angeles has tungsten clusters of five 100-watt lamps on posts spaced 60 feet apart on both sides of the street, so that 16.6 watts are required per foot of length and there is a lamp for each 6 feet. The yearly rate for this service is \$58.50 per cluster of five lamps, which amounts to \$11.70 per lamp and to \$1.95 per foot of street lighted.

In Minneapolis clusters of five 100-watt lamps are located 30 feet apart on both sides of the streets to the number of 510, or 2,550 lamps. This spacing gives 12.5 watts per foot and 8 feet of street per lamp. Per cluster the annual rate is \$78, amounting to \$15.60 per lamp and to \$1.95 per foot of streets.

Vancouver has its lamp clusters 110 feet apart along each side of the street, and five 100-watt lamps per cluster, so that 9.1 watts are used per foot of street and there is one lamp to each 11 feet.

In each of the above instances of street lighting with clusters of tungsten lamps the supporting posts are located on both sides of the streets, and the figures for watts required and for cost per foot of the length of street lighted include the lamps on both sides. As a result, if the rate or the required watts per front foot of property on the street is wanted, the figures given for these items must be divided by two.

For more convenient use the above data as to required watts

and as to rates for intense street lighting with clusters of tungsten lamps are here tabulated.

From this table it appears that three to five lamps are often used per cluster and as many as 14 lamps per arch, giving clusters that operate with as much as 500 watts each and arches with 1,050 watts. The clusters or arches are located 44 to 110 feet apart, the former usually on both sides of the street, giving 5 to 22.7 watts per foot in the length of street lighted, and 1.0 to 16.6 feet per lamp.

With the old style incandescent street lamps the power seldom reached one watt per foot, and the annual rate was usually below 20 cents per foot, with generally more than 100 feet of street per lamp. On the other hand, incandescent lighting was not formerly much used on main business streets.

The method of cluster lighting necessarily tends to large power and high cost per foot of street where a good degree of illumination is wanted at points midway between clusters, and equally satisfactory results can be got at much less power and cost by the use of only one tungsten lamp per post. Important reasons for this are that the intensity of illumination varies inversely as the square of the distance from its source and that the cost of new tungsten series lamps for street lighting is independent of their candle power up to and including the 75-watt size and increases at only a moderate rate with the higher candle powers.

To illustrate the point as to least intensity of illumination, take the case of 500-watt clusters located 50 feet apart along each curb of the street, each cluster containing five 100-watt lamps. For the cluster the total candle power should be 400,

TEMPORARY DISPLAY LIGHTING IN ROCHESTER, N. Y.

at 14 watts per candle power, and at points on the curb midway between clusters the illumination on surfaces at right angles to the rays of light is about 0.64 candle foot.

Next let the 100-watt lamps be located singly at points 20 feet apart along the curb of the street, so as to give 80 candle power per post. At points along the curb midway between these single lamps the illumination on surfaces normal to the rays of one lamp is about 0.8 candle foot, or one-fourth greater than that above found with the clusters of five lamps each. On the other hand, the five-lamp clusters 50 feet apart along each

Place.	POWER AND RATES FOR STREET LIGHTING					Annual Cost per Cluster.	Cost per Lamp.	Cost per Foot Street.	Sid. s of Street. Both	Posts or Arches. Posts

MAGNETITE LAMPS ON A ROCHESTER STREET

Street wet. Illumination greater than on page 17. Glare also greater, chiefly because lamps are too low

curb require a lamp for each 10 feet of curb and 10 watts per foot of curb, or double these figures per foot of the length of street, while the same size of lamp located singly 20 feet apart represent a lamp for each 20 feet of curb and 5 watts per foot of curb.

By using a single lamp per post under above conditions the total power and total number of lamps required by the five-lamp clusters to give less light midway between posts are reduced by one-half.

As to the cost of lamp renewals to maintain any given candle power at a post, either six 50-watt lamps or four 75-watt lamps give a total of 240 candle power, and each of these sizes costs the same amount each.

Intense street lighting with metallic flame arc lamps is well illustrated in Toledo and St. Louis, where the numbers of arcs per mile of street have been carried to a point probably never equalled before.

The new street lighting in Toledo is to include about 2,500 metallic flame arc lamps of the 4-ampere size, and on the more important streets pairs of these lamps are located 80 feet apart along each side so that there is an arc for each 20 feet of the length of street and 16 watts per foot. The rate for this lighting is \$45 per lamp per year, amounting to \$2.25 per foot of the length of street.

In St. Louis the streets formerly lighted with 138 enclosed carbon arc lamps now have the intense illumination of 240 4-ampere and 427 6.8-ampere metallic arcs. The 6.8-ampere lamps operate with 500 watts each and are spaced 80 feet apart along some of the streets, alternate lamps on opposite sides requiring 6.25 watts per foot of length. Along Broadway, St. Louis, 80 posts carry three each of the 4-ampere arcs, and these posts are about 60 feet apart on each side of the street, so that there is an arc for each 10 feet and 32 watts per foot.

CO-OPERATIVE SANITATION

WHAT appears to be needed in this country at the present time is some method of co-operation by which needed sanitary reforms can be brought about at least expense. It is unbusiness-like to compel the purification of the sewage of a large upstream city in order to protect the water supply of a small city lower down, provided pure water can be furnished the latter in some better and cheaper way. Legislation that clothes the State authorities with power to prevent the pollution of sewage, but does not give them power to compel the purification of water or to control pollution by trade wastes is unfortunate. It naturally leads to litigation rather than co-operation, and may retard rather than hasten necessary sanitary reforms. If our State authorities cannot be trusted in this matter it may be that a proper solution of the difficulty will be found in the establishment of district boards similar to those in England and Germany, such boards having jurisdiction over the limits of particular watersheds. In some respects these natural hydrographic boundaries have advantages over artificial State boundaries. In the near future also our national government will doubtless take a hand in the matter. In whatever form the authority may be constituted the idea of co-operation should prevail and ironclad rules against stream pollution should give way to a rational distribution of the burden of purification of both water and sewage, and an equitable adjustment of cost made between the parties interested, thus decreasing the total expense of sanitary measures required and utilizing natural resources for the purification of sewage in water as far as this is safe.

If the system of water carriage of sewage continues in use, the time will some day come when the sewage of all of our cities will be purified, partially or completely, and all surface water supplies filtered. It is proper to anticipate this consummation as far as our means permit, but meantime it is good business and sound common sense to spend our money first where it will go furthest and do the most good, building water filters and sewage purification works, sometimes one, sometimes both, as they may be needed.—*George C. Whipple, in a paper before Institute of Chemical Engineers.*

RAPID ROAD BUILDING IN KANSAS

Grading and Rolling Eighteen Miles of Dirt Road in One Day by Volunteer Labor—Organization and Construction Methods

Coffeyville, Kan., is one of the leading manufacturing centers in that state of such materials as brick, glass, roofing tile and pottery products. About eighteen miles distant is another manufacturing town, Independence. These two are connected by an old county road which was laid out thirty years ago, but has never been improved, although carrying considerable traffic.

Several years ago the desirability of furnishing a better roadway was realized, but it was not until last July that anything definite was done, when the leading business men of both cities got together and decided to endeavor to make of this an oiled highway with a minimum width of roadway of thirty feet. This union of prominent men of the two cities resulted in the organizing of the "Montgomery Good Roads Association."

PART OF ROAD AS IT APPEARED IN THE MORNING

The plans as finally decided upon involved what looked like the impossible proposition of building this road in one day by volunteer labor obtained from the two cities. Those whom it was most difficult to get interested in the project were the farmers themselves who owned the land along the roadway, and who believed that the idea was to provide a speedway for automobile owners. Even the mail carriers used their influence with the farmers, however, and through their efforts, but especially through those of the Commercial Club and a few prominent men and the Coffeyville *Daily Journal*, most of the objections were finally overcome and the plans were completed. In order to provide the funds a finance committee was

STRETCH OF FINISHED ROAD

VITRIFIED PIPES READY TO BE LAID FOR CULVERTS

appointed in each of the cities, and every one was asked for contributions, which ranged from sums of \$5 to \$200, and reached the total amount of about \$4,000.

In order to obtain materials and machinery for building the road, this was divided into two divisions, the southern or Coffeyville half being placed in charge of Mr. Oscar Jansen, of that city, and the Independence half, in charge of Mr. Fred Maine. Each of these divided his division into sections of one mile in length and appointed a foreman to take charge of each, with directions to have the roadway cleared of grass, hedges, rubbish and small trees. The County Commissioner, Mr. H. W. Dale, obtained the necessary graders, scrapers and rollers, and placed them at intervals along the route before the day in which the road was to be built, November 15. Grading machinery was collected from every township in the county, and that used by the street departments of the cities was obtained also. All culvert and bridge work was placed in charge of one man, who saw that the necessary sand and stone and vitrified clay culvert pipe were distributed where needed.

The Mayors of both Coffeyville and Independence issued proclamations making Tuesday, Nov. 15, a holiday, and asked that all places of business and schools be closed for the day. Judge Flannelly dismissed court and requested his office force to be out and assist in the work. The women of the two cities made arrangements to provide food for the thousand or more laborers at the noon hour, and again at 6 o'clock, if necessary. For laborers reliance was placed upon volunteers of the citizens, and early in the morning of the 15th, which was fortunately fair and clear, these citizens, including doctors, lawyers, bankers, farmers and laborers, gathered at the centers of the two cities, from which points automobiles and wagons provided by citizens took them to the several sections to which they had been assigned.

BUILDING CONCRETE BRIDGE CULVERT

The first work to be done was the plowing, grading and leveling of the road, cutting ditches along each side of the road and preparing for the vitrified pipe culverts for drainage purposes and for the small bridges which were to be constructed.

Following this, harrows and drags leveled the rough places and broke up the big clods, and rollers following behind consolidated the roadway. Many of the teams and laborers were furnished by the farmers having land close to the road. Wives of the farmers and of the leading citizens of both cities distributed baskets of luncheon among the workers at noon. By the time the sun had set, the road, which was over a rough and hilly country, and on which not even a sod had ever been turned, had been graded and rolled into an excellent thoroughfare.

One of the most difficult problems solved in this rapid construction was getting oil distributed over the entire 18 miles of roadway. One of the local oil companies originated the scheme adopted, which consisted in laying a line of pipe (which was borrowed from several of the oil companies) along the line of the road and placing hose connections with stop cocks at regular intervals along the same. On account of the extreme drought it was believed, when the road was constructed, that the earth surface was too dry for effective use of the oil at that time, but it was decided to wait until the first heavy rain, which would permit better consolidation, and then drag and roll the road and apply the oil by hose attached to the several connections along the pipe line.

LIABILITY OF MUNICIPAL OFFICERS

On Unauthorized Contracts—Not Liable When Acting in Good Faith—Court Decisions in Several States

It must be taken to be well settled by repeated decisions that when officers of a municipal corporation, acting in good faith, contract in their official capacities with parties having full knowledge of the extent of their authority, or who have equal means of knowledge with themselves, they do not become individually liable, unless the intent to incur a personal responsibility is clearly expressed, although it should be found that through ignorance of the law they may have exceeded their authority.

An instructive case is that of *Newman v. Sylvester*, 42 Ind. 106. Here it appeared that the common council of a city passed an ordinance for the improvement of a street, and a contractor whose bid was accepted for the work completed it to the satisfaction of the city engineer. An estimate was made and allowed against an abutting lot owner, who denied liability. The Mayor and Council refused to order a precept on the ground that the lot was not within the limits and jurisdiction of the city. The contractor sued the Mayor and Common Council, alleging that by advertising for and receiving proposals for the work they had held forth that they had jurisdiction over that part of the street when they knew that they had not and thereby intended to and did deceive; that the plaintiff had no knowledge to the contrary, and believed they had, and by their action was thrown off his guard and prevented from making inquiry. The defendants in their answer alleged that they had voted for the passing of the ordinance by mistake, without fraud or intentional wrong, and under a misapprehension as to the locality of that part of the street; that the plaintiff had the same knowledge as they had, and that they acted in good faith without any intention whatever of defrauding the plaintiff. In the court below a demurrer to the answer was sustained and judgment given for the plaintiff. The defendants appealed. The action was maintained on the theory that the Common Council was acting as a mere agent, governed by the same rules and liable to the same extent as ordinary agents for private persons, and so, having no authority, was personally liable to the party contracted with, either upon the contract or for deceit.

The court held that the action of the Council in passing the

ordinance and its proceedings under it were not calculated to throw the plaintiff off his guard or prevent him from making inquiry about the city limits. It was not expressly stated by it that the street was within the city. The most that could be said was that it acted as if it believed it to be. Nothing was said or done to prevent the plaintiff from ascertaining for himself whether the place was within the city limits.

On the general question of the liability of one assuming to act as agent for another without authority the court, adopting a view favorable to the agent, said:

If he enters into the contract in the name and as the agent of another, and does it honestly, fully disclosing all the facts touching the authority under which he acts, so that the one contracted with, from such information or otherwise, is fully informed of the authority possessed or claimed by him, he is not liable on the ground of deceit or for misleading the other party. It is material in such cases that the party complaining of a want of authority in the agent should be ignorant of the truth touching the agency. If he has a full knowledge of the facts, or of such facts as fairly and fully put him upon inquiry for them, and he fails to avail himself of such knowledge, or the means of knowledge reasonably accessible to him, he cannot say he was misled, simply on the ground that the party assumed to act as agent without authority, in the absence of fraud.

On the question of liability as public officers the court said:

If the party contracts as a public officer, and in that capacity acts honestly, he will not ordinarily be personally liable. If his authority to act is defined by public statute, all who contract with him will be presumed to know the extent of his authority, and cannot allege their ignorance as a ground for charging him with acting in excess of such authority, unless he knowingly misled the other party.

For these reasons the Supreme Court held that the facts alleged in the answer constituted a bar to the action and that the demurrer thereto ought to have been overruled, and reversed the judgment of the Superior Court.

In *Houston v. The Board, etc., of Clay County*, 18 Ind., 396, it was held that if township trustees, acting as such, exceeded their authority in making a contract for the erection of a bridge which they were not authorized to do by statute, and did so innocently, under a mistake of law, in which the other contracting party equally participated with equal opportunities of knowledge, neither at the time of making the contract looking to personal liability, the trustees would not be personally liable, nor would the township be liable.

In another case village trustees, acting as such, made a contract for the building of abutments for a bridge within the village. After completion of the work and payment in part by the village it repudiated liability. The contractor's assignee sued the trustees individually. It was held that the defendants, being officers of the village, acting *bona fide* and without concealment or fraud, were not personally bound upon the contract. It was not necessary to pass upon the liability of the village, but the court intimated that it was difficult to see why it should not be both legally and equitably liable. *Lyon v. Irish*, 58 Mich., 518.

Two village trustees were alleged by a plaintiff to have made a contract of employment with him to act as chief of police. He knew their position as trustees and that his appointment would have to be confirmed by the board of trustees. He sued them individually for damages for nonperformance of the alleged contract. There was no proof of any special obligation or intent on the part of the defendants to become personally liable on the contract. They were held not liable. *Miller v. Board*, 15 Mis. (N. Y.), 322, 37 N. Y. Supp., 766.

Where highway commissioners, in a proceeding to lay out a highway, being unable to agree with a land owner as to the damage he would sustain, submitted the matter of damages to arbitration, and executed their bond in their individual names containing an express covenant to abide by and perform the award, they having no power to bind the town in this manner, it was held that they were not individually liable on the bond. *Mann v. Richardson*, 66, Ill., 481.

The members of a board of education requested an architect to make plans for a school building and subsequently made an agreement for his employment. They afterwards notified him

to cease work on the plans as they did not wish them. He sued the city unsuccessfully and then sued the members of the board individually. It was held he could not recover, as the board's want of statutory power was as much within the plaintiff's cognizance as in the defendants', and as both parties acted in good faith, there being no guaranty by the defendants of their authority. *Lawrence v. Toothmaker*, 75 N. H., 148.

A statute vested the power to engage special counsel for cities in the Mayor and Common Council. An ordinance of the city attempted to delegate this power to the City Collector. Acting under the direction of the void ordinance the City Collector entered into a contract engaging special counsel for the city. The contract was held invalid, and in an action thereon by the attorney engaged, against the city and the collector, the latter was held not liable under the rule. *Edwards v. City of Kirkwood (Mo.)*, 127 S. W., 378.

A contract for grading a city street provided that the work should be done according to the plans on file and in obedience to the directions of the city engineer "as to the mode of doing the work." The engineer set his stakes wrong, so that they indicated a grade higher than called for by the contract. The contractor conformed the grade to the stakes, and subsequently sued the city and the engineer for the extra work caused him. The engineer was held not liable, the error being an honest one, and no bad faith on his part being charged or any intention to injure the plaintiff. *Wilson v. St. Joseph (Mo.)*, 10 S. W., 600. And where a director of a school district executed as such a note for the benefit of the district, believing (in good faith, though erroneously) that he was authorized to bind the district, it was held that he was not personally liable on the note. *Humphrey v. Jones*, 71 Mo., 62.

In *Southworth v. Flanders*, 33 La. Ann., 190, the Mayor and administrators of the City of New Orleans were sued by the Recorder of Mortgages for the Parish of Orleans for \$10,000 under the following circumstances. The defendants, in their official capacity, passed a city ordinance authorizing the Recorder to obtain and record certain certificates and copies of tax payments at a cost not exceeding \$10,000. The Recorder accepted and complied with the contract. It was held that assuming that the ordinance was illegal, the defendants were not personally liable. The court stated its understanding of the general rule of law on the subject to be that when officers of a municipal corporation, clothed with legislative functions involving a legislative discretion, make a mistake as to the extent of their powers, a mistake which is shared by the party with whom they contracted, having equal opportunities of information touching the powers delegated to such officers, and there is nothing in the proceeding looking to personal responsibility, the officers in such case are not personally liable.

The court also said that if any action did lie in such a case against the officers personally it would not be on the contract but would be *ex delicto*. That would also be the case in most of the other states, but in some the officers, if liable, could be held upon the contract.

STREET LIGHTING BY PORCH LIGHTS IN GREENWOOD

At the beginning of 1910 the municipal electric light plant of Greenwood, S. C., reduced by 10 per cent their rates for current, which were already low, but the increased business during the year has caused the financial showing to be the best in the history of the plant, we are informed by Mr. A. J. Sproles superintendent of the plant. The rates, we believe, are to be continued this year the same as last, but the Commissioner of the water and electric light plant decided on Jan. 4 to furnish current free of charge for porch lights, providing the residents use current for lighting and that they furnish a 40-watt tungsten lamp on the front porch on a rigid pendent fixture so located that it will give as much light as possible to the street or sidewalk. This light must be used only between the hours of 6 p. m. and 7 a. m. While the owners must provide the lamps, the Commissioners will furnish these to them at actual cost.

Sewage Disposal Patents

Up to ten years ago little was heard of patented processes
or appliances for purifying sewage. The results of the in-
vestigations of private engineers and sanitarians, as well as of
city, State and national boards, were published and given freely
to the public. About that time Cameron patented the septic
tank apparatus in England, and that and the process in this
country, and the process patent, with certain limitations, has
been sustained by our highest court.

We believe that no patent is claimed for contact beds or
sprinkling filters, but the various styles of moving sprinklers
used in England are, we believe, all patented; and one of the
sprinkler heads which is being used in the United States is

patented, as are most of the dosing appliances which have been
invented.

Much has been said recently about what bids fair to be a
successor of the septic tank—the Emscher or Imhoff tank.
This has been patented in this country by Mr. Imhoff, and
quite recently the same engineer has patented a combination
of such tanks with a biological filter. (See our issue of
January 4, page 40.) This is a modification of the Travis
tank, and the English papers have stated that Mr. Imhoff may
find trouble in collecting royalty because of Dr. Travis' previ-
ous invention. And both these are modifications of the septic
tank. The complication which all this might seem to involve
is, we are informed, actually threatened in one or two cases.
Purification plants at Atlanta, Ga., for which contracts have
been let, are to include Emscher tanks, for which it is proposed
to pay a royalty to Mr. Imhoff. But the holder of the Ameri-
can septic tank patent is demanding royalty because of the
same tanks. And it is possible that the troubles of this same
city will not end there. We understand that a method of
aerating the filter by ventilators to the sub-drains (described
in our January 4 issue) is to be adopted in that plant; and
also that a patent (No. 656,665) by Mr. Burton J. Ashley
is claimed to cover such ventilation.

It will be extremely unfortunate if this multiplication of
patents on engineering inventions should retard progress in
sewage treatment rather than advance it, as is the aim of the
patent system. And yet this is likely to be the case if there is
an uncertainty among engineers and city officials as to just
what disposal methods are covered by patents and who is en-
titled to the royalty. Much of this trouble might have been
avoided had the several State and municipal investigating bodies
taken out patents on their discoveries and given the same freely
to the world. What is now to be hoped for is an early sub-
mission of such cases to the highest courts and the prompt
decision of these, based upon a more intelligent appreciation
of the engineering, chemical and biological principles involved
than has been the case in several such decisions of late.

Sewage Purification Plants as Nuisances

In a paper before the Institute of Chemical Engineers, Mr.
George C. Whipple, in a paragraph headed "Purification Plants
as Nuisances," called attention to certain precautions which
should be taken in designing and locating sewage purification
plants. The paragraph was as follows:

Purification works themselves may be a source of nuisance.
There is a natural opprobrium attached to a region where such
works exist that results in a recognized deterioration of prop-
erty values. The processes used for the purification of sewage
not infrequently result in odors that may be distributed over
considerable areas. Where the purification works are entirely
covered, as some kinds of works may be, little or no nuisance
may result, but where, for example, the sewage is first sub-
mitted to putrefaction in a septic tank and the septic effluent
then sprayed into open air upon the surface of sprinkling
filters this exposure of the atomized liquid results in the libera-
tion of odors that may reach distances of half a mile from
the plant, depending upon the amount and character of sewage
treated, the local topography, prevailing direction of the wind,
humidity in the atmosphere and other conditions.

Frequently high winds will carry the spray itself for several
hundred feet with inevitable bacterial pollution of the air. In
the operation of sprinkling filters also it has been found that
at certain seasons of the year swarms of flies breed in the
porous beds. These are very troublesome in the immediate
vicinity of such works. In considering the need of sewage
purification it is proper to balance these nuisances against
those resulting from the discharge of unpurified sewage into a
body of water. It not infrequently happens that the installa-
tion of sewage purification works merely substitutes one
nuisance for another.

A cause of nuisance, possibly even more common than those
mentioned, is the failure to use sufficient care in operating the
plant, either to prevent nuisance or to secure the highest effi-
ciency. It is altogether too common for cities, having once
constructed a plant, to expect it to operate automatically, with
no attention whatever, or to place in charge some one with no
great amount of intelligence and no experience whatever in

purification plants, and thereafter pay no attention to the results obtained by him. In some cases State Boards of Health are empowered to require the construction of sewage purification plants, but have no control over their operation; and a city upon which the construction of such a plant has been forced by the State Board, finding that it has no further authority in the matter, absolutely neglects the plant. A plant so neglected is almost certain not only to fail to make any adequate return for the money invested in it, but may result in actual nuisance. In either a water or a sewage purification plant care in operation is fully as important as in designing or construction.

TAKING TRAFFIC CENSUS

In a recent paper on road construction Prof. A. H. Blanchard, of Providence, R. I., gives some useful hints on methods of making traffic counts on highways, the desirability of which was recently commented upon in these columns. He said:

The principles underlying the essential elements of any classification of traffic may be stated briefly as follows: Differentiation between horse-drawn vehicle traffic and motor car traffic; a division of each of these classes of traffic into pleasure and commercial traffic; the determination of the weight per linear inch of width of tire of all types of commercial traffic, a factor of the utmost importance in the design of the substructure of the road; subdivision of pleasure motor car traffic upon the basis of weight and speed, since in many instances the greatest damage to ordinary macadam road is caused by seven-seat touring cars, limousines or landaulets traveling at speeds of forty to sixty miles per hour.

As a practical, economical and efficient plan the following method is proposed for adoption under average conditions. For the open season from April to October, inclusive, the traffic should be taken during four periods of three days each, one period being in April, May or June, one in July, one in August and one in September or October. As local conditions may dictate, either Friday, Saturday and Sunday or Saturday, Sunday and Monday could be taken, thus insuring information relative to the usual abnormal Sunday motor car traffic, and in some cases, traffic above the week day average on Saturdays, while the Friday or Monday traffic would give a fair indication of the normal week day traffic. It is evident that by this plan more reliable and essential facts are secured relative to traffic than by the other methods considered.

HYPOCHLORITE AT NIAGARA FALLS

Among the many cities in the East which have been using hypochlorite for water sterilization is the city of Niagara Falls, New York. The Norwood Engineering Company is constructing a water-purification plant for improving the supply of the city, which is obtained from Niagara River, and is one of the most seriously polluted in the country. As it is some time before the filtration plant can be completed and put into service, the city is, meantime, under the direction of this firm, relying upon the use of hypochlorite as a temporary expedient for reducing the typhoid rate.

Considerable complaint is being made by the citizens and by certain of the daily papers against this use of hypochlorite, it being stated that a decided and unpleasant taste and odor are given to the water thereby. One or two experts have already visited the city to ascertain whether this objectionable feature can be prevented and how, and it is reported that the application of the hypochlorite is to be placed at once in the hands of a chemical and a bacteriological expert, both professors in the University of Buffalo.

There seems to be no doubt that there has been more or less taste in the water since the application of the hypochlorite, and we believe that it is no longer denied that the taste is due to the addition of that substance. The water commissioners, however, believe that the possible saving of life or sickness from typhoid warrants the temporary annoyance which this causes. The city bacteriologist, Dr. E. B. Horton, however, is opposed to the continuation of its use, claiming, in a letter to us, that it is "a most needless procedure, adding a poisonous drug to drinking water, when we have a safe and sane method of purification in slow sand filtration." While there has been a considerable reduction in typhoid since the use of hypochlorite was begun,

Dr. Horton believes this to be caused by the general boiling of the water by the citizens rather than by the hypochlorite. He has sent us a number of figures of tests made by him of raw and treated water, in which the number of bacteria per c.c. in the two respectively were as follows:

Date	In raw water	In filtered water
Oct. 21	14,400	130
Nov. 4	30,700	120
" 8	6,600	50
" 11	32,500	600
" 14	20,200	1,600
" 16	15,900	750
" 21	17,500	1,750
" 23	16,600	2,000
" 29	36,000	4,800
Dec. 4	20,000	6,800
" 7	16,000	3,300
" 11	9,000	1,900
" 14	9,700	1,200
" 18	4,400	350

On November 27 liquefying colonies destroyed all the plates from raw water in 36 hours; the bacteria in the treated water amounting to 8400.

These results the doctor does not consider as being very satisfactory. The tests given above show an average reduction of bacteria of 90.1 per cent. While this is not nearly as satisfactory a result as should be given by either a slow or rapid sand filter, nor as good as has been produced by the use of hypochlorite at other places, it would seem almost certain that it reduces the danger from typhoid by a very large percentage, and is well worth while, unless it is reasonably certain that the hypochlorite is causing injury to the people generally. It has been claimed by all advocates of this method that no harm whatever can be caused by the hypochlorite. This is something which, if there is any question about it, should be ascertained at once by recognized medical experts, as the use of hypochlorite is being adopted in scores of cities throughout the country.

OIL FOR PRESERVING WOOD BLOCKS

Readers of MUNICIPAL JOURNAL AND ENGINEER have been kept advised of the discussion which has been continued during the past year or two concerning the nature of the creosote or preservative oil which should be specified and used in the preparation of wood paving blocks. In our issue of Oct. 26, 1910, were printed the specifications recommended by a committee of the American Society of Municipal Improvements, which differed in only a few respects from those which had previously been recommended by a committee of the Organization of City Officials for Standardizing Paving Specifications.

Since our publication of these specifications, we understand, they have been criticised as providing for an oil which could not be obtained in the open market, and certain comments of this nature have found their way into print. These criticisms were called to the attention of the committee, and their reply to the same will be of interest to all who are concerned in this matter of wood block paving.

The committee states that it "is readily understood and appreciated by any one acquainted with the tar industry that any coal tar can be filtered so as to produce a tar sufficiently free from carbon which, when mixed with a proper creosote oil, will produce a product such as is called for in these specifications. [Those of the American Society of Municipal Improvements.] The by-product coke-oven tars produced in Nova Scotia are well adapted to the manufacture of such an oil." The committee also is informed that one of the large manufacturers of paving blocks obtains oil meeting these specifications from two different sources which are entirely independent of each other.

The committee quotes from a letter written to the chairman by Dr. Gellert Alleman, professor of chemistry at Swarthmore College, as follows:

I have no hesitation in stating that any dealer in tar can fulfill the specifications to which you refer by either filtering the tar and adding a certain proportion of creosote oil to it, or, in some cases, by adding creosote oil to the unfiltered tar. There are a number of coke oven tars now made in this country

which contain less than 8 per cent of free carbon, and, at the same time, possess a gravity of about 1.15. Such tars unfiltered, when reduced with creosote oil, will yield the material you require. There are two Philadelphia oil firms which could supply this material, but would be unwilling to do so unless the order were quite large.

The committee also refers to the Bulletins of the Bureau of Municipal Research of Cincinnati, treating at some length the question of creosote for paving blocks, one of which bulletins was abstracted by us in our issue of August 10, 1910. One of these reports stated that a coal tar is in common use for treating wood paving blocks which is produced as a mixture of coal tar creosote of a gravity approximately between 1.03 and 1.08 and of a coal tar or pitch with a gravity of 1.10 or higher and containing small percentages of free carbon less than four. This bulletin states that this mixture is commercially feasible and readily obtainable in large quantities at prices from six to eight cents per gallon.

The committee further states that, if it is the case that this oil can be furnished in large quantities by only one or two firms in this country, it is not because of any monopoly or patent, but because these firms are ready and willing to furnish it at such low cost (it has an offer in writing of seven cents a gallon) that there is no inducement for others to compete in the business, at least until the wood paving industry attains larger proportions than at present.

This particular discussion is not as to the desirability of using the creosote called for by the specifications, but only as to whether they would permit of sufficient competition among paving contractors to insure reasonable prices under them. It would appear as though a test of this might be obtained by efforts to secure bids under these specifications, and we hope that such a test will shortly be made by some city or cities which will give a definite proof as to the correctness of the committee's claim that any wood block manufacturer can obtain the creosote called for at a price which will permit of full competition.

THE IMHOFF TANK—AN EXPLANATION

Editor MUNICIPAL JOURNAL AND ENGINEER,

239 West Thirty-ninth street, New York City.

January 3, 1911.

SIR:—It has just come to my notice that some persons have expressed the supposition that I had some other than a purely professional interest in the Imhoff tank because I have recently on several occasions called attention to it and advocated it for the separation of the coarse suspended matter from sewage and for the treatment of the deposited sludge.

I hope you will permit me through your columns at once to disabuse the minds of such persons by emphatically denying any basis for such a presumption and stating that I have not and never will have any commercial interest, directly or indirectly, in any apparatus or process forming a part of any work which, as a consulting engineer, I have recommended or may recommend to public or private clients.

Since my last return from Europe it is true that I have repeatedly called special attention to the Imhoff tank. But this was done because I now consider it to form one of the most important and useful steps of progress in sewage treatment we have made for a number of years, and because I desired that my own country, where so many cities and towns can be benefited by it, should enjoy its advantages as soon as possible. My interest is purely and solely a professional one, and my communications have been made frequently, partly by invitation and partly to advance the subject more rapidly than might otherwise have been the case.

It may be proper to add a few words as to what my relation has been to the sewage sludge question since the time when in 1880 I first studied it in England. At that time and up to the present, as everyone knows, the sludge disposal has been the most troublesome feature of sewage work wherever it was necessary to separate the gross suspended matter from the sewage. The trouble was due to the nuisance created by the offensive odors at the place of treatment and to the difficulty of quickly drying the sludge for permanent disposal.

One proposition after another failed to prevent the usual foul odors, and with the advent of the septic tank these had practically come to be considered a "sine qua non," a wide belt of land being generally reserved around the works to secure immunity from the nuisance. Such a condition never appealed to me as a final one, and I considered that the question of

sludge treatment still remained the most pressing one for solution. I was, therefore, on the constant lookout for any favorable progress in that direction.

What appeared to me the most promising work in this direction was that of Dr. W. O. Travis, of Hampton, south of London, England, who was separating into two compartments by gravity most of the suspended from the liquid matter, and who deserves a large share of the credit in this modern movement. I then became acquainted with Mr. Wattenberg, Engineer of the Emscher district in Germany, a few years before his death, who was studying the Travis tank with reference to its introduction in his district.

During that study, Dr. Imhoff, then also an engineer of the Emscher district, discovered certain facts which made it possible to improve upon the Travis tank, and not only to get a sludge decomposition which was inoffensive, but a sludge that would dry quickly and allow of a non-odorous and economical removal and disposal.

These promising discoveries, after the unsuccessful efforts of many years in both America and Europe, were one of the causes for making a trip to Europe in 1908 to witness the actual conditions and results. Apparently these were satisfactory, but the experience had been so short that I was not yet entirely sure of a permanent success, and intended to make another visit two years later, which was last summer.

After returning home in 1908 my hopeful anticipations were not shared by most of those with whom I spoke, and naturally my assurance was not increased thereby, the subject being more of a chemical and bacteriological than an engineering one.

Fortunately, the Engineering Department of Philadelphia, through its Chief Engineer, Mr. George S. Webster, determined to erect a small Imhoff tank and to get experience data regarding the process under American conditions. The results after nearly a year's trial were confirmatory of those obtained in Europe. Meanwhile, conversations with Dr. Imhoff, during his visit to America in 1909, and further European correspondence and publications, proved that no serious difficulties were appearing.

Last summer I again visited a number of such plants in Germany and without exception found them inodorous and yielding quickly drying sludge, without incipient troubles of any kind. There were then already over 25 plants in operation.

Therefore, as all my own doubts had been removed regarding a large sphere of usefulness for these tanks (whatever modifications might later be found advisable under some special conditions) and as I learned that the royalty charge was very small, I felt it to be my duty to my American confreres to call attention to this advance, so that we might keep abreast of the progress which is being made elsewhere.

RUDOLPH HERING.

RETAINING MUNICIPAL POSITIONS.

We have been requested by a subscriber to print the following letter, which speaks for itself:

MUNICIPAL JOURNAL AND ENGINEER.

New York City.

GENTLEMEN: Why is it that the superintendent and employees of a municipal electric light plant are always uneasy at the time of municipal elections. Is it possible that professions have gone so deeply into politics? It is true that city officials like to undo what the former officials have done; and when such is the case something turns upside down usually. Why is it that the operatives of the city's machinery take any hand in the municipal elections? On the other hand, if they are doing their duty they should make such a record that the new city officials would be glad, exceedingly glad, to have them remain. Let us, as professional men, superintendents and employees of municipal electric light and water and ice plants, strive to run our end, no matter who is head of the city; strive to make it pleasant for him and those whom we serve. Do not mix politics with professions.

I have a record of the last five or six years where changes have been made on account of new city officials, and in several cases where politicians rather than professional men have been appointed and have taken charge of municipal plants, boilers have blown up, generators have been burned out, engines have been wrecked and the city has had law suits on account of the lines not being kept up and poor service generally. Good men are scarce and their services should be appreciated.

Yours respectfully,

F. B. HARRIS,

Superintendent Water and Light Plant,
Covington, Ga.

NEWS OF THE MUNICIPALITIES

Current Subjects of General Interest, Under Consideration by City Councils and Department Heads — Streets, Water Works, Lighting and Sanitary Matters — Fire and Police Items — Government and Finance

ROADS AND PAVEMENTS

Year's Work on Streets in Atlanta

Atlanta, Ga.—The annual report of City Engineer R. M. Clayton gives the amount of work done by the Street Department as follows: Curbing and sidewalks laid during the year 1910, 35.8 miles, at a cost of \$179,809.86. The majority of the sidewalks were paved with cement. The total cost of it all was charged against the property owners and thus cost the city nothing. Wherever sidewalks were laid, curbing was put down also, so the figures quoted above mean that much of both has been finished. Total sewers laid during the year were 12.43 miles, at a cost of \$100,983.57. Of that amount 2.62 miles, costing \$47,329.47, were paid for with bond issue money. The cost of the remaining was assessed against the property owners. No less than 10.94 miles of new street paving was put down in the year. That includes chert, bitulithic, bituminous macadam, old granite block and creosoted wood block. The total cost was \$282,640.81. Of that amount \$249,425.10 was paid by the city and the property owners combined, the city paying a third and the property owners the balance. The other cost, or \$53,215, was paid by the street railway company.

More Grade Crossings Going

Buffalo, N. Y.—Nine more Buffalo grade crossings are to be abolished. These are the Erie crossings at Main, Genesee, Doat and Colvin streets, Delevan, Kensington, Walden and Delaware avenues and the Military road. The contract, which was signed last week by the Grade Crossings Commission and the Erie Railroad Company, also provides for a crossing not at grade at East Amherst street when that thoroughfare is opened. With these crossings abolished there will be few left to deal with. All of these crossings are dangerous and have been the cause of complaints for years.

One Grade Crossing Change to Cost \$600,000

Cincinnati, O.—City Engineer Shipley says that the Rookwood crossing of the Pennsylvania lines would probably be the first grade crossing to be abolished with the funds provided by the recent sale of the grade crossing bonds. The estimated cost of the work is \$600,000, one-half of which is to be borne by the railroad and one-half by the city. Of the city's portion, the Cincinnati Traction Company will be required to bear a just and equitable share. This, however, shall not exceed one-half of the city's burden of the cost.

Will Widen Streets in Burned District

Cincinnati, O.—Councilman Robert O'Brien has proposed to remedy the evils of traffic congestion in the vicinity of Sycamore street, where a large area was recently burned, by having the city condemn portions of the property affected for the purpose of widening streets.

Plan Laws for Suburbs to Give Better Streets

Clayton, Mo.—Delegates from each municipality in the county met at Clayton last week to discuss legislation beneficial to the suburban towns. The principal subject discussed was the drawing up of a bill which, if made a law, will allow the County Court to spend on work in the towns 60 per cent of the road taxes paid by the municipalities. Under the existing law residents of municipalities in the county pay the regular tax of 40 cents on the \$100 valuation in addition to the 20-cent special road tax, and the county is not allowed to spend money on their roads. The grade-crossing question was also discussed. Senator Buel L. Matthews, of St. Louis County, has announced that he will introduce a bill in the Legislature giving the officials of municipalities and the judges of the county courts power to eliminate grade crossings. Samuel Hodgdon, of Webster Groves, presided. Addresses were made by Judge Herman Hackmann and Wilfred Jones.

Big Increase in Improvements

East Orange, N. J.—In an annual report made to the East Orange City Council, which, by reason of the fact that he is soon to relinquish his office, is in effect a valedictory, City Engineer Frederic A. Reimer showed that the construction of new improvements under his supervision during the year 1910 was between four and five times as great as that of 1909, and the purely maintenance work over \$7,000 in excess of that of the previous year. The value of new improvements aggregated in the present year \$305,702.73, and that of 1909 \$67,369.73, according to the report, while the figures for maintenance work were respectively \$54,881.63 and \$47,510.42. In the new work was included 9793 feet of sewer extensions, 8752 feet of drainage extensions, 29,936 feet of new paving, 22,238 feet of new sidewalks, 11,540 feet of new curbs and gutters in Park avenue and 168 new street lamps. The maintenance work embraced resurfacing of 34,154 feet of roads, resetting 25,106 feet of curbs, relaying 2476 square yards of gutter, oiling 26.84 miles of streets, cleaning 153 streets and repairing 13,273 feet of sidewalks. Besides that snow and ice was removed from sidewalks at a cost of \$4,096.77 to the property owners.

Year's Street Work in Minneapolis

Minneapolis, Minn.—According to figures compiled by the City Engineer, \$2,274,015 was spent during 1910 in street improvement work. Sixteen miles of paving was laid at a cost of \$525,000, and \$99,700 was expended in constructing 51 miles of curb. Other expenditures were: 26 miles of sewers, \$530,000; 40 miles of water mains, \$380,000; 28 miles of sidewalks, \$73,900; roads, \$90,593; filtration plant, \$65,000; bridges, \$29,822; Street Commissioner work, \$480,000.

Nine Grade Crossings to Go

New York, N. Y.—The Public Service Commission has ordered nine grade crossings to be abolished by the Long Island Railroad on its north side division in Flushing. The Legislature at its last session appropriated \$200,000 for such work in Queens County, inasmuch as the law requires that the city and State shall each pay one-quarter of the cost. The remaining half is to be paid by the company. With the amount thus available the Commission could only order an improvement to cost not more than \$800,000, but inasmuch as the Commission substantially approved the plan submitted by the Long Island for a general improvement covering about 13,000 feet of roadbed, which the city's engineers also approved, the company has agreed to pay the extra cost which will bring the entire amount to more than \$1,000,000.

Pouring and Spraying of Oil Compared

Plainfield, N. J.—During the season of 1910 two carloads of Standard road oil were spread by means of Saybolt pneumatic wagons, by which method the oil is forced out in a fine spray under air pressure. This process met with general approval from the fact that the street could be used immediately after the application of the oil. While much less oil is used than in the pouring process the treatment does not last as long and should be repeated at intervals of four or six weeks. The street committee, in their annual report, say that, judging from two years' experience, the expense of treating all streets so that they should be dustless during the entire season would be more than the city can now afford.

Opposes Acceptance of Any More Macadam Pavements

Schenectady, N. Y.—Commissioner Quackenbush, in his annual report, says that he is opposed to the acceptance by the city of any more macadam pavements, as they wear out quickly and are expensive to repair. The street repair account, last year, as given in the report of Superintendent Charles Hogan, was \$7,000.

Cement Pavement Disintegrating

Portland, Ore.—Several thousand square yards of Hassam pavement on East Twenty-first and Milwaukee streets, laid within the last four months, will have to be removed for the reason that it is disintegrating, according to a statement made by Manager George H. Hyland, of the Oregon Hassam Paving Company. This is due, he says, to the fact that the cement used in the pavement was worthless, which fact was unknown to the paving company when the pavement was laid. The pavement will be replaced immediately with good cement at the expense of the cement firm which produced the inferior material. The loss to the cement firm will reach approximately \$50,000, it is said.

Lien on the Streets

Topeka, Kan.—For the first time in the memory of the officials of the city, Topeka has had a lien served on some of its streets, sidewalks and alleys. Claiming that John Ritchie, a local paving contractor, owed them various sums, the Topeka Vitrified Brick & Tile Company and C. A. Ritchie have notified them that a lien has been served on considerable paving work. The brick company claims that Contractor Ritchie owes them \$755.95 for materials. C. A. Ritchie claims \$2,535.50 for work and material.

Paving Record in South Bend

South Bend, Ind.—Brick pavements costing \$55,746.99 were laid during the year, while \$30,219.69 was spent in the construction of macadam pavements. Asphalt pavements, which were contracted for in 1909, were completed this year at a cost of \$15,681.11.

Points to Be Covered by Indiana Road Law

Indianapolis, Ind.—A subcommittee consisting of William F. Elliott, chairman; B. J. T. Jeup, secretary; C. A. Kenyon, William Fortune, L. Ert Slack and W. L. Slinkard, representing the Indiana Good Roads Association, has begun work on the draft of a bill to be presented to the General Assembly in January, under which it is hoped that better roads for Indiana may be obtained. This committee was appointed by Addison C. Harris, who has been elected chairman of the general legislative committee of the Indiana Good Roads Association. Although this committee is not bound by restrictive instructions from the general committee, it has been asked to report one or more bills which will embrace these general points: A state highway commission and its powers; State aid in constructing and maintaining roads; special taxes on vehicles; use of convict labor, and amendments to present statutes. These ideas were selected by the general committee after a long discussion, embracing the fundamentals of needed legislation for relief in road matters in the State.

City Engineer Reports on Paving Work Done

Syracuse, N. Y.—Public improvements costing \$495,087.83 have been completed during 1910, according to the report of City Engineer Henry C. Allen to Commissioner of Public Safety Frank M. Westcott. During the year more than 5.69 miles of pavement have been laid, which is a larger mileage than any previous year in the history of the city with the exception of 1898 and 1899, when 6.39 and 6.94 miles, respectively, were laid. At present the city has 74.43 miles of pavement, or more than one-fourth of the total of approximately 270 miles.

The report shows the following work carried to completion during the year: Pavements, 5.69 miles, costing \$285,743.64; sewers, 5.64 miles, costing \$65,236.35; sidewalks, 9.26 miles, costing \$23,633.60; streets graded, 1.47 miles, costing \$14,311.47; miscellaneous contracts, including street sprinkling, flushing and the like, cost \$106,162.77; total, \$495,087.83.

Annual Report on Streets

Springfield, O.—Springfield has an area of 11.1 square miles, parks of 225.71 acres, 14.69 miles of paved streets, 17 miles of macadam streets, 48 miles of graveled streets, 46 miles of sewers, 2,426,525 square feet of cement walks and 284,856.45 feet of cement curb and gutter, according to a report of the engineering department of the city government submitted to the service director by Engineer M. J. Bahin. During the year 320 permits for laying cement curb and gutter were issued, a total of 122,250 square feet being laid and 12,271 feet of curb and gutter.

SEWERAGE AND SANITATION

160 Miles of Sewers Laid in Four Years

Baltimore, Md.—Chief Engineer Calvin W. Hendrick, of the Sewerage Commission, has submitted to Mayor Mahool, for use in the latter's annual message to the City Council, a statement showing that in the four years of the Mayor's incumbency 160 miles of sanitary and storm water sewers have been laid. Mayor Mahool regards this evidence of work that has been accomplished in Baltimore's biggest municipal undertaking with particular pride. The statement from Mr. Hendrick calls attention to the fact that the enormous disposal works on Back River have been practically completed, and the roof almost laid over the new sewerage pumping station on East Falls avenue. The pumps for this station, almost the largest of their kind in existence, have been completed and are awaiting shipment from the factory. Mr. Hendrick still sticks by his promise that the completed portion of the system in the eastern and northeastern sections of the city will be ready to be put into operation by 1912.

Contamination of Water Increases Yearly

Cleveland, O.—Proof that the city's water supply is becoming more contaminated each year is seen by Superintendent Ford, of the Health Department, in a report showing the results of the bacteriological examination of water from the new intake each day since the year of the completion of the new water tunnel. The bacteriological report shows that during the year 1904 the presence of colon bacilli was discovered in the water only on 12 days. In 1905, 11 days was the total. The total for 1907 was 29 and in 1908 it jumped to 40 days. In 1909 it was 43, and for the first 11 months of the present year it was 57. Indications are that the complete report will show a total several points above 60. Health officials compare this bacteriological showing of the water supply with the typhoid reports. The total number of typhoid deaths for this year will run to about 104, as against 67 for the year 1909.

Sewer and Water Pipes in Same Trench

Mt. Jackson, Va.—The town has just completed an up-to-date water and sewer system. With a natural drainage the town was adapted to an easy disposal of its sewage. When the water system was voted on favorably last summer some of the citizens agitated a sewer system along with the gravity water system. Acting upon this, a committee secured the necessary money to purchase the pipe. This pipe was laid in the same trench with the water line, and the entire work was completed at a cost of a little more than \$12,000. Kneisley Bros., of Woodstock, Va., had charge of the work, Mr. H. A. Kneisley, of the firm, supervising it. A reservoir of 600,000 gallons has been built in Massanuttn Mountain, several large springs furnishing the water. A pressure of 110 pounds has been developed.

No Public Drinking Cups Allowed in Idaho

Boise, Idaho.—The public drinking cup was abolished as an institution within the borders of Idaho January 1. Drinking fountains in the public buildings probably will be supplied with paper cups which can be used only once. The new law prohibits the use of common drinking cups on all railroad trains, railroad stations, hotels, stores, public and private schools and a number of other institutions. Circulars have been issued by the railroad companies ordering their employees to remove all cups from passenger cars while traversing Idaho.

Sewers Choked by Street Flushing

Philadelphia, Pa.—Complaints have come from many sections of the city because of the filthy condition of the streets, but more particularly because Contractor Vare's men are pushing the filth, left after the snow melted, into the sewers instead of carting it away. One result has been the choking up of the inlets, rendering the smaller sewers useless, and in some sections causing water to back up into cellars. Besides the trouble with sewers, there has been considerable complaint from the water officials regarding the use of filtered water at a time when it may be necessary to pump raw water into the mains.

WATER SUPPLY

Watervliet Water Situation Serious

Watervliet, N. Y.—A mass meeting of Watervliet citizens was held last week in Corporation Hall, when action was taken on the present water situation. The meeting was called by Mayor Hanratta and the Water Board. The large hall was packed with prominent residents of the Arsenal City. Mayor Hanratta said in calling the meeting to order that he and the Water Board had done all in their power to protect the city from fire. He made arrangements with the Roy Mill, where thousands of gallons of water are being pumped from the Hudson into the mains, and the Watervliet Arsenal and Green Island Water Company are furnishing several thousand gallons daily. The Mayor said he had visited Commissioner of Public Works Mann, of Troy, and that official assured him that the Collar City will furnish fire engines in case of a fire occurring in Watervliet. "Gentlemen," said the Mayor, in closing, "I am out for a municipal plant. The Hydraulic Company is not trying to help us out." Other speakers expressed themselves as favoring a municipal plant.

Favor New Water Rate

Cleveland, O.—A special committee of Council, appointed some months ago to look into the question of establishing new water rates will advise that a ready-to-serve charge of \$1 be substituted for the present minimum charge of \$1.25 for houses of six rooms or less and \$2.50 for houses containing more than six rooms. This single minimum of \$1 would be charged whether water is used or not and would entitle the consumer to the use of 2500 cubic feet of water without additional charge. Above this \$1 charge there would be a charge of 40 cents for every thousand feet of water used.

Water Company Sues City

Connersville, Ind.—The Connersville Hydraulic Company has brought suit in the Circuit Court to enjoin the City of Connersville from tearing down and removing the engines, boilers and pumps of the city water works, located on the hydraulic company's ground, to the city's new plant. The city formerly received its water supply through the canal maintained by the hydraulic company, and erected a pumping station on the company's ground, the lease for which expired about 18 months ago. The hydraulic company alleges that by the terms of its lease to the city, after the expiration of the time it was to run, the buildings and pumping machinery, if not removed before, become the absolute property of the company. The president of this company is E. Dwight Johnston. Finly H. Gray, Mayor; the members of the Council, the contractors and T. H. Stoops, of this city, are defendants.

Water Contract Renewed

Elizabeth, N. J.—The contract between the City of Elizabeth and the Elizabeth Town Water Company has been renewed for a period of three years. In the contract, however, were important alterations to benefit the city. The special committee on water supply that had in charge the matter of resuming the contract first reported favorably, and later a resolution empowering the proper city officials to execute a contract in accordance with the recommendations of the report was adopted. The new contract will reduce the cost of water for each fire hydrant from \$15 to \$10 and the water company will agree to furnish free water for street sprinkling. The rates to municipal buildings and fountains will remain the same, as will the rates for houses. The discount on bills paid at the proper time will be 10 per cent, instead of 5 per cent. So that the city may be protected there will be a clause in the contract providing that the city can revoke the contract at any time after giving a notice of 90 days. This clause was inserted, it was explained, so that if the city at any time thought it proper to install a municipal water plant—as recommended by Mayor-elect Stein—it could be in a position to do so. The new contract took effect on December 31.

Year's Work of Minneapolis Water Department

Minneapolis, Minn.—During 1910, up to Dec. 29, the City Waterworks Department spent \$779,897.58. Of this, \$550,000 was for construction work. The total receipts for the year up to Dec. 29 were \$516,764.22, with approximately \$35,000 to be added before the new year, making all told \$551,764.22. Construction work this year has been unusually heavy, work on the filter plant alone costing \$76,352.46. Then large feeder mains have been laid, entailing heavy outlay. The cost of material used amounted to \$270,340.33. It has been necessary to draw over \$200,000 on the surplus of \$414,000 of last year. The revenue this year was \$90,000 more than a year ago, \$347,330.96 for water being collected in 1909, as compared with about \$430,000 for 1910. During the year 4170 meters were installed, compared with 3455 last year, and 3612 taps were made, compared with 2978 in 1909.

Must Drink Raw Water

Philadelphia, Pa.—Street cleaners have opened fire plugs and otherwise wasted water to such an extent while flushing streets recently that the water in the Oak Lane reservoir was so depleted that it was necessary for the Water Bureau to supply raw water to make up the deficiency for that section of the city depending upon that source of reserve supply for filtered water. It was several days before the pumping stations and filtration system were able to catch up with the loss sustained by the wasteful use of water in flushing the streets. Manufacturers in the northeast have complained of the lack of water to properly operate their mills. One concern on Lehigh avenue, where many plugs were opened at one time and cleaners refused to use the hose as directed, there was but one pound of water pressure, and it was impossible in some instances to feed water to boilers which were supplying power without shutting down the plant and reducing the steam pressure.

Considerable complaint has been made of freezing fire plugs, which Chief Dunlap declares is avoidable, and is the result of the constant opening and closing of plugs which freeze while the water is permitted to drip from an improperly closed plug. The fire plugs are so constructed that when the flow is properly shut off the valve is so low in the ground that it will not freeze. The water left in the plug when shut off quickly leaks through a duct into the earth, entirely emptying the exposed section of the plug.

Improvements in Water and Light Plants

Mishawaka, Ind.—In the Electric Light and Water Department the electric light extensions and improvements cost estimated \$4,000; 9000 feet of water mains cost \$8,005; three pure water wells, 10 inches in diameter, about \$3,500. Total in department, \$16,000. The Water Department now has 1816 patrons and the Electric Light Department 1460 patrons, a fine growth. In 1911 the city will in all probability build a pumping plant in East Mishawaka, giving the city pure water in the mains.

Water Meters in Petersburg

Petersburg, Va.—City Engineer Robert Budd, on a visit to Norfolk, made the following statement of the results obtained in Petersburg from the use of meters:

No city which ever adopts meters is willing to abandon them. There was a feeling against their use in Petersburg when they were put in the ground, but that city will not give them up now, for they are profitably used. Before meters were installed Petersburg was pumping 2,500,000 gallons of water a day. The first few months after the installation of the meters the pumpage was reduced 90 per cent. The daily pumpage now is 800,000 gallons. The average household charge in Petersburg, under meters, is 65 cents per month. Before they were used I was paying \$36 a year for water.

There was a panicky feeling in Petersburg when the meter system was adopted. The pumpage fell very low, and there was a cry that the city would not get enough revenue from its water rents to maintain the water department. Gradually this feeling subsided as the people became accustomed to meters.

Despite the revenue of the Water Department of Petersburg has been reduced by the installation of meters, this has been more than offset by the decrease in the operating division of the department. We are able to shut down our pumps at midnight sometimes and the great decrease in pumpage has cut the coal and other bills way down.

City Liable for Damages in Supplying Bad Water

St. Paul, Minn.—The Supreme Court has handed down a decision declaring that a city with its own water works system is liable for damages that citizens suffer by getting bad water. The case may mean damage suits aggregating millions of dollars for municipalities where typhoid epidemics can be traced to the water supply. The decision was given in the cases of Della Keever and Kate Flanagan, two Mankato women whose husbands died during the typhoid fever epidemic in that city in 1907 and who sued the city for \$5,000 damages each. The lower court ruled against them and the Supreme Court reversed the case. The attorneys for the defendant said in their argument before the court last spring if it was decided that the city was liable it would mean damage suits aggregating \$10,000,000 would be filed against the city. This, they said, would bankrupt the city and threaten its very existence, as the assessed valuation of property in Mankato is only \$4,000,000. The cases now go back to the Blue Earth County District Court for retrial, and it will be a question of fact for the jury to determine whether the husbands of the defendants got the typhoid through the water supply and whether the city was negligent. It was commonly understood that the typhoid epidemic was due to a leak from the sewer system into the water system, but it may be a difficult matter to prove in court that it was the city's fault.

Sheboygan's Municipal Water Plant Is Paying

Sheboygan, Wis.—With revenues of \$81,664.70 for the year the Sheboygan Water Works plant, under the second year of municipal ownership will show a large increase in profits. It being estimated that the net receipts of the plant will exceed \$57,000. The gross revenues of the plant for the previous year are given at \$77,000, showing a gain of \$4,664 for 1910, the fiscal year for which closed June 30. Accompanying the report is a recommendation of the City Water Commission for a 10 per cent reduction in water rates to consumers.

Water Company Treats City Liberally

Bridgeport, Conn.—At the solicitation of Mayor Buckingham, and as a New Year's gift to the city, the Bridgeport Hydraulic Company has released the municipality from any obligation to pay for water supply for the hydrants. The historic controversy over this contract is done away with without legal entanglements and the resultant cost of time, harmonious feelings and money. The announcement was made New Year's day, and is considered to be an excellent example of a corporation helping a city in its growth and general prosperity; also an example for other water supply corporations in other cities. The contract with the city has about 16 years more to run. During years past this has been a point of issue between individuals and the hydraulic company. For this purpose the sum of \$12,000 is appropriated annually by the city. By its action it is estimated that, even if the city has no growth and there is no increase in the number of hydrants, the company practically makes a present to the city of \$102,000, the total of 16 years' payment of \$12,000 annually. Surely the city and Mayor Buckingham are to be congratulated over this result. But here will be a notable increase both in the size of the city and the number of hydrants. Although impossible to predict the amount of increase, a conservative increase places the present at a total of \$250,000.

New Filtering Plant Completed

Eugene, Ore.—When the university students returned last week they were able to secure pure water from the city mains. One of the largest modern filtering plants in the State has been recently completed. The type of filter, which is the same as that in use at Oregon City, has been approved by the university and State authorities. It will cost the city over \$60,000. Before this the city water was filtered, and repeated tests showed it to be pure, but the plant was a small one, and suspicion and caution have prompted many to boil the water or to use well water. It is thought that the latter is responsible for half a dozen cases of sickness in the last few weeks. It was noticed the sickness occurred immediately after a flood of the Willamette, and it is thought that the heavy rains and high water washed surface water into the wells and contaminated them.

STREET LIGHTING AND POWER

Ornamental Lighting Movement Spreading

Atlanta, Ga.—Since the turning on of the "Great White Way" on Peachtree, Whitehall and Mitchell, the beauty and value of this scheme of ornamental public lighting has gradually grown into the good graces of the people generally, and it is now generally recognized that Atlanta, in its main artery of retail traffic is the handsomest lighted city in the South. These ornamental lighting standards are being placed on Marietta to Cone and on Forsyth street from Marietta to Peachtree, on Broad street from Marietta to Peachtree and on Luckie from Forsyth to Peachtree. This second installation will probably be turned on about the first of February, thus adding another large portion of the downtown business streets to the system of lighting that so beautified the central thoroughfares. It has long been recognized as a logical and proper thing to do to light in this same manner Pryor street from Peachtree on through at least to the railroad and the intersecting streets between Peachtree and Pryor. The various people who have interests on Pryor street have in the last few days gotten together and have signed up practically all frontages, thus insuring the spread of the lights to Pryor street, and it is probable that other adjacent streets in the very near future will also be canvassed and added to this third installation. The property owners and merchants on Pryor street are very enthusiastic about this movement, as they have plainly seen the value of the lights to the street and how dark it is in comparison to the other streets thus lighted. Never before has Atlanta had the opportunity to note how truly "business follows the lights." It is generally conceded as a fair and proper move for the City Council to light and maintain the system on other downtown business streets and undoubtedly this will be the attitude of the Council when the recently canvassed blocks have been presented for their consideration.

New Contract and Improved Lights

Defiance, O.—The ten-year contract between the Defiance Gas & Electric Company has been signed by President William T. Morris, of the Defiance Gas & Electric Company, and the Director of Public Service. This means the end of the much-discussed lighting problem and the poor light service, as the company will immediately begin the work of installing the new system of street lights.

The principal points in the contract are as follows:

It is for a period of ten years. Street lamps numbering between 83 and 100 are to be on the rate of \$70 per lamp per annum. The lamps are to be of modern inclosed type, the long burning series and produce a much better light than the present old style lamp. On the business part of Clinton street the company is to install six Boston flaming arc lamps, which give a much greater light than the ordinary arc lamp and are more expensive to install and more costly to operate. Electricity for commercial use is to be charged at the rate of 9 cents per kw-hour with a discount of one cent per kw-hour if the bill is paid by the tenth of the month. Gas is to be charged at the rate of \$1.35 a thousand, with a discount of 10 cents a thousand if the bill is paid by the tenth of the month. The city is to have the privilege of carrying the fire alarm wires on the poles of the company. The poles of the company are to be painted in accordance with instructions of the Director of Public Service.

Want City to Pay for White Way

Des Moines, Ia.—The Commercial Club will make a big fight next year to compel the city to pay for the electricity used in the downtown electrolier street lighting system, according to Secretary Geis Botsford. "With the current paid for by the city the system would be extended to practically every business block in the city," Mr. Botsford said recently. "The city is not playing fair. A year ago it was intimated that after another year the city would pay for the current, but the commissioners seem to be making no plans to do so. Instead, the citizens are paying for the lighting of downtown streets as individuals. The city turns off its arc lights in the downtown districts until after midnight, when the electroliers go out."

St. Maries Will Have Good Light

St. Maries, Idaho.—The citizens in the west end are having installed a new street lighting system which, when completed, will be the only one of its kind in the Northwest. The lights form an arch across Front avenue at each corner, with 150 four-candle power tungsten lamps and one huge arc light in the center.

Power Plant in Connection with High Dam

St. Paul, Minn.—In reply to the criticism of G. W. Lewis, secretary of the Mississippi River Boulevard Association, anent the advisability of constructing the high dam for power purposes in which it is pointed out that in planning for the generation of electricity no provision has been made to pay for the installation of an auxiliary steam plant in case of low water, Mayor Keller declared the steam plant provision has been under consideration by the business corporation, comprising the officials of the Twin City and the university authorities, ever since the question of using the high dam for power purposes was first taken up. The Mayor said the engineering departments of the two cities and the dean of the school of engineering of the university had given the auxiliary power plant installation considerable investigation, and he believed a detailed estimate of this plan had been included in the general estimate of the expense which would have to be borne by all parties interested in the improvement.

Gas Company Says It's Going to Quit

Cleveland, O.—The East Ohio Gas Company, recently denied a franchise giving it the right to increase the price of artificial gas, has taken the first step toward making good its threat to shut off the supply by notifying all the employees at artificial gas plants of their dismissal to take effect Jan. 17, 1911. Over 1000 men are affected.

City Gets a Good Natural Gas Well

Iola, Kan.—Drillers for the Municipal Gas Department have brought in the best gas well in recent years on the Arnold lease in the west field. Other wells will be drilled in the vicinity of the new gasser in the near future.

FIRE AND POLICE

New Auto Apparatus Received

Augusta, Ga.—The new Webb auto chemical hose and ladder wagon, just received, has been named Thomas Barrett, Jr., in honor of the Mayor. The apparatus differs in some details of design from any other in the country. The ladder receptacles are made according to suggestions of Chief Reynolds and Chairman Kalbfleisch.

Driving over Fire Hose to Be Stopped

Baton Rouge, La.—City Fire Chief Hugh Waddill announces that after Jan. 1 any person who drives over city fire hose will be promptly arrested and prosecuted before the city court. There have been a great many complaints from firemen over the way persons have been in the habit of driving over hose at fires. The weight of a carriage does serious damage to the hose. There is a city ordinance against driving over the hose, and the Fire Department officials say that the ordinance will be strictly enforced.

Self Government for Police of Berkeley

Berkeley, Cal.—Chief of Police August Vollmer has announced that hereafter the men of the Police Department are to govern themselves, settle their petty differences by a jury of their peers and hear complaints made against them both by members of their own corps and the general public. In the latter cases the approval of the Chief and Commissioner of Public Health and Safety is required before the findings are regarded as final. Chief Vollmer has been considered as one of the most progressive police chiefs in the country, and the result of his experiment will be watched with interest. A year ago he established the golden rule policy. The soft non-fracturing club was adopted some time ago as the official weapon of patrolmen.

Police Department Buys Bloodhounds

Chattanooga, Tenn.—The Chattanooga Police Department now owns two fine-looking bloodhounds, and from all reports their record is as good as their looks. The new hounds were received in the city last week and were at once turned over to Detectives Clark and Gibson, who will have charge of them. They came from Brushy Mountain State Prison, and have a record of making a number of good catches at the prison. The hounds are the property of the city, and will be used in cases of arson, housebreaking, larceny and all cases where work of this kind is needed.

Water Supply Failed—Town Nearly Destroyed

Granville, N. Y.—The village of Granville was saved from destruction by fire Jan. 3, by a sudden shift of the wind after the flames had consumed ten blocks of business buildings, three hotels and seven residences. The loss was \$300,000. There were no casualties. The fire had free sway owing to the failure of the water supply. Long lines of hose were strung to the Pawlet River, but the stream which was pumped was too feeble to be of much service. The fire started in a clothing store. Its cause has not been ascertained. Granville has a population of about 5000.

Fire Chief Advises Against Special Privileges

Milwaukee, Wis.—Fire Chief Clancy has advised the Council Committee on Public Buildings and Grounds not to grant any special privileges to vacate or build over alleys in the downtown district on account of the danger through fires. "I am strongly against closing up alleys or building over them with nothing but a driveway for the reason that it would give the Fire Department no opportunity to fight fires," he said. "No ladders could be erected and the flames would be given an added impetus to do damage. We must not only fight fires, but also prevent them."

New Fire Chief for Auto Apparatus

Minneapolis, Minn.—Charles W. Ringer, who has recently been appointed Chief Engineer, is reported to have said that no more horse-drawn fire apparatus will be purchased or ordered built, if he can direct it. He is in favor of motor-propelled vehicles. "It is time Minneapolis had apparatus on automobile trucks," he said, "and I am going to start construction of a motor-propelled combination hose and chemical wagon in the repair shops as soon as I can."

Fire Chief to Investigate

Elkhart, Ind.—Mayor Chester has announced that Fire Chief Ulrich would at once begin a thorough investigation of conditions in all business buildings and other large structures, especially the basements. The object is two-fold—first, to order correction of improper conditions and, second, to acquaint the firemen with the "lay of the land" in order to be better able to meet emergencies. The Chief will be accompanied by different firemen at different times.

Steam Engine and Paid Department Are in Service

Navarre, O.—The Navarre Fire Department has disbanded. It held its final meeting last week, read and approved the minutes, transacted some business and adjourned sine die. Hereafter the protection of the village will rest with a department consisting of 15 men who will work under the direction of a chief, an assistant chief and an engineer. A new steam engine has been purchased and the old hand engine serves no other purpose than to show posterity with what apparatus their ancestors worked. The City Council, which purchased the new engine, has assumed supervision of the new Fire Department, which is expected to do wonders in the future. Navarre residents say that they will never work more faithfully or more loyally than did the old company with the hand engine. That, they say, would be impossible.

Fire College for City

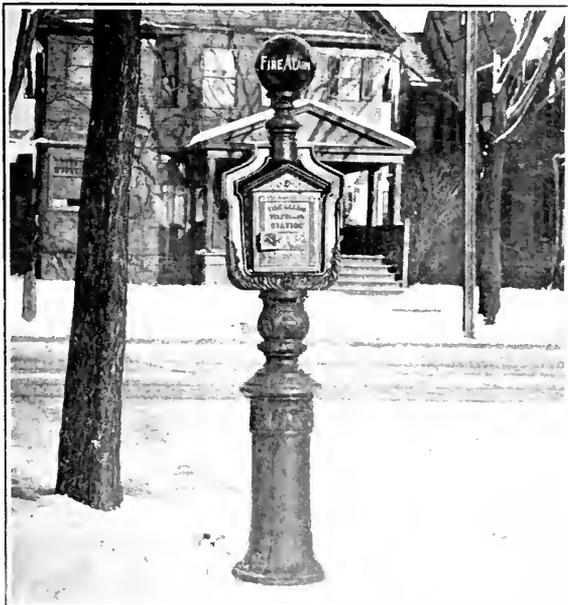

New York, N. Y.—For three months or more Commissioner Rhinelander Waldo and Chief E. F. Croker have been perfecting a project which Hugh Bonner often talked about—the establishment of a "Fire College," so that the lore of fire fighting, gained by individuals in years of fighting thousands of fires, might be preserved instead of dying with the individual. Practical work in machine shops, lectures on explosives by well-known chemists, talks and demonstrations by electrical engineers on the new problems offered by the high voltage electrified railroads, the handling of blazes in high buildings, a better understanding of the high pressure system, and very practical lessons in the scaling of walls, jumping into life nets, and the handling of all kinds of tools used by firemen, all these subjects and many more of a practical nature will be taken up and drilled into the force by the fire college. The fire college is not intended to supplant the regular drill school, but is inaugurated for the purpose of carrying on higher work.

New Fire Hose, All Good

New York, N. Y.—Commissioner Waldo has completed the purchase of 60,000 feet of fire hose, of which two-thirds will be used in Manhattan and the other third in Brooklyn and Queens. A new system was used in testing this hose. Every link was tested to make sure that it was up to its contract requirement of resisting pressure of 400 pounds to the square inch. The average strength of the new hose was found to resist 600 pounds pressure. The date of purchase is marked on a piece of red rubber at the coupling of each link. Under the former system only selected pieces of hose were tested.

Fire Alarm Boxes Provided with Lights

Rochester, N. Y.—In order to make the fire alarm boxes clearly recognizable at night they have been equipped with an incandescent lamp enclosed in an outer red globe. No change was made in the fire-alarm posts, a special fitting at the top being equipped with a shade holder and a 40-watt, clear-bulb, tungsten lamp over which is a red globe with the words "Fire Alarm" etched in it. The lighting circuit to the post is run underground either from the underground system or from a pole line, the leads in the latter case passing down the pole in conduit to the fire alarm post. Where the lighting circuits are on the opposite side of the street

Courtesy Electrical World

ELECTRICALLY LIGHTED FIRE-ALARM BOX

the circuit is placed underground in an iron pipe, a single conductor being used for one lead and the pipe itself for the other lead. In this way the extra cost of a double conductor is saved and the small transformers—for all the lamps receive energy from an overhead or underground 16-volt, 40-watt transformer connected to the constant-current arc lighting circuits—are effectually grounded. The small transformers are in most cases set in the manholes adjacent to the fire-alarm posts. The invention is the outcome of an incident that occurred some time ago, when a fire made considerable progress because a citizen could not find a box at night. It is the joint work of City Engineer Fisher and officers of the Rochester Rail and Light Co.

Schenectady's Annual Fire Record

Schenectady, N. Y.—According to the annual report of Chief Henry R. Yates, of the Fire Department, there were 280 fires during the year, with a total loss of \$62,307.01, as against 250 fires, with a total loss of \$152,086.71 in 1909. On the buildings in which there were fires during the year the insurance amounted to \$419,349.94, and their contents were insured for \$126,760, a total insurance of \$546,109.94. The insurance paid on the buildings was \$30,639.41 and on the contents \$26,882.60, with an estimated uninsured loss of \$4,685. These latter amounts added together are taken to represent the total fire loss of the year, \$62,307.01.

GOVERNMENT AND FINANCE

Enjoyed Being Mayor

Detroit, Mich.—Mayor Philip H. Breitmeyer, who retired from office on Jan. 1, was asked in what light he now viewed his policy of making his office a universal social club during his two-year incumbency, and how much it had cost him. The Mayor's chief object seems to have been to be a jolly good fellow to everybody. He has given banquets and other entertainments galore, and the invitations to the same have been sent out with a free hand. The Mayor said he had kept no account whatever of what it had cost him, but when different figures were suggested to him he admitted that it might have been in the neighborhood of \$40,000. "Do you think the fun was worth the price?" he was asked. "Young man," he replied, "I would have paid just three times as much for the honor of being Mayor of a city like Detroit. It has been a great experience. These have been the two happiest years of my life."

New Municipal Government Bill in Indiana

Indianapolis, Ind.—State Representative Adolph Roggan, of Allen County, has prepared a bill which he will introduce into the General Assembly, giving Indiana cities of the first, second and third classes the right to change their form of city government by abolishing old and creating new offices and prescribing the method of procedure. According to the draft of the bill a petition signed by 25 per cent of the total vote cast at the last city election asking a change in city government and setting forth the proposed change, shall be filed with the Mayor or City Clerk. An election must then be called to be held the first Tuesday after the first Monday in the month of November following. The Roggan bill offers an avenue for the substitution of the commission form of government for the present form in any Indiana cities voting the change, although the commission form of government is not mentioned in the proposed bill.

Busy Year for Public Service Commission

New York, N. Y.—At the close of business for 1910 the Public Service Commission, Second District, had presented to it for action 2071 different matters. These included 1438 complaints which were handled informally by the Commission and settled without the necessity of formal orders, 371 formal complaints and 262 applications from various corporations for authorization by the commission. During the year the Commission disposed of and closed 1670 of the matters presented. In addition to daily sessions and consideration of disposition of cases, the Commission held 554 hearings covering a period of 196 days. During the year the Commission authorized capitalization to the amount of \$151,048,108. In 1909 there was authorized \$142,855,035.85; in 1908, \$92,253,900; for the last six months of 1907, \$17,730,745.90, a total for the 3½ years of \$403,887,789.34.

Springfield, Ill., Votes for Commission

Springfield, Ill.—Springfield, the first city of Illinois to hold an election under the commission form of government statute, adopted the commission plan by a majority of 790. The people turned out despite a blizzard and voted for the new plan. The vote was 3790 for and 3000 against.

Spokane Adopts Commission Form

Spokane, Wash.—By a majority of 2237 out of a total of 10,463 votes, the commission plan charter, drawn by a committee of fifteen freeholders was accepted at the election of Dec. 28. The following will be the immediate effects of the new charter:

Any official filling an elective city office may be recalled. Any new ordinance may be introduced by initiative petition and election. Referendum may be applied to any ordinance except emergency ordinances, ordinances ordering local improvements and those ordering the annual tax levy and appropriations. Any provision of the new charter may be amended by petition and election. Succeeding elections of city officials will be under the new commission system, the next general election to be on March 7.

The other powers of the charter—those which directly affect the administration by the commission—will go into effect when the first commission has been elected and has qualified.

Waldo Urges Bureau for Prevention of Fire

New York, N. Y.—Fire Commissioner Rhinelander Waldo recently testified as follows before a legislative committee on the subject of fire prevention:

The question of the Fire Department divides itself into two branches, the extinguishing of a fire and the prevention of a fire. In my opinion, the prevention of fire is the subject in which greatest development for the future lies. The extinguishment of fire is now being handled extremely efficiently by the New York Fire Department. The fire prevention is, however, as I said before, a subject which I believe is most susceptible to improvement. To-day we have many devices of fire prevention. We have the automatic sprinkler system. We have the perforated pipe systems; we have the standpipes and the introduction of fire extinguishers and automatic fire alarm telegraphs giving notice of a fire at its start. I think the Fire Department should have some legislation which would make this bureau of fire prevention a separate one from the bureau of fire extinction, and it should have authority to compel the introduction of these devices in premises where the business carried on is of a hazardous character, such as in workshops and storehouses and department stores. I think if the Legislature would pass some act which would give the Department authority to do that it would greatly limit the loss. Also another subject which I think you ought to take up is the one preventing the fire insurance companies from overinsuring. A man can to-day get out an insurance without having his property adequately inventoried and thereby give him an incentive to incendiarism. I think it ought to be made a penal offense to insure any property unless a careful inventory has been taken by the insurance company. There is no question but what a large percentage of all fires here is of an incendiary nature and are incurred by the laxity of the insurance companies in inventoring.

Police Will Be Provided with Rifles.

Pittsburg, Pa.—Chagrined by the escape of a score of burglars during the last month for lack of long-range weapons, William Bennett, Chief of Police of Braddock, a suburb, has ordered ten regulation Springfield rifles. Councilmen argued it might not be legal for policemen to carry such firearms, whereupon Chief Bennett, a Civil War veteran, wrote Secretary Knox at Washington for an opinion. The answer was satisfactory and the Council approved the bill.

STREET CLEANING AND REFUSE DISPOSAL

Metal Garbage Cans and Trolley Loading Stations Recommended

Baltimore, Md.—Declaring that rats are overrunning many sections of the city, Col. Joseph L. Wickes, Commissioner of Street Cleaning, in his annual report to the Mayor will make another earnest plea for the passage of the ordinance requiring all householders to use covered metal receptacles for their garbage. According to Colonel Wickes, the rodents are becoming more and more numerous in Baltimore and bolder in their devastations. He attributes their growth and activities to the contributory negligence of householders who expose their garbage, and thus provide food for rats. Colonel Wickes will also recommend again the reorganization of the system of collecting and disposing of non-perishable waste, such as ashes and rubbish. He will recommend the establishment of the system used in Brooklyn, where central collection points are provided from which the waste is carried out of the city on trolley cars.

Preventive Measures to Aid in Street Cleaning

Cincinnati, O.—An active campaign toward keeping the streets clean was launched at a conference between Mayor Schwab and Street Cleaning Superintendent Maag. The attention of the officials was called by the Woman's Club, which made many valuable suggestions as to how the matter could be remedied, and to the practice of littering streets by sweeping dirt out of stores onto the sidewalks.

Will Continue to Measure Snow Wagons

New York, N. Y.—Commissioner of Weights and Measures Walsh and Leo Arnstein, secretary of the Borough of Manhattan, have devised a plan for continuing the measuring and sealing by the Bureau of all wagons used in snow removal. During the recent storm Mr. Walsh found that the extent of the work was such that it taxed the capacity of the Bureau and kept his inspectors from attending to their regular duties. The failure of the inspectors to prevent delay in handling the wagons was also assigned by Street Cleaning Commissioner Edwards and others for the almost unprecedented delay in getting the streets of the city cleaned up. Mr. Walsh and Mr. Arnstein have decided to draft a large number of men from other Departments and Bureaus, principally from the offices of the Commissioner of Accounts and Borough President McAneny, to do this work.

RAPID TRANSIT

Impossible to Supply Seats Even in Non-Rush Hours

New York, N. Y.—With the statement that it is impossible to provide seats for all passengers in the subways in the non-rush hours, Theodore P. Shonts, president of the Interborough Company, has given notice to the Public Service Commission that its orders could not be observed. Mr. Shonts asked for a new hearing on the order increasing service, but at the same time states that the company has no intention of carrying out the improvements suggested. Mr. Shonts suggests that if the Commission persists in demanding better service in the non-rush hours the question of the legality of such orders will be taken to the courts. The Commission granted the request for a new hearing and set the date for January 12, before John E. Eustis. "The terms of the Commission's orders are not accepted by this company," Mr. Shonts wrote. "The terms are impossible of performance. The order makes no provision for temporary prevention from complying with its terms by accident or other controlling emergency. The terms are unjust and unreasonable. The order deprives this company of the right of ownership and management and protection of its property and the property of others committed to its care."

May Abolish Three-Cent Fare

Cleveland, O.—Wall Street threatens to put an end to Cleveland's enjoyment of a three-cent street car fare. This rate has been in effect for over a year. The service has been good, but Wall Street has been asked to furnish funds for certain improvements the Cleveland Railway Company desires to make, and the money kings insist that the fare be raised before they put up the cash. Cleveland Railway Company officials will open negotiations this week with Mayor Baehr and other authorities to have the Taylor franchise amended to meet suggestions of N. W. Harris & Co., of New York, who offer to finance the property under certain conditions. The amendments suggested are of such a nature as to make certain an increase in the rate of fare. "Never mind. There will be no increase in the rate of fare," was Mayor Baehr's only comment on the situation.

MISCELLANEOUS

Dock Commissioner Plans System of Open Piers

New York, N. Y.—Dock Commissioner Calvin Tompkins is slowly working out a plan for the reorganization of the pier system of the city, by which the piers will not all be turned over to steamship companies and private corporations for their exclusive use at nominal rentals, but many of them will be held as "open piers," on which privileges will be let to various business concerns. This will relieve the lack of pier facilities for the small business man, and in the course of time will substantially add to the city revenues.

Close First Year of Separate Park Department

South Bend, Ind.—Maintaining the park system of South Bend during 1910, the first year it became a department separate from the Board of Public Works, cost the city \$22,851.59. Of this amount \$5,308.24 was spent for salaries, while \$8,095.19 was paid out for labor in the parks. The park system was separated from the Board of Public Works the first of last year when Fred C. Winkler, Simon Greenebaum, Richard Elbel and Col. George M. Studebaker were named Park Commissioners. With the death of Mr. Winkler, who was president of the Board, Mr. Elbel became head of the department, while Dr. E. J. Lent was appointed to fill out the unexpired term of the deceased member. Herman Beyer was retained as superintendent of the park system. Other expenditures in the department for the year shown in the annual report compiled by Clerk A. P. Perley, follow: Miscellaneous articles, \$1,752.17; tools, \$268.91; seats and buildings, \$902.02; lights, \$70.07; plants and shrubs, \$587.57; rinks, \$776.02; roads and paths, \$321.16; concerts, \$1,192.10; fuel, \$100.90; repairs, \$271.34; plumbing, \$6.10, and zoo expenses, \$785.80. Donations for the purchase of land during the year amounted to \$785.80.

Small Measures Generally Short from Wear

Massillon, O.—Sealer Martin, in a report, said that during the six months he had been in office he had found 216 scales correct and 83 needing adjustment. He said he found 88 correct half-bushel, peck, half-peck and quarter-peck measures, but all quart and pint dry measures short. He said there was no intention on the part of the dealers to defraud their customers, but the weights had become short through usage and wear. The testing equipment, he said, had cost \$198.36; incidentals, \$11.50; office supplies, \$8.50; salary, \$150.

Co-operative Town to Be Established

Muskogee, Okla.—To establish a town on a co-operative basis, with all of the conveniences for a city and in close proximity to Muskogee, is the hope and ambition of a number of working men in this city, and the plan has crystallized to such an extent that articles of incorporation will soon be filed. The scheme is to secure sufficient land to enable 100 men to own conveniently sized lots on which to build a home. The homes will radiate from a business section laid off with a view to having enterprises which would supply the entire town. A co-operative store, a farmers' union warehouse, a gin, cannery and creamery are also provided for, as well as sites for a central temple or convention hall, a theatre, school house, park and green house and nursery. Altruria will probably be the name of the town.

Cannot Prosecute Dealer for Sale of Short Measure Goods

Grand Rapids, Mich.—That the public of this city are being systematically defrauded in the sale of matches and clothes lines through no fault of the retail dealers was discovered to-day by City Sealer Byrne, who, after a consultation with Assistant City Attorney Ferguson, was forced to acknowledge that the retailer was not responsible under the law for the practice and cannot be prosecuted. City Sealer Byrne's attention was attracted to the practice by a complaint which reached him last week. A woman in the south end of the city had two clothes line poles set in her yard a hundred feet apart and went to her retailer to procure a line. The retailer sold her two packages of line which was represented by the label to contain 50 feet of line per package. She purchased two and went home to find that the two packages lacked 16 feet of reaching from pole to pole. She reported the matter to City Sealer Byrne and he started an investigation which resulted in his finding that every package of this brand of clothes line measured only from 42 to 43 feet in length. He ordered the retailer to stop the sale, but the merchant pleaded innocent with manifest justice and Assistant City Attorney Ferguson upheld him in his innocence. Then a complaint about matches was received and the City Sealer bought several packages of matches and in one on which the label represented the box to contain 500 matches he found only 250 matches and this count was substantially borne out by a count of several boxes. Assistant City Attorney Ferguson says the retailer, while he can be prohibited from selling these short measure goods cannot be prosecuted because he is not primarily responsible for the contents of the package and buys them in good faith, relying on the representation of the package label, and sells them with the same good intent. The city ordinance or State law cannot reach the manufacturer, and the only hope for the people Mr. Ferguson sees is the enactment of a National Sealer of Weights and Measures to operate under a national law that will reach every manufacturer, and this coupled with a uniform system and State laws applying to weights and measures.

Accepts \$500,000 for Fountain

Detroit, Mich.—The Detroit City Council has voted to accept the \$500,000 set aside by the will of James Scott, among a picturesque figure of this city, to be used in building a memorial fountain and life-sized statue of him in Belle Isle Park. For more than a month the clergy and various citizens and organizations fought against accepting the gift because they considered its giver not the proper person to be remembered by any public object, even if he left the money for it. The clause in the will setting aside the half million dollars for the memorial has been dubbed "Jim Scott's last joke."

Topeka Will Operate Amusement Park

Topeka, Kan.—Topeka will have a new amusement park next summer—and it will be under municipal control. The Board of City Commissioners have decided to make Garfield Park into an "electric white city" and the City Clerk has been asked to advertise for bids from different amusement firms for the purpose of carrying out the plans. Boating, band concerts, figure 8, merry-go-rounds—and concessions and attractions of all kinds have been placed on the list of required amusements. Everything of an entertaining nature which is included in an up-to-date metropolitan amusement park will be sought for Garfield, and the gates must be opened for the grand opening early in the summer. It is believed by the city officials that a park of this kind would be greatly appreciated as well as patronized by the people of the city. It is also figured that the royalties and the revenue to be obtained from such a park will be a profitable undertaking to the city.

Will Muzzle Dogs for Year

Boone, Ia.—Mayor Wilder has ordered that all dogs in the city be muzzled for a period of one year. This unusual order is the result of the death from rabies of a four-year-old child and the injury of nearly a dozen citizens by being bitten by dogs within a few months. Mayor Wilder is considering the advisability of ordering all dogs in the city killed.

Want Municipal Telephone System

Thief River Falls, Minn.—The Tristate Telephone Company, which holds a franchise for a telephone system in this city and which has been running the local exchange for two years has been prohibited by the city authorities from setting poles in the alleys of the city. There has been more or less dispute between the company and the Council for some time, the city claiming that the franchise is not legal and the company claiming it is. When the company sought to string wires or set poles they met with opposition and it is likely that the trouble will have to be settled in the courts. There is a strong sentiment in the city in favor of a municipal ownership of the system, as the city owns its own electric plant and makes it pay handsome returns annually. The water works are also city owned and in the near future the city may install a telephone system. This is the chief reason why no further extensions of the present lines will be permitted by the authorities.

Washington Streets Flushed with Hose

Washington, D. C.—Following the partial melting of snow the streets were in unusually bad condition. Seven gangs of six men each were put to work flushing the streets. Wagons borrowed from the Water Department were used to carry the hose from hydrant to hydrant. The work was so effective that in two or three days walking and automobiling had resumed their normal state.

For City Aviation Landings

Modesto, Cal.—Visions of the days when men shall fly as they now ride in street cars are called up by a provision in the new charter adopted by the citizens of Modesto. Power is given to the city to construct and operate aviation landings as a municipal enterprise, and it is said that the clause is wide enough to enable the city fathers to conduct aerial contests and to build aviation parks.

Mayor Would Have Municipal Laundry

Petoskey, Mich.—As a means of increasing the popularity of Petoskey and alleviating the troubles of housewives, Mayor Reycraft advised the Council to consider the project of building a municipal laundry. As a result of the recent installation of new machinery in the city light plant, more power is generated than is needed, and the Mayor suggested that it be put to this use. Water could be heated by means of electricity, and a great saving of time and labor to private citizens would result.

State to Share in Expense of Grade Crossing Changes

Trenton, N. J.—The Board of Public Utility Commissioners has recommended in its annual report to the Governor that a law be passed under which the State, as well as the municipalities and railroads affected, shall share the burden of expense of abolishing grade crossings.

LEGAL NEWS

A Summary and Notes of Recent Decisions—Rulings of Interest to Municipalities

Flooding Land—Measure of Damages

Ewing et ux. vs. City of Louisville.—Where a municipal corporation establishes an original grade on a street it is not liable for injuries thereby to adjacent property. Where the city established an alleyway without a culvert or drain, which caused surface water to back up on plaintiff's premises, it is liable under the direct provisions of the constitution, which allows compensation for property injured or destroyed, as well as that taken, for a public use. When a case is reversed, instructions on retrial should conform to the view of the law expressed above. Where water is turned on plaintiff's premises, the measure of damages if the nuisance is permanent is the depreciation in the market value of the property and one recovery must suffice; but if the injury is temporary, it is the reasonable cost of repairing and the depreciation of the rental value of the property during the time sued for or the damage to its use. In an action against a city for constructing an alleyway that caused water to back up on plaintiff's land, the city cannot show to mitigate damages that the alley renders the property more convenient and valuable.—Court of Appeals of Kentucky, 131 S. W. R., 1016.

Contractor's Bond—Material Man

Gate City Lumber Company vs. City of Montesano et al.—Laws 1909 provide that any municipal council contracting for the performance of any public work shall require a bond of the contractor for the payment of all material men and just debts incurred by the contractor. Section 2 makes the city itself liable on failure to take such a bond. An action was brought against the contractor, its receiver and the municipality for which the contract work was done to recover the contract price for material furnished to the contractor. It appeared that a part of the material furnished was neither used in the work nor delivered upon the ground to be used therein. Held, that neither as a material man nor as one to whom a just debt had been incurred in the performance of contract work could plaintiff recover of the city for material not used or delivered on the ground for use.—Supreme Court of Washington, 111 P. R., 799.

Street Improvement—Delays—Waiver

Cushing vs. Bullock et al.—Invalidity of tax bills for a street improvement on account of the contractor's failure to complete the work within 90 days, as required by his contract, was not waived by an owner requesting the contractor within such period to complete the work according to the contract, and agreeing that if the work should be completed to the satisfaction of the City Engineer "as aforesaid" that the owner would not contest the tax bills, though the work was actually completed within a six-months extension of time granted by the city.—Kansas City Court of Appeals, Missouri, 131 S. W. R., 713.

Public Improvements—Proceedings—Objections

Johnson vs. City of Indianapolis et al.—An owner of a part of agricultural lands annexed to a city by ordinance, adopted as authorized by acts 1905, who feels aggrieved by the action may, as authorized by section 243, appeal to the Circuit or Superior Court, and where he fails to avail himself of such remedies he cannot in proceedings to construct a sewer so as to create a lien on the land in the territory annexed insist that the council did not have sufficient reason for annexing the territory.

Under acts 1905 authorizing the Board of Public Works to hear persons interested or whose property will be affected by a proposed improvement on the question of special benefits, etc., the board may exercise its own honest judgment, and it need not decide the question of benefits on the weight of the evidence formally presented at the preliminary hearing.—Supreme Court of Indiana, 93 N. E. R., 17.

Change of Grade—Paving

Lawrence vs. City of Corning.—Corning City Charter provides that the grade of a street shall not be changed, except on petition of resident owners of more than one-half the lincal feet adjacent, nor unless compensation to persons damaged be made on agreement or by award of Commissioners. Section 113 provides for "paving or macadamizing" streets on petition of adjacent owners. On a petition for "paving" and "grading" of a street, no proceedings were taken under Section 112 to ascertain the compensation; but a radical change was made in paving the street, raising the roadbed several feet. Held, that this could not be regarded merely as grading incidental to paving, and the city was liable as for a change of grade. Under Corning City Charter, providing that, when the grade of a street "has been established" by the Common Council and the street graded accordingly, no change shall be made without compensating persons damaged, it is not necessary that the establishment of the grade must have been made by some formal action of the Common Council.—Supreme Court of New York, 125 N. Y. S., 682.

Municipal Elections—Disfranchisement of Negroes

Anderson vs. Myers et al., Howard vs. Same, Brown vs. Same.—Acts of Maryland, 1908, prescribing the qualifications of voters at municipal elections in the city of Annapolis, declares that the register shall register all male citizens of 21 years or over having resided in the city for one year, not convicted of a crime and assessed on the city tax books for at least \$500, also all duly naturalized citizens of 21 years of age, all citizens who, prior to January 1, 1868, were entitled to vote in Maryland or any other State at a State election, and all lawful male descendants of any person who, prior to January 1, 1868, was entitled to vote in Maryland or in any other State of the United States at a State election, provided that no person not coming within one of the enumerated classes should be registered as a legal voter in the city or be qualified to vote at any municipal election held therein. Held that, though such act did not provide a race or color disqualification in terms, it nevertheless effectually disfranchised and discriminated against negroes, and was therefore unconstitutional as violating Const. U. S. Amend. 15.—United States Circuit Court, 182 F. R., 233.

Contractor's Bond—Materials

E. I. DuPont De Nemours Powder Company vs. Cullin-Pace Contracting Company et al.—Statutes 1904, entitling labor and material claimants to the benefit of a municipal contractor's bond, treats the bond as security for the payment of the contractor's debts, where mechanics' liens would attach if the owner were a private person, and gives a claimant an enforceable interest as if the bond were a fund for his benefit; and, if the penal sum is insufficient to pay all sums, they share in proportion to the amount due to each. One furnishing material to a municipal water works contractor has no right of action against the city on account of his claim. A municipal water works contractor's bond to secure payment for "material" under Statutes 1904 covers dynamite used in the work and fuses used to explode it.—Supreme Judicial Court of Massachusetts, 92 N. E. R., 1023.

Defective Sidewalk—Motive—Sufficiency

Gregorius vs. City of Corning.—Notice to a Sidewalk Inspector and to one member of the Board of Public Works of a defective sidewalk was not notice to the Mayor within Laws 1905, exempting a city from liability for injury caused by defective ways, unless notice of the unsafe condition has been given to the Mayor or the City Clerk a reasonable time previously.—Supreme Court of New York, 125 N. Y. S., 534.

Defective Streets—Loose Grating

Clark vs. City of Lancaster.—In an action by plaintiff to recover for injuries received from stepping on a loose grate over a gutter in a street, where two witnesses apparently contradict each other as to whether the grate was visibly loose and out of place, and it is not clear whether plaintiff could have seen it, a nonsuit was improperly entered.—Supreme Court of Pennsylvania, 78 A. R., 87.

MUNICIPAL APPLIANCES

Eureka Tape Splice

THE Eureka tape splice is a metallic sleeve for repairing tapes, which is sold by the Engineering Agency, Inc., Monadnock Block, Chicago, Ill. It consists of thin sheet metal folded in the shape of a sleeve and coated with a combination of solder and flux so sensitive it will make a perfect adhesion with the tape by the heat of one common match.

The use of rivets and soldering irons is avoided and there are no ugly knots on the tape. The repair can be made in the field in one minute and look as neat as if done by a jeweler and as strong as a blacksmith could do it. One dozen of these sleeves weigh less than half an ounce and occupy too little space to be noticed. They are furnished in a small round wooden box with screw cover. They are made in sizes to fit any tape, and are specially adapted for light pocket tapes, as it does not interfere in coiling in the case.

The directions for using are as follows:

Clean the broken ends of the tape with a knife or sand paper; insert the broken ends in the sleeve; hammer the sleeve slightly so it closes well down on the tape; hold a lighted match under the sleeve while it burns itself out. Let it cool and do not move it while it is cooling.

Rectifiers Charging Batteries of Fire Alarm System

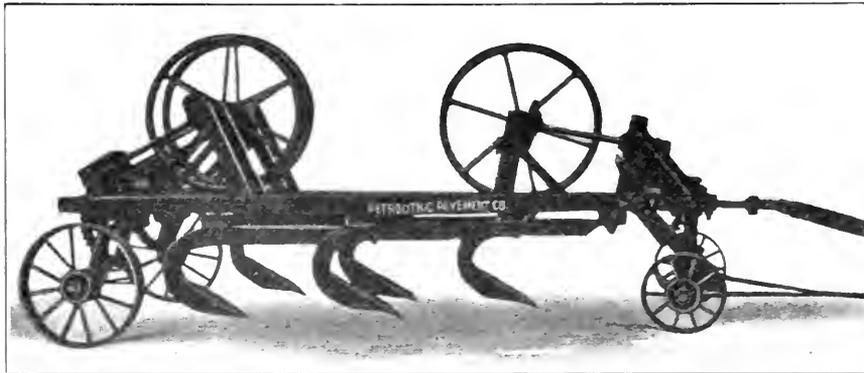

THE mercury arc rectifier shown in the illustration has been installed for charging the storage batteries which operate the fire alarm system of the city of Sandusky, Ohio. The battery consists of four sets of 15 cells each, chloride accumulator, type CT, and with the present system 50 fire alarm boxes can be pulled at once.

Previous to the installation of the rectifier a gravity battery consisting of 108 cells operated the fire alarm system. The new installation is said to effect a saving of \$300 per year as the expense of cell renewals, which, when gravity batteries were used, was a large item of expense. The first cost of the new equipment, including rectifier, battery and distributing board installed complete was \$589, while the cost of power for its operation is about \$1.40 per

month at a 10-cent per kilowatt-hour rate.

This equipment is operating very satisfactorily and during the six months that it has been in operation absolutely no trouble of any kind has been experienced with it.

The rectifier panel was furnished by the General Electric Company, Schenectady, N. Y.

HEAVY GANG PLOW FOR ROOTING OR SCARIFYING

Gang Road Rooter

THE Petrolithic gang road rooter is a plow first developed for their own special work by the Petrolithic Pavement Co., 336 Pacific Electric Building, Los Angeles, Cal., but adapted also for other road uses, such as scarifying macadam or other roads. The plows can be raised and lowered quickly and easily by hand wheels, worm and sector. The rooter is of steel construction wherever possible and weighs 3100 pounds. It is claimed to break anything plowable 16 inches deep or as much less as is desired, 5 feet wide, and to stand up under the hardest work behind traction engine or heavy roller. An ordinary roller pulls it 8 or 9 inches deep in hard material. The front truck cuts under so that it turns in a narrow space.

Cork Flooring for Engine Houses

A FLOORING material composed of chips of cork bound together into a brick by means of an asphalt binding material is made by the Armstrong Cork Company, Beaver Falls, Pa. The

headquarters of the Beaver Falls Fire Department has been paved with this material, and it is reported to be giving good satisfaction: in fact, it is said to be a great improvement on the wooden blocks, cement and artificial stone floors at present in use. The danger of slipping, about which complaint is made in regard to hardwood floors, is avoided, as the cork bricks give a foothold approaching that of rubber. The cork bricks, in the instance cited, were laid on top of a hardwood floor, but they can just as well be laid over other material. This

new composite flooring proves easy on the horses' feet, whether in starting out with the apparatus or standing in their stalls. The floor is water-tight, because the asphalt makes the blocks impervious and the joints between them are rendered tight with asphalt. The noiseless nature of the material is a notable feature. In the stalls the blocks were laid on a concrete foundation with a sand cushion. The stall floor is said to be absolutely odorless after washing once a day. The horses used by this department weigh 1500 pounds each, and the wagon weighs 6200 pounds, so the floor which has been in constant use for six months and shows no signs of wear has been subjected to at least ordinary use.

Sanitary Stall for Fire Engine Houses

A SANITARY stall which is adapted for use in fire engine houses, police patrol stations, as well as for general purposes, is made under patents by W. W.

RECTIFIER AND SWITCHBOARD, FIRE ALARM SYSTEM

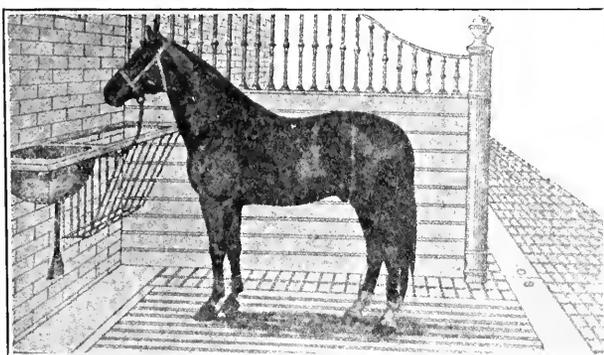

SIMPLE TAPE REPAIRING SLEEVE

Schouler, 45 Clinton street, Newark, N. J. The stall has been used by fire and other city departments in the house of the inventor and neighboring cities, and is approved by them as combining sanitary qualities with conditions promoting the comfort of the horses. The stall consists substantially of a flooring of wooden slats permitting drainage, on which the horse stands and a foundation of cement. The accompanying illustration represents the new and improved slat floor for horses, the slats being adjustable, may be taken up and replaced with very little labor. Having an open space between each slat, unobstructed by bolts, etc., they may be readily cleaned by a hook, leaving the passage free for the water to run to the gutter. This system of stall floors is designed especially where concrete foundations or artificial stone is used, and the manner in which they are applied leaves only the artificial stone and iron in the stall when the slats are removed. The portion occupied by the slats is 7 x 3 feet, with the artificial stone brought up on a level with the top of the slats in front and on each side, where a horse seldom, if ever, puts his feet.

STORAGE BATTERY, SANDUSKY, O., FIRE ALARM SYSTEM

CEMENT STALL WITH WOODEN FLOORING FOR HORSE TO STAND ON

New Monahan Trench Machine

THE new Monahan trench machine, which is being placed on the market by the Marsh Company, Old Colony Building, Chicago, is claimed to be suitable for all trenching purposes and its parts are designed of special strength in order to avoid the breakages which so often interrupt the operations of ditch-digging excavators. The excavator is of the chain, belt and bucket type, and delivers the excavated material onto a conveyor which throws it up on the side of the ditch. The links of the chain of the excavator are of special Gropenhau steel, the cutters are manganese steel and the cutter holders are crucible steel. These cutters are so arranged that they can be taken off and sharpened by the removal of a cotter pin. All gears and pinions are of steel. The buckets are all one piece 1 x 6-inch bar steel. The buckets are loose and fly away from the chain at both ends of the boom and have a positive cleaner. There are no backs on the buckets and they deliver the dirt to the conveyor close to the ground.

The conveyor is made in three parts and the delivery can be changed to either side of the machine at the will of the operator. A backfiller can be attached to the machine so that the dirt can be delivered back to the truck or loaded in a wagon on either side.

The wheels are on the inside of the frame, the back ones being 30 inches of

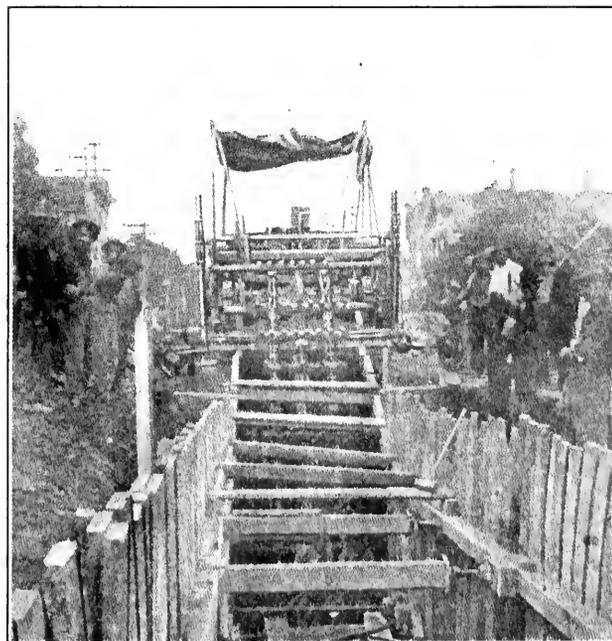

The buckets are provided with a safety device which prevents breakage of the machine, which, in case a pipe, boulder of too large a size to pull out or other obstruction is met with, shears off a pin and can be replaced with a new one in a few minutes with a very slight expenditure.

The machine illustrated is cutting a ditch 92 inches wide and 14 feet deep, cutting through 18 inches of rip rap and macadam, 4 feet of lake sand, 4 feet quick sand, and the remainder clay and very wet. The same machine will cut as high as 120 inches wide and up to 20 feet deep with some slight changes. The top stringers, shown in the cut, are pulled behind the machine by the machine itself and permit sheeting past the

boom. This machine is driven by a four-cylinder, four-cycle, 100-horsepower gasoline engine.

Large Pulley Block

A pair of the largest pulley blocks ever constructed in this country was recently made by the W. W. Paterson Co., Pittsburg, Pa., for the Seaboard Construction Company, Philadelphia. The safe working load of the two blocks is 125 tons. They are to be used for the upper lift of a large derrick car designed to handle 50-ton loads. All of the plates in the blocks are of 1/2-inch steel. The side straps are 8 inches by 3/4 inch. The head pin is 4 1/2 inches in diameter and the sheave pin 3 inches. The bottom bolt, to which the triple block is attached, is 2 1/2 inches in diameter. The sheaves are grooved for 7/8-inch cable. Each block weighs 1804 pounds. There are no shackles for the blocks as they are attached directly to the derrick by 4 1/2-inch pins.

MONAHAN UNIVERSAL DITCH EXCAVATOR

NEWS OF THE SOCIETIES

Minnesota Roadmakers' Association.

—The third annual meeting was held in the Senate Chamber of the old Capitol, St. Paul, December 20. The following resolutions embody the practical results of the meeting:

We strongly recommend the expenditure of State funds be made under the supervision of the State Highway Commission by duly appointed assistants under its control, and that all such supervision and all necessary engineering in the matter of State roads and bridges be done at the expense of the State.

We recommend that the Legislature pass an act to put into effect the one-quarter mill tax levy for public roads, as provided for in the constitution, and that a new amendment be submitted to the people providing for a tax of one mill for that purpose.

Realizing that the future of the road system of this State depends upon a more solid and permanent construction than has heretofore obtained, we recommend that the Legislature provide for the establishment of stone crushing plants at favorable locations in the State at the discretion of the State Highway Commission.

That an appropriation of \$150,000 a year be made to enable the State Highway Commission to carry out the recommendations contained in the foregoing resolutions and especially to provide for a corps of practical roadmakers to co-operate with the local authorities in securing a better system of highways throughout the State.

That the association realizes the value of material co-operation in the construction of the highway system of the country and recommends that our representatives in Congress be urged to support any measure looking to the continuance of a liberal policy toward the Department of Public Roads.

These resolutions were prepared by a committee consisting of R. C. Dunn, of Princeton; N. Y. Taylor, of Litchfield; V. R. Hoag, of Minneapolis; Gebhard Kimpel, of Norwood, and Louis E. Guidinger, of Winona.

The following officers were elected: James T. Elwell, Minneapolis, President; George H. Hazzard, St. Paul, Vice-President; John H. Mullen, St. Paul, Secretary.

Indiana Good Roads Association.

The following officers have been elected: President, Clarence A. Kenyon, Indianapolis; Vice-Presidents, Carl G. Fisher, Indianapolis; John E. Lamb, Terre Haute; Stephen Stratton, Richmond; L. Ert Slack, Franklin; Marcus Sulzer, Madison, and A. M. Beardsley, Elkhart; Secretary-Treasurer, W. J. Oobyns, Indianapolis. The Legislative Committee includes L. Ert Slack, Franklin; W. D. Brandt, Brookville; V. L. Slinkard, Bloomfield; John O. Potter, Muncie; Morton H. Downey, Anderson; W. K. Hatt, Lafayette; Jorace Stillwell, Anderson, and C. E. Pittenger, Muncie.

Chamber of Commerce of Harrisburg,

Pa.—A report has been made to the Board of Trade suggesting the formation of a Chamber of Commerce, consisting of the present Board of Trade, the Civic Club, Municipal League, Merchants' Association and the various organizations. The new organization will be divided into the following bureaus: Bureau of Merchants, Civic Affairs, Municipal Affairs, Industries, Labor, and Education and Professions.

Kentucky Good Roads Association.—

At the Congress, Louisville, Ky., December 28-30, Senator George Thomas Wyatt, Logan County, was elected chairman and J. V. Beckman secretary. Harry A. Sommers, Elizabethtown, presided before a chairman was elected. Fred W. Keisker, Louisville, delivered the address of welcome. Two hundred delegates were present at the opening session. M. C. Rankin spoke in behalf of the delegates in response to the address of welcome. The all important matter considered by the meeting was the synopsis of a good roads bill which will be presented to the next Legislature. This bill will provide, among other things, for a tax levy of 10 cents on the \$100 of assessable property for the purpose of aiding the counties in the building of good roads. This tax is expected to net the State about \$500,000. Each county will then bond itself for a certain amount to carry on the work, the aggregate being more than a million dollars a year available for the construction of roads. The following are the members of the association who will draw up the bill: Senator Joseph F. Bosworth, Middlesboro; H. A. Sommers, Elizabethtown; George L. Pickett, Shelbyville; W. E. Rowe, Lexington, and Senator G. T. Wyatt, of Logan County. One of the provisions of the bill much discussed was the clause stating the proportions of expense to be borne by the counties and by the State. It was finally decided that each should pay half. The manner of selecting the highway commission was discussed and the matter was finally left to the discretion of the committee. The following is the text of the clause regarding the raising of funds of the counties: "No county shall receive the benefit of State aid in the building of metal, concrete or gravel roads unless said county has first levied and provided for a county tax for the maintenance of roads in the county, and that each fiscal court in the State of Kentucky shall have the right to make a levy of not less than 10 cents nor more than 40 cents on the \$100 for the maintenance of the roads in the several counties." The impression seemed to prevail that the Legislature would act favorably upon the suggestions made.

Minnesota Surveyors and Engineers' Association.—

According to a resolution passed at the recent convention a new law will be submitted to the Legislature making the office of County Surveyor a more important one. The idea is to make the office of County Surveyor more an office of record, where a great deal of information now sought in the office of the Register of Deeds will be readily accessible to the public. The task of framing such a law is in the hands of its Legislative Committee, Nathan Butler, of Minneapolis; N. Y. Taylor, of Litchfield; J. E. Hill, of Anoka, and C. W. Gove, of Windom. Prof. W. R. Hoag, Minneapolis, President; W. C. Fraser, Rochester, Vice-President, and Charles A. Forbes, St. Paul, Secretary and Treasurer, were re-elected. It was decided to hold the next annual meeting at Duluth about the middle of January, 1912. The Minnesota Roadmakers' Association will be asked to hold its annual meeting in that city at the same time. The members of the St. Paul and Minneapolis Civil Engineers' societies will be invited to attend. It is planned to have these four organizations take a joint excursion through the Iron Range district and view the mining region.

American Society of Agricultural Engineers.—

At the convention, Perdue University, Lafayette, Ind., December 28, the objects and need of the society were stated in an address by Dr. Samuel Fortier, chief of the United States Irrigation Investigation Bureau. Dr. Fortier asserted that every land grant college should establish a course in agricultural engineering without delay, as the need of agricultural engineers was great, with practically none available. He said a course in agricultural engineering should include farm water supply and sanitation, rural architecture, drainage, irrigation, farm machinery and motors and public roads. Farm water supply and sanitation were much neglected, most of the water being bad and the sanitation worse, while rural homes, as a rule, were poorly designed and constructed and were uncomfortable and unhealthful, he said. He told of the many millions of acres of unreclaimed swamp lands, and said the drainage and irrigation questions were of vital importance to America.

The following officers were elected: C. A. Ocock, Madison, Wis., president; W. F. McGregor, Racine, Wis., first vice-president; J. B. Bartholomew, Peoria, Ill., second vice-president; J. B. Davidson, Ames, Ia., secretary; E. A. White, Urbana, Ill., treasurer; councilman, Howard W. Riley, Ithaca, N. Y. Nominating committee for 1911—M. L. King, Ames, Ia.; H. J. Podlesak, Moline, Ill.; John Evans, Guelph, Ontario. Research committee, chairman, C. I. Guinness, of Fargo, N. D.

Indiana State Association of Councilmen.—

Plans were laid January 2 at the meeting of the association at the Denison Hotel for the preparation and introduction of a bill in the Legislature for amendments to the cities and towns law which would give the City Council more power in the matter of initiating public improvement resolutions and the Mayor less power in cities of the third, fourth and fifth classes, and which would also increase the powers of the Council in cities of the first and second classes. A temporary organization of the association was made some time ago by members of the Council in several cities in the northern part of the State, but the permanent organization was not effected until this meeting, when Henry Whitaker, member of the Hammond Council, was elected president; Carl Markmuller, also a member of the Hammond Council, was elected secretary, and G. W. Greenleaf, of Terre Haute, treasurer. Members of the councils of the following cities were present: South Bend, Terre Haute, Ft. Wayne, Evansville, Michigan City, Gary, Hammond, Lafayette, Peru, Logansport and New Albany. The following committee was appointed to prepare the bill: Dr. W. H. Johnson, Indianapolis; G. W. Greenleaf, Terre Haute; C. A. Hanley, Michigan City, and Marcus Castleman, Gary.

Norfolk Good Roads Association.—

A good roads meeting will be held at Williamsburg, Va., for the furtherance of the movement for a straight and improved highway from Newport News to Richmond. The meeting will be under the auspices of the Norfolk Good Roads Association, the Richmond Automobile Association and the Chamber of Commerce of Richmond, Newport News and Norfolk. The meeting will also be a general peninsula highway convention. A movement for a highway between Richmond and Washington via Fredericksburg will be discussed.

Thurston County (Wash.) Good Roads Association.—A big meeting will be held at Olympia, January 18, for the purpose of endorsing the good roads bill that is being prepared by Judge J. T. Ronald, Seattle, in behalf of the Pacific highway project through the State of Washington. The interest of British Columbia authorities in the project is shown by the fact that among the speakers will be Hon. Thomas Taylor, Minister of Public Works of British Columbia; A. E. Todd, Vice-President Victoria Board of Trade, Victoria, B. C., and E. S. Rowe, Vancouver.

Calendar of Meetings

- January 10-14.**
Organization of City Officials for Standardizing Paving Specifications.—Second Meeting, Engineering Societies Building, 29 W. 39th street, New York, N. Y.—John B. Hittell, Secretary-Treasurer, Chief Engineer of Streets, Chicago, Ill., Hotel Reclor, New York, N. Y.
- January 11-13.**
Michigan Engineering Society.—Annual Meeting, Lansing, Mich. Alva L. Homer, Secretary, Grand Rapids, Mich.
- January 12-13.**
New York Tax Reform Association.—State Conference on Taxation.—A. C. Pleydell, Secretary, New York, N. Y.
- January 12-14.**
Montana Society of Engineers.—Annual Meeting, Helena, Mont.—Clinton H. Moore, Secretary, Leysen Block, Butte, Mont.
- January 12-14.**
National Civic Federation.—Annual Convention, New York, N. Y.—D. L. Case, Secretary, 1 Madison avenue, New York, N. Y.
- January 12-14.**
Indiana Engineering Society.—Annual Meeting, Hotel Denison, Indianapolis.—Charles Brossman, Secretary, Union Trust Building, Indianapolis, Ind.
- January 16-20.**
Canadian Cement and Concrete Association.—Annual Convention and Exhibition, Toronto, Ont.—R. E. W. Hagarty, Secretary, 662 Euclid avenue, Toronto, Ont.
- January 17.**
Engineers' Society of Western Pennsylvania.—Annual Meeting, Pittsburgh, Pa.—Elmer K. Hiles, Secretary, 803 Fulton Building, Pittsburgh, Pa.
- January 17-19.**
American Institute of Architects.—Annual Convention, San Francisco, Cal.—Glenn Brown, Secretary, Octagon, Washington, D. C.
- January 18.**
Municipal League of North Carolina.—Annual Meeting, Raleigh.—Mayor J. S. Wynne, Raleigh.
- January 18-19.**
American Society of Civil Engineers.—Annual Meeting, New York.—C. W. Hunt, Secretary, 220 W. 57th street, New York, N. Y.
- January 20.**
Illuminating Engineering Society.—Annual Meeting, New York, N. Y.—P. S. Millar, Secretary, 29 W. 39th street, New York, N. Y.
- January 24-26.**
American Society of Heating and Ventilating Engineers.—Annual Meeting, New York, N. Y.—W. M. Mackay, Secretary, P. O. Box 1818, New York, N. Y.
- January 24-26.**
Ohio Engineering Society.—Annual Meeting, Columbus, O.—C. J. Knisely, Secretary, New Philadelphia, O.
- January 25-27.**
Illinois Society of Engineers and Surveyors.—Annual Meeting, East St. Louis, Ill.—E. E. R. Tratman, Secretary, 1636 Monadnock Block, Chicago, Ill.
- February 1-3.**
Nebraska Cement Association.—Western Cement Exposition, Omaha, Neb.—Peter Palmer, Secretary, Oakland, Neb.
- February 6-11.**
National Brick Manufacturers Association.—Annual Convention, Louisville, Ky.—T. A. Randall, Secretary, Indianapolis, Ind.
- May 29.**
American Water Works Association.—Annual Convention, Rochester, N. Y.—J. M. Diven, 14 George street, Charleston, S. C.
- May.**
City Commission Congress.—Meeting, Galveston, Tex.—Mayor Lewis Fisher, Chairman of Committee, Galveston, Tex.

PERSONALS

ANDERSON, E. PAUL, Lexington, Ky., has been appointed Consulting Engineer.

BARRETT, J. W., Athens, Ga., has been elected Consulting Engineer at Gainesville, Ga. E. B. Epps has been elected City Engineer.

BAUER, J. L., has been appointed Engineer for Garwood, N. J., Borough.

BUCK & SHELDON, INC., Consulting Engineers, Hartford, Conn., have opened a branch office in Willimantic, Conn., in charge of H. R. Turner.

COLLIN, D. F., Kansas City, Mo., until recently manager of Bell Telephone Co., became business manager of the W. H. Palmer Co., engineers, Dwight Building, Kansas City, Mo., on Jan. 1.

CROCKER, R. Leslie, for fifteen years with the Boston Elevated Ry. Co., has opened an office in the Park Row Building, New York City, for general practice of engineering and surveying.

DIMMICK, J. K., on Jan. 1 assumed presidency and active management of the Dimmick Pipe Co., Birmingham, Ala. He is senior partner in pig iron and coke firm of J. K. Dimmick & Co., Philadelphia.

DE CLAMECY, Philip, New York City, has been appointed Chief Engineer with the Coffin Valve Co., Boston, Mass.

FLOYD, RICHARD, was elected Mayor of Huntsville, Ohio, in place of Mayor Knotts, who resigned.

FOLSOM, W. C., Washington, D. C., has been appointed Chief Sanitary Inspector at Cincinnati, Ohio.

HENDRICK, Calvin W., Chief Engineer of the Baltimore Sewerage Commission, has, with the consent of the Commission, accepted an invitation to report on the best source for a new water supply for the Maryland Tuberculosis Sanatorium, a State institution, in Frederick County.

JACOBS, Taylor J., has been elected Mayor of Rockport, Ind., vice Mayor Kercheval, deceased.

MACCARTHY, Timothy J., Holyoke, Mass., has been appointed City Engineer, succeeding James E. Tighe.

MCCORKLE, W. H., has been appointed Chairman of the Board of Public Works, Lexington, Ky., and Newton L. Stout member of the Board of Police and Fire Commissioners.

MOSHER, Edward, Elizabeth, N. J., has been appointed Township Engineer, Cranford, N. J.

NUGENT, JAMES, Newark, N. J., has been reappointed City Counsel.

RANSOM, Wm. A. Elizabeth, N. J., has been elected President of the Board of Water Commissioners, and David Gage was chosen as Engineer.

RICHMOND, Wm., Lockport, N. Y., has been reappointed Water Commissioner; J. F. Frchsee has been reappointed City Engineer and Surveyor; Frank J. Reynolds and Alexander Clark have been reappointed to the Police Board, and John R. Mahaney and James W. Hearn become members of the Fire Board.

SNOW, Wm. H., Holyoke, Mass., has been appointed Manager of the Gas and Electric Department; Philip M. Judd, member Board of Fire Commissioners, and Michael F. Walsh member of the Board of Public Works.

WALSII, Thom:s J., Boston, Mass., has opened an office at 141 Milk street, for the practice of electrical engineering. Mr. Walsh is a graduate of the Sheffield Scientific School, a junior member of the A. S. M. E. and an Associate Member of the A. I. E. E. He has been connected with the Stone & Webster Engineering Corporation for several years.

TRADE NOTES

Cast Iron Pipe.—Chicago—Foundries expect to book a large tonnage before spring, although prices are low and unsatisfactory. Quotations: 4-inch, \$25; 6 to 12-inch, \$24; 16-inch and up, \$23.50. Birmingham—Aggregate stocks on hand January 1 were larger than a year ago. Still the outlook is considered more favorable than a year ago. Quotations: 4 to 6-inch, \$19 to \$19.50; 8 to 12-inch, \$18 to \$18.50; over 12-inch, average, \$17. New York—Conditions continue quiet. Quotations: 6-inch, carload lots, \$22.

Lead—Prices are firm. New York: 4.50c.; St. Louis, 4.35c.

Cement Magazines.—Cement Age, of New York, and Concrete Engineering, of Cleveland, O., have been consolidated into one publication under the name "Cement Age, with Which Is Combined Concrete Engineering." Robert W. Lesley will be editor and Allen Brett and Edward A. Trego associate editors of the new publication. The New York office, 30 Church street, will be in charge of Frederick F. Lincoln, president of the Cement Age Company.

Sale of Water and Traction Company.—The franchise and all the properties of the Somerset Water, Light & Traction Company will be sold at public outcry by a special master commissioner of the Pulaski Circuit Court, Somerset, Ky., on January 6, for the purpose of satisfying the stockholders and creditors of the company. The company was capitalized at \$250,000 and was organized by Dr. W. Godfrey Hunter. About two years ago a number of the stockholders joined in a suit to have the affairs of the company and its entire management and control taken out of the hands of Dr. Hunter and placed in the hands of a receiver, which was done, and it has been in the hands of a receiver since that time. The organization of the Somerset Water, Light & Traction Company was the consolidation of the Water Company, the Light Company and the franchise for a street railway. Soon after these companies were taken over by Dr. Hunter he constructed the electric street car line, which has been in operation for two years or more, and is now being operated by the receiver.

Water Company Reorganization.—The syndicate headed by C. Terry Treadway, president of the Bristol National Bank, which has been bidding several weeks past for the controlling interest in the stock of the Bristol Water Company, has secured it.

New High-Pressure Centrifugal Pump.—The Hayton Pump Company, Hannibal, Mo., has been incorporated to manufacture turbo-centrifugal high-pressure pumps. The pumps are the invention of T. R. Hayton, and it is claimed they show a large gain in efficiency over many others now on the market, the gain ranging from 20 to 50 per cent. The company has made arrangements with the Leader Foundry Company, Quincy, Ill., for the manufacture of the pumps.

Garbage Receptacles.—The Buffalo Receptacle Company, Buffalo, N. Y., has been incorporated with a capital stock of \$150,000, and will establish a plant in that city for the manufacture of garbage cans and refuse receptacles. Considerable machinery will be required in the way of shears, punches, presses, riveters, etc. Gustave Steinwachs, 1047 Genesee street, is manager.

Water Petition.—Forty residents of Berlin, Conn., have petitioned the General Assembly for a charter for a water company. The petition recites that common convenience and necessity require that the different communities in the town of Berlin be supplied with running water for the purpose of domestic use and fire prevention, and that there are within the town streams of water, springs and ponds available for such supply. Among the signers of the paper are: O. Clark, E. I. Clark, H. H. Damon, G. B. Norton, D. E. Bradley, J. Molumphy, Francis Deming and John Norton.

Water Meters.—The Neptune Meter Company, New York, N. Y., has asked the Board of Control, Norfolk, Va., for permission to take up and test two or three hundred of the water meters installed by that concern four years ago. As the meters have been given no attention, simply having been placed in the water run through them without registering, this concern, desiring to again compete for a Norfolk meter contract, wishes to inform itself regarding the condition of the old meters, and how they have stood the peculiar "service" to which they have been put. The Board of Control referred the application to Thomas B. Dornin, chief engineer of the water department. In the city's last meter purchase 3500 meters were bought from the Neptune Company.

General Electric Plant at Erie, Pa.—One of the largest projects calling for machinery expenditures expected to come before the trade this year is that of the General Electric Company, Schenectady, N. Y., which is establishing a large plant at Erie, Pa. The company is owned a tract of land at Erie for several years, and it now has a large laundry and other smaller buildings erected. It is expected eventually to erect a general machine shop, and inquiries now out indicate that the company's plans will mature before the year is over.

Steam Shovel Companies.—The Marion Steam Shovel Company, Marion, Pa., which has been in business for 26 years, brought suit against the Marion Shovel & Dredge Company, recently incorporated, seeking to restrain the latter from the use of its name on the ground of the similarity being likely to lead to the diversion of trade. The court decided adversely to the suit, holding that the name of the new company is a sufficiently distinct designation.

Park Lighting Standards.—The Elmer P. Morris Company, of 90 West Street, will furnish 500 posts for Tungsten park lighting in the City of New York. About half of these are of a new type and will be used for the lighting of the transverse roads through Central Park and the balance for regular installations.

Snow Plow.—The Street Committee of Plainfield, N. J., in its annual report, says that the new Twentieth Century sander has proved a very efficient sidewalk cleaner as well as a gutter scraper.

Patent Paving Suit.—The Rudolph S. Rome Company, Chicago, Ill., has served notice on Sioux City, Ia., that the city will be made the party to a lawsuit in which certain concrete pavements are laid according to specifications under which suits were recently received.

Pipe Suit.—An action for \$5,560 has been filed by the Central Foundry Company of New Jersey against the City of

Shattuck, Okla. The company alleges the city has failed to pay for purchased water mains.

A Wire Rope Trade Inquiry.—The Broderick & Bascom Rope Company, manufacturer of wire rope, St. Louis, Mo., addressed 60 or more of its agents scattered throughout the country, taking in every State, asking for their views concerning the outlook for trade for 1911. A summary of the replies has been printed by the company. These replies, with very few exceptions, take an exceedingly hopeful view of business for the coming year. The wire rope trade is regarded by the company as a fair barometer of the general commercial condition from the fact that it is not confined to any one line, wire rope being largely used in lumber and logging camps and by oil well drillers, mining companies and boat builders, elevator builders, contractors, etc., so that consumers' interests are much diversified. The tenor of these replies is radically different from the views of James J. Hill, published by the Associated Press about December 1, which caused the inquiry to be made by the company. The Broderick & Bascom Rope Company states its opinion that 1911 will be a banner year unless trade should be interfered with by tariff tinkering, adverse railroad legislation or general labor troubles.

Change of Address.—The Lackawanna Steel Company announces that after January 19 its general offices, now at 2 Rector street, New York City, will be located at its works at Lackawanna, Erie County, N. Y., where all correspondence and communications for the President, Vice-President and General Manager, Secretary, Treasurer, general sales department and traffic department should then be addressed. The office of the assistant to the President will remain at 2 Rector street, New York City, where the company will also maintain a district sales office.

Oxy-acetylene Flame in Bridge Wrecking.—The use of an oxy-acetylene flame in removing the 450-ton turntable drawspan, 330 feet long, of the Madison avenue bridge in New York City, is estimated to have saved several weeks' time, the actual work of removal having been done in one week. One oxy-acetylene outfit, with two torches and a total consumption of about 1500 cu. ft. of oxygen and 450 cu. ft. of acetylene gas, were used in the cutting operation. The method of operation was as follows: The bridge was swung open and supported by cribbing built up on the fender pin to provide for unbalanced reactions as the work of removal progressed. Two floating derricks were made fast to one end of the span and the top and bottom ends were cut through vertically about 50 feet from the end. The main diagonal eyebars were also cut, the stringers disconnected from the floorbeam and the end of the span was detached and lowered by the derricks. By similar methods the span was cut into seven pieces, two weighing 25 tons each, two 66 tons, two 75 tons and the center tower 130 tons.

NEW INCORPORATIONS

Huntsville, Alabama, Gas Light & Fuel Co., Camden, N. J.; capital, \$300,000. Incorporators: William P. Huston, M. Rea Gano and Howard L. Miller. The company is to deal in stocks, bonds, debentures, securities, etc.

Federal Water Proofing Co., Akron, O.; capital, \$100,000. Incorporators: H. B. Ball, F. S. Nash, H. H. McCloskey, W. H. Miller and R. A. Carrell.

PATENT CLAIMS

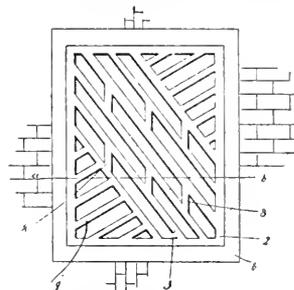

979,146. **CORRUGATED SECTIONAL NESTABLE CULVERT.** Charles A. Foster, Portland, Ore.—Serial No. 437,214. An improved culvert, comprising upper and lower semicircular sections, each formed of sheet metal corrugated throughout its length along lines substantially at right angles to its longitudinal axis, a number of retaining plates fixed to one side of one of said semicircular sections, said

plates being spaced apart from each other and being firmly fixed at one end to the adjacent semicircular section and each having its body portion slightly spaced apart from the adjacent portion of the section to which it is attached to admit the edge of the other semicircular section between the plates and the section to which they are attached.

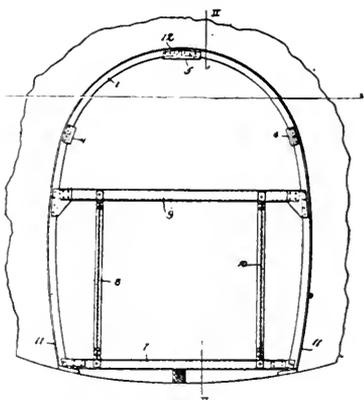

979,182. **CATCH-BASIN COVER.** James H. MacDonald, New Haven, Conn. Serial No. 471,787.

In a catch-basin cover, the combination with an open oblong rectangular frame having an inwardly extending bearing-flange, of a grille transversely bowed on its longitudinal axis so as to present a concave upper surface and consisting of a rim adapted in form and size to be set into the said open frame and having a main

rim between opposite corners of the said group of long parallel bars extending diagonally across the grille.

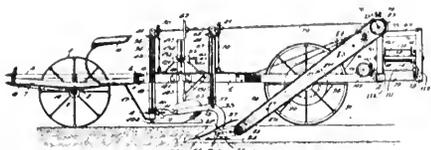

979,185. **TUNNEL FORM.** Charles D. McArthur, Pittsburg, Pa., assignor to Blaw Collapsible Steel Centering Company, Pittsburg, Pa., a Corporation of New Jersey. Serial No. 542,065. In combination in a tunnel form, a series

of spaced ribs comprising channels having inwardly directed flanges, bearing strips of less width than the channels secured to the outer faces thereof, lagging plates having their end edges resting upon the bearing strips; and means for securing the plates detachably to the flanges of the channels.

979,442. DITCHING MACHINE. John Louis Crismon, Eagle, Col. Serial No. 507,218.

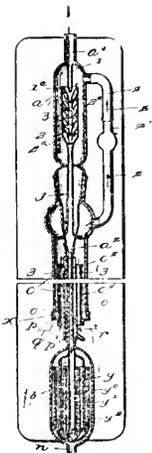

In a ditching machine, the combination with a frame mounted on front and rear wheels, of horizontally disposed vertically adjustable bars mounted on said frame; a plow connected at its opposite ends to said bars; an inclined conveyor secured at its lower end to said plow in position to

receive earth therefrom; means for adjusting said plow laterally upon said bars, and said inclined conveyor simultaneously therewith; a laterally adjustable horizontally disposed conveyor on said frame adapted to receive the discharge from the inclined conveyor; means for changing the direction of travel of said horizontally disposed conveyor; and vertically adjustable plows on said frame in front of said rear wheels, having their mold boards facing each other.

979,999. APPARATUS FOR THE STERILIZATION OF WATER OR OTHER LIQUIDS. Casimir Stanislas Piestrak, Paris, France. Serial No. 579,475.

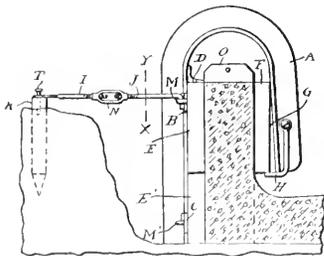

An apparatus for sterilizing water and other liquids by means of ozone comprising a vacuum tube, said vacuum tube con-

taining mercury, an electrode mounted within said vacuum tube, an outer electrode arranged concentrically with and surrounding said inner electrode, an air passage between said electrode and means for aspirating air through said air passage and into contact with the liquid to be sterilized.

979,863. CEMENT - FORM. Francis T. Leeder, Sioux City, Ia., assignor to Lewis & Leeder, Sioux City, Ia., a Copartnership. Serial No. 557,405.

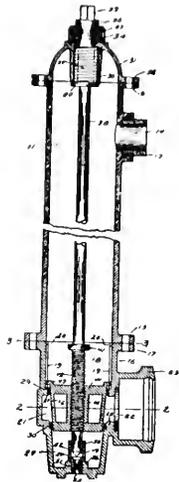

In a cement form for curbs, the combination with boards for inclosing the cement, of an inverted U-shaped holder one leg of which is longer than the other, guides se-

cured to the boards on the long side of the holder in which the holder is held in position, a hook pivoted to the short end of the holder and adapted for adjustment under the board on the short or gutter side of the holder, and a stop on the long side of the holder adapted to rest on the top board inclosing the cement, substantially as described

979,941. HYDRANT AND VALVE THEREFOR. John Lansing Fuller, Schaghticoke, N. Y. Serial No. 577,932.

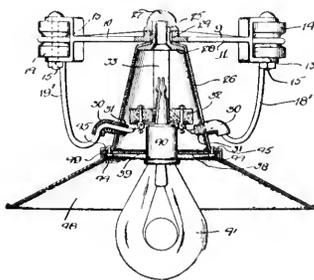

In a hydrant, a stand pipe; a bottom portion; a lateral inlet; a vertically movable main valve; a valve stem having rotary movement for raising and lowering

said valve and a limited vertical movement with respect thereto; and a waste outlet in said bottom portion below said main valve including a valve seat and an aperture above said valve seat, said valve stem being constructed and fitted to engage said outlet valve seat and thereby to close said outlet.

979,459. ELECTRIC STREET LIGHTING. Carl Henry Froelich, St. Louis, Mo. Serial No. 570,326.

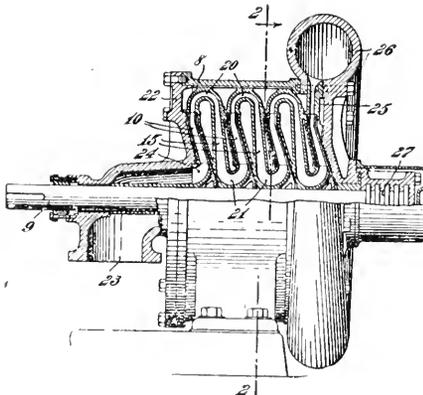

In electric street lighting, the combination of a suspension member having three

arms, flexible supporting elements respectively connected to said arms, a lamp-holder secured to said member, and an electric light socket supported by said holder.

979,634. ROTARY PUMP. Nicholas W. Akimoff, Philadelphia, Pa. Serial No. 484,884.

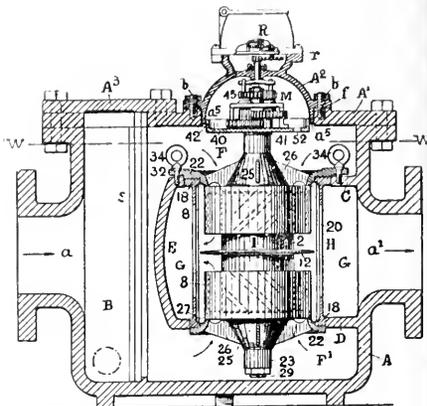

In a pump of the character described, a shaft, a plurality of impellers secured to

said shaft, said impellers being inclined backwardly substantially as and for the purpose set forth.

979,518. WATER METER. William H. Larrabee, Worcester, Mass., assignor to Union Water Meter Company, Worcester, Mass., a Corporation of Massachusetts. Serial No. 462,022.

In a water meter, a meter wheel or propeller, consisting of a cylindrical body having near its respective ends similar oppositely disposed series of projecting helical vanes with water ways between, each

series surrounded by an outer cylindrical shell attached thereto, and a circumferential projecting flange around the cylindrical body midway between the respective series of vanes; in combination with wheel-supporting means having guide passages for directing currents of water downward and upward onto the respective series of vanes, at the upper and lower ends of the wheel.

979,577. PROCESS OF AND TEMPLET FOR USE IN LAYING PAVEMENTS.

Eugene Geo. Schwendeman, Oak Park, Ill., assignor to The American Asphalt Paving Company, Chicago, Ill., a Corporation of Illinois. Serial No. 584,183.

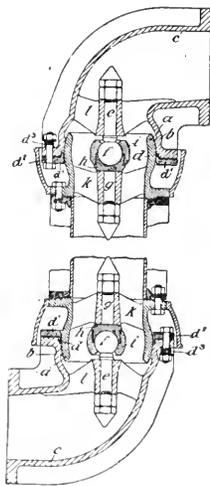

A templet for the purpose specified com-

prising a long flat strip having one or more ears projecting therefrom and extending transversely thereof at one edge.

979,513. FLEXIBLE PIPE JOINT. Johann Koenig, Riga, Russia. Serial No. 485,436.

A flexible pipe joint comprising two pipes making a ball and socket joint with each other, and, located within the pipes

and connecting them, a second ball and socket joint whose center point coincides with that of the said first joint, and which consists of a ball member connected to the one pipe and engaging a bearing cup connected to the other pipe and having a cap by means of which the ball member is confined in the bearing cup, so that the inner ball and socket joint is adapted to take off the outer joint the pressure in either longitudinal direction

BIDS ASKED FOR

STATE	CITY	RECEIVED UNTIL	NATURE OF WORK	ADDRESS INQUIRIES TO
STREET IMPROVEMENTS				
Minnesota	Minneapolis	Jan 13, 7:30 p.m.	Furn. paving material during 1911, inc. sandstone, creol. wood and vit. paving block; granite and sandstone curb, crushed granite, cement.	Henry N. Knott, City Clerk
Illinois	Chicago	Jan. 14	Furn. at bldgs and viad. approx. 4,000 sq. yd. sect. wood pave.	B. J. Mullaney, Comr. Pub. Wks
New York	New York	Jan. 14	Regulating, grading, setting curbstones, flagging sidewalks, etc., Jerome ave. to Macomb's Road, and Gun Hill Rd. to Burke av.	Pres. Bronx Boro, 177th St. & 3d Ave
California	Fresno	Jan. 14	Construction of mountain road from plains to old Millwood road and Happy Gap. Approx. 2 1/2 miles.	Board of Supervisors.
California	Los Angeles	Jan. 16, 2 p.m.	Improving portions of Huntington Drive in Los Angeles County	C. G. Keyes, County Clerk
Kentucky	Paducah	Jan. 16, 3 p.m.	Bldg. sidewalks, etc., 3 jobs: concrete walks: 14,325, 23,000 and 13,300 sq ft.; concrete driveways: 820, 800 and 380 sq. ft.; concrete gutters: 2,900, 3,946 and 1,2520 lin. ft., granite curb: 2,900, 3,940 and 2,500 lin. ft.; L. A. Washington, City Engineer.	Board of Public Works B. M. Cook, Village Clerk W. A. Morse, City Recorder.
Ohio	Lakewood	Jan. 16, noon	Paving 3 aves., and one road; Wm. H. Evers Eng. Co., Arc. Clvld	State Hwy. Comr. Sacramento, Cal.
Oregon	Salem	Jan. 16	Paving 175,000 sq. yds. street surface with hard surface pave...	Earl Thomson, Co. Engr., Camden.
California	Sacramento	Jan. 16	Constr. Huntington Drive rd. from Los Angeles to Pasadena and from Bairdston to Alhambra.	W. L. Craft, City Clerk.
Washington	Olympia	Jan. 18	Grad., drain, mac., etc., State Aid rd. 99, Walla Walla Co.	Fred Dreihls, County Clerk
New Jersey	Mt. Holly	Jan. 19, 11 a.m.	Grav. rd. through Akron from Garlner's Cor. to Atlantic Co. line	Fred Dreihls, Clk. County Comrs
Virginia	Roanoke	Jan. 19, noon	Constructing granolithic sidewalks; grading two streets.	Franklin W. Hopkins, Mayor.
Ohio	Cincinnati	Jan. 20, noon	Improving Dayton Pike	Solomon Norcross, C. E., Atlanta, Ga
Ohio	Hamilton	Jan. 20, noon	Imp. Dayton Pike Sycamore twp., Spec. No. 127; Bond \$1,000.	C. G. Keys, Clk. Bd. Superv.
New Jersey	Alpine	Jan. 21	Bldg. stone rd. 2,570 ft. long, from Tenafly to Alpine, Sylvan av.	C. G. Hamilton, City Clerk.
Alabama	Wetumpka	Jan. 23	Road improvements to cost \$170,000.	Lemuel Shipman, County Auditor.
California	Los Angeles	Jan. 23	Improving Valley Road.	John Coon, Comr. of Streets.
California	Hemet	Jan. 25	Imp. Harvard st. incl. cement curb and gut & conc. culverts	B. M. Cook, City Clerk
Indiana	Hawler	Feb. 1, noon	Construction of one mile of gravel road in Benton County.	Wm. McQueen, City Clerk.
West Virginia	Huntington	Feb. 6, 1 p.m.	Grad. and pave. 20 streets with vit. brick, bitulithic, sheet asphalt, asphalt block or concrete asphalt.	J. W. Morris, City Engineer
Florida	Palatka	Feb. 7, 7:30 p.m.	Constructing approx. 16,500 sq. yd. concrete sidewalks.	
Canada	Vancouver, B. C.	Feb. 7	Furnish road roller, weight not less than 15 tons.	
Oregon	Portland	Feb. 23	Constructing pavement on Jersey st.	
SEWERAGE				
Minnesota	Minneapolis	Jan. 13, 7:30 p.m.	Furn. Portland cement for sewer and street work, etc., in 1911.	H. N. Knott, City Clerk.
Oklahoma	Oklahoma	Jan. 14	Constructing sanitary sewer system.	W. J. Pattison, City Clerk.
New Jersey	Elizabeth	Jan. 16, 8:30 p.m.	Furn. and lay 570 ft. 10-in. 505 ft. 8-in. sewer, m.h., etc.	N. K. Thompson, Street Comr.
Oklahoma	Checotah	Jan. 16	Bldg. 11 miles 8, 10 and 12-in. san. sewer, disposal works, etc.	W. W. Southard, City Engineer.
Kentucky	Paducah	Jan. 16, 3:30 p.m.	Constructing c.i. drain pipes, paving, etc., 2 sts.	L. A. Washington, City Engineer.
Pennsylvania	Masontown	Jan. 16	Constructing a sewer and water system for borough.	C. V. Cloud, Chm. Council Com.-in-C
New Jersey	Elizabeth	Jan. 16, 8:30 p.m.	Con. 570 ft. 10-in. 505 ft. 8-in. sewer pipe, calked joints, etc.	N. K. Thompson, St. Comr.
Maryland	Annapolis	Jan. 17, 11:30 a.m.	Constructing sewers in Carroll and 5th sts., Brooklyn.	S. O. Tilghman, Clk. Co. Comrs
Ohio	Cincinnati	Jan. 17, noon	Constructing sewers in Otto ave.	John J. Wenner, City Clerk.
Washington	Spokane	Jan. 20, 2 p.m.	Furn. 7,000 ft. of 10-in. corrugated drain pipe, perf. bottoms.	John Gifford, City Purch. Agt.
Ohio	Elyria	Jan. 20	Constr. trunk sewer, cost approx. \$26,000.	Rose Moriarty, City Clerk.
Kentucky	Louisville	Jan. 20	Constr. sewer known as 2d St. sewer, incl. 2,430 ft. of 42 and 48-in. concrete sewer.	Comr. of Sew., 605 Equitable Bldg.
New York	Syracuse	Jan. 26 10 a.m.	Bldg. harbor brook intercepting sewer and imp. stream.	G. R. Holmes, Ch. Engr. Inter. S. Bd
Manitoba, Can.	Souris	Feb. 1	Furn. 31,000 ft. vit. sewer pipe, etc. spring and summer, 1911.	C. R. Heath, Health Engineer.
WATER SUPPLY				
Washington	Spokane	Jan. 13, 2 p.m.	Bids in triplicate for 100 4-in. and 30 6-in. hydrants; 50 6-in., 25 8-in. 25 10-in. and 25 12-in. valves, c.i. bell and 50 6-in. valves, Kal. bell.	John Gifford, City Purchasing Agt
Kentucky	Dayton	Jan. 16	Franchise to construct and operate w. w. system for 18 years.	C. V. Cloud, Chm. Council Com
Pennsylvania	Masontown	Jan. 16	Constructing a water and sewer system for Borough.	A. E. Fortier, Town Clerk.
Ontario	Pembroke	Jan. 16	Furn. water main and piping.	D. F. Mackenzie, City Recorder.
Minn.	Faribault	Jan. 16, 8 p.m.	Drilling artesian well approx. 1,000 ft. and casing old wells.	John T. Geary, City Clerk.
New York	Yonkers	Jan. 16	245 lengths of 12-in. pipe.	Jos. G. Armstrong, Dir. Pub. Wks.
Pennsylvania	Pittsburg	Jan. 17	Furn. and erect, 1,000,000 and 6,000,000 gal. pumping station	J. A. Leinbach, City Clerk.
Pennsylvania	Lancaster	Jan. 17	Furn. elec. driven centrif. pump having capacity 10,000,000 gals. in 24 hours.	
Michigan	Grand Rapids	Jan. 19, 8 p.m.	Bldg. fireproof w.w. and filtration plant, one story, 178x178 ft., and repair shop, two stories, 40x66 ft.; cost \$400,000; Hering & Fuller, Engrs. 170 Broadway, New York City.	S. A. Freshney, Gen. Mgr., Bd. P. W.
Texas	Fort Sam Houston	Jan. 19, 11 a.m.	Con. 3 reinforced concrete water troughs, etc.	P. W. Guiney, Com. Q.M.
Arizona	Douglas	Jan. 19, 1 p.m.	Con. reservoir, water mains, valves, hydrants, etc.	R. G. McArthur, Sec'y. W. W. Com.
Illinois	Chicago	Jan. 19, 11 a.m.	Furn. and install two 20,000,000 gal. centrif. pumps and two 1,000 h.p. elec. motors with wir. pip., etc., at pump. station.	B. J. Mullaney, Comr. Pub. Wks
Ohio	Newburg	Jan. 21, noon	Constructing water mains.	L. W. Shimek, Clk. Bd. of Control
Oregon	Astoria	Jan. 23, 2 p.m.	Furn. labor and material for wood stave pipe.	Jars Bergsvik, Engr. Wt. Com.
Missouri	Kansas City	Jan. 26	Bldg. horizontal shaft centrifugal pump, direct connected to vertical cross-com. engine, capacity 30,000,000 gals.	W. Kiersted, Ch. Engr. Water Dept
Washington	Spokane	Jan. 30, 2 p.m.	Furn two 14 in. single suction, hor. shaft, two-stage centrifugal pumps, valves, etc.	John Gifford, City Purch. Agt
Manitoba, Can.	Souris	Feb. 1	Furn 425 tons c.i. water pipe, specials, fire hydrants, gate valves and boxes, pig lead, etc., in spring and summer of 1911.	J. W. Breakey, Secy.-Treasurer.
Iowa	Rippey	Feb. 6, 8 p.m.	Construction of water works system.	J. A. Haberer, Town Clerk.
BRIDGES				
Ohio	Cincinnati	Jan. 13, noon	Bldg. concrete bridge on Cooper ave.	Fred Dreihls, Clk. Co. Comrs.
California	Fresno	Jan. 14	Constr. eight bridges on mountain road.	Board of Supervisors
Kansas	Wichita	Jan. 16	Bldg. pile bridge in Lincoln twp.	Jesse Leland, County Clerk.
Ohio	Jefferson	Jan. 16, 1 p.m.	Constructing superstructure of bridge over Grand river.	A. V. Hillyer, County Clerk.
Indiana	Indianapolis	Jan. 18, 10 a.m.	Constructing bridge over canal at College ave.	Albert Sahn, Co. Auditor.
Dist. of Col'bia	Washington	Jan. 23, 2 p.m.	Strengthening Calvert st. bridge. Approx. \$25,000.	Wm. V. Judson, Engr. Comr
Virginia	Richmond	Feb. 1, 4 p.m.	Plans, designs, detailed drawings, strainsheets, specifications and proposals for \$225,000 rein. concrete bridge over James ri.	Charles E. Bolling, City Engineer

Elizabeth City, N. C.—Asphalt street paving, to J. L. Robinson, Baltimore, Md., \$1.61 per sq. yd.; paving Water st. with Belgian blocks, to J. L. Lawson, Norfolk.

Cleveland, O.—Grading and loaming Parkway, Harvard to Washington road, to Alex. Tubman & Wm. Burkhardt, 2153 Fairmount st.

Circleville, O.—To James T. Lynch, of Flint, Mich., for paving streets, \$73,052.

Marion, O.—Paving Marion and Agosta pike, to D. C. O'Connell, \$5,950.

Bartlesville, Okla.—To Kraul & Co., for paving East 3d st., including curbing, guttering, grading and laying of sewers, \$2.38 per sq. yd.

East Providence, R. I.—Supplying 132,000 granite paving blocks, to New England Granite Co.; 50,000, to John Catto; both contracts are to be filled at Westerly quarries and 100,000 will be supplied at \$60 per M and \$2,000 at \$59 per M.

Portsmouth, Va.—To E. Parks Lindsay, city, by Norfolk County Permanent Road Improvement Commission, for construction of macadamized boulevard from Cross roads in Tanner's Creek magisterial district to Ocean View, \$16,163; other bidders: E. J. McGuire, Norfolk, \$16,270, and Dalby, Nottingham & Co., Norfolk, \$16,297.20.

Olympia, Wash.—By State Highway Board, for four miles of road, running east from Tomasket in Okanogan County, known as road 92, to Wood & Rubert, about \$5,000.

BIDS RECEIVED

Los Angeles, Cal.—By County Board of Supervisors for improving El Monte-Cornia Road, 9.05 miles long, requiring 28,820 tons of oiled macadam: A. C. St. John, \$40,348; Oiled Macadam Paving Co., \$43,382, and F. E. Prondgeast, \$41,313.

Hartford, Conn.—Construction of State road work: Town of Sterling, three sections gravel-telford road, on the road leading from the Sterling railroad station to the Rhode Island State line, (a) first section, 5,810 lin. ft., (b) second section, 6,268 lin. ft., (c) third section, 9,442 lin. ft., (d) telford, (e) rubble drain; Ahern Bros., Norwich, (a) \$6,730, (b) \$8,720, (c) \$7,033, (d) 60c., (e) \$1; Roger Kennedy, Middletown, (a) \$8,541, (b) \$9,778, (c) \$12,189, (d) 60c., (e) \$1.25; A. Vito & Co., Thompson, (a) \$8,100, (b) \$10,730, (c) \$7,380, (d) 75c., (e) \$1.25; O. T. Benedict, Pittsfield, Mass., (a) \$7,500 (b) \$11,350, (c) \$8,250, (d) 75c., (e) 95c.; A. D. Bridge's Son Co., Hazardville, (a) \$9,607, (b) \$13,155, (c) \$11,700, (d) 75c., (e) \$1. Town of Canton, 6,123 lin. ft. gravel-telford road, including one reinforced concrete culvert, 8-ft. span, on Indian Hill section: B. D. Pierce, Jr., Co., Bridgeport, lump sum, gravel \$18,000, telford 75c. per lin. ft., rubble drain 90c. per lin. ft.; William Maloney, West Hartford, \$18,027, 60c., 75c.; C. A. Rossi, Torrington, \$18,065, 65c., 75c.; Joseph Mascetti, Torrington, \$11,266, 50c., 60c.; F. Arrigoni & Bro., Durham, \$27,422, 50c., \$1.25; Pierson Engineering and Construction Co., Bristol, \$16,838, 50c., \$1.25; Sternberg & Cadwell, West Hartford, \$13,899, 50c., \$1.25; C. W. Tyron, Meriden, \$18,062, 50c., \$1.25. Town of Brooklyn, 5,050 lin. ft. macadam-telford road, on Main st.; Roger Kennedy, Middletown, \$1.79 per lin. ft. for macadam, \$2.30 per lin. ft. for telford, \$1 per lin. ft. for rubble drain, 65c. per sq. yd. for cobble gutters; C. T. Bene-

diet, Pittsfield, Mass., \$2.53, \$3.23, \$1.75c., Tony Leo, Thompson, \$2.89, \$3.71, \$1.05, 89c.; A. D. Bridge's Son Co., Hazardville, \$2.57, \$3.27, \$1.60c. Town of Preston, 7,825 lin. ft. graded telford road, including one reinforced concrete arch culvert, 8-ft. span on the road from Sterling station to the Rhode Island State line, (a) grading, lump sum, (b) telford, (c) rubble drain, (d) rubble walls; Ahern Bros., Norwich, (a) \$19,590, (c) \$1, (d) \$6; Roger Kennedy, Middletown, (a) \$14,000, (b) 60c., (c) \$1, (d) \$5.50; O. T. Benedict, Pittsfield, Mass., (a) \$19,595, (b) 75c., (c) 96c., (d) \$5.95; William B. Wilcox, Norwich, (a) \$21,000, (b) 70c., (c) \$1, (d) \$6; Clayton T. Curtiss, Glastonbury, (a) \$11,001, (b) 90c., (c) \$1.10, (d) \$5; Tony Leo, Thompson, (a) \$15,870, (b) 81c., (c) \$1.19; Tony Carbond, Norwich, (a) \$21,235, (b) \$3.30, (c) \$1, (d) \$3.25; Eldredge Construction Co., Mystic, (a) \$13,728, (b) \$2.18, (c) 90c., (d) \$1; A. D. Bridge's Son Co., Hazardville, (a) \$18,553, (b) 60c., (c) \$1, (d) \$6. Town of New Fairfield, four sections graded telford road, aggregating 160 lin. ft., including one I-beam reinforced concrete culvert, (a) first section, 1,815 lin. ft., (b) section, 1,000 lin. ft., (c) 630 lin. ft., (d) 630 lin. ft., (e) lump sum price for four sections, (f) telford, (g) rubble drain; Goodman Trumbull, Litchfield, (a) \$1,495, (b) \$2,966, (c) \$1,176, (d) \$1,110, (e) \$9,776.40, (f) 90c., (g) \$1.25; Joseph Mascetti, Torrington, (a) \$2,717, (b) \$530, (c) \$450, (d) \$2,000, (e) \$6,300, (f) 60c., (g) 60c.; Norris Hatch, New Fairfield, (e) \$10,800; E. G. Pardee, Bethany, (a) \$10,000, (b) \$2,500, (c) \$2,000, (d) \$2,500, (e) \$17,000, (f) 65c., (g) \$1; E. N. Beard Co., Shelton, (e) \$12,210, (f) 65c., (g) \$1. Town of Litchfield, 3,100 lin. ft. graded telford road, and Town of Harwinton, 732 lin. ft. graded telford road; road for elimination of two dangerous grade crossings, East Litchfield; work involves much heavy cutting and filling; both sections: The B. D. Pierce, Jr., Co., Bridgeport, \$11,000 for entire grading, 85c. per lin. ft. for telford, 85c. per lin. ft. for rubble drain; A. Vito, Thompson, \$16,861, 90c., \$1.25; F. Arrigoni & Bro., Durham, \$17,081, 99c., \$1; John de Michael & Bro., Torrington, \$15,902, 50c., \$1; William Maloney, West Hartford, \$14,178, 60c., 75c.; O. T. Benedict, Pittsfield, Mass., \$13,987, 60c., 75c.; Pierson Engineering and Construction Co., Bristol, \$11,000, 75c., \$1; Joseph Mascetti, Torrington, \$11,266, 50c., 55c.; Sternberg & Cadwell, West Hartford, \$10,900, 50c., \$1.25; C. W. Tyron, Meriden, \$11,071, 50c., \$1.

Mt. Vernon, N. Y.—Paving East Lincoln ave., Louis Petrillo, new curb, 80c.; old curb, 43c.; asphalt block, \$2.30; brick pavement, \$1.68; brick pavement relaid, 25c.; new flag walks, 65c.; Jas. Piro, new curb, 65c.; old curb, 25c.; brick pavement, \$2.25; relaying brick pavement, 10c.; new sidewalks, 70c.; old sidewalks relaid, 10c.; new brick pavement, present foundation, \$1.63. Frank Nordone, new curb, \$1; old curb, 50c.; asphalt pavement on 6-in. concrete foundation, \$2.95; asphalt on cement foundation, \$2.75; brick pavement, \$2.45; brick pavement relaid, 10c.; brick pavement on present foundation, \$1.59; sheet asphalt, \$2.60; sheet asphalt on 2-in. concrete foundation, \$2.50; new flag sidewalks, \$1; old flag sidewalks relaid, 15c.; Charles Molotla, new curb, 70c.; old curb, 35c.; asphalt on 6-in. concrete foundation, 85; asphalt on 2-in. cement foundations, \$4.50; brick pavement, \$2.50; new flag sidewalks, 60c.; brick relaid, \$1.05; bricks on present foundation, \$1.55; sheet asphalt on 6-in. concrete foundation, \$5; sheet asphalt on 2-in. cement foundation, \$4.75; new flag sidewalks, 60c.; old flag sidewalks relaid, 10c.; Barber Asphalt Co., new curb, \$1.34; old curb, 74c.; asphalt block, \$3.28 $\frac{1}{2}$; asphalt block on 2-in. cement foundation, \$2.51 $\frac{1}{2}$; brick pavement relaid, 35c.; sheet asphalt on 6-in. concrete foundation, \$2.94; sheet asphalt on 2-in. cement foundation, \$2.20 $\frac{1}{2}$; new flags, 90c.; old flags, 25c.; James Garofano, new curb, 75c.; old curb, 20c.; brick pavement, \$2.75; old brick pavement relaid, 10c.; new flags, 65c.; old flags, 20c.; new brick pavement on present foundation, \$1.69; Charles Sillery, new curb, 75c.; old curb, 20c.; brick pavement on 6-in. concrete foundation, \$2; brick pavement relaid, 50c.; brick pavement on present foundation, \$1.64; new flags, \$1; old flags, 30c.; Harlem Contracting Co., new curb, 78c.; old curb, 30c.; asphalt on 6-in. concrete foundation, \$2.78; asphalt on 2-in. cement foundation, \$1.88; brick pavement relaid, 25c.; new flag walks, 85c.; old flag walks, 18c.; Sabino Guarino, new curb, 75c.; old curb, 15c.; brick pavement on 6-in. concrete foundation, \$2.20; brick pavement relaid, 10c.; new sidewalks, 60c.; old sidewalks, 10c.; new brick pavement on present foundation, \$1.71.

Akron, O.—Paving sections of Akron Hudson road; Section 1, E. McShaffrey & Son, city, \$36,682; Section 3, Wildes & Davidson, city, \$63,264; Section 5, Paul & Henry, Barberton, \$106,652.

Atlanta, Ga.—Constructing Peachtree Creek disposal plant: To (a) Chester A. Dady, Brooklyn, N. Y.; other bidders: (b) Nichols Constr. Co., Atlanta; (c) Piedmont Constr. Co., Atlanta; (d) Hard & Worm, New York, N. Y.; (e) Municipal Engr. & Constr. Co., Chattanooga, Tenn.

Table with 5 columns (a-e) and multiple rows listing construction items like earth excavation, rock excavation, grit chamber, settling tanks, etc., with corresponding costs.

SEWERAGE

Concord, Cal.—Plans will soon be prepared for installation of complete sewer system.

Los Angeles, Cal.—Bids will be received about Jan. 15 by H. B. Ferris, Secretary Board of Public Works, for sewers in Wilmington district.—Homer Hamlin, City Engineer.

Athens, Ga.—Mayor Rowe has recommended extension of sewerage facilities.

Danville, Ind.—Citizens will vote Feb. 2 on installation of sanitary sewer.

Gary, Ind.—Bids will be received by the Board of Public Works for construction of sewers: 3,120 ft. of 60-in. brick sewer, 2,055 lin. ft. of 36-in. brick sewer, 3,160 lin. ft. of 30-in. brick sewer, 3,320 lin. ft. 20-in. pipe sewer, 3,900 lin. ft. of 8-in. pipe sewer, 6,540 lin. ft. of 24-in. brick sewer, 4 gutter inlets, 5 catch basins, 12 manholes.—Harry G. Moose, City Clerk.

Madisonville, Ky.—Engineers Alvord & Burdick, 140 Dearborn st., Chicago, have been selected to prepare plans for \$60,000 sewerage system and purification plant.

Lowell, Mass.—Mayor John P. Meehan has recommended loans for additional sewer and smooth paving work.

New Bedford, Mass.—Mayor Ashley has recommended asking Legislature for permission to issue \$300,000 bonds for new sewers.

Gordon, Neb.—Citizens will vote Jan. 17 on \$4,600 bonds for installation of sewer system.

Bridgeton, N. J.—Council has declared contract for building sewerage system forfeited and has instructed Engineer Clyde Potts to take necessary steps to have work finished either by city doing it itself or by new contract.

Caldwell, N. J.—Mayor John Espy has recommended improvement to sewerage facilities.

Hasbrouck, N. J.—Mayor A. C. Austin is favorable to establishment of sewer system.

Hackensack, N. J.—Mayor Chas. W. Ball has recommended that matter of sewerage disposal be taken up in near future.

Plainfield, N. J.—Mayor W. V. Moy has recommended increasing of sewerage disposal beds.

East Aurora, N. Y.—Installation of \$100,000 sewer system is being considered.—F. W. King, Buffalo, Engineer.

Niagara Falls, N. Y.—Bids will be received about Jan. 17 for sewer in Ashland ave.

New York, N. Y.—Bids opened Dec. 23 by Cyrus C. Miller, President Bronx Borough, for constructing sewers in Walker and Benson aves. and other streets and avenues: (a) Vinton Contr. Co., 141 E. 125th st., \$75,689; (b) W. F. Murray, 215 W. 125th st., \$79,229; (c) L. J. Moran, 562 Burnside ave., \$71,898; (d) Geo. M. Dunn, \$61,593; (e) Leahy Contr. & Constr. Co., 1146 Prospect ave., \$66,954; (f) Stalwart Constr. Co., 5186 Bway., \$76,019; (g) Melrose Contr. Co., 147 E. 125th st., \$73,380; (h) Anita Constr. Co., 3975 Marion ave., \$66,927; (i) Alamo Contr. Co., 215 W. 125th st., \$67,480; and (k) Armanca & Lyons, 8 Van Cortlandt ave., \$68,448.

Rome, N. Y.—Mayor Kessinger will secure expert advice on construction of proposed sewage disposal plant.

Wilmington, N. C.—Plans for a complete sewerage system have been submitted to State Board of Health by local Sewerage Commission; cost about \$180,000.

Akron, O.—E. D. Bradberry, Columbus, will prepare plans and specifications for proposed sewage disposal plant.

Bellefontaine, O.—Bids will be received Jan. 30 for \$75,000 sewer bonds.

Bryan, O.—Village is considering installation of sanitary sewer system, including disposal plant.—Riggs & Sherman, The Nasby, Toledo, Engineers.

Hominy, Okla.—Citizens have voted \$36,000 sewer and water bonds.

Oklahoma City, Okla.—Citizens have voted \$15,000 for enlarging sewer system in downtown district.

Altoona, Pa.—Department of Health has recommended completion of Fourth District sewer.

Grove City, Pa.—Bids will be received about March 1 for construction of sewers at cost of about \$15,000.—L. E. Burnside, Borough Engineer.

Pottstown, Pa.—Council has defeated motion to employ engineer to make survey for proposed sewer system demanded by State Health Commissioner Dixon.

Providence, R. I.—Mayor Henry Fletcher has recommended extension of sewerage pumping plant.

Watertown, S. D.—Council is considering construction of sewer on 2d st.

Seattle, Wash.—Board of Public Works has approved specifications for trunk sewer in Virginia st.

La Crosse, Wis.—City will lay number of sewers during coming year.

Goderich, Ont., Can.—Ratepayers have passed by-law to raise \$26,000 for building storm sewer.

item 2, \$13; item 3, \$20; item 4, \$7; item 5, 30c.; item 6, \$1.05; item 7, 95c.; Tenleytown, item 1, excavation; item 2, sewer brick masonry; item 3, 15-in. pipe; item 4, 12-in. pipe; item 5, 10-in. pipe; to W. F. Brenizer Co., city, item 1, 50c.; item 2, \$13.50; item 3, 68c.; item 4, 60c.; item 5, 55c.; Florida ave., item 1, excavation; item 2, brick masonry; item 3, concrete masonry D; item 4, 6-in. subdrain pipe; to same bidder item 1, 80c.; item 2, \$21; item 3, \$7; item 4, 30c.; Rock Creek, item 1, excavation; item 2, sewer brick masonry; item 3, vit. brick masonry; item 4, concrete masonry B; item 5, concrete masonry C; to same bidder, item 1, \$24; item 2, \$20; item 3, \$25; item 4, \$15; item 5, \$14.

Keewatin, Minn.—To H. L. Bartlett Co., Virginia, for installing storm and sanitary sewers.

Marble, Minn.—To H. L. Bartlett Co., Virginia, for installing sanitary sewers.

St. Louis, Mo.—Constructing sewer in N. Harlem Joint district, to Herman Construction Co., 444 S. Theresa ave., \$326,447.

Hackensack, N. J.—Installing sewers in Richmond and Ethelbert aves., to Union Construction Co.

Chester, Pa.—Sewer work, to Henry Pritchard, Central ave., \$1,785.50; Flower st., \$2,030; Ward st., \$448.10; 9th st., \$344.20; Edwards st., \$481.50; Pennell st., \$669; Lloyd st., \$1,335; to John Hanna & Sons, Academy st., \$350.90; Edgmont ave., \$505.40; 22d st., \$400.34; 20th st., \$1,768.30; 5th st., \$381.80; Bromall st., \$370.50; Madison st., \$275.80; Front st., \$375.66; Potter st., \$1,475.75; Chestnut st., \$1,631.50; No. 1, inlets, to Henry Pritchard, \$88 each; No. 2, inlets, to J. & J. Hanna, \$86.89; grate top inlets, \$83.39; No. 3, inlets, \$71.17; grate top inlets, \$70.27; to John J. Williams Co., to build 36-in. iron pipe extension to Welsh st. sewer, \$3,995.

Duquesne, Pa.—Building sewer, to Wm. Jones, Carnegie, \$37,500.

CONTRACTS AWARDED

Trinidad, Col.—Building sanitary sewer on Chestnut st., to John McEwan, \$6c. per lin. ft. for excavation; \$46 each for man-holes and \$10 for flushers.

Washington, D. C.—Sewer work: Anacostia, item 1, excavation; item 2, sewer brick and masonry; item 3, 12-in. pipe; to Geo. Hyman, city, item 1, 49c.; item 2, \$13; item 3, 54c.; Bureau of Engraving, sewer A, item 1, excavation; item 2, sewer brick masonry; item 3, 24-in. pipe; item 4, 21-in. pipe; sewer B, item 1, excavation; item 2, sewer brick masonry; item 3, 24-in. pipe, to same bidder, sewer A, item 1, 25c.; item 2, \$13; item 3, 90c.; item 4, 90c.; sewer B, item 1, 25c.; item 2, \$13; item 3, 90c.; Langdon, item 1, excavation; item 2, sewer brick masonry; item 3, vit. brick masonry; item 4, concrete masonry D; item 5, 6-in. subdrain pipe; item 6, 24-in. pipe; item 7, 21-in. pipe; to same bidder, item 1, 49c.;

BIDS RECEIVED

Washington, D. C.—Construction of intercepting sewer on Rock Creek, between P st. and Military road, section 1, between P st. and Massachusetts ave.: (1) W. F. Brenizer Co., city, (2) E. G. Gummel, city, (3) Alfonso A. Alfieri, Morgantown, W. Va., (4) Whiting & Middleton Construction Co., Baltimore, (5) B. F. Sweeten & Sons, city; ordinary excavation (1) 77c., (2) 55c., (3) 63c., (4) \$2.29, (5) \$1.50; brick masonry, (1) \$14, (2) \$14, (3) \$10, (4) \$20, (5) \$20; vit. brick masonry, (1) \$22, (2) \$20, (3) \$19.47, (4) \$23.75, (5) \$30; concrete masonry, "D," (1) \$2.25, (2) \$7, (3) \$7.73, (4) \$8.03, (5) \$9.

Baltimore, Md.—Sanitary Contract No. 61, lateral sewers in District No. 40-C and Storm Water Contract No. 11; Sanitary Contract No. 61-B, F. Sweeten & Son, 820 Sharp st., \$92,090; Wm. McCarthy & Co., 1007 American Bldg., \$94,737; Irwin Bros.,

Table with 11 columns (a-k) and multiple rows listing construction items like concrete sewer, pipe sewer, manholes, etc., with corresponding costs.

Greenville, O., \$102,088; David Peoples, 60 Knickerbocker Bldg., \$103,658; W. H. & T. F. Thompson, \$127,283; Ryan & Reilly, American Bldg., \$129,635; the Whiting-Middleton Construction Co., Sexton Bldg., \$138,993; Storm Water Contract No. 11, Wm. McCarthy & Co., 1007 American Bldg., \$14,841; E. F. Sweeten & Son, 820 Sharp st., \$15,297; W. H. & C. F. Thompson, \$15,845; Shreve & Capie, 848 Equitable Bldg., \$16,143; the Whiting-Middleton Construction Co., Sexton Bldg., \$16,469; David Peoples, 60 Knickerbocker Bldg., \$18,371; Ryan & Reilly, American Bldg., \$19,457; McCay Engineering Co., 9 East Lexington st., \$22,378.

WATER SUPPLY

Modesto, Cal.—Trustees Thede and Knowles have been appointed as a committee to arrange with Engineer Clark to change plans for water works from underground to an overhead system, including overhead tank of 80,000 gals. capacity on a over 100 ft. high.

Washington, D. C.—District Commissioners have ordered laying of additional water mains in number of streets.

Daytona, Fla.—Council is considering establishment of water softening plant.

Ocala, Fla.—Cost of installing water system has been estimated at \$80,000; issuance of bonds being considered.

Sarasota, Fla.—Issuance of \$20,000 bonds for water works and sewerage is being urged.

Athens, Ga.—Mayor Rowe has recommended installation of plant for hypo-chloride of lime treatment of water as suggested by City Engineer Burnett.

Joliet, Ill.—City Engineer Stevens is preparing plans for pumping station to be built at west side well.

Mattoon, Ill.—City will construct \$20,000 filtration system.

Wheaton, Ill.—City will install pumping outfit, including concrete storage reservoir, engines and central well.—A. L. Webster, City Engineer.

Vincennes Ind.—Vincennes Water Co. will purchase quantity of water mains.

Boone, Ia.—Bids will be received Jan. 18 on bonds for additions and extensions to water works.—K. C. Kastberg, City Engineer.

Goodland, Kan.—County Commissioners have voted \$10,000 to install artesian well.

Patterson, La.—City is considering construction of water works; power to be furnished by F. B. Williams Cypress Co.

Beverly, Mass.—Mayor Fred A. Dodge has recommended investigation into manufacture of cement lined pipe for water department.

Woburn, Mass.—Mayor Hugh D. Murray has recommended improvement of water system at cost of \$200,000.

Worcester, Mass.—Mayor Jas. Logan has recommended immediate action to develop Aseubumskit water system.

Flint, Mich.—Wm. G. Clark, Toledo, Consulting Engineer, will supervise construction of proposed water works.

Grand Rapids, Mich.—New pump will be purchased by Board of Public Works and be installed in new city pumping station as reserve engine.

Holland, Mich.—Board of Public Works is considering construction of \$12,000 pumping station at 21st st.

Duluth, Minn.—Council has passed ordinance for election in February on \$300,000 water and light bonds.

St. Paul, Minn.—Assembly Committee on Streets has decided to report favorably on the resolution authorizing Water Board to issue \$100,000 bonds for improvements and extensions.

Worthington, Minn.—Citizens have voted \$12,000 bonds for extension of water mains and erection of tank.

Plattsburg, Mo.—City has selected Rollins & Westover, Beals Bldg., Kansas City, to prepare preliminary plans for water works and electric light plant; cost \$50,000.

Battle Creek, Neb.—Citizens will vote Jan. 15 on \$10,000 bonds for construction of water works.

Gordon, Neb.—Citizens will vote Jan. 17 on \$12,000 bonds for installation of water works system.

Omaha, Neb.—South Omaha Water Co. will erect storage reservoir, capacity 4,000,000 gals., in spring.

Caldwell, N. J.—Mayor John Espy has recommended municipal water supply.

Elizabeth, N. J.—Mayor Alfred A. Stein has recommended municipal ownership of water works.

Glen Ridge, N. J.—Mayor Giles W. Read has recommended municipal ownership of water system.

Lyndhurst, N. J.—Citizens have voted to issue \$25,000 bonds for extending water system.—J. F. Woods, Township Clerk.

North Plainfield, N. J.—Mayor N. B. Smalley has recommended installation of public water plant.

Perth Amboy, N. J.—Water Commissioners are considering installation of 24 or 30-in. water main to connect city with water works at Runyon; cost about \$70,000.

Plainfield, N. J.—Mayor W. V. Moy has recommended installation of municipal water works.

South Amboy, N. J.—Mayor Michael A. Welsh has recommended necessity of providing adequate supply of water.

Hornell, N. Y.—Citizens have voted \$100,000 for water storage reservoir.

Utica, N. Y.—Consolidated Water Co. will install additional sterilization plant.

Cincinnati, O.—Plans for sterilization plant at the California filtration station have been completed and work on the construction will soon be begun; Water Works Superintendent Laidlaw has estimated cost at \$6,500.

New Carlisle, O.—City has sold \$20,000 bonds for construction of water works system.

Sylvania, O.—Village is considering construction of water works.—Riggs & Sherman, The Nasby, Toledo, Engineers.

Youngstown, O.—Council has passed ordinance directing Director of Service to expend \$23,000 for water works supplies.

Delaware, Okla.—Citizens have voted \$25,000 bonds for construction of water works.

Hominy, Okla.—Citizens have voted \$36,000 water and sewer bonds.

Toledo, Ore.—Engineer D. J. Sidney will make preliminary survey for proposed water works system; \$25,000 available.

Lebanon, Pa.—Water Commissioners have recommended duplication of machinery at Hammer Creek pumping station, erection of dwelling house at Hammer Creek for engineers, building of fourth dam at South Mountain watershed and laying of terra cotta pipes to carry water of streams in vicinity of dam No. 3.—E. H. Shroff, Superintendent.

Somerset, Pa.—Council has sold \$10,000 water bonds to Farmers' National Bank.

Wyomissing, Pa.—Borough is considering issuance of \$60,000 bonds for water works and electric light plant.

Providence, R. I.—Mayor Henry Fletcher has recommended storage reservoir for city's water supply.

Pierpoint, S. D.—Installation of water works system is being urged.

Etowah, Tenn.—Prices are desired by Mayor T. F. Peck on deep well pumps.

El Paso, Tex.—Installation of additional engine and pump to force water into city from Mesa pumping plant and sinking of eight new wells 14 in. in diameter is proposed by Superintendent of Water Works W. E. Race.

Palacios, Tex.—City has asked bids from private parties for constructing and operating water works.

Polytechnic, Tex.—City is considering construction of \$30,000 water works system.—John Mead, Engineer.

Trenton, Utah.—City is considering installation of water works system.

Seattle, Wash.—Council has passed resolutions for laying water mains in 12th ave N. W. and 25th ave. N.

Lethbridge, Alta., Can.—Preliminary surveys have been made for gravity water system; cost \$880,000.—C. W. Arnold, City Engineer.

Harrison, Ont., Can.—Citizens have passed by-laws for installation of water works.

North Vancouver, B. C., Can.—City will expend about \$40,000 during year in purchasing c. i. pipe for proposed extensions.

St. Catharines, Ont., Can.—Ratepayers have voted \$180,000 for installation of water main to increase pressure and supply.

CONTRACTS AWARDED

San Bernardino, Cal.—To J. Wm. Smith, for drilling well near Penis reservoir site, \$5,600.

Winnetka, Ill.—Laying water mains on Laurel ave., Fig and Lake sts., to C. T. Partlett 827 Greendale st., Evanston, \$1,747.—Winds & Marsh, 508 Birch st., Engineers.

Mitchell, Ind.—Building water system, to S. S. Royland.

Ft. Cook, Neb.—Reservoir and well at post, to J. W. Turner Development Co., Des Moines, Ia., \$28,500.

Lincoln, Neb.—Furnishing water pipe, to American Cast Iron Pipe Co., of Birmingham, Ala.; 295 tons 16 and 12-in. pipe, \$23.55 per ton; 159 tons 6-in. at \$23.00, and 75 tons of 4-in., \$24.95 and 5 tons specials, 24c. per lb.

Newark, N. J.—Laying pipe line for fire protection at Hospital for Contagious Diseases, Soho, to Wm. H. Jacobson, \$1,151.06.

Oriskany Falls, N. Y.—Construction of a gravity system of water works, consisting of 15,000,000-gal. reservoir, concrete dam, approximately 25,000 ft. of 12, 10, 8 and 6-in. pipe, 37 hydrants, 36 valves and all accessories, material, tools and labor neces-

sary to complete the system, to John Siegrist, Utica, \$26,794.

Cincinnati, O.—Furnishing 48-in. check valve to Water Works Department, to Rensselaer Valve Co., \$1,947.50.

Somerset, Pa.—To D. W. Rhoads, city, for construction of the pipe line from new well just north of town to reservoir, which is necessary in carrying out plans of Engineer L. E. Chapin, of Pittsburg, for enlarging water works; about 4,300 ft in length.

Appleton, Wis.—To O'Keefe-Orbison Engineering and Construction Co. for building dam at Appleton to cost from \$90,000 to \$100,000.

Greybull, Wyo.—Building water works system, to Garrard Construction Co., Sheridan, \$31,960.

BIDS RECEIVED

Hudson, N. Y.—Laying larger water main on Second st.; Harper, Javo & Kehoe, Quincy, Mass., \$2.28, and Patterson & Malone, city, \$2.30; total, about \$4,857.

LIGHTING AND POWER

Murfreesboro, Ark.—Plans are being prepared by W. A. Fuller, 1616 Chemical Bldg., St. Louis, Mo., for power plant to be erected by Pike County Water Co.; cost about \$850,000.

Meridian, Cal.—Pacific Gas and Electric Co. is preparing to extend its power lines from this city to Colusa.—J. A. Britton, San Francisco, General Manager.

Redding, Cal.—Fred Dakin is interested in proposed installation of gas plant.

Willow, Cal.—Board of Supervisors has granted franchise to Sacramento Valley Power Co., Redding, to construct and maintain power line in Glenn County.

Ventura, Cal.—County Supervisors have granted to Ventura Power Co. franchise to lay and maintain 36-in. reinforced concrete pipe line.

Norwich, Conn.—Board of Gas and Electric Commissioners will install 750-kw steam turbo generator set and make other improvements to electric light plant; \$35,000 available.

Jacksonville, Fla.—Jacksonville Electric Co. will erect power house on Riverside ave.—Geo. J. Baldwin, Savannah, Ga., President.

Kooskia, Ida.—F. J. Engelhorn has asked for franchise to supply electric lights and power.

Pocatello, Ida.—J. A. Jones is considering construction of \$200,000 gas plant.

Farmland, Ind.—J. T. Moorman and Ed Goodrich, of Citizens' Water and Light Co., Winchester, have closed contract with Town Council to furnish Farmland with 38 electric street lights; also supply lights for all the residents and business men of Farmland who want them; work on extension from Winchester will commence as early as possible.

Iowa City, Ia.—The Cedar Rapids and Iowa City Interurban Railway Co. is planning to expend \$80,000 this year on improvements; company will erect substation, also remove substation from Coralville to North Liberty.

Webster City, Ia.—Council will purchase site on Superior st. for erection of power house.

Frankfort, Ky.—City has granted franchise to E. M. Wallace, manager Capitol Lumber Co., to construct electric light system.

Midway, Ky.—City is considering granting franchise to E. M. Wallace, manager Capitol Lumber Co., Frankfort, to furnish city with electric light; system is to be extended from Frankfort, distance 14 miles.

Springfield, Mass.—Mayor Edw. H. Lathrop has recommended municipal ownership of gas and electric lighting systems.

Escanaba, Mich.—Council has authorized Board of Public Works to secure site for erection of proposed city gas plant.

Iron Mountain, Mich.—L. Sterling and O. C. Davidson are interested in proposed erection of hydroelectric plant on Menominee River.

Duluth, Minn.—Citizens will vote in February on \$300,000 light and water bonds.

Minneapolis, Minn.—Plant of the Minneapolis General Electric Co. has been destroyed by fire and explosion.

Minneapolis, Minn.—Mayor J. C. Haynes has recommended replacement of old-style gasoline lamps with incandescent lamp beads and burners, making of new contract for incandescent gas street lighting and for electric lighting.

South Stillwater, Minn.—Citizens have voted \$5,000 bonds for improvement of lighting plant and streets.

Tower, Minn.—Citizens will vote on bonds to erect power plant at Pike River Falls, cost about \$15,000.

Plattsburg, Mo.—Rollins & Westover, Beals Bldg., Kansas City, are preparing preliminary plans for electric light plant.

Penacook, N. H.—Penacook Electric Light Co. is considering extension of transmission line.

Camden, N. J.—Mayor Chas. H. Ellis has recommended installation of additional lights along main thoroughfare.

South Amboy, N. J.—Mayor Michael A. Welsh has recommended appointment of committee to consider matter of municipal electric light plant.

Buffalo, N. Y.—Public Service Commission at Albany has granted Niagara and Erie Power Co. of Buffalo permission to issue \$500,000 bonds for improvements.

Watertown, N. Y.—Public Service Commission has authorized Ober River Power Co. to exercise franchise granted in towns of Champlain and Denmark.

Hickory, N. C.—The Water Power Electric Co. has selected Connell & Connell, 90 West st., New York, as Chief Engineers for construction of water power electrical plant.—Louis R. Abel, 258 Broadway, New York, Resident Engineer.

Hastings, Okla.—Prices on wire and poles are desired by Mayor J. A. Marley.

Oklahoma City, Okla.—Oklahoma Street Railway Co. will erect addition to Belle Isle Power plant; will also enlarge substation at Olive ave. and 2d st.—A. J. Bemis, General Manager.

Cottage Grove, Ore.—Citizens have voted to extend franchise of present electric light company for period of 25 years.

Freewater, Ore.—Pacific Power and Light Co. will construct eight-mile electric power transmission line.

Conneautville, Pa.—Application has been made to Council by newly organized company for franchise to install electric light and heating plant.

Lansdale, Pa.—The Montgomery Heat and Fuel Co. is planning to erect complete plant.

Wyomissing, Pa.—Borough is considering issuance of \$60,000 bonds for electric light plant and water works.

Watertown, S. D.—Definite plan for lighting city is being urged by Manager Ferris, of light plant.

Etowah, Tenn.—Prices are desired by Mayor T. F. Peck on insulated or bare copper wire.

Fort Stockton, Tex.—Clay Bros., San Angelo, have been granted franchise to install electric light plant.

Wichita Falls, Tex.—Council has granted J. W. Culbertson and associates 25-year franchise to supply natural gas.

Morgantown, W. Va.—Morgantown and Dunkard Valley Railroad Co. is considering plans for erection of power house.

Walla Walla, Wash.—Practically whole of distribution system of Pacific Power and Light Co. south of Main st. will be rebuilt in near future, while system on other side of Main will also receive considerable attention and improvement.—W. B. Foshay, Manager.

Bowmanville, Ont., Can.—Seymour Power and Electric Co., Ltd., has been granted franchise.

Hespeler, Ont., Can.—Ratepayers will raise \$4,000 for extension of electric light for street lighting.

Kingston, Ont., Can.—Ratepayers have passed by-law for electric light improvements.

Waterloo, Ont., Can.—Ratepayers will raise \$40,000 for electric light purposes.

CONTRACTS AWARDED

St. Augustine, Fla.—Lighting city, to St. Johns Light and Power Co., renewal.

Belvidere, Ill.—Lighting streets for ten years, to Public Service Operating Co.

Albany, N. Y.—To Wells-Boughton Co., Troy, for construction of hydroelectric plant at Crescent Dam, \$42,940.

New York, N. Y.—Furnishing 500 posts for Tungsten park lighting, to Elmer P. Morris Co., 90 West st.; about one-half are for regular installations and rest of new type and will be used for lighting of transverse roads through Central Park.

Defiance, O.—City has contracted with DeFrance Gas and Electric Co. to furnish light for 10 years; street lamps are to be at rate of \$79 a year a lamp; commercial lighting is to be at rate of 9c. per kw.-hour.

Parksville, Tenn.—By Eastern Tennessee Power Co. for electrical equipment for power plant, to Westinghouse Electric and Mfg. Co., Pittsburg, Pa.

Dallas, Tex.—To Dallas Electric Light and Power Co., to install and maintain decorative system of lighting on Elm st.

FIRE EQUIPMENT

Birmingham, Ala.—Council has authorized purchase of 15 new motor-driven fire hose wagons at cost of \$65,000.

Montgomery, Ala.—Finance Committee has recommended erection of fire station on McDonough st.

Trinidad, Col.—Fire Chief Robert A. Daugherty has recommended erection of the station on north side, purchase of combination auto-chemical and hose wagon, ca-

capacity 2,000 ft. of hose and 65-ft. aerial truck, also installation of modern fire alarm system.

Cartersville, Ill.—Fire department has been organized.—J. M. Brann, Fire Chief.

Joliet, Ill.—Police Chief McMasters has recommended purchase of auto.

St. David, Ill.—Town is considering purchase of chemical fire engine.

New Albany, Ind.—Finance Committee is considering \$2,500 appropriation for erection and equipment of reel house in Seventh Ward.

Burton, Kan.—City is considering purchase of fire engine.

Chicopee, Mass.—Mayor S. E. Fletcher has recommended purchase of motor-driven vehicle capable of serving as pumping engine and hose and chemical engine combined.

Fall River, Mass.—Mayor Higgins has recommended placing of all fire alarm wires underground and installation of more fire alarm boxes.

Gloucester, Mass.—Mayor Patch has recommended purchase of auto combination wagon for fire department.

Malden, Mass.—Mayor Fall has recommended auto chemical for Maplewood and auto for Fire Chief.

Waltham, Mass.—Mayor E. A. Walker has recommended purchase of auto chemical and auto for Fire Chief.

Worcester, Mass.—Mayor Jas. Logan is favorable to auto fire apparatus.

Manchester, N. H.—Mayor E. C. Smith has recommended purchase of modern, properly equipped aerial truck.

Bayonne, N. J.—Mayor John J. Cain has recommended erection of fire house.

Bellevue, N. J.—Township is considering need of motor fire engine.

Caldwell, N. J.—Mayor John Espy has recommended establishment of fire alarm system.

Camden, N. J.—Mayor Chas. H. Ellis has recommended location of fire house in Eleventh Ward for combination hose and chemical wagon, auto being favored; installation of light steamer at present east side house and auto for Chief.

Elizabeth, N. J.—Mayor Alfred A. Stein has recommended erection of fire station in Eleventh Ward; also new home for company in Station No. 6 on Magnolia ave. and house in city yards, High and Port sts., for Engine No. 3 and additional truck company.

Englewood, N. J.—Chief Engineer Emile Rush has suggested need of auto fire engine.

Glen Ridge, N. J.—Mayor Giles W. Read has recommended new headquarters for fire department.

Hackensack, N. J.—Mayor Chas. W. Bell has recommended better equipment of fire fighting apparatus in Mercer st. fire house; auto apparatus favored.

Hasbrouck, N. J.—Establishment of fire alarm system is being considered.—A. C. Austin, Mayor.

Jersey City, N. J.—Architect Robert B. Morrison has submitted tentative plans for fire headquarters to be erected on Merseles st. at cost of \$250,000, including site.

Roselle Park, N. J.—Mayor Geo. H. Horning has recommended installation of fire alarm system and purchase of combination chemical hose cart.

Roselle, N. J.—Mayor Chas. W. Macquoid has recommended need of equipping fire department with modern apparatus.

Somerville, N. J.—Purchase of combination wagon is being considered.

South Amboy, N. J.—Mayor Michael A. Welsh has recommended that hook and ladder company be provided with hose carriage and sufficient quantity of hose.

Trenton, N. J.—President Chas. G. Cook, of Fire Board, has recommended erection of fire house and extension of fire alarm system.

Albany, N. Y.—City will try out gasoline propelled chemical and hose wagon; purchase of auto for Chief of Fire Bureau is being considered.

Bath, N. Y.—Village Trustees have decided to purchase 1,000 ft. of hose and rubber gloves and coats.

Elmira, N. Y.—Fire Commissioners have approved plans for erection of fire house on Roe ave.

Endicott, N. Y.—Fire house, cost \$20,000, will be erected next spring.

Hornell, N. Y.—Citizens have voted \$36,000 for erection of central fire house station.

Mt. Vernon, N. Y.—Plans by Architect Stickle have been accepted for erection of \$10,000 fire house on 6th ave.

Syracuse, N. Y.—Mayor Edward Schoenbeck has recommended that central fire alarm system be installed.

Voorheesville, N. Y.—Erection of fire station is being considered.

Elyria, O.—Purchase of combination chemical auto engine and hose wagon and erection of fire house is being considered.

Norwalk, O.—Council is considering re-advertising for bids for proposed fire truck.

Old Fort, O.—Fire house will be erected and necessary apparatus installed.

Altoona, Pa.—Fire Chief T. W. Allemann has recommended purchase of combination chemical engine and hose motor car, auto for Chief, 1,000 ft. of 2½-in. rubber-lined cotton hose and turret pipe.

Catasauqua, Pa.—Fire station will be erected at cost of \$7,000.

Lebanon, Pa.—Fire Alarm Superintendent S. A. Burkholder has recommended additional and better equipment for city hall fire alarm apparatus, including switchboard and automatic repeater.

Stowe, Pa.—West End Fire Co. will purchase 500 ft. of hose.

Pawtucket, R. I.—Mayor Giles W. Eastbrooks has recommended changing of present hose wagon into motor-driven apparatus.

Providence, R. I.—Mayor Henry Fletcher has recommended extension of underground system of fire alarm service.

Chattanooga, Tenn.—Board of Public Works will at once ask bids for repairs to Whiteside st. fire hall.

Clarkston, Wash.—Fire department has been organized.—Geo. Bursell, Chief.

Olympia, Wash.—City is considering erection of two-story concrete fire station and city hall.

Seattle, Wash.—Board of Public Works has approved specifications for fire house at Hillman City.

Toppenish, Wash.—Fire station will be at once erected on east side.

Collingwood, Ont., Can.—Ratepayers have voted to erect fire hall and install modern equipment.

CONTRACTS AWARDED

Rochester, N. Y.—To Standard Underground Cable Co. for 2,000 ft. of 20-conductor cable for fire department, \$556, and for 2,500 ft. of 8-conductor cable, \$357.50.

BRIDGES

Los Angeles, Cal.—Ivory B. Noble, County Surveyor, has completed plans for bridge across Arroyo Seco at Garvanza, connecting with Lincoln Park-South Pasadena district.

Jacksonville, Fla.—Board of Public Works has authorized City Engineer to advertise for bids for construction of a reinforced concrete bridge across Hogans Creek, on East Bay st., to replace the present wooden structure; \$2,500 available.

Batavia, Ill.—State Highway Commission has prepared plans for erection of bridge at Wilson st.

Kansas City, Kan.—Engineer Kenneth Hartley, 349 Greeley st., will prepare plans and specifications for Mill and 18th st. viaducts.—Otto Anderson, Commissioner of Public Works.

Boston, Mass.—Council has passed \$10,000 loan order for preliminary work on proposed Chelsea north bridge.

Dedham, Mass.—City has awarded \$7,740 bridge and street bonds to Adams & Co.

Ashland, Neb.—Construction of bridge over Platte River is being urged.

Toledo, O.—Council has instructed Chief Engineer to supply estimate as to cost of rebuilding the old Cherry st. bridge at Ash and Consaul sts.

Philadelphia, Pa.—Survey Bureau has completed plans for widening of Chestnut st. bridge; \$90,000 available.

Philadelphia, Pa.—City has appropriated \$25,000 for bridge repairs.—Geo. Stearns, Commissioner of Public Works.

Pittsburg, Pa.—County Consulting Engineer E. M. Bigelow has recommended erection of bridge and tunnel from 1st and Ross sts. to Bell Tavern; cost about \$2,000,000.

Reading, Pa.—Berks County Court has approved recommendation for bridge across Schuylkill River between Reading and West Reading.

Fredericksburg, Va.—Supervisors of Spotsylvania County have decided to build bridge over Hazel Run and over Massapanox Run, on road leading from here to Spotsylvania Courthouse; bridges will be either concrete or steel.

Chippewa Falls, Wis.—Plans will be prepared for erection of \$35,000 bridge.

CONTRACTS AWARDED

Red Jacket, Minn.—Building concrete bridge, to Marsh Engineering Co., Des Moines, Ia., \$12,650.

David City, Neb.—Bridge construction in county for year; Wooden bridges, to Nebraska Construction Co., Lincoln; cement culverts, to Wilson Reinforced Concrete Co., Nebraska City; metal culverts, to Nebraska Culvert Manufacturing Co., Wahoe.

Hastings, Neb.—To Standard Bridge Co., Omaha, for county bridge contract for year.

Youngstown, O.—Bridge with steel joists over Powers River for County Commissioners, to Hunter Construction Co., city, \$13,120.

MISCELLANEOUS

Gadsden, Ala.—Etowah County will consider erection of jail.

Arkansas City, Ark.—Desha County is considering erection of addition to court house.—C. H. Halley, Judge.

Los Angeles, Cal.—Dennis & Farwell, Irrigator Bldg., will prepare plans for erection of sub-police station on Boyle Heights.

Petaluma, Cal.—Citizens have voted \$20,000 bonds for purchase of Kenilworth Park.

San José, Cal.—Park Commissioners will ask for bond issue of \$125,000 for following improvements: Bath house, two new bridges, septic tank, development of new mineral springs and of general water supply.

Bridgeport, Conn.—Council is considering \$5,000 bond issue for erection of hall of records.

Bridgeport, Conn.—Board of Park Commissioners has asked for following appropriations: Playground paraphernalia, \$2,500; improvements at Beardsley Park, \$1,000; miscellaneous, \$13,000.

Bridgeport, Conn.—Police department has asked for \$40,000 appropriation for purchase site and erection of police station at West End.

Waterbury, Conn.—Mayor Wm. B. Hotchkiss has recommended issuance of 6,000 bonds for remodeling of city hall.

Waterbury, Conn.—Superintendent of Parks George C. Walker has recommended number of improvements to park system, including playground in Brooklyn district and swimming pool in western section of city.

Athens, Ga.—Mayor Rowe has suggested erection of city stockade and necessity of city park.

Chicago, Ill.—Committee on Bathing Beaches and Recreation Piers will urge \$40,000 bond issue for improvements.—A. J. Sherman, Theo. K. Long and W. P. Dunn are interested.

Mishawaka, Ind.—City will advertise for bids in near future for police alarm system. Harvey Frick, Chief of Police.

Portland, Ind.—County Commissioners will consider erection of court house.

Cambridge, Mass.—Citizens have petitioned for establishment of municipal hospital for caring for sick poor.

Lawrence, Mass.—Mayor Cahill has recommended city hall, police station and refreshment hospital.

Lowell, Mass.—Mayor John T. Meehan has recommended purchase of land for ball playgrounds in congested centers.

Lynn, Mass.—Police Chief Burekes has recommended purchase of auto chemical and touring car for Inspectors; also remodeling of police station.

Malden, Mass.—Mayor Fall has recommended use of some dust-laying preparation on streets.

New Bedford, Mass.—Mayor Ashley has recommended petitioning of Legislature to issue \$35,000 bonds to build and equip city hall, systematic tree planting, creation of public landing place and recreation pier, pairing of railings and better lighting of new Bedford and Fair Haven bridge and immediate equipment of lately secured playground.

Northampton, Mass.—Mayor Calvin Coe has recommended erection of city hall.

Quincy, Mass.—Mayor Wm. T. Shea has recommended development of city's 27 miles of water front.

Sandwich, Mass.—Town hall will be remodelled at cost of \$3,000.

Somerville, Mass.—Mayor Chas. A. Burns has recommended auto wagons for police department.

Taunton, Mass.—Mayor Woods has recommended erection of public comfort station near Taunton Green.

Winthrop, Mass.—City will receive bids Jan. 12 for \$5,000 playground bonds.

Cloquet, Minn.—Erection of modern two-story city jail is being considered.

Minneapolis, Minn.—Mayor J. C. Haynes has recommended establishment of poor house, erection of separate building for contagious diseases, erection of wing to City Hospital and alterations to old part; also building of branch and central library buildings.

Minneapolis, Minn.—Alderman John Peterson is urging establishment of municipal ice house.

St. Paul, Minn.—John Nolen, Landscape Architect, Cambridge, Mass., is preparing plans for elaborate city plan arrangement; Municipal City Plan Commission and City Club will carry on work.

Manchester, N. H.—Mayor E. C. Smith has recommended erection of house of detention for women.

Bayonne, N. J.—Mayor John J. Cain has recommended removal of ashes and garbage by contract.

Burlington, N. J.—Mayor Chas. P. Farmer has recommended creation of small city park.

Caldwell, N. J.—Mayor John Espy has recommended establishment of public park and better methods for garbage disposal.

Garwood, N. J.—Citizens will vote Feb. 18 on \$5,500 bonds for erection of borough hall.

Jersey City, N. J.—Architect Robert B. Morrison has submitted tentative plans for police headquarters to be erected on Merseles st. at cost of \$250,000, including site.

Jersey City, N. J.—Hudson County Park Commission has adopted plans for improvement of North Bergen site, providing for spacious playgrounds, many miles of drives and gravel walks, a large lake, a small pond and observation pavilion.

Newark, N. J.—Mayor Haussling has again recommended comprehensive study of general topography and layout of city with view to replanning of streets wherever necessary.

Roselle, N. J.—Mayor Chas. W. Macquoid has decided to appoint committee to take up question of better plan for disposal of ashes and garbage; also recommended advisability of placing street signs throughout borough.

Trenton, N. J.—Grounds and Buildings Committee of Park Board has been directed to receive plans and bids for public comfort station in Cadwalader Park.

Batavia, N. Y.—Plans have been completed by City Engineer Wentworth for garbage crematory.

Buffalo, N. Y.—Bids will soon be asked for constructing sections 3 and 4 of Buffalo River improvement.—Louis P. Fuhrmann, Mayor.

Kingston, N. Y.—Mayor Rosco Irwin has recommended erection of building to house apparatus of police and street departments.

Poughkeepsie, N. Y.—Mayor Sague has recommended cleaning of paved streets by means of flushing machine.

Rochester, N. Y.—James A. Salter, architect, has presented to Mayor H. H. Edger-ton plans for street paralleling Main st., for new city hall on Church st., for bridge across river and for a union trolley station over river bed at Central ave.

Syracuse, N. Y.—Mayor Edward Schoeneck has recommended that \$100,000 to be provided by bond issue be allotted to Park Commission for permanent park improvements and that playgrounds be provided for children in congested district.

Charlotte, N. C.—Crematory has been destroyed by fire.

Hamilton, O.—Geo. E. Kessler, Landscape Architect, Kansas City, Mo., has made offer to prepare plans for construction of proposed \$1,000,000 civic center.

Oklahoma City, Okla.—Plans will be prepared by Alex. Potter, New York, N. Y., for proposed garbage disposal plant.

Port Clinton, O.—Citizens will vote early in February on erection of \$25,000 city hall.

Newport, R. I.—Mayor Patrick J. Boyle has recommended establishment of playgrounds.

Providence, R. I.—Mayor Henry Fletcher has recommended rebuilding of Wanasquatucket River walls and establishment of more city playgrounds.

Pawtucket, R. I.—Mayor Giles W. Easterbrooks has recommended establishment of public docks, erection of comfort station and erection of police station.

Highmore, S. D.—Plans are being prepared by Black Hills Co., Deadwood, for erection of \$75,000 stone court house.

Fort Worth, Tex.—Police Commissioner Geo. Mulkey is favorable to establishment of municipal store room; also erection of levee to protect water plant.

Norfolk, Va.—Controllers are having plans drawn for lodge house at Forest Lawn Cemetery.—A. Eberhard, Architect.

Olympia, Wash.—City is considering erection of two-story concrete city hall and fire station.

Goderich, Ont., Can.—Ratepayers have voted to build municipal building.

CONTRACTS AWARDED

San José, Cal.—To Henshow, Bulkley & Co., to furnish sanitary street flushing machine, \$910.

Rochester, N. Y.—To Selden Motor Vehicle Co. for automobile for City Engineer Fisher's department, \$1,600 and old machine now in use in department.

Philadelphia, Pa.—Removing garbage for year, to Penn Reduction Co., \$570,000.

BIDS RECEIVED

Akron, O.—Furnishing auto for Chief Mertz; Kanawa Chemical Co., Kanawa, Pa., bid \$1,750; turned down because it was not accompanied by certified check; Auto Garage, city, \$2,875, and the Webb Motor Company, \$2,950.

TOO LATE FOR CLASSIFICATION

STREET IMPROVEMENTS

Los Angeles, Cal.—Board of Supervisors has instructed the Highway Commission to take immediate steps towards finishing the harbor boulevard.

Atlanta, Ga.—Council has adopted resolution instructing Chief of Construction to secure cost of widening Peachtree st.; also considering \$18,500 appropriation to pave Marietta st., and resolutions for paving portions of 11 streets.

Chicago Heights, Ill.—City is considering 900 sq. yds. vit. brick paving.—A. L. Fox, city Engineer; J. C. Mote, Mayor.

Mandeville, La.—Council has adopted ordinance, which requires banquette on Lake st. and in the business portion of town to be paved with bricks, shells or cement work; work will be commenced a Marigny ave. at early date.

New Orleans, La.—Plans have been submitted for installation of subsurface drains, curbs, gutter bottoms, etc., and the paving of North Cortez st., St. Louis to Toulouse st. with granitoid.

Portland, Me.—Estimates of cost will be finished for grading Seaside ave. and paving Franklin st. with granite blocks.

Laurel, Miss.—Mayor Noble has recommended substitution of other material for wooden walks.

Cape May, N. J.—County Freeholders will

be asked to build country road from Green Creek to Goshen.

Collingswood, N. J.—Highway Committee has been instructed to make a thorough inspection of all thoroughfares with view of determining which are most in need of improvement.

Millville, N. J.—Mayor W. Fred Ware has recommended paving of streets.

Cincinnati, O.—City Engineer Shipley has reported total cost of the wood block improvement of Ohio ave. as \$28,478.97; also submitted approximate estimate for paving with brick, Beldare ave., Tower to Vine sts., \$8,796.

Montpelier, O.—Special election will be held Jan. 31 to vote on proposition of issuing bonds for paving; Riggs & Sherman, Engineers, Toledo, have furnished an estimate for paving two principal streets at a cost of from \$50,000 to \$70,000.

Chester, Pa.—Property owners on Parker st., between Third and Fifth sts., have decided to petition Council to resurface roadbed of that thoroughfare with filter-bertine paving material.

Hazleton, Pa.—Council has passed ordinance for paving North Pine st. from Broad to Holly.

Houston, Tex.—Council has received petitions for shelling Hardy and Saca sts.

Sherman, Tex.—Citizens will vote on \$10,000 bonds for street improvements.

Everett, Wash.—Board of Public Wks. will ask for bids for improving Hoyt ave. and Fair ground district; also for purchase of 50,000 ft. of lumber for Street Department.

Seattle, Wash.—Council has decided to pave University st., Ellicott ave. and Olympic way, also bridge roadway on Twenty-third ave. West.

South Bend, Wash.—Council will consider paving of Water st.; distance 1½ mi.

Spokane, Wash.—Board of Public Works has rejected bids for paving Wall st.; cost, about \$52,000; no bids were received for grading, curbing and sidewalking Bine Court; cost about \$1,830.

Pasco, Wash.—Council will consider paving of business district.

CONTRACTS AWARDED

Cincinnati, O.—Improving Elmore st. with brick, to Wm. P. Flynn, \$2,781.55; David st. with asphalt, to Kerschner Construction Co., \$3,501.20.

Chehalis, Wash.—To W. J. Murphy, Tacoma, for construction of nearly 10 miles of sanitary sewerage in southern and eastern portions of city, \$51,258 for a vitrified system.

BIDS RECEIVED

Spokane, Wash.—Paving with granitoid concrete Bernard st., Pacific to 8th ave.,

Fife and Fife Bros. lowest bidders, \$37,500 on Bernard job and \$11,744 on Boone ave. work; City Engineer's estimates, \$36,900 and \$11,600, respectively; R. C. Blome & Co., holders of the granitoid concrete patent, bid \$11,200 and \$12,600 on two contracts; Boynton, Church & McCoy submitted bids on both these jobs, but they were rejected for reason that bids were made on condition that the city save bidder harmless from damages which might be claimed by Blome Co. for infringement of patent; Beirnard st., \$40,500; Boone ave., \$11,600; grading, curbing, parking and sidewalk Lacey st., 29th to 33d ave., Inland Engineering Co., \$6,550; Naylor & Norlin, \$6,589; estimate \$6,550; paving 8th ave. with brick, Cannon to Chestnut st., James Fife, \$4,352; estimate was \$3,550; sewerage Maine ave., Cedar to Ash st., G. Burgie, \$3,050; no bids were received for grading, curbing and sidewalking Bine Court from Bine st. to Crestline st.; estimate \$1,530.

SEWERAGE

Atlanta, Ga.—Council has adopted resolution instructing Chief of Construction to make surveys of streets in Tenth Ward that are without sewers and outfalls and to estimate cost.

Lexington, Ky.—Mayor Skein has recommended construction of main sewer in southeastern portion of city at cost of \$2,000.

Portland, Me.—Estimates of cost will be furnished for sewerage Stevens ave. and Belknap st.

McComb City, Miss.—Dr. Louis D. Dickerman, Chairman Board of Health, has recommended immediate installation of sewer system.

Glasgow, Mo.—Burns & McDonnell, Scarritt Bldg., Kansas City, are preparing plans for sewers and water works, cost \$35,000; bond issue declared legal.

Lestershire, N. Y.—Board of Trustees will consider extension of East Main st. sewer.

Watertown, N. Y.—Board of Public Works has passed a resolution ordering plans and specifications for sewer in Grove and Moulton sts.

York, Pa.—Dr. Bennett, Chairman, Sanitary Committee, has recommended early completion of sewerage system and \$10,000 appropriation annually for sewer work.

Corpus Christi, Tex.—Engineer F. H. Lancashire, Houston, will supervise construction of proposed sewer system; cost, \$75,000.

Corsicana, Tex.—Construction of sewer system to Truehart S. Jackson, San Antonio, \$16,433.30; other bidders: Collins Bros., Houston, \$19,588; Dallas Lime and Gravel Co., Dallas, \$18,440; H. W. Cardwell, Mena, Ark., \$18,450; Tarrant Construction Co. also bid.

WATER SUPPLY

Fort Smith, Ark.—Council plans to levy tax to raise funds for purchase of water plant, franchise of operating company having expired; plant valued at \$442,000.

White City, Kans.—Plans and specifications are being prepared by Burns & McDonnell, Scarritt Bldg., Kansas City, Mo., for municipal water works and lighting plant; approximate cost \$25,000.

Glasgow, Mo.—Plans and specifications are being prepared by Burns & McDonnell, Scarritt Bldg., Kansas City, Mo., for water works and sewers costing approximately \$35,000; bond issue has recently been declared legal.

Cape May, N. J.—By Council, to John W. Corson, Jr., for erection of 50,000-gallon stand-pipe for water works.

Akron, O.—Water Expert F. A. Barbour has been employed by city at expense of \$8,500 to prepare plans for new water works plant and to make estimate of cost of old water plant.

West Telford, Pa.—Council has granted the Telford Water Company permission to construct and operate a water system in borough.

Polytechnic Heights, Tex.—City Commission has instructed Clerk Valentine to secure plans for construction of water works plant.

Sherman, Tex.—Council has decided to call election on \$22,000 bonds of extension of water mains and improvement of pumping plants.

Pasco, Wash.—Council will consider distribution of water to outlying districts.

Snohomish, Wash.—Council has passed ordinance to adopt the plans to extend city water system by bringing water by gravity from the mountains; plan provides for dam on the Pilchuck, 16 miles from the city, and laying of 81,000 ft. 14-inch pipe line to city; system calls for 1,500,000 gallons a day of pure mountain water to be placed in two reservoirs, one now in use and one to be built fifty feet higher to accommodate residents of hill district. Cost, \$110,000; bond election will be held Jan. 24. Engineer C. H. Green, Spokane, engineer in charge of survey.

CONTRACTS AWARDED

Gloucester, Mass.—To L. E. Smith Company, to supply Department with car load of one and two-inch pipe, \$1,189.70; other bidders: Raymond, Dow & Company, Boston, \$1,198.40; J. H. Cunningham Co., Boston, \$1,202.50; L. E. Andrews & Company, city, \$1,190.50; George Uhler, Boston, \$1,248; W. H. Gallis & Company, Boston, \$1,354.66; A. P. Stoddard & Company, city, \$1,192.50, and Walworth Manufacturing Company, Boston, \$1,192.50.

LIGHTING AND POWER

Auburn, Cal.—Offer to install new system of street lighting has been made to City Trustees by Frank Bell, manager of Bell Electric Company; proposed to do away with present arc lights and put in Tungsten lights, one on each pole along the streets, system to cost between \$4,000 and \$5,000.

Fairbury, Neb.—Burns & McDonnell, Scarritt Bldg., Kansas City, Mo., are preparing plans for electric light and water works improvements; bonds sold; cost \$40,000.

White City, Neb.—Burns & McDonnell, Scarritt Bldg., Kansas City, Mo., are preparing plans for municipal lighting and water works plant; cost \$25,000.

Weiner, Tex.—Weiner Water, Light, Ice and Cold Storage Co., Wm. Hillje, president, will take over, enlarge and improve local electric light plant.

FIRE EQUIPMENT

Oakland, Cal.—Furnishing and installing in the new fire alarm building at Thirtieth and Oak streets relay and tape instruments as part of fire alarm equipment, to Gamewell Company, \$2,312.

Lexington, Ky.—Fire Chief Jesse has recommended erection of two fire stations, each equipped with motor comb. wagons; also purchase of first-size fire engine, self-hoisting 75-ft. aerial truck, preferably of motor type, and quantity of hose.

Millville, N. J.—Mayor W. Fred Ware has recommended better apparatus for firemen.

Trappe, Pa.—Fire Company has been organized by election of W. F. Rushong as President.

BRIDGES

Bridgeport, Conn.—Mayor Buckingham will be authorized to appoint committee to make all necessary arrangements for and to have charge of erection of bridge across Pequonnock River at East Washington ave.

Atlanta, Ga.—Finance Committee is considering appropriation of \$10,000 for purchase of lands to be used in construction of viaduct across railroad tracks at Bellwood ave. and \$60,000 for building span across tracks and approaches.

Dallas, Tex.—To Missouri Valley Bridge and Iron Co., for construction of the Wilmer, Hutchins and Malloy bridges across Trinity River, by the County Commissioners' Court; \$41,780.

MISCELLANEOUS

San Jose, Cal.—Chief of Police Kidder is considering installation of police "flash-light" signal and telephone system throughout business section of city.

Atlanta, Ga.—Finance Committee is considering erection of city prison; old stock-ade to be sold.

Lexington, Ky.—Mayor Skain is favorable to erection of proposed police station.

Holyoke, Mass.—Police Department has recommended installation of police signal system and purchase of auto patrol wagon.

Kingston, N. Y.—Plans have been prepared for erection of building on O'Reilly st. for storage of city apparatus.

York, Pa.—Dr. Bennett, Chairman, Sanitary Committee, has recommended erection of municipal abattoir.

Marlin, Tex.—Council has decided to install garbage crematory after plans suggested by State Health Officer Brumby.

CONTRACT AWARDED

Louisville, Ky.—Placing street intersection signs, to E. L. Winston & Co.

Lucedale, Miss.—To Hull Construction Company, Jackson, to build the George County Court House and Jail, \$33,296.

KINGSHIGHWAY, LOOKING SOUTH ALONG EAST EDGE OF FOREST PARK. SOUTH HALF.

ST. LOUIS PARKS AND BOULEVARDS

City Planning to Have the Finest Park System in the Country—Now Constructing the Kingshighway, a Parked Boulevard Connecting All the Large Parks—Details of Plan for This

BY CHAS. CLAUDE CASEY

THE City of St. Louis is well provided with small parks, there being fifteen or more of less than ten acres in area, seven of more than ten and less than one hundred acres, three of between one and three hundred, and one, Forest Park, containing 1,372 acres. A considerable part of these have been in possession of the city for a great many years, some of them since 1812 and all but three of those mentioned since before 1900. The total park acreage is approximately 2,200 acres, of which about 350 acres is in charge of special commissions. These parks are well scattered throughout the central part of the city, which is located along and near the bank of the Mississippi river, at a bend in the same. West of the business part of the city, extending from the river on the north to the river on the south, is a section of city in which there are few parks, one of which is the large Forest Park of 1,372 acres. The four large parks referred to are scattered at fairly uniform distances in a line just west of the central section of the city, and it is proposed to add still another park of about 100 acres in the same general line.

The nearly 2,000 acres included in the larger parks are to be united into a park system by a new fifteen-mile boulevard known as the Kingshighway. This boulevard extends from a 160-acre park—O'Fallon Park—four miles north of the court house, and swings around through the principal residence district and four to six miles back from the river, and, continuing to the southern end of the city, swings again to the east and ends in a small park on the Mississippi river bluff known as Riverside Park, more than five miles south of the Court House.

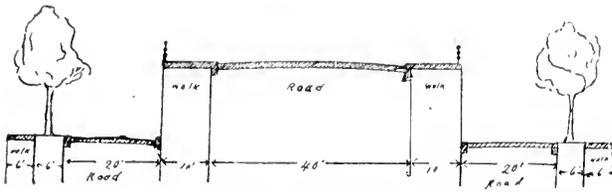

Most of the land needed for Kingshighway has been acquired, sufficient being obtained to give the boulevard a width varying from 100 to 350 feet through its entire length. Most of the boulevard is through streets already existing, and over a large part of its length it is necessary only to widen and continue the thoroughfare and lay out the parking scheme. Land damages have already been paid aggregating \$602,960, with the report of the court still to be heard from on several sections which it is sought to condemn. Contracts have been let for bridging, planting, grading and paving to the amount of \$485,715, this providing for the southern portion of the highway.

One of the features, and the most expensive section, of the boulevard is a monumental reinforced concrete viaduct nearly half a mile long spanning several railroad tracks. The contract for the construction of this has been awarded, amounting to \$336,380, this not including the filling of the approaches. The

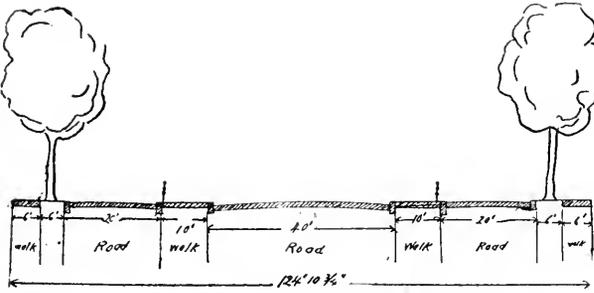

viaduct is to take the place of an old wooden one now being torn away, which was both unsightly and dangerous. The new structure is to be entirely of concrete, except for the steel reinforcing bars, the wood block paving and granite curbing. There are to be three main spans designed to act as a single elastic system and resting upon three concrete piers and concrete abutments. The bridge is designed and guaranteed to stand a maximum load of 24 tons on one wheelbase.

Besides the civil engineering problems to be overcome, the highway has required a vast amount of "diplomatic engineering," for the original scheme of building the thoroughfare as a "boulevard" had to be abandoned because of the excessive amount which the city would have had to pay. A bond issue of \$500,000 was authorized by the people to pay the city's portion of the cost of this improvement. When Mr. James C. Travilla, the present Street Commissioner, assumed that office and looked into the matter he found that, while this sum might pay the city's share of the improvement considered as a street, it would pay but a small part of what the city would be required to pay for the same if opened as a boulevard, since the city charter exempted all property from assessment for the construction of boulevards, except that immediately adjoining the same, while the cost of opening the streets could be assessed upon an entire district. It had been the plan to assess the cost of widening the boulevard against adjoining property, but it was found that the widening which was desired in some of the streets would cut off such a large proportion of many of the lots adjoining that there would not be enough left to assess any considerable amount of damages against. After long delay Mr. Travilla succeeded in having ordinances passed by the Municipal Assembly abandoning the boulevard plan and authorizing the original plans to be carried out as if the highway was an ordinary street. In this way the financial difficulty caused by the charter provision referred to was gotten around and the cost of the work is now being assessed against property "in the benefited district." It is the plan to construct a boulevard and add the necessary dignity after the expenses are paid which can be done by legislation restricting traffic on the highway.

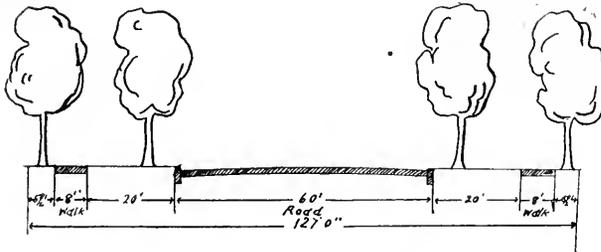

Plans for the parking, etc., are being prepared by George E.

SECTION AT MICHIGAN AVENUE

TYPICAL CROSS-SECTION FOR 140-FOOT WIDTH

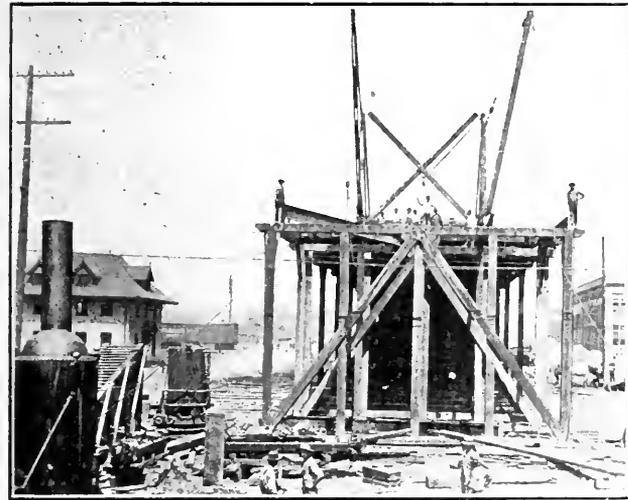

TYPICAL CROSS-SECTION FOR 170-FOOT WIDTH

OLD WOODEN VIADUCT, NOW BEING TAKEN DOWN

Kessler, city landscape architect. The contracts awarded for the southern sections, known as Kingshighway Southeast, show a cost for grading and planting of from \$1.97 to \$3.02 per front foot. The first (most southerly) section, from Riverside Park to Compton avenue, 1,500 feet, is to have 138 avenue trees, with no shrubbery. The next section, Compton to Grand avenue, 2,800 feet, is to have 464 avenues trees, and 1,278 and 211 trees in the parking spaces between the two driveways. The cost of the parking in the first section is to be \$345, and the grading, \$6,500. Parking the second section is to cost \$2,221, and the grading, \$8,000.

A great variety of trees and shrubs are being used. Nine different kinds of trees and more than a score of different kinds of shrubs are provided for the two sections named, birch, ash,

REMOVING OLD WOODEN VIADUCT

maples of different kinds and pin oak, Carolina poplar and American white elm being the trees that predominate. Other sections show a similar variation. Mr. Kessler's plan groups similar trees and shrubs, with changing but harmonizing varieties, along the parking spaces between streets with few single or scattered trees. Thirty-five groups are used in the parking space between Compton and Grand avenues.

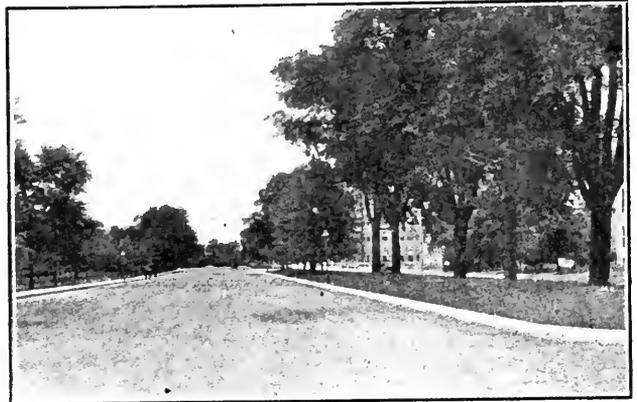

St. Louis is ambitious to have a system of parkways and boulevards that will set new world records. So far its park area does not exceed 2,500 acres, excluding public school parks,

MANCHESTER AVENUE (NORTH) ENTRANCE TO KINGSHIGHWAY VIADUCT, NOW UNDER CONSTRUCTION

private parks, places, etc. All but about 500 acres will be connected by the Kingshighway, and two extensions which are proposed and are likely will be carried out soon will tie to the system about 300 acres more of that. At the present time no two of the 28 parks (including three in the water-works reservation) are connected by direct parked thoroughfares. The movement for more parks, connecting and circling boulevards, and a better general city plan, has resulted in the organization of The City Plan Club, and a bill is pending in the Municipal Assembly to create a City Plan Commission. The Civic League has been working for a long time on the civic betterment of the city and is still an active factor in the movement.

At the general election last November a proposition was submitted to the people to create a park and boulevard reservation district, taking in 250 square miles. This was defeated but will be voted on at the election in November, 1912. This

KINGSHIGHWAY, LOOKING SOUTH ALONG FOREST PARK, NORTH HALF

plan included two long boulevards encircling the city on the west, forming approximate arcs of circles with radii of 10 and 16 miles respectively around the city hall as a center. Several park reservations also were included in the plan, which was to have been worked out by a commission to be appointed, had the proposition carried. The funds for the work were to have been provided by a small tax. The main purpose of the plan is to preserve in their present natural beauty many park and boulevard sites.

An additional boulevard is planned for the city, independent of the proposed outer-park plan. It is to be known as the River des Peres Boulevard, and consists of an approximate circular arc lying just within the city limits and seven or eight miles from the city hall. The plan is to change the crooked course of the River des Peres to approximately that of the boulevard, and to divert to the sewer which is now being constructed the sewage which is contaminating the river, the clear water being taken care of in an open channel, which will be paralleled by a driveway on either side. Connecting bridges are to be provided at cross streets, and parking spaces are planned to beautify the banks of the stream.

CITIES HAVING COMMISSION GOVERNMENT

SINCE publishing in our January 4 issue a list of cities which have adopted commission government, we have received a letter from the secretary of the Short Ballot Organization, stating that since preparing that list they had examined all the charters of the cities named therein and had found it desirable to revise the list because of "drawing a closer definition of what constitutes commission government." This revision includes the following changes: Omission of the cities of Bristol, Clarksville and Etowah, Tenn.; Charlotte, N. C.; El Paso and Waco, Tex.; Riverside, Cal., and St. Joseph, Mo. Also the addition to the list of Clarksdale, Miss.; Harbor Beach, Mich.; High Point, N. C.; Moline, Rock Island and Springfield, Ill.; Newport, Ky., and Terrell, Tex. Taunton, Mass., and Roswell, N. M., were included in the revised list, but as having a government which the investigators of the Short Ballot Organization defined as a modified commission government.

MUNICIPAL REFERENCE LIBRARIES

A Preventive for Repeating Mistakes in Municipal Government and Work—What Some Cities Have Done

By DR. HORACE E. FLACK,

Municipal Reference Librarian, Baltimore, Md., Chairman Committee on Municipal Reference Libraries, Nat'l Municipal League. Paper before 1910 Convention of the League.

THE question of securing good, efficient municipal government is one of the biggest problems confronting the American people of to-day. The people are awakening to the fact that inefficiency, poor laws and mal-administration result in high taxes, poor service and unsanitary conditions. They realize as never before what efficiency and poor laws really cost the community. Some of this cost is, of course, due to vicious and incompetent officials, but the greater part is due to ignorance, both on the part of the citizens and the officials. Honesty and sincerity on the part of municipal officials are not the only qualities needed to make our municipal governments what they should be; it is also necessary to have efficiency, and efficiency can only be secured, even with the ablest men at the helm, by a thorough knowledge of the facts and conditions relating to each and every question which comes up for consideration.

Every one admits that our city governments need improving, that efficiency is woefully lacking, but the difficult problem is how to secure efficient government. Experience has demonstrated that the best and ablest of officials have made mistakes. Many of these mistakes have been due to lack of knowledge. There has been too much self-complacency in the administration of city affairs, each city trying to solve certain problems or undertaking municipal enterprises regardless of the experiences of other cities. As a matter of fact, the officials of one city rarely know about the experiences of other cities. The result is that nearly every city goes through the same experience, and a dear one it has been. Instead of first seeing what other cities have done, how they have solved or tried to solve the same problems, the administration of each city and to a great extent each successive administration of the city undertakes to carry out certain preconceived notions, whether practical or not, and every one is familiar with the evil consequent results. It is a well-demonstrated fact that civilization is based on past experiences, and the failure of municipal government is largely due to the fact that our city governments do not profit by the past experiences of other cities.

During the past few years efforts have been made to improve the legislation of some of our States by means of Legislative Reference Bureaus. It may be said that these efforts have passed the experimental stage and that these bureaus or departments have been successful. Such departments have been of great benefit to members of the Legislature and to administrative officials who have tried to give their best services to their respective communities. The idea has spread until to-day such bureaus, in one form or another, are to be found in Wisconsin, New York, Ohio, Indiana, Pennsylvania, Rhode Island, Connecticut, Massachusetts, California, North Dakota, Michigan, Iowa, Montana, Alabama and Nebraska. The advantages to be gained by such departments were so apparent that the question occurred to some whether the same idea could be applied to cities with beneficial results. It would seem more essential to have such departments for cities than for the States, since so many matters vitally affecting the lives of those who reside in cities depend upon the city government. The water supply, milk supply, police and fire protection, schools, lighting, transportation and all other necessities requisite to life in cities are absolutely dependent upon municipal officials, and if the city government is inefficient, if the funds for the several municipal functions, or for any one of them, are improperly, unwisely or imprudently spent some other department must suffer for lack of funds and unsanitary conditions follow or proper school facilities, police or fire protection, etc., are wanting.

It may seem a small matter that \$10,000 is squandered here, \$50,000 there, etc., but the continued practice of this kind soon bears fruit, for it means that some essential or meritorious function is being neglected. Fifty thousand dollars appropriated to try some worthless experiment or \$100,000 wasted in the purchase of city supplies, \$200,000 for salaries for clerks not needed, either means that the health department, the schools and playgrounds, the police, the fire department or care of delinquent children will not get some needed appropriation or that an extra burden is put on the taxpayers, the result frequently being both.

What can be and should be prevented, however, is the repeated waste. It is perfectly proper for a city to try some new experiment if there is a prospect of success and if there is a reasonable hope that conditions can be improved by it. But there is not only no excuse, it almost seems criminal, that one city after another should try the same thing after it has been shown to be impracticable, harmful or useless. There might have been excuse for such a condition before the advent of the railroad, the telegraph and the telephone, but under present conditions there seems absolutely no excuse for it. It is not claimed that our city officials are criminal or that they do not desire to give good government, but their ignorance of what other cities have done or are doing makes progress slow and unduly expensive.

Recognizing this condition and impressed by the good results following the establishment of Legislative Reference Bureaus in several of the States, the National Municipal League in 1909 appointed a committee to report upon the feasibility and desirability of municipal reference libraries. The first work of the committee was, of course, to learn what was being done along this line, either by special legislative reference or municipal reference libraries, and inquiries were made of the librarians of the public libraries in all cities having a population of 50,000 or over. The replies indicate that there is almost complete unanimity as to the great need for the establishment of municipal reference libraries, but there was not the same unanimity as to how this should be done. The committee feels that these replies are strong evidence of the need of such libraries.

Nearly a score expressed the opinion that the municipal reference library should be located in the City Hall as a branch of the public library. Some were of the opinion that such a collection would be almost as useful in the public library building, but in these cases it was stated that the library was in very close proximity to the City Hall. Nearly all expressed the opinion that a municipal reference library should be under the control of the public library because it would make the maintenance and administration less expensive and would also be likely to keep them out of politics.

There are at the present time only three purely municipal reference libraries maintained at public expense, viz., those of Milwaukee, Kansas City, Mo., and Baltimore. The Baltimore library, called the Department of Legislative Reference, was created in 1906 by act of the Legislature and went into operation January 1, 1907. The Milwaukee library was created by ordinance soon after this and only within the past few months Kansas City has passed an ordinance creating such a library. Both of these follow very closely the law creating the Baltimore department. The board in Baltimore is composed of the Mayor, City Solicitor, President of the Johns Hopkins University, President of the Municipal Art Society and the President of the Merchants' and Manufacturers' Association; and that of Kansas City of the Mayor, President of the Commercial Club, President of the Industrial Council, President of the Kansas City Bar Association and the President of the City Club. The public library of Minneapolis has only quite recently established a municipal reference section as a part of the library. This is the first case in which a public library has undertaken this work and it will be quite interesting and valuable no doubt to watch the development of the work there.

The Civic League of St. Louis submitted certain recommendations to the Board of Freeholders now drafting a proposed

charter for the city, and among these was one for the establishment of a municipal reference library. At the present time the matter is being considered by the officials of the public library and it seems quite probable that St. Louis will soon have such a library, either as a branch of the public library or as a separate department of the city government, as is the case in Baltimore, Milwaukee and Kansas City. Boston and Chicago have had statistical bureaus for several years, but there is at present some agitation for establishing a municipal reference library in Chicago, and this may mean a merging of the present Bureau of Statistics with it. There is also a Bureau of Statistics and Information in Newark, N. J., the bureau being under the direction of the City Clerk. The chief objection to the latter is that the bureau is subject to political changes, which may interfere with its efficiency in the future.

The Universities of Wisconsin and Kansas have established municipal reference bureaus to furnish information to all the cities of those States. A Bureau of Municipal Research has also been established quite recently by the Finance Commission of Boston. Its main purpose is to collect information for the Finance Commission and to examine and study the city departments of Boston with a view to municipal improvement. The extent of the work will depend upon the attitude of the City Council in making appropriations. There is also a municipal reference bureau in Los Angeles, but in this case the bureau is under private auspices and management.

The question of establishing a municipal reference library is also being considered in Cleveland and steps will probably be taken in the near future with this end in view. Efforts have already been made to secure such a library in Washington, D. C., as a part of the public library, but Congress failed to make a sufficient appropriation for this at the last session. It is stated that the Board of District Commissioners realize the value of having such a bureau and hope to secure an appropriation for it.

That there is need for some such organization or department as the municipal reference library for the collecting, collating and filing of information on municipal, social, political and economic questions is apparent to every one who has ever given any thought to such questions or has tried to find out anything about his own or any other city government.

In the consideration of this question, the committee has been confronted with the proposition as to whether such libraries should be separate and distinct departments as in Baltimore, Milwaukee and Kansas City, or whether they should be under the control of the public libraries, and if the latter, whether in the public library itself or as a branch in the City Hall. The question of the qualifications of the head of such a bureau as well as the methods of his selection was also given careful consideration, for it was felt that these two points were vital to the success of the movement. Another very important feature considered by the committee was the scope of the work of municipal reference libraries; in other words, the functions of such libraries.

After careful deliberation the committee has reached the following conclusions:

1. That municipal reference libraries should be established in all large cities.
2. That, as a general rule, such libraries should be under the control of the public library.
3. That such libraries should be located in the City Hall where feasible.
4. That the qualifications for the head of such a library should be a liberal education, with special training in political science, economics, municipal government and methods of organization and administration, and he should be selected for merit alone.
5. That the head of the municipal reference library be selected by that method which, in the particular city, will, under the local conditions there prevailing, tend most completely to eliminate political considerations. In some cities the most satisfactory results may be obtained by lodging the ap-

pointing power with the public librarian or library trustees. In other cities conditions may make it advisable to have appointment made by a select, impartial and non-political board.

6. The functions of the library should not be restricted to any particular phase of work so long as that work relates only to the collecting, collating, compiling and disseminating of data or information. Of course, the principal work will be concerning municipal questions and special efforts should be made to secure such information for the city officials who are responsible for the administration of the city's affairs; but to be of the greatest value such a library must undertake to furnish information to the public generally. Such a bureau will be used extensively by the press and this is one of the best ways of reaching the public. Social, civic and improvement associations will also frequently have occasion to use such a library and its value to a city cannot easily be overestimated. If the bureau be under the control of the public library it would seem advisable to issue a bulletin containing interesting comments for newspaper purposes and showing how the reference library can be of assistance to officials and to the public as each matter of general interest gets the center of the stage.

It would also be expected that the reference libraries tear up and file all helpful things together—all the information possible on each particular subject, so that when one wants to know what has been said, for example, about the health department, police department, etc., it will not be necessary to go over 50 or 100 volumes.

The head of the library should by all means maintain a neutral attitude on all questions, for the very moment he begins to advocate or oppose any measure or proposition he will begin to make less effective the work of his department. He must not make it possible for any one to say that he is collecting information because of any personal bias of his own. His only interest should be to secure the data and let the facts speak for themselves.

In reaching these conclusions we were aware that conditions existed in some cities where better results might be had by the establishment of separate and distinct bureaus, but where this is done we cannot urge too strongly that the department be placed under the control of a non-political board. If such libraries become subject to political patronage they are likely to become not only useless, but really harmful. Unless they can be inaugurated under conditions which will keep them out of politics it would be better not to have them.

In presenting the above recommendations the committee realizes that such libraries of themselves will not bring about an immediate reform in city government nor will efficiency in municipal administration follow as a necessary result of their establishment. But it is respectfully submitted that such a library would be a valuable instrument or agency in the efforts to make our municipal governments more business-like and more efficient. The library will not of itself do away with the abuses which exist, but it will furnish the means whereby such abuses can be lessened, for it will be able to supply the date and the knowledge which are essential to all good government.

The Civic League, of St. Louis, in recommending such a bureau to the Board of Freeholders in February of this year [1910] made the following statement:

The value of comparative data in dealing with municipal questions can hardly be overestimated, especially when so many new problems are constantly arising. A department of this kind would prevent many ill-advised measures now advanced from becoming laws and would often save the city an actual loss by preventing the passage of ordinances which have proven unsatisfactory in other cities.

An officer, whose duty it will be to keep in touch with municipal movements everywhere and be ready to supply the information to those who are charged with making the laws and administering them, should, we believe, be provided for in the new charter.

Speaking at a conference of city officials and others soon after the organization of the Baltimore bureau, President Remsen, of the Johns Hopkins University, made the following statement apropos of the work inaugurated by that bureau:

It may fairly be said that that nation which makes most use of the scientific method is the most advanced nation, taking everything into consideration, and in the long run that nation will outstrip the others.

That the industries are dependent upon the cultivation of the sciences is well known. Innumerable striking examples of this could be given. It can also be shown that in the study of the problems of government, whether these problems are those of a municipality, of a State or of a nation, the scientific method is of vital importance. What this method is may be summed up in a few words. It is that method which proceeds in the most sensible way to solve problems. Whenever a wise man has a problem to deal with he first endeavors to find out what the facts are, and, after he has learned the facts, he proceeds to action; his conclusions are drawn from the knowledge of the facts. That is the scientific method; that is the only sensible method of going to work in any field, whether it be the field of nature, of business or of government. Progress in its broadest sense is due to the use of this method.

REFUSE CREMATORY AT HOUSTON

A CREMATORY has been in use for more than three years at Houston, Tex., and another of practically the same design, which is known as the "Thompson," in Austin, Tex., which is highly spoken of by the Mayor and the City Engineer. It is said to destroy all the refuse, including small dead animals, in the center of a well-built section of the city, without any objectionable effects. It is described by the makers as follows:

The furnace consists in the main of a vertical cylindrical combustion chamber which, by a series of three grates, is horizontally divided into four different compartments. The lower compartment is the ash-pit, which is provided with a clean-out door, through which the ashes are removed and by which also air can be admitted. For this purpose special air regulators are also provided.

The second compartment is the room between the secondary and main grate. Here the cinders and ashes which have passed the fires above and have dropped through the main grate are returned before they finally pass into the ash-pit, and therefore absolute combustion must take place. This chamber is also provided with all the necessary regulators.

The third compartment is the room above the main grate.

and, as the name implies, the hottest fire is maintained here on this grate. Stoke holes, air inlets and clean-outs are also provided here.

The fourth compartment is the room above the water-tube grate, and this compartment is connected with the chimney, which is built directly over it, thus securing the best possible draft conditions.

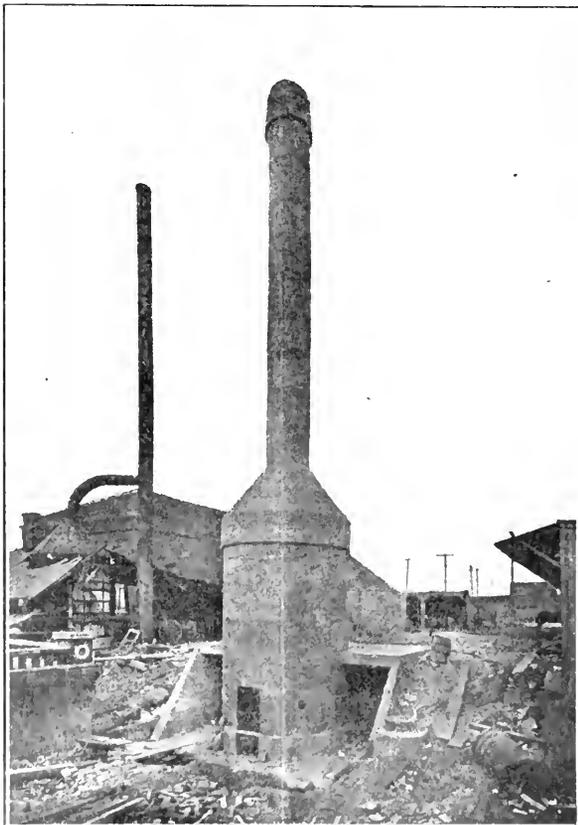

The furnace is charged through the feeding chute, which empties above the water-tube grate. This grate is so arranged that it holds the garbage like a basket and allows it to drop on the main grate only after a preliminary drying has taken place and after the more bulky materials have been partly reduced. In this manner any clogging of the main fire is most effectively prevented, and odorless combustion is possible at all times.

The water-tube grate is connected with a water tank, which is located under the charging floor, and a free circulation of the water through the tube grates is accomplished. All the steam generated in the tubes accumulates in this tank, and, if necessary, sufficient steam can be drawn from it to drive a fan or blower. If no use is made of the steam it will either escape through a steam pipe connected with the chimney or it can be condensed by a small condenser and the water can be thus saved. The water grates are so constructed that they can easily be cleaned in all parts, all main connections of same being located at the outside of the furnace.

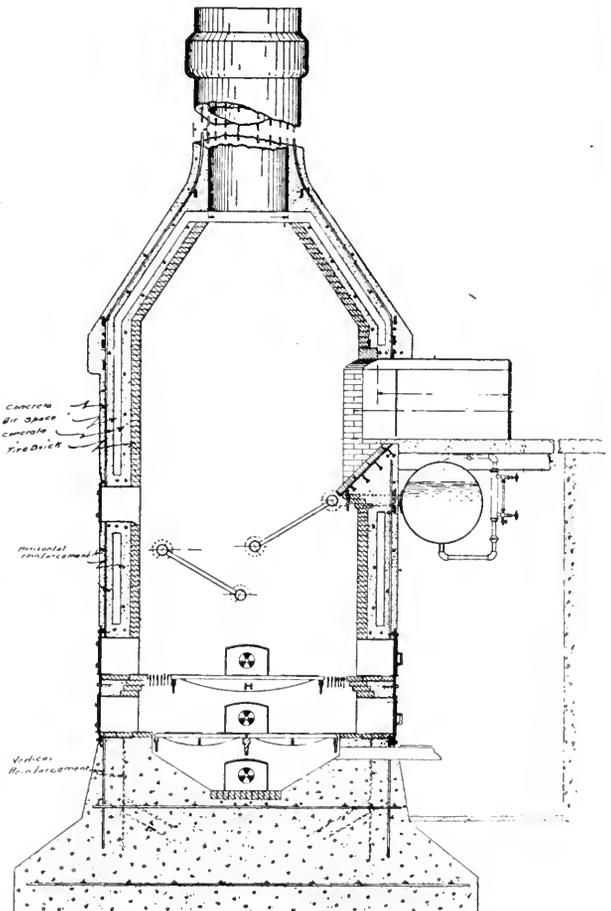

The Thompson crematories are built of two strongly reinforced concrete walls, with an air space between, and heavily lined with firebrick. The chimney is of reinforced concrete, built according to the Weber system. Air isolation chambers are provided to protect the outer concrete walls against excessive heat from the furnace within. All manholes, stokeholes, air regulators, charging chute, grates, dampers, water tanks, etc., are made of cast or wrought iron, as best adapted for their purpose.

The operation of the crematory is very simple. After a small fire has been started on the main grate with easily combustible materials, selected from the refuse, the plant is charged through the chute. Care must be taken to have the water tank filled before starting the fire, in order to prevent burning of the tube grates.

On the water tubes the garbage, etc., is suspended until it is dried and sufficiently charred to fall through them di-

HOUSTON GARBAGE CREMATORY

HOUSTON GARBAGE CREMATORY, VERTICAL SECTION

rectly upon and into the main fire, where it is fully consumed. The cinders falling through the main grate are retained on the secondary grate below, and only after they are completely incinerated can they pass into the ash-pit.

Tin cans, bottles, wire, iron, flower pots and similar materials are taken from the garbage by the man on the charging floor and thrown directly into the ash pile.

Three men are necessary for operating a twenty to thirty ton crematory. One of these men, who acts as foreman, should have some intelligence and must understand the operation of the plant in every detail. The two others can be common laborers, as their work consists only of feeding the furnace, removing the ashes, stoking, etc.

In view of the fact that the garbage is dried on the upper grate, from which the gases pass directly up the chimney, one familiar with garbage cremation would not expect the odors to be destroyed before reaching the air.

BITUMINOUS BINDER AND AGGREGATE

Importance of Aggregate Too Often Overlooked—Protecting Road by Cushion Coat—Grades of Oil Used in St. Louis for Surface Treatment

In a paper before the American Association for the Advancement of Science, Mr. James C. Travilla, Street Commissioner of St. Louis, called attention, among other things, to the importance of more care in selecting the aggregate for broken stone roads with bituminous binder than is frequently employed. In this connection he said:

In the construction of bituminous roads and pavements I am of the opinion that a great many bituminous materials, when properly used, may prove entirely satisfactory, but that the use of these same cementing products may result in complete failure if the mineral matter has not been suitable. Not only may the cementing properties of most bitumens be lost by the use of too much mineral dust, but, whether oil, asphalt, tar or pitch be used, it is fully as essential to study the character of the available mineral matter as it is to determine the nature and character of the bitumen to be used.

Experience has shown that the life of an asphalt or bitulithic pavement depends as much upon the character of the aggregate as it does upon the cementing bitumen, and this theory holds good in the formation of a bituminous concrete or a bituminous wearing surface for a macadam road.

Different bitumens vary in their ability to penetrate the mineral matter. Coal tar products possess a penetration property not usually found in oil asphalt cements; moreover, in using these last in the construction of a bituminous macadam road, it is necessary that the stone be free from dirt to secure proper adhesion, but with the coal tar products this precaution is not so essential. In a broad sense, however, mineral dust is about as objectionable as moisture in the construction of bituminous roads.

The life of a bituminous road or pavement depends as much upon the wearing qualities and the grading of the mineral matter which forms the roadway surface as it does upon the adhesive and cohesive properties of the bitumen. A soft limestone wearing surface of a bituminous macadam road, provided the road be constructed according to the generally accepted practice of placing the larger stone on the bottom, will not prove a success if subjected to heavy traffic. If the process of construction be reversed, however, good results may be obtained, since crushing strength varies as square of the lineal dimensions. . . . The life of the road may be increased by a cushion coat of fine mineral matter to absorb the impact of the calks of the horses' shoes and to lessen the abrasion caused by steel wagon tires.

Concerning the road oils in common use Mr. Travilla stated as follows:

The statement that certain heavy road oils on the market "carry" a certain per cent of asphalt does not mean much to a road engineer familiar with their use. It is admitted that the greater the per cent of asphalt, the better the oil for the work; but an oil carrying sufficient asphalt to have adequate adhesive and cohesive properties for making a bituminous concrete or bituminous wearing surface is other than what is ordinarily sold for the purpose. Such an oil-asphalt product could not be handled in the tank cars now in the service of the oil companies, since they do not possess the necessary steam coil capacity to raise the temperature sufficiently high for successful handling.

St. Louis has specifications for four grades of oil for surface treatment, and from careful study of results during the past three years I am fully satisfied that there is place for each grade.

The grades of oil used are as follows:

No. 1—Residuum oil having a gravity of 30 deg. Be., is applied cold, and is used on cinder roads and for the purpose of giving life to the surface of a road that has previously been treated with a heavier product and is becoming dusty. Being merely a dust layer, it should not be considered as having any binding properties.

No. 2—Residuum oil having a gravity of 20 deg. Be., is applied hot, and is recommended for park roads and roads that are not main arteries of travel.

No. 3—Residuum oil having a gravity of 16 deg. Be., is applied hot, and is used on the main thoroughfares having a mixed traffic, and acts as a temporary binder for the mineral matter.

No. 4—An oil-asphalt compound having a gravity of 12 deg. Be., is applied hot, and is recommended for any type of road, since it simply forms a binder for the mineral matter which actually bears the traffic.

In the use of all the grades of oil referred to, with the exception of No. 1, there should be a covering of mineral matter, uniformly distributed over the surface of the oil to a depth of from one-eighth to one-half inch, depending upon the amount and gravity of the oil applied.

MINNEAPOLIS WATER WORKS REPORT

THE Report of the Water Works Department of the City of Minneapolis for the year 1909 contains several suggestions worth considering by superintendents of other plants. Among these is a method of cleaning large water mains without opening the street surface. During the year there had been some leaks in the main supply pipe leading from one of the reservoirs, which had become cracked in two places, probably owing to the settlement of the pipes. One crack was 14 inches long and the other 23 inches long, each being in the bottom and on the bell end of a 42-inch cast-iron pipe. The cracks were repaired by fastening 3/8-inch steel plates on the inside of the pipe with tap screws. Access to the interior of the pipe for this purpose was had through a manhole. This method of repairing the pipe from the inside saved considerable expense for excavating to the pipe, which at this point had been laid some 25 feet deep.

The two reservoirs were emptied and thoroughly cleaned, during the year, of about two years' deposit of clay. The average depth of the deposit was probably less than three inches. The accumulated sediment was all washed out through the drain pipes, this method having been adopted in place of removing by hand shoveling and wheelbarrows, as in previous years. When taken out by hand it had formerly been necessary to wait several days for the mud to become dry enough to be handled. Last year, after the experience obtained in cleaning the first reservoir, it required six days to empty, clean and begin refilling the second reservoir. For washing out the clay, fire hose and a fire steamer were used, which were hired from the city fire department, \$200 being paid for the services. Supervisor Edmund T. Sykes believed that a permanent pumping plant, with discharge pipes leading to several places in the reservoirs, would make the cleaning easier and cheaper than by hiring the fire steamer. As it is, this method of cleaning cost about \$450 less than by shovel and wheelbarrow. The total cost of cleaning the reservoirs was \$1,072.18.

Early in the year the Water Works Committee directed the Supervisor to investigate the methods of filling the street sprinkling carts from the water mains, it being thought that the use of standpipes for this purpose was expensive. Letters were sent to 387 water works managers and replies received from 269 of these. As a result of this investigation the committee adopted the general rule of using sprinkler standpipes in the districts away from the main business centers of the city, and special hydrants used for this purpose only were located in the immediate business centers. Unless or until such special hydrants are installed, the use of special valves attached to the ordinary hydrant nozzles is recommended for the business centers.

The inquiry concerning sprinkler hydrants referred to contained six questions, from which the following informa-

tion was obtained: Three recommended filling sprinklers from standpipes and 13 filling flushers from the same; 3 filling sprinklers from special valves and 2 filling flushers from the same; 3 having special hydrants for sprinklers and 17 having them for flushers; none advised filling sprinklers or flushers directly from the fire hydrants.

As to actual practice, 142 used hydrants for filling carts; 99 connected directly to the nozzle of the hydrant, while 46 used a special valve attachment; 113 used standpipes or special hydrants; 83 used flushing carts.

As to satisfaction with the method used, 19 were satisfied with filling sprinklers from the hydrant and 67 were not; 72 were satisfied with filling sprinklers from standpipes and 3 were not; 20 were satisfied with filling sprinklers from a special valve and 24 were not; 14 were satisfied with filling sprinklers from special hydrants and 2 were not; 10 were satisfied with filling flushers from hydrants and 32 were not; 5 were satisfied with filling flushers from standpipes and none were dissatisfied; 3 were satisfied with filling flushers from special valves and 12 were not; 10 were satisfied with filling flushers from special hydrants and none were dissatisfied.

An illustration of a scientific method of studying the problem of the location of a pipe yard and warehouse is offered by Supervisor Sykes, who estimated that most of the street service force, including twelve single teams, are required to travel an average of four miles a day more with the present location than they would with the warehouse centrally located. In addition, there is an average of three miles extra haul per day for all the supplies and a large share of the pipe for each year's extensions. He therefore believed it conservative to estimate that there is a loss of time and labor costing \$9 per day, about \$2,700 a year, and that the lost time of teams is worth about \$240, or a total loss of \$2,940. Capitalized at 4 per cent, this is interest on \$73,500. He allows a reduction of 25 per cent for a possible east side service, leaving over \$55,000, which, according to this calculation, the city can afford to spend in securing a more central location. In addition, he calls attention to the fact that the time saved in getting from such centrally located headquarters to a break in a main in the important business section of the city would be a very important item.

WASHINGTON FILTRATION AND TYPHOID

As indicated in these columns several times during the past year or two, the condition of affairs as regards typhoid fever in Washington, D. C., is far from satisfactory, and this in spite of the fact that a water filtration plant has been purifying the entire water supply of the city for about five years. Naturally the general and continuous prevalence of typhoid in the city, giving death rates per annum per 100,000 inhabitants running as high as 111 during that time and having reached the rate of 60 per annum during the year 1909-10, was considered by many as reflecting upon the work of the filter plant. We have published the statements of the investigating board that the Washington water supply apparently had little to do with the typhoid cases, but that milk and general uncleanness were probably responsible for a considerable amount, while importation from summer resorts outside the city would account for a considerable percentage of cases.

In the Proceedings of the American Society of Civil Engineers for December, 1910, is the advance copy of a paper to be read before the society in February by Mr. E. D. Hardy, superintendent of the filtration plant, describing the operation of the plant up to and including June of last year. In this paper are tables showing the monthly records of deaths from typhoid fever and also of bacteria in applied and in filtered water and of bacillus coli. It seems almost certain that if the water was responsible for the typhoid cases there would be a more or less intimate relation between the fluctuations in such cases and those in the bacteria and especially in the B. coli.

We have plotted the data referred to, giving three curves, and found that there is absolutely no relation apparent between the death rate and the number of B. coli or of total bacteria. In fact, in almost every year high counts in bacteria follow from three to five months after high typhoid death rates. The peaks of the death rate curve occur in every year between August and October, there being one in each of those two months in 1905, 1906 and 1907, one in September, 1908, and one in September, 1909. The peaks in the bacteria curve occur in each case in January, with occasionally a second peak in February or March. The peaks in the coli bacillus curve seem liable to occur during any month of the year, but especially between December and March.

These records would seem to bear out the statement that the water was in no wise responsible for the prevalence of typhoid fever, and the fact that the highest rates occur at the end of the summer season would seem to offer legitimate argument for the belief that many of these cases were imported from summer resorts.

While looked at from this point of view the tables would appear to offer information which favors the filter plant, in some respects examination of the figures themselves is less reassuring. Especially is this the case when we consider the actual numbers of bacteria and B. coli in the filtered effluent. During the five years of operation the number of bacteria in the filtered water has shown monthly averages as high as 800 (January, 1910), and has averaged over 100 during five months of that time. Certain monthly averages have been quite low, the lowest having been eight, which average occurred in July and again in October, 1908. The averages for the fiscal years (from July 1 to June 30) have been as follows: 1905-'06, 33; 1906-'07, 31; 1907-'08, 55; 1908-'09, 21; 1909-'10, 143. The last high rate is due to a large extent to the averages for December, January and February, which were 250, 800 and 350 respectively.

The annual typhoid death rates for these same fiscal years were 47, 42, 32, 43 and 38, respectively. The rates for the five years immediately preceding the inauguration of filtration were 65, 68, 63, 46 and 39, respectively. The means of the two periods were therefore 56.2 before and 38.4 during the filtration of the water supply.

Examining the tables of tests for B. coli, these tables give the percentage of the tests made during a given month which were positive, with no attempt to indicate the number per c.c. Taking the ten-c.c. tests, we find that of the 54 months included in the table B. coli were found during 19 of these months, the percentage of tests in which they were found in any one month varying from 3.2 to 25.8. That more than one-fourth of all the tests of filtered water made in a given month should show the presence of B. coli is certainly far from creditable to the filter plant or its operation, to say the least.

It is not the least peculiar circumstance connected with the Washington problem that the month when this high rate was found, together with the month following, showed very low typhoid rates, only five other months of the entire five years showing lower rates. These months of high B. coli had been preceded by eight months when all tests for B. coli had been negative, but during those same eight months the annual rate per 100,000 of typhoid had varied from 24 to 60, or two to six times the rate during the months when the high percentages of B. coli were observed.

Making all allowance for incubation periods, there appears to be no relation between the bacterial content of the filtered water and the typhoid rate. On the other hand, the results obtained by the filter would seem to be far from creditable and to strongly substantiate the claims made by Mr. Hardy and other members of the department that the filter alone is not adequate for treating the Potomac River water, but that auxiliary treatment is necessary. Congress has been requested to provide funds for constructing coagulation basins, and experiments have been conducted for a number of months in the use of such basins and several kinds of prefilters. The results of these investigations are described by Mr. Hardy in his article and will be presented by us in abstract in a later issue.

Value of a Periodical

On another page of this issue appears the following:
It is perfectly proper for a city to try some new experiment if there is a prospect of success and if there is a reasonable hope that conditions can be improved by it. But not only is there no excuse, it seems almost criminal, that one city after another should try the same thing after it has been shown to be impracticable, harmful or useless. It is not claimed that our city officials are criminal or that they do not desire to give good government, but their ignorance of what other cities have done or are doing makes progress slow and unduly expensive.

This is quoted from a paper advocating municipal reference libraries in cities, but is equally applicable to the employment of other means for keeping informed of what cities generally are doing. While this necessarily is recognized by experts in all branches, so that as large a part of their time is occupied

in keeping themselves informed concerning the latest developments everywhere in their particular fields as in using this knowledge in their professional work; yet the average municipal official in this country, where holding municipal office is but an occasional incident in the life of a business man, finds himself called upon to advise on and administer department operations concerning which he has only the general knowledge of the well read citizen rather than the specialized knowledge which is necessary for efficiency and economy. It is therefore especially necessary for such an official to have at his command the most complete and reliable summary of available information, including both the standard principles and the latest developments.

For this purpose a municipal reference library, such as is outlined in the paper quoted from, would be of incalculable value in every city, and we urge that every city official read this article carefully and take such action as seems best adapted, in the case of his own municipality, to secure the establishment of such a library.

We feel all the more strongly in this matter because Municipal Journal and Engineer presents to its readers such abstracts of standard information, but especially such news of latest developments, as have just been referred to. It is our aim to furnish for city officials just the class of recent information which Dr. Flack considers necessary to efficiency in municipal government.

But the very qualities which make a valuable periodical are incompatible with its serving as a history or a text-book. The elementary principles and the condensed history must be obtained from books written with that as their purpose; and here is where the reference library is valuable. But to keep in touch with the latest developments and doings in any line it is necessary to read regularly the carefully selected and timely articles to be found only in a high-class periodical. The one is as fully necessary as the other for intelligent and efficient service.

Standard Specifications

The action taken relative to standard paving specifications by the Organization of City Officials for the Standardizing of Paving Specifications, which met in New York last week, is described briefly in our News of the Societies columns. Two or three of these decisions are of special interest because of the discussions which have appeared in print concerning certain features of them.

The character of the oil to be used in treating wood blocks is one of these. The committee on this subject recommended the adoption of the same specifications as those presented last year (see our issue of March 2, 1910), except that there was allowed a range of specific gravity between 1.14 and 1.10, instead of a minimum of 1.10 as before, and a range of 30 per cent to 40 per cent of distillate up to 315 deg. C., instead of 35 per cent. The committee considered that the treatment of wood blocks should include waterproofing as well as preserving from decay. It recognized that the oil called for would probably be manufactured by the addition of coal tar pitch to the creosote, of which there can be no monopoly. Oil of this kind, it stated, has been "rased or manufactured" at Mobile, Ala., Cincinnati, O., Indianapolis, Ind., Minneapolis, Minn., Chicago, Ill., and New York City. It recommended 20 pounds per cubic foot as last year, but considered that 16 pounds might be sufficient where the traffic is heavy.

The committee on brick paving recommended the use of the rattler test and the abandoning of the absorption test. For the former the rattler developed by the recent investigation of the N. P. B. M. A. (see Municipal Journal and Engineer, Nov. 16, 1910), was recommended. There were added to last year's specifications additional clauses covering coal tar paving pitch filler and asphalt filler. There was considerable opposition to this, but we decidedly approve of the action taken; for, whether or not cement filler is by far the best (as is claimed by the National Paving Brick Manufacturers' Association), there is a very considerable percentage of engineers who prefer the bituminous fillers, and these should be considered in providing specifications for general use.

NEWS OF THE MUNICIPALITIES

Current Subjects of General Interest, Under Consideration by City Councils and Department Heads—Streets, Water Works, Lighting and Sanitary Matters—Fire and Police Items—Government and Finance

ROADS AND PAVEMENTS

Big Road Machine Bought by County

Augusta, Ga.—Richmond County has ordered a road scarifier, to be sent to Augusta from New York, for trial and approval. Heretofore the county has been using an old-style road plow, which is found too slow for the work of tearing up the hard gravel roads. The county owns two power road engines and the scarifier can be used very effectively. The new machine is a modern, improved type, model 1909, weighs 5,500 pounds and will tear up six furrows. It will cost the county about \$500, if accepted. The commissioners believe that the new machine will improve the roads of the county very much. The order was given after conferences between Commissioner Pope, Secretary Gardner and Superintendent Stringer. If the machine proves to be entirely satisfactory other counties will undoubtedly decide to adopt more modern appliances.

Charges Are Filed Away

Macon, Ga.—The City Council has washed its hands, figuratively speaking, of the charges brought by Henry Horne in connection with the award of the paving contract to the Southern Paving Company. The special committee made a report, submitting the correspondence, and was discharged. Council will not pay any further attention to Mr. Horne's charges, having decided that he did not submit evidence in substantiation of his claims. A telegram received last week from the Lasleys, the owners of the Southern Paving Company, was read. It is as follows:

"Replying to your inquiry, we nor no one connected with our company have paid, or are now paying, or have ever paid, to parties mentioned in your letter of December 17 any money on account of paving in Macon." Signed, W. M. & T. H. Lasley.

Improvement in Assessment Procedure

Masillon, Ohio.—The city will be saved money and property owners spared inconvenience from accidental mistakes in the computation of their street improvement assessment if plans approved by City Councilmen and under consideration by Mayor Remley and Solicitor Davis are carried out. The officials are seeking to improve the process heretofore in effect preliminary to the starting of the annual street improvement work. In the past, it is said, the custom has been to carry on the books of the City Auditor the names of owners who did not pay in full assessments on their properties, instead of certifying them within the time required to the County Auditor for collection with interest through the channel of taxation. As a result the city has failed to collect interest on deferred payments. City Solicitor Davis is planning to have the Council authorize the certification of the accounts to the County Auditor as soon as all property owners have been given an opportunity to pay the assessments in full, and thus secure all the interest collectible when the payments are made in installments. Mayor Remley will make an effort to have incorporated into the assessment ordinances the names of owners and a description of the property fronting on the streets to be improved. This, he said, will not only make the record of the properties improved permanent, but will enable each owner to see for what frontage he, as well as his neighbors, is assessed, and detect any mistake in measurement. Under the system heretofore in effect, he says, the ordinance only mentioned the total frontage, and lacked details. The main argument in favor of publishing a list of the property owners and the frontage is that clerical errors can creep in and cause the assessment of any one of them more than his share. Officials who might be inclined to be unscrupulous might cause the assessment against any one owner to be canceled and the deficit made up by extra assessment on the city.

Won't Keep Highway Board

Albany, N. Y.—Governor Dix received to-day a delegation of Monroe County supervisors, escorted by Senator Ormrod, who entered a protest against the abolition of the State Highway Commission. The committee urged the retention of the commission, even though the governor substituted new men for the existing commissioners. Governor Dix intimated his intention of standing by his recommendation. He pointed out that several of the counties had determined to bond themselves and build their own good roads, which the Governor thought indicated that the present commission had not been as economical as it might have been.

Engineer Discusses Paving Prices

Baltimore, Md.—Commenting on a report made by him to the Mayor regarding the amount of paving work done during the Mahool administration, City Engineer Fendall has called attention to the fact that, while the lower cost of paving during the last four years has been largely due to the operation of the Bruce-Fendall law, the competition brought about by this ordinance is fast disappearing. With the exception of the competition offered in the use of vitrified brick pavement, Mr. Fendall declared that the asphalt people have practically no obstacle in their way in Baltimore at the present time.

"How long the vitrified brick will last as a club over the prices of the asphalt trust," said Mr. Fendall, "depends on the future conditions of the brick business, but I must say that I regret exceedingly the withdrawal of the Warren Bitulithic Pavement Company from the field. So long as the Warren company was here the asphalt trust was always willing to underbid the Boston concern in the hope of driving it away from Baltimore. Unfortunately, the Warren people were never able to reach the prices of the trust interests, and consequently were forced out. Personally, however, for the purpose of keeping up this show of competition, I would like to have seen the Board of Awards give the Warren company occasional contracts even at a higher price. Luckily, the vitrified brick pavement is still an independent commodity, and so long as it remains so we shall always have a club over the trust, for the moment the latter's prices go up I can come in and do work with vitrified brick and day labor. Under the Bruce-Fendall ordinance, which allows the Board of Awards to receive bids on all classes of material for each contract, the prices have gone down considerably in the last four years. We now get sheet asphalt laid at about \$1.75 a yard, when formerly we paid from \$2.25 to \$3.50."

Mr. Fendall's department in the last four years has laid slightly more than 10 miles of street, using for the most part sheet asphalt at a cost of between \$45,000 and \$50,000 a mile.

Brooklyn Asphalt Plant Has Much Work in Sight

Brooklyn, N. Y.—With the expiration of guarantees during this year the Municipal Asphalt Repair Plant will have 4,000,000 square yards to maintain. The plant is said by its superintendent, Charles K. Lennon, to have saved the city \$40,000 annually since its installation in 1907. Mr. Lennon was paving inspector for about 20 years before he took charge of the plant. During the more recent of these years he had general charge of asphalt repairs for the city, which were done by contract. The field of operations covers a very wide area and the position requires an intimate knowledge of localities and pavements.

Dallas Street Improvements in 1910

Dallas, Tex.—During the last year, according to the report of City Engineer J. M. Preston, the city has spent \$330,854 in street paving, resurfacing, building bridges and laying sewers. The city expended for street paving as follows: Bitulithic, \$122,216.08; vitrified brick, \$23,606.82; creosoted blocks, \$79,349.11; streets macadamized, \$20,674.22; streets graded, \$4,496.88; resurfaced with asphalt, \$12,597.64. Total, \$263,030.75. The amount of sidewalk curbing and gutter laid was as follows: Sidewalks, square feet, 674,489; sidewalks in miles laid, approximately, 30; curbing laid, lineal feet, 83,898; gutters laid, 24-inch, lineal feet, 37,433; gutters laid, 18-inch, lineal feet, 250. The total cubic yards of street grading was 20,224. Fourteen streets were macadamized at a cost of \$20,674.

Railroad Asks Town to Share Cost of Changing Grades

Montclair, N. J.—The Lackawanna Railroad Company has asked the town of Montclair to contribute \$50,000 as the municipality's share of the expense in the contemplated terminal improvements here. The company's plan provides for the elimination of all grade crossings in town, a viaduct on Grove street, the closing of Pine street to all except foot traffic on an overhead bridge, and depress Bay street so that the railroad tracks may cross over that thoroughfare.

Census of Traffic over New York Bridges

New York, N. Y.—The report of the Public Service Commission for the First District contains a count of the traffic over the East River bridges. This report states that from a count made on three different days it was learned that on the first day in question the Brooklyn Bridge handled 309,783 people; on the second day, 328,899; and on the third day, 342,909. At the same time the Williamsburg Bridge was serving 182,233, 213,487 and 242,251 people. The ferries in the same time took care of 161,938, 120,841 and 119,423 passengers. The subway to Brooklyn turned in this count: 159,708, 193,781 and 210,130 passengers for the three days noted. The total East River travel for the three days on which tests were made was 813,662, 882,311 and 978,561. On the three days 405,951, 443,754 and 490,965 came to Manhattan, while 407,711, 438,557 and 487,596 went to Long Island.

Pittsburg City Plan in Relation to South Hills

Pittsburg, Pa.—The section of F. L. Olmsted's report to the civil commission on the Pittsburg city plan relating to South Hills thoroughfare has been made public. The report holds that Forbes street and Sixth avenue is the most desirable point for South Hills traffic to reach the lowtown section. A roadway on the face of the hill is provided to enable traffic from the Southside flats to reach the elevated mouth of the tunnel, while the lower deck of the bridge will bring traffic from the flats to the downtown section. Provision has been made, as shown by a map accompanying the report, for traffic to reach all important sections of the South Hills on easy grades from the south end of the tunnel, which emerges on Washington avenue, east of the entrance to the present street car tunnel. By bending the southern end of the proposed tunnel to the west along Washington avenue, the grade of the tunnel and bridge, it is pointed out, may be reduced to from 3 to 3½ per cent. On account of the uneven nature of the Pittsburg site, problems of an exceptional nature are presented to the city engineers.

Four Cities Ask New Paving and Park Laws

Indianapolis, Ind.—The members of the boards of works of South Bend, Terre Haute, Evansville and Fort Wayne met last week at the Denison Hotel to discuss proposed amendments to the Thornton paving bill. With the board members were the Mayors and City Attorneys of these cities. Under the old law abutting property owners were charged not only with the work that benefited them directly, but with the paving of street intersections. The Thornton law charged street intersections against the city. When application of this statute was sought it was discovered that in most cases the city was taxed to the constitutional limit and that there were no funds to carry out needed improvements. The boards of works, the Mayors and the City Attorneys of the cities affected by the Thornton law propose that this statute shall be amended and that the law shall be like as was in the beginning. At the same time a meeting was held of officials of the same cities to frame a bill and have it introduced in the Legislature to apply to the cities of the second class the Indianapolis park law. Under this law the park board divides the city into park districts, and the cost of park improvements or park work in each district is borne by assessment on the property in that particular district instead of charging it up against all the property in the city. The law also authorizes the City Council to make a tax levy on all the property for park purposes, not to exceed a given amount each year. Under this law the park system in Indianapolis is being extended and the plan is working well.

SEWERAGE AND SANITATION

Defect in Law About Alleys Creates Unsanitary Conditions

Atlanta, Ga.—Thousands of Atlantans were astounded by the story in a recent issue of the *Constitution* in regard to the 3,000 houses in the city which are prohibited from using city water. The fact that Atlanta has a law which prevents this number of houses from using city water was generally regarded as evidence of a defect that should be remedied as speedily as official machinery can do it. As stated in the *Constitution*, the prohibition of water also keeps out sewers, and therefore all these 3,000 houses must use earth closets. It would not have been so surprising if these houses were located in some of the outlying districts, but when the statement was made that they were all within a mile and a half of the center of the city, and many of them within a stone's throw of the business center, a lot of people were set to thinking. The matter summed up is as follows: Three thousand houses are situated on alleys that are being used as streets; the city cannot lay water mains and sewers on alleys; the city cannot turn these alleys into streets because there is a law which says that no thoroughfare shall be accepted as a street which is less than 50 feet wide. It looks at the first glance as if all there is to be done is for the City Council to repeal the ordinance limiting the width of streets and then declare all the alleys streets. This looks "dead easy," but one obstacle in the way is that many of these alley streets are private property and cannot be taken over by the city unless condemned for such purposes. One suggestion that has been made is that Atlanta might adopt a blanket ordinance by which it can assume control and jurisdiction over all sorts of thoroughfares. When this is done the ordinance in regard to the width of streets can be repealed and then the alleys declared streets whenever it becomes necessary to lay water mains and sewers upon them.

City to Take Over Private Drains

Baltimore, Md.—The Sewerage Commission have issued the following notice relative to the incorporation of existing private drains in the municipal system:

NOTICE TO OWNERS OF PRIVATE DRAINS

The Sewerage Commission, in compliance with the Act of the Legislature, will incorporate any existing private drains that can be properly incorporated as a part of the general sewerage system, and herewith notify the owners of any private drains to forward at once to the Commission full information regarding them—namely, ownership, location, depth, size, date of construction, street number of houses connected; also state if any rain water enters the drains, and the names of parties having rights in these drains.

Proper compensation will be allowed for any private drains taken over by the city in accordance with the Act of the Legislature.
 W. D. PLATT,
 Chairman Pro Tem.
 HARRY W. RODGERS,
 Secretary.

Strenuous Work by Sanitary Men

Birmingham, Ala.—Chief Sanitary Inspector Walter Benson reports that the city began the new year in good sanitary condition, owing in large part to the strenuous work of his men, who made over 30,000 inspections in December. The nature of the inspections follows: Inspections, 22,778; no garbage can, 1,360; clean up premises, 2,793; throwing garbage in street, 161; stagnant water on lot, 1; connect closet with sewer, 256; no water on closet, 85; plumbing repaired, 121; sewer opened, 17; to fill open wells, 1; remove dead stock, 56; clean out stock yard, 15; clean out stable, 1,670; move manure, 102; clean out cow pens, 708; complaints answered, 640; bakeries, 88; restaurants, 164; meat markets, 85; stores, 469; flags, 71; typhoid fever cases worked, 6; fumigations, rooms, 110. Total, 31,550.

Dallas Sewers Laid in 1910

Dallas, Tex.—Sanitary sewers laid from April 30, 1910, to Dec. 31, 1910:

	Lineal ft.	Cost.
6-inch sanitary sewers.....	47,056	\$19,398.61
8-inch sanitary sewers.....	2,850	3,533.76
10-inch sanitary sewers.....	736	2,232.95
15-inch sanitary sewers.....	510	802.00
Totals	51,182	\$25,967.32

Amount of storm sewers laid from April 30, 1910, to Dec. 31, 1910: 11,641 lineal feet, from 12 to 50 inches in diameter; total cost, \$27,773.04.

Sewer Explosion

Eric, Pa.—An explosion occurred in a sewer at the intersection of Twelfth and Cranberry streets, Jan. 4. Man-hole covers were thrown high in the air, the roadway was torn up and telegraph poles thrown down. The explosion is attributed to gas or gasoline.

Payment for Sewers in Intersections

Indianapolis, Ind.—It has been the custom in many Indiana cities for the sewers to be built at the expense of the whole municipality, instead of by the property owners in certain limited districts, as in Indianapolis. This has been the custom in Terre Haute and Evansville, and, therefore, coming in addition to this, the drain on the general fund for the improvement of street intersections is said to be a great hardship. At the recent conference of Mayors to discuss paving and other laws Mayor Charles Heilman, of Evansville, was emphatic in his argument that the law should be changed so that the property owners directly benefited would be compelled to pay for the street intersection improvements.

Large Concrete Block Sewer Finished

Houston, Tex.—The Austin street storm sewer built of reinforced Parmley blocks by Contractors Horton & Horton and planned by Consulting Engineer Frank L. Dennant has

REINFORCED CONCRETE BLOCK SEWER

been completed. The sewer is a mile and three-quarters long and 11 feet in diameter at the mouth. It drains several hundred acres of territory and will prevent the flooding of many miles of streets even in the severest storms. A large part of the sewer was built in earth tunnel.

Anti-Spitting Ordinances to Be Rigidly Enforced

Walla Walla, Wash.—Chief of Police Mike Davis has announced that hereafter the anti-spitting ordinance will be rigidly enforced. By way of warning the large Red Cross anti-spitting cards will again be posted conspicuously about the city. One of the most impressive of these is the following: "A world without careless spitters would soon be a world without consumption."

Louisville, Ky.—Mayor W. O. Head has instructed Chief of Police H. Watson Lindsey to see that the spitting ordinance is rigidly enforced, especially in street cars which are close, stuffy and poorly ventilated because of the cold weather. Colonel Lindsey has called to the attention of all the men under him the ordinance which provides a fine of \$1 to \$50 for spitting in a public place. "The street car company has posted in all its cars a notice of a \$50 fine for spitting on the car," said the Mayor. "I don't think that Judge Boldrick would fine anyone that amount of money for expropriating in a public place, but I do believe that if the police arrest the spitters Judge Boldrick will not hesitate to fine the offenders \$1. This minimum fine would be a sufficient reminder that the law must be obeyed and would break up the obnoxious and dangerous practice." Colonel Lindsey has sent the police out with the placards bearing the anti-spitting ordinance and they will be put in all public places where the old signs have disappeared.

Sanitary Sewer Connections with Storm Sewers Condemned

Duluth, Minn.—In the annual report which he filed with Health Commissioner H. E. Webster, Plumbing Inspector George Kreager strongly recommends a discontinuance of the practice of allowing sanitary sewer connections to be made with storm sewers. He declares that it has come to be a most serious problem to the city. He states that in the dry season the stench from the catch basins of storm sewers which have sanitary sewer connections emptying into them is "awful." The sewers are not being flushed as is necessary and the odor is a nuisance to many parts of the city afflicted in this manner. Inspector Kreager also refers to the practice of allowing sanitary sewers to run into the different creeks in the city. He asserts that it is most unsanitary, causing not only much unpleasantness for the residents along their banks, but breeding disease. He believes that as far as possible every sanitary sewer now dumping into creeks should be cut out as soon as possible and connections made with sanitary sewers wherever it can be done.

WATER SUPPLY

Water Supply Getting in Good Shape

Altoona, Pa.—After a period of three months the Kittanning Point reservoir is again full and overflowing. The depth of the basin at the spillway is 37 feet, and it has overflowed four inches. This also had a perceptible influence on the impounding dam, which is now slowly filling up, the gain in one day being 14 inches, making the present stage 23 feet 10 inches. The Kittanning Point reservoir had not been full since October 2. It first ceased to run over the spillway on July 20, but later on, under the influence of fall rains, it filled up again, and this condition lasted for several weeks, or until Oct. 2, since when, until the present time, it was not full. Prior to the last breakup it was almost empty. The officials of the department are very much gratified at the conditions now existing and expect to see the impounding dam fill up very rapidly from this time on. The pumping station at Sugar Run, which was closed down a week ago, has been put in operation again, the idea being to draw upon the supply at Kittanning Point as lightly as possible, so that both basins may be filled. There is a good flow of water in both the streams, more than the daily consumption in the city, and at the present rate of gain it will not take long for the impounding dam to be full, when the restrictions may be removed.

Under-registration of Meters Alleged Cause of Decreased Revenues

Natchez, Miss.—The Municipal Water Works Commission has presented its eighth annual report to the Mayor and Aldermen showing that the gross income for water and sewer service last year was \$42,947.57, as against \$44,129.32 the year before. The loss was attributed to under-registration of the meters. The operating expenses, including fixed charges, but excluding betterments, were \$24,535.45. The expenditures for construction work amounted to \$15,307.90.

Poughkeepsie Filtration Plant Efficient

Poughkeepsie, N. Y.—At a recent meeting of the Board of Public Works Dr. R. W. Andrews, City Bacteriologist, presented his report, which showed the water used by the city to be practically pure, much more so than any country well, stream or spring. Raw waters contain 4,050 bacteria. The city filtration system removes 4,020, leaving only 6. In other words, 99.8-10 per cent are removed, and only 2/10 of 1 per cent remain.

Temple Water Allowance Raised

Temple, Tex.—The City Water Commissioners are considering plans whereby the minimum water allowance to families where meters are used will be raised from 6,000 to 10,000 gallons, without a corresponding increase in rates. Under municipal ownership and non-partisan management the Temple water works plant is now equal to that of any city in the State having 20,000 population and over and delegations from other cities are constantly visiting this city to obtain information, the last delegation being from Denison. It is felt that the water problem in Temple has been successfully solved for a period of twenty years at least.

Ask Receiver for Water Company

Akron, Ohio.—A motion has been filed in the city's suit in Common Pleas Court to have the Akron Water Works Company placed in the hands of a receiver. The city, through its legal department, claims that a contract was entered into with the Akron Water Works Company to furnish an "abundant supply of wholesome water" for 20 years. The contract was made in 1894. The city claims that the water company is insolvent and is unable to comply with the terms of the contract.

Seeks Information Regarding Water Plants

Chicago, Ill.—Oscar E. Hewitt, Deputy Commissioner of Public Works, has written to the engineering bureaus of 44 large cities in the United States asking information about their water plants, with the view of adopting every suggestion that promises an improvement in the present Chicago system. The cities asked for the information are those having a population of 100,000 or more which control their own water plants. Forty questions are asked in the letters. Number and type of boilers, furnaces and a technical value of coal used as relating to a high-pressure system are among the questions. Several recommendations made in the report of the Merriam investigating committee on the water bureau also are provided for in the list of questions.

Suit Over Water Company Taxes

Crookston, Minn.—This city and the Crookston Water Works, Power & Light Company, of which W. J. Murphy of Minneapolis is the head, are about to clash. The company has not paid a dollar of taxes since 1906 and its back taxes without penalties attached now reach the snug sum of \$39,000. The trouble arose over back taxes assessed four years ago, in which the personal property assessment was materially increased, the wires, water mains, etc., being assessed back for a number of years. County Attorney Maybury four years ago started a suit which was taken to the Supreme Court and it being about the close of his term was allowed to fizzle out. County Attorney Hagen did not take it up and now City Attorney Loring has been working on it for some time past and is about ready for action.

Must File Record of Water Tests

Escanaba, Mich.—At the last meeting of the Common Council, following the acceptance of the usual report from City Chemist A. J. Carlson relative to his analysis of the city water and its results, a motion was made and adopted that hereafter the city chemist should file a record of each water test made. Dr. Carlson reported that during the month of December he had made 12 analyses of the city water and each test revealed the water to be unsafe.

Municipal Plant Is Profitable

Moorhead, Minn.—The statement of the business of the city's water and light plant for the past year shows net earnings of \$17,128.30, which is \$1,800 in excess of the earnings for 1909. The number of light consumers is 750 and there are water consumers to the number of 376.

STREET LIGHTING AND POWER

Annual Report of Light Department

Marion, Ind.—According to the report of Otis Weesner, Superintendent of the City Lighting Plant, the cost of street light was \$40.20 per year. The total cost of operating plant was \$9,026. There are 224 street lamps now in use. The figures include \$4,192 spent for extension, including \$1,500 for a site for a new plant. The value of the plant is \$41,500.

Aurora Lighting Plant Soon Ready

Aurora, Minn.—The new dynamo and switchboard for the municipal lighting plant have arrived and are being installed. The engine was received some time ago and as all wires have been strung it is only a short time until the town will be lighted by electricity. Aurora now has a modern light plant, first class water and sewer systems, a fine municipal hall, and a \$125,000 high school building in the course of construction.

Regulating Maximum Price for Electricity

Toledo, Ohio.—That the maximum rate charged consumers of electricity for commercial and domestic use should be less than 7 cents a kilowatt hour is the contention of City Solicitor Schreiber. He believes it ought not to exceed 5 cents a kilowatt hour. The present maximum rate is 9 cents a kilowatt hour, with a discount of 10 per cent if the bill is paid within a stipulated time. The Council Committee on Gas and Light recently received the communication of the Solicitor notifying Council that the present ordinance regulating the price of electricity expires Jan. 12. When Council passes an ordinance, fixing a maximum price, then no company can charge a higher price than that fixed in the ordinance; if the company accepts the ordinance, Council cannot lower the price during the life of the ordinance; if the company does not accept it, then while it can charge no more than the ordinance fixes, Council can at its pleasure again change the price.

Explosion Ties Up and Darkens City

Minneapolis, Minn.—An explosion and fire which destroyed the main plant of the General Electric Company Jan. 6, injured three men, caused a loss of \$750,000, and seriously interfered with business throughout the city during the day, left the city at night in almost total darkness. Several office buildings got power for light and elevators from the street railway company and flour mills until 11 o'clock, but after that time all power was turned off. No street lamps were lighted and all save the main section of the city was without electric light all night. Fearing that the darkness of the city might induce lawlessness, the entire police and detective force was held in reserve with waiting automobiles. The General Electric Company put 500 men at work making arrangements so that the power from the company's plants in Taylor's Falls could be used.

The explosion, which plunged the city into darkness and almost paralyzed the commercial life of the city, was in the "13,000 wire" leading into the power plant at Third Avenue, Southeast, and Main street. A tangled mass of wire machinery was thrown in every direction by the explosion. Fire, which followed, completed the demolition. Three separate explosions were accompanied by car-splitting cracks and vivid display of blue electric flame. There is little left of the power plant beyond the charred wreckage level with the water in the river. Blinding arcs of electricity powerful enough to bore through steel girders rent the air, igniting coal gas in the boiler room and communicating with twenty dynamos on the top floor. Cables slapped and writhed, wheels ground and whizzed. Lights were all extinguished, and for a minute the building was outlined by ghastly blue light.

The general opinion is that the first explosion was caused by the blowing out of a fuse on a cable which carried 13,000 volts of electricity from the power house at St. Croix Falls to the Main street substation. That put out every electric light in Minneapolis, stopped every electric motor. If it had stopped there repair might have been comparatively easy. But coal or sewer gas in a subway underneath the Main street plant was ignited, it is believed, and exploded with terrific force.

City's Electric Plant Gone

Santiago, Chile.—The central station of the entire electric and telephone plant of the city was burned Jan. 7. The loss is estimated at \$2,000,000.

Would Grant New Power Franchise

Spokane, Wash.—Electric power companies seeking franchises in Spokane will have the support of the City Council. The Council power plant committee believes that others than the Washington Water Power Company should be given the right to compete with the local electric company. While dropping the idea of building a municipal plant at the present time, the committee points out that the Panhandle Electric Railroad & Power Company and the International Electric Company have offered to furnish electricity for domestic consumption in Spokane at a maximum of 6 cents a kilowatt hour, 4 cents less than the present rate. The opportunity to secure rates so much more favorable to the consumer will not be allowed to pass without recognition if the City Council has its way.

FIRE AND POLICE

Annual Inspection of Fire Department

Alliance, Ohio.—The annual inspection of the Fire Department was held, Jan. 2, by Mayor E. P. Speidel, Safety Director Thomas Doyle and Chief Arthur S. Aungst. The first station to be inspected was No. 3, an automobile station. The machine was started and ready to go in five and three-quarter seconds. It was started and run to the corner of Union and State streets in 32 seconds. A second run to same place, including laying of 100 feet of hose and developing pressure of 80 pounds, was made in 1 minute 49 seconds. At Station No. 1, a hitch by two men ready to go on receipt of alarm was made in 13 seconds. At Station 2 the same drill was made in 12 seconds.

During the year 75 alarms were answered. The value of buildings at risk was \$250,410; contents, \$236,944; loss, \$0,695; insurance paid, \$3,381.

Increased Efficiency of Fire Department

Dallas, Tex.—Strides toward modernizing the Fire Department of Dallas during the year 1910 have probably been as great as in any other one department of the city. At all times thoroughly equipped and efficient, the year has brought the installation of the latest types of fire-fighting apparatus to supplement the machines that were formerly used. One of the most noteworthy additions to the department equipment was the installation of automobile fire engines. The first automobile engine arrived and was put into service along in April, as Dallas was the first city of the State to have automobile apparatus. Since the first engine arrived others have been added until at present there are two automobile fire engines and two automobile chemical engines. A record of the effective work done by all of these machines would indicate that the purchases have been expenditures that brought large returns. Scores of fires that might have resulted most disastrously have been stopped in their incipency and thousands of dollars saved. Geared to high speed, these engines are able to answer alarms in less than half the time of horse-drawn apparatus, and many fires have been prevented that would have got beyond control without the automobile equipment. During the year 15 new fire alarm boxes have been installed, new horses purchased, the McKinney avenue station rebuilt and other improvements and additions made to the extent of nearly \$35,000. To man this new equipment and to keep pace with the growth of the city additional men have been employed in the department, this increase amounting to more than one man for each month. At the beginning of the year the members of the department numbered 114. At one time, during the water shortage, this number was increased to 139, and at present there are 128. During the year the department responded to 840 calls. There were 35¹/₂ second alarms, or calls for additional apparatus, and five general alarms. The figures are supplied by Acting Fire Chief Myers.

Will Inspect Apparatus and Accessories More Closely

Lestershire, N. Y.—Criticism has been rife since the fire in Arch street, Jan. 3, because of the seemingly long time of the department in responding to the alarm, but it is generally conceded that blame cannot justifiably be attached to the heads of the department or firemen on duty at the station. While it was some fifteen minutes before the apparatus arrived, this was due to a streak of unfortunate luck, so to speak, unlike anything that has ever occurred in the history of the local department. "Independent's" wagon was leaving the building on the first round of the alarm but in making the turn a wheel collapsed, making the apparatus useless so far as getting to the fire was concerned. A re-hitch was made in short order to the "C. F.'s" wagon but the harness broke in a vital place and further delay was caused. Fortunately the fire was of minor importance and had been extinguished some minutes before the apparatus arrived, but history may not always repeat itself and for this reason people have been heard to complain of the delay. The incident has inspired Chief Spies and his assistants to inaugurate a thorough inspection of apparatus and accessories to see that nothing of a like nature can occur in the future.

Bloodhounds for Police Force

Galveston, Tex.—The Police Department has purchased two bloodhounds and will have them trained to do police work, particularly the tracing of fugitives.

Insist on Hundred-Pound Pressure at Fires

Green Bay, Wis.—The Green Bay Water Company will be instructed by the city of Green Bay, through City Clerk W. L. Kerr, that it must furnish 100 pounds pressure for all fires that break out in the city. The clerk was authorized and ordered by the Council to impart the information that nothing less than 100 pounds pressure would be satisfactory hereafter. A resolution conveying the expression was introduced by Chairman Felix Biemeret of the committee on Fire Department, who, after putting the resolution said that the company was furnishing nearer 85 pounds pressure than 100 at recent fires. He added that he had it from Chief Sweeney that 100 pounds could be used to advantage. By the franchise which the company operated under it was required to furnish 125 pounds pressure.

Annual Report of Fire Department

Huntington, Ind.—According to the report of Fire Chief Gardner for the year 1910, the total expenses of the Department were \$6,629. The number of runs during the year was 66, of which 61 were by telephone, 13 by alarm boxes and 2 by police; there were 4 false alarms. The total fire loss was \$9,802. Number feet water hose laid, 14,850; chemical hose, 2600.

New Rules for Fire Department

Indianapolis, Ind.—With the assistance of Mayor Shank and Fire Chief Coots, the Board of Public Safety, at a special meeting, promulgated new rules for the conduct of firemen. The action is the result of a complaint by the Mayor that firemen at engine house No. 19 have been guilty of drinking while on duty, and that when he entered an engine house with the Fire Chief, recently, firemen on duty failed to show proper respect. Hereafter firemen who are found intoxicated, either on or off duty, will be tried by the board. Assistant Fire Chiefs are to make unannounced inspections of fire engine houses at least once a week, according to the new rules. It is also made the duty of firemen to report violations of rules to Assistant Fire Chiefs, as well as to the Fire Chief. The new courtesy rule, it is understood, will apply not only to officers of the Fire Department, but to the Board of Public Safety and the Mayor as well. Firemen not knowing members of the board or Mayor may become familiar with their countenances by looking at photographs on file in the board's office. The new rule follows:

"When any superior officer enters a fire station all men are to refrain from what they were doing, rise to their feet and salute and remain standing until dismissed by their superior officer."

The following emphatic postscript was added to the rule requiring firemen to pay their debts:

"Note—This rule hereafter must be lived up to and obeyed."

First Auto Squad Wagon in Service

Indianapolis, Ind.—The first automobile squad wagon of the Indianapolis Fire Department was placed in service Jan. 7, and will be stationed at fire headquarters. In order to make room for the new machine, chemical No. 1 has been moved to engine house No. 27, in East Tenth street. The new machine cost \$5,200, and it is the intention to place a second one in service when a new fire engine house is erected at South and New Jersey streets. Those who have been assigned to the squad wagon are young but experienced men, capable of filling any place in the department in fighting fires. It is intended to use the company largely in filling in companies that arrive at fires with less than their usual crews. For instance, at certain times of the day some hose wagons reach fires with only two men, one man being off duty, and another at a meal. For the time being the new wagon will answer all alarms in the territory between State avenue and White River, from Twenty-second street to Merrill street. It will also answer the box at Madison avenue and Morris street and the box at the Central Indiana Hospital for the Insane.

Police to Report by Telephone

Louisville, Ky.—Chief of Police H. Watson Lindsey recently issued orders to the men of the Police Department to the effect that in the future they must report all accidents, fires, robberies and other happenings on their beats by telephone to Central Police Station as soon as possible. In the past it has been the custom of the officers to make a written report of such things, but Col. Lindsey wants the headquarters at Central to be more in touch with the men, and for this reason ordered the telephone reports.

Fire Inspection in Entire City Daily

Minneapolis, Minn.—Life and property in Minneapolis are to be further protected against fire by a new system of inspection that will cover every section of the city and will include every building except dwellings. The plan is C. W. Ringer's, the new Chief of the Fire Department. Ringer outlined his plans to the captains and assistant chiefs last week. The inspection will be begun at once. Ringer hopes to minimize the danger from fire. Schools will be given special attention, and extra precautions taken to safeguard children. A fireman from each fire station in the city will be detailed every day of the year to make the rounds of buildings in the district surrounding each engine house. He will inspect buildings from top to bottom. He will see whether boilers are properly protected; whether debris is heaped in basements; whether elevator shafts are unprotected; whether ashes are dumped next to buildings. He will inspect fire escapes and report lack of fire escapes. "The firemen will study buildings so that in case of fire they will know exactly how to get into them and how best to fight flames. This inspection will include schools, churches, stores, halls, office buildings, flat buildings, hotels, warehouses, manufacturing plants; every important structure in the city. Through this inspection the captain of each company will be familiar with his own district, and be able to inform a chief of exact conditions in case of fire," said Chief Ringer.

Police Telephone Stations Established

New York, N. Y.—The Police Department, following out a scheme framed by Commissioner Bingham, has set up six police booths in remote parts of Staten Island which contain telephones and are tended by policemen, some of them bicycle men. The idea is to furnish substations from which a man can be moved more quickly to a place of trouble than if he had to travel from the precinct house. A booth also has been set up at the Manhattan end of the Brooklyn Bridge which is connected by telephone with police headquarters and with the Oak Street Police Station. Another booth which has been at the Manhattan end of the bridge for years is connected only with the various telephone stations on the bridge and at the Brooklyn end.

Asks State to Pay for Fireboat Maintenance

Oakland, Cal.—Upon recommendation of Mayor Frank K. Mott the Board of Police and Fire Commissioners have adopted a resolution recommending the passage of a bill by the State Legislature whereby the State would contribute half the expense of maintaining the San Francisco fireboats. This was done in view of the fact that an arrangement has been made between San Francisco and Oakland by which the latter city will be in a position to avail itself of the fireboats stationed in San Francisco bay, which can, in case of emergency, be used in connection with this city's recently installed high-pressure salt water system. This arrangement is not on a formal basis, and while no difficulty is feared by Oakland officials, it is thought that if such a bill is passed, making it mandatory for the boats to respond to various points on the bay in return for the payment of 50 per cent of the expenses of operation by the State, greater satisfaction will result.

English Police Would Carry Arms

London, England.—Since the killing of three police officers in the battle of Dec. 20 a movement has been started to allow the English police to go armed. Hitherto they have been unarmed. They wear, it is true, a short baton in a belt, but practically it is merely an emblem of office and authority and has not and could not be used as a weapon.

Books for Fire Houses

New York, N. Y.—In order that every member of the Fire Department shall have interesting and instructive reading matter at his command the chaplains of the Fire Department, acting with the approval of Commissioner Waldo, have taken steps to establish in every fire house a library. For weeks Chaplains Knapp, Smith, McGronen and Handel have discussed plans by which the firemen might be entertained and instructed during their long hours in quarters. Chief Croker is co-operating in the work. It was the desire of the chaplains to bring about the establishment of a special library for the firemen and the Commissioner took steps to interest those who are in a position to assist such a plan. Meantime, however, in order that the firemen shall have the benefit of such reading matter as they desire, arrangements have been made with the Public Library for a special supply of books. The Commissioner has designated Chaplain Knapp as the librarian for Manhattan, Bronx and Richmond, and Chaplain McGronen as librarian for Brooklyn and Queens.

Pittsburg, Pa.—A free circulating library in every fire engine house of the city of Pittsburg is one of the possibilities of the very near future. This move doubtless will be expedited by the fact that to meet the educational and recreative needs of New York firemen an eight-foot shelf of books, especially suited to meet the wants of the fire fighters of Gotham is to be established by the New York Public Library in every station.

When the matter was called to the attention of Samuel Harden Church, secretary of the Carnegie Institute Board, he said: "It is a capital idea and I am sure it could be worked successfully in Pittsburg. At present there are 175 branch distributing centers of the Carnegie Library located in different sections of the city to enable book lovers to secure books, so you see the New York idea is not altogether a new one. I see no objection to the plan and rather favor the idea of providing the firemen with books."

The New York plan originated from the fact that many firemen applied to public libraries near the stations for technical treatises on engines and hydraulics, as well as for novels.

Auto Chemical Is Good Hill Climber

Rome, N. Y.—The new Seagrave auto chemical and hose wagon arrived last week and was given a trial trip. With Fire Chief Harrington and a number of the firemen and city officials as passengers, the machine was run into what are considered the hardest places in Rome. It went out through East Rome, climbing the Reynolds hill on far Second avenue on high gear, in spite of its unusual load of 15 men. Coming back by devious paths, a trip was made to Shorter College Hill, the machine being driven into the college yard and backed out down to East Fourth and from there driven up the steep grade on Third avenue at the Conservatory of Music. These are places that not every runabout could negotiate and that are avoided by all automobilists.

Annual Fire Loss in Selma

Selma, Ala.—According to the annual report of Fire Chief Blakely, the Department responded to 121 alarms. The loss to property and contents was \$46,731, on which the insurance was \$43,000. The were two large fires, at one of which the loss was \$12,868 and at the other \$21,160.

Small Fire Loss

Wheeling, W. Va.—A report showing the total fire losses of the city for the past 12 years has been issued by Fire Chief Altmeyer, and is of a very gratifying nature, in that it shows an extremely small loss for the year just completed. The 1910 total was \$22,367.53, which was lower than that of any year since 1900, with the single exception of 1906, in which there were very few fires. In the year 1908 the loss was almost five times as great and in 1909 almost three times. The small amount, coupled with the large number of alarms and the fact that many of the fires would have been disastrous except for the excellent work of the department, reflects the highest credit on Chief Altmeyer and the firemen. During the year many radical improvements have been made and the department is on a modern and progressive basis. The present year will see still further improvements to equipment.

GOVERNMENT AND FINANCE

Adrian Council Is Ordered to Revise the City Charter

Adrian, Mich.—Copies of a writ of mandamus from the Supreme Court have been placed in the hands of Sheriff Knowles to be served on Mayor Treat, City Clerk Mawdsley and each of the City Aldermen, ordering them to proceed with a meeting for the purpose of electing commissioners to draft a new constitution for the city of Adrian. The serving of the papers is apparently the end of a long and arduous strife which has been waged ever since a resolution for charter revision was voted upon and carried at election nearly a year ago. The Council at the time refused to grant an appropriation for the work and the mandamus proceeding was taken up in the Circuit Court and finally carried to the Supreme Court.

Commission Government Adopted

Carbondale, Ill.—Commission government was adopted Jan. 7 by a vote of 441 to 172. Less than half of the full vote was polled.

Treasurer Demands Compliance with Law

Burlington, N. J.—Compliance with the State law that requires that every municipal bill shall be presented to the Mayor for his approval and signature will be forced upon Common Council by the action of City Treasurer Joshua Taylor, who has refused to pay any more bills unless the Mayor signs them. The City Treasurer's action has caused a stir, as strict compliance with the statute makes Mayor Farmer a censor of every expenditure. Business men and taxpayers generally are behind a movement that will reconstruct and put on a business basis the entire municipal financial system. They declare the City Treasurer, under the city charter, is the proper custodian for all municipal funds but that, by various methods which will not stand a legal test, large sums have been diverted to the custody of unbonded officials.

Theory of City Wages Discussed

Chicago, Ill.—City Comptroller Walter H. Wilson has written a letter to Mayor Busse, stating that he finds a discrepancy in the average wage received by city employees and employees of private enterprises amounting to 30 per cent in favor of municipal workers. In his communication Mr. Wilson states the argument of those who claim that the municipal employees should be higher paid. The theory is, "The city's employees should have greater compensation because when entering the civic service they give up the hope for material advancement which private business alluringly holds out for the future. It must also be borne in mind that the civil-service law permits the same compensation to the city's clerks of like position, without the power to differentiate as to personal ability and capacity permitted in private offices."

Insurgent Councilmen in Indiana

Hammond, Ind.—Every city in the Calumet region in Indiana, Hammond, Gary and East Chicago, has a majority of insurgent councilmen who have completely blocked the municipal government, the Mayors and the Boards of Public Works. Mayor Knotts, of Gary, is tied hand and foot. East Chicago's Council has balked at Mayor A. G. Schlieker's pet measures, the defiant majority declaring the Mayor had had his way long enough. The Hammond insurgent Aldermen rejected contracts made by the Board of Public Works and made it plain they were to rule according to lines laid down by the Indiana State Association of Councilmen, which will fight for aldermanic power or commission government.

Municipal Election in Mingo County

Kermit, W. Va.—At Kermit, Mingo county, where the Adkins family of feud fame is numerous, Dick Adkins was refused a ballot by the election commissioners. Adkins vowed that if he was not allowed to vote no one else should. Revolver in hand, he is alleged to have taken possession of the ballot box and tossed it into Tug River. This ended the election so far as Kermit was concerned. Adkin was arrested. The higher courts will be asked to determine what has been the result of the election.

Commission Government Elections

Moline, Ill.—Commission government was adopted January 3 by a majority of 535.

Rock Island, Ill.—Commission government was adopted January 3 by a majority of 812.

Springfield, Ill.—Commission government was adopted January 3 by a vote of 3699 to 3029. The opposition was led by local brewery interests, saloon windows having been placarded with "vote no" signs.

Rockford, Ill.—Commission government was defeated at an election January 3 by a vote of 4029 to 1097.

Texarkana, Tex.—Commission government was adopted January 3 by a vote of 108 to 47. The recall feature carried by a vote of 111 to 30. Only 155 votes out of a total of about 1,200 in the city were cast in the election.

Points in Montclair's Proposed New Charter

Montclair, N. J.—Charles H. Hartshorne, Chairman of the Law Committee of the Town Council, has explained the proposed new town charter as follows: In the new charter the Mayor is given the power of nominating all town officials, he said, and the Town Council approves or disapproves his choice. Other provisions of the new charter are the election of councilmen-at-large, the short ballot, through nominations of officials by the Mayor, non-partisan nominations, the appointment of a committee to examine into the fitness of the Mayor's candidates for office and a looser organization of town government by a division into four departments—town affairs, finance, public safety and roads and sewers, each eventually to be placed in charge of an expert.

City Funds to Be Deposited with Highest Bidder.

Muskogee, Okla.—An ordinance has been passed providing that the sinking and interest funds and all other city funds not needed for ordinary administrative expenses shall be placed as time deposits with the bank or banks offering the highest rate of interest upon daily balances. The Mayor and Council are empowered to require all depositories of city funds to put up a sufficient bond. Where two or more banks offer the same amount of interest the funds are to be equally divided.

New York Charter Report Ready

New York, N. Y.—The Charter Revision Commission has completed its work and its report is now being prepared for the Legislature. It will be presented about February 1.

Declares for Municipal Ownership and Control

Springfield, Mass.—Declaring that the experience of other cities and "good business" demands it, Mayor Edward H. Lathrop in his inaugural address in Memorial Hall declared that the time has come, if it has not passed, when the city should consider taking over the property and franchise rights of the gas and electric companies. He again urged that there be an auditing of the affairs of all the city departments, and severely questioned the value to the public of the merging of the Springfield & Eastern with the Springfield street railway. In the latter connection he said that it means the paying of \$36,000 a year in dividends on "nothing of value," and that the public should bear this in mind when improvements involving expense are asked of the company.

City Charter Completed

Oklahoma City, Okla.—Members of the Board of Freeholders have completed the work of drafting a new charter for Oklahoma City and have appointed Claud Weaver and Clark Hudson as a committee to arrange the final draft of the charter. The Board will present the document to the Mayor, after which time he may call an election for its ratification or rejection. The charter incorporates a pure commission idea of city government, ward lines left out except for school board purposes, the commissioners elected directly to their offices, which would be impossible under a system by which they were elected from wards, the initiative and referendum, the recall and the civil service. The Board held its first meeting six weeks ago, having completed the document in about one-half the time consumed by former boards.

STREET CLEANING AND REFUSE DISPOSAL

City's Streets Cleaned at Half Average Cost

Corning, N. Y.—From the report of Superintendent of Public Works Canfield it appears that regular sweeping of the paved streets was begun on March 20 and continued with a force of twelve men until October 21, and with a reduced force until December 2. The average length of pavement swept daily by each man was 2,475 lineal feet, or 625 square yards. The daily cost of sweeping per 10,000 square yards was \$1.66. In 1909 the cost was \$1.74; in 1908, \$1.90; 1907, \$2.16, and in 1906, \$2.28. From investigations made a few years ago of the cost of street cleaning in 210 cities it was found that the average cost of sweeping streets by machines averaged \$7.53 per 10,000 square yards, by hand \$2.45 per 10,000 square yards, and flushing the streets about \$3.18 per 10,000 square yards; that the cost per capita per annum of cleaning the streets in cities east of Mississippi was, in 1904-1905, 53 cents, and that the cost of those cities which kept their streets well cleaned was 60 cents per capita per annum. The entire sum expended on street cleaning this year was \$3,531.79, which is equal to 60 cents per capita, according to the last census.

Regulating Disposition of Rubbish and Care of Cans

West Orange, N. J.—On the recommendation of the West Orange Improvement League, an ordinance has been passed imposing a penalty of \$5 for throwing rubbish in the street, and requiring that all garbage and ash receptacles shall be removed from the street when emptied. The ordinance also provides the same penalty for destroying or damaging receptacles for refuse belonging to the town.

RAPID TRANSIT

Power to Void Street Car Company's Privileges

Indianapolis, Ind.—If the citizens of Indianapolis believe the Indianapolis Traction & Terminal Company has not complied with its franchise obligation in the matter of building cross-town street car lines and paving between the tracks, they have the privilege, under a State law, of bringing suit brought for the annulment of the company's franchise. In 1899 the State Legislature passed a law (the Indianapolis Street Railway Law) governing street railway companies in cities of more than one hundred thousand inhabitants, making it lawful for such companies to obtain from the city a franchise of not more than 34 years' duration. The franchise of the Indianapolis Traction & Terminal Company was granted in 1902 under this law.

City Said to Have Ample Power Over Traction Lines

New York, N. Y.—The rapid transit committee of the Chamber of Commerce has made a report which takes the position that the amendments made to the rapid transit act of 1909 give the city effective control of the future development and operation of transit lines. It is stated that the control given the city by the amendments carries with it the recall of any franchise and greatly strengthens the regulating powers relating already to the operation at the present vested in the Public Service Commission.

Revive Claims for Damage by Electrolysis

St. Paul, Minn.—Assemblyman Kane believes the Common Council should put life into the electrolysis suit if there is any merit in the action brought by the city against the St. Paul Street Railway Company for \$500,000 for alleged damages to water pipe by electrolysis. With a view of learning the present status of the suit he succeeded in having adopted by the Assembly last week a resolution requesting the Water Board to furnish the Council with data covering all phases of the case from December, 1902, when the suit was instituted, to the present time. Dr. Kane said the suit had been continued from time to time and he doubted if any member of the Common Council could tell what shape it is to-day. He said much money had been expended to obtain scientific data bearing on the electrolysis question and material sums had been spent for special counsel for the Water Board. He also inquired if the company had agreed to pay any damages by reason of the continuations of the suit from time to time.

Trenton Trolley Passes Go

Trenton, N. J.—As a forerunner of the better service promised patrons, the Trenton & Mercer County Traction Corporation, which is now in temporary control of the lines of the Trenton Street Railway Company, has announced that all free transportation will be recalled. This will affect 500 persons, among them being many of the officials of this city and of Mercer county. No one will be permitted to ride in the cars as a "dead head" other than employees of the company and firemen and policemen, when in uniform. Among those who must give up their "annuals" are members of the Common Council and other city officials who have failed to respect the action a year ago of the Council, which directed that all passes should be returned.

MISCELLANEOUS

Ordinance Against Prize Fights and Pictures

Ardmore, Okla.—The Board of City Commissioners has passed an ordinance against the showing of prize-fight pictures or the holding of prize fights or boxing contests of any kind within the city limits.

New Department of Landscape Gardening

Columbus, O.—The semi-annual appropriation ordinance submitted to Council by Mayor Marshall provides for a new department, that of Landscape Gardening and Forestry. The sum of \$5,000 is allowed the department for the first year.

A Municipal Challenge

Memphis, Tenn.—Mayor E. H. Crump has sent the following telegram to Mayor F. H. Kreismann, of St. Louis, Mo.:

Mayor F. H. Kreismann, St. Louis:

The City of Memphis hereby challenges the City of St. Louis to a public comparison of their respective advantages, industrially, commercially, socially and educationally. We assert that Memphis is a better city to dwell in and do well in than St. Louis. It possesses greater advantages in each of the above particulars generally and specifically, and that a friendly, frank comparison of the two communities will prove the fact which Memphis claims. As chief executive of the great city of St. Louis, do you accept the issue?
E. H. CRUMP,
Mayor of Memphis.

Place Municipal Reference Library Under Public Library

Milwaukee, Wis.—Council has decided to place the municipal reference library under the jurisdiction of the public library and appropriated \$5,000 additional for the use of the library board to carry additional expense. The library is to be retained in the City Hall.

Enjoins Increase in Telephone Rates

Portland, Ind.—The City Council has directed the filing of an injunction suit to prevent an increase of the price charged for service by the Home Telephone Company. Recently the company announced an increase of 25 cents a month, making the price \$2.25 a month for business houses and offices and \$1.25 for residences. When the new rates became effective with the first of the year, perhaps fifty telephones were removed and others have served notice of similar action.

War on Bucket Shops

San Francisco, Cal.—Mayor McCarthy wishes the city of San Francisco to join forces with the postal department in the war on bucket shops. In a letter to the Board of Supervisors he urges the passage of an ordinance to outlaw the professional stock gamblers and to make it an offense even to enter their establishments. In the draft ordinance he presented penalties of \$500 and imprisonment up to six months are provided.

Plan Municipal Exhibit

Toledo, O.—To plan for a municipal exhibit to be held in Memorial Hall, Mayor Whitlock called all of the heads of city departments together in his office last week and started them at work in gathering material for the city show. The dates have not been announced. It is planned to hold the fair for a week, with a noted expert on some municipal topic to lecture each evening. The object of the show will be to acquaint the people with their government in all its branches and to make practical demonstration of the work that is being done.

LEGAL NEWS

A Summary and Notes of Recent Decisions—Rulings of Interest to Municipalities

Computation of Indebtedness—Deductions

Elliot vs. City of Philadelphia et al.—Act April 20, 1874, provides that the word "indebtedness" of a city shall include all manner of debt, floating, as well as funded, and that the net amount thereof shall be ascertained by deducting from the gross amount, the moneys in the treasury, outstanding solvent debts and revenues applicable within one year to the payment of such debt. Held that, while municipal authorities cannot arbitrarily say that every claim of the city is an outstanding solvent debt or that revenues necessary to pay current expenses can be set aside to pay outstanding obligations, yet where there are bona fide outstanding debts due the city and revenues not necessary to meet current expenses are available for the payment of debts within the year, such deductions can be made under the statute in ascertaining the net indebtedness.—Supreme Court of Pennsylvania, 78 A. R., 107.

Bonds for Manual Training School

Maxcy vs. City of Oshkosh et al.—Under statute 1898, as amended by laws 1903, authorizing a city to vote bonds "for the erection, construction and completion" of school buildings, a city may issue bonds for the erection, construction and equipment of a manual training school since a school building is not completed within the statute until it is ready for use and occupancy and since the word "completion" must be given some force, and is not synonymous with the words "erection" and "construction."—Supreme Court of Pennsylvania, 78 A. R., 107.

Action on Surety Bond—Extra Work

City of Fergus Falls vs. Illinois Surety Co.—While payments to a contractor in excess of the amounts stipulated in the contract will release a surety company pro tanto, mere irregularities in the issuance of estimates upon which such payments are based will not so release it unless actual prejudice has resulted. A secret and unlawful agreement between the contractor and the engineer in charge to share in the profits of the contract does not release the surety. A charter provision of a municipality, providing, in case of default by a contractor in the performance of a public improvement, that the city shall furnish the labor and materials necessary to complete the contract, is complied with by letting one or more contracts for such completion. When a contract provides for the ordering of extra work, the requiring of such extras does not violate or change the contract, so as to release the surety. Unless the new contracts let after the default for the completion of the original contract differ so materially from the original as to amount to a departure from it, resulting in enhanced cost, the surety is not released. Although the estimates for payment during construction contain improper items, if the amount actually paid does not exceed the stipulated percentage of the amount which might in good faith be properly allowed, the surety is not discharged. In an action upon a contractor's bond after default, when it appears that the original contractor performed extra work, its value should be added to the contract price and the sum so found deducted from the amount the obligee was compelled to pay.—Supreme Court of Minnesota, 128 N. W. R., 820.

Contract for Water—Violation—Burden of Proof

Antigo Water Co. vs. City of Antigo.—The water company having sued the city for hydrant rentals, under contract provisions of an ordinance, and the city having denied liability, alleging that the service was not rendered as provided in the ordinance in that the system did not meet a required test as to capacity, and therefore that nothing ever became due therefrom under the ordinance, the burden of proof was on the water company throughout the trial to establish its claim by a preponderance of evidence, by showing that the service furnished complied with the terms of the ordinance and was sufficient to meet the test required.—Supreme Court of Wisconsin, 128 N. W. R., 888.

Streets—Alleys—Boundaries

Town of New Castle et al. vs. Hunt et al.—The monuments marking the initial point for the only plat of defendant town which was ever made were destroyed so that no accurate survey can now be made. The lines of an alley abutting plaintiff's property were marked by permanent improvements as they now exist from the time the property was first occupied, and at two different times the city engineer marked the boundary lines in conformity with such improvements and the town's claim that such improvements encroached upon the alley was first made over 75 years after the property was originally occupied. The improvements marking alley line consist of a hedge fence, houses, etc., and a \$4,000 residence. Held, that the town could not now claim that the lines of the alley as marked by the improvements were not the true lines.—Appellate Court of Indiana, 93 N. E. R., 173.

Excavation in Street—Action for Death

Voelker vs. Hill-O'Meara Construction Company.—Under the rule that one suing for negligent death must prove not only negligence, but that decedent met his death by reason thereof, and the causal connection as a fact, it is sufficient where the facts proved are of such a nature and are so connected and related to each other that the conclusion therefrom may be fairly inferred. There is no presumption of law that decedent for whose death an action is brought committed suicide, and where the surroundings do not indicate how he came to be where he was when found, the presumption is that it was without design. In questions touching the conduct of men, motives, feelings and natural instincts constitute evidence for the jury. In an action against a contractor excavating in a sidewalk without guarding the excavation or maintaining warning lights as required by a city ordinance for the death of a pedestrian falling into the excavation, evidence held to justify a finding that decedent met his death by falling into the excavation while walking on the sidewalk, authorizing a recovery.—St. Louis Court of Appeals, Missouri, 121 S. W. R., 906.

City's Liability for Notary's Fee

Morgan vs. City of New York.—The city of New York is not liable for the official fees of a notary public or commissioner of deeds verifying affidavits at the request of a city or county official, but the remedy of the notary or commissioner is against the person procuring the service, and the fee must be demanded of the officer at the time of the rendition of the service or within such time thereafter as will enable the officer in the presentation of his claim for audit to include the same and be reimbursed.—New York Supreme Court, 125 N. Y. S., 1034.

Notaries' Fees—Responsibility of City

Bookman vs. City of New York.—Code civil procedure specifically allows a notary to demand his fee for administering an oath in advance, and section 3291 provides for the reimbursement of an officer who is required to take an oath, etc. Held, that in view of these provisions, a notary who administers an oath to a municipal officer must demand his remuneration from such officer, who in turn may be reimbursed by the city, but the city cannot be held liable directly to the notary.—Court of Appeals of New York, 93 N. E. R., 190.

Action for Injuries—Harmless Error

Barnes vs. City of St. Joseph.—Where, in an action against a city for injuries by falling into a hole in a sidewalk, the evidence showed conclusively that plaintiff fell into a hole in the walk which was made by surface water, and was of a size and depth sufficient to be dangerous to travelers, especially on a dark, rainy night, as was that in question, and that it had existed for four months before the injury, error in an instruction which assumed to cover the whole case, and directed a verdict for not requiring the jury to find that the hole made the sidewalk unsafe to pedestrians and not instructing that the city was entitled to a reasonable time after actual or constructive notice thereof in which to repair the defect was not prejudicial to the city and hence was not reversible.—Kansas City Court of Appeals, 132 S. W. R., 318.

City's Liability for Purity of Water Supply

Oakes Mfg. Co. vs. City of New York.—Where a municipality maintains a public water system it is acting as a governmental agency and is therefore not liable for negligence in maintaining the water supply. Where a ministerial duty is specifically imposed by statute or otherwise upon a municipality, it is liable for the negligence of its officers in the performance of such duty. Greater New York charter makes the consolidated city the successor of the constituent municipalities, with all their rights, powers and duties. Section 517 vests in the city of New York and places on the commissioner of water supply the rights, powers and obligations of Long Island City as to the public water supply. Sections 479 and 483 further charge the commissioner of water supply with maintaining the purity of the water supply. Long Island City Charter provided for water commissioners, with power to establish a water supply, and made it their duty to take all proper measures to preserve the purity and sufficiency of the water. Held, that even if a duty was imposed on the consolidated city in favor of inhabitants of Long Island City to provide a public supply of water, an error in selecting a source of supply which was subject to contamination by sea water was error in the exercise of a discretion judicial in its nature and imposed no liability on the consolidated city for damages.—New York Supreme Court, 125 N. Y. S., 1030.

Street Railway Franchise—Breach of Contract

City of York vs. York Railways Company.—That the city stood by and saw work done on the line after expiration of the period set for its completion, required the company to expend money in paving a street and accepted the percentage of the gross earnings on the track laid stipulated for in the ordinance did not estop the city from collecting the amount stipulated in the contract as damages for default in completing and operating the railway on time, where it did not appear that the city claimed a forfeiture of the franchise of the railway company or questioned its right to use the part of the line that the railway company had completed and was paying the percentage upon.—Supreme Court of Pennsylvania, 78 A. R., 128.

Street Improvement—Taxes—Injunction

Dubbert et al. vs. City of Cedar Falls et al.—A city council's resolution of necessity for a street improvement having been regularly adopted, notice thereof having been given, persons having made objection before the council, not only as property owners but as taxpayers, and the work having been ordered by proper action, the council acquired jurisdiction to proceed so that a tax thereafter levied for the street improvement fund, out of which the expenses of the improvement not taxable to abutting property were to be met was not a tax levied without jurisdiction. Mere irregularities on the part of the tribunal having jurisdiction to proceed with the levy of a tax to pay part of the expense of a street improvement cannot be raised by a taxpayer in an action to enjoin collection of the tax.—Supreme Court of Iowa, 128 N. W. R., 949.

USE OF SPACE UNDER STREETS**Street Titles—Ownership of Fee—Plats**

Williams vs. City of Chicago.—The plat of Ft. Dearborn addition to the city of Chicago, made by the United States in substantial compliance with the statute of Illinois then in force, vested in the city of Chicago the fee to the streets, alleys and public grounds designated on the plat as completely as if made by an unconditional conveyance in the ordinary form, so that the city could charge owners of lots abutting upon streets within the addition for the use of sidewalk space in the streets.—Supreme Court of Illinois, 93 N. E. R., 165.

Street Titles—Ownership of Easement

Northwestern Safe & Trust Company vs. City of Chicago.—Quincy street, in Chicago, being laid out in 1854 by plat not certified and acknowledged as required by the statute then in force, the city acquired only an easement and not the fee therein, which remained in the abutting owners.—Supreme Court of Illinois, 93 N. E. R., 160.

Street Titles—Ownership of Fee

Sheldon vs. City of Chicago.—The fee in all of the streets in the original town of Chicago rests in the city of Chicago.—Supreme Court of Illinois, 93 N. E. R., 167.

Title to Street—Invalid Dedication

Farwell vs. City of Chicago et al.—Where a Chicago street was opened by a plat made in 1851 and recorded in 1852, which plat was acknowledged before a county clerk in Connecticut, who was not authorized by statute to take acknowledgments of plats, the title to the street did not pass to the city; and the maker of the plat, when he subsequently conveyed lots abutting on the street, conveyed to the center of the street, so that the city could not require abutting owners to obtain a permit before using space beneath the surface of the streets adjoining their premises in a manner not interfering with the public easement.—Supreme Court of Illinois, 93 N. E. R., 168.

Use of Subsurface Space—Street Acquired by Condemnation

Illinois Trust & Savings Bank et al. vs. City of Chicago.—The plat of school section addition to Chicago being a common law plat, not having been certified, signed or indorsed as required by the statute in force at the time, the fee to Monroe street therein is in the abutting owners, and the city cannot require them to obtain a permit to use the space underneath sidewalks adjoining their property in such street in a manner not interfering with the public easement. Where a city condemns property for a street, it acquires only an easement therein, the fee remaining in the abutting owners, and they cannot be required to obtain a permit to use the space underneath the sidewalks adjoining their property on such street in a manner not interfering with the public easement.—Supreme Court of Illinois, 93 N. E. R., 160.

Rights of City to Compensation

Sears vs. City of Chicago.—An ordinance provided that no person should use space underneath the surface of a street or construct or maintain any structure thereunder without a permit from the city, and that every applicant for such a permit should file a \$10,000 bond to keep the city harmless from any claim of damage arising out of the use of such space or structure, and that a certain compensation should be paid for such use. Held, that the ordinance was valid as to owners of lots located upon streets in which the city owned the fee, but could not be enforced against owners of lots abutting upon streets wherein the city had only an easement.—Supreme Court of Illinois, 93 N. E. R., 158.

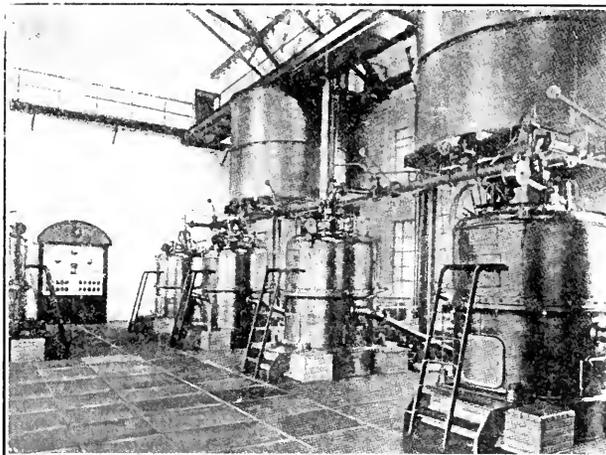

Permit for Use of Subsurface Space—Reasonableness

Tacoma Safety Deposit Company vs. City of Chicago.—An ordinance providing that no person shall use space under a street nor maintain any structure thereunder without a permit from the commissioner of public works of the city, requiring a \$10,000 bond to save the city harmless from claim of damage arising from the use of such space or structure and for maintenance of the street, exacting a rental, when the space so used does not extend more than 15 feet below the surface of the street and the adjoining property is subject to general taxation, of a sum equal to 4 per cent of the amount determined by multiplying the number of square feet of surface over the space so used by a sum equal to one-tenth of the land value of the average square foot in the lot abutting on such space, as fixed by the last assessment thereof for general taxation, the annual compensation in no case to be less than \$10, providing that the ordinance shall not apply to one using such space at the time under any ordinance theretofore passed requiring payment of compensation for such use, if such person is making such payments, nor so long as such payments are made according to the terms of such ordinance, and providing that, if any person using space underneath a street, sidewalk, etc., shall fail to take out a permit as provided in the ordinance within 90 days after it takes effect, the commissioner of public works shall proceed to remove such structure and close the space therein, as applied to streets in which the fee is in the city, is not unreasonable nor discriminatory.—Supreme Court of Illinois, 93 N. E. R., 153.

MUNICIPAL APPLIANCES

Sludge Drying Machine.

A GERMAN sewage sludge drying machine, called the Shafer-ter-mur, is being offered to municipal authorities by the Lathbury-D'Olier Company, Morris Building, Philadelphia, Pa. The dryer, which is a centrifugal machine, is claimed to convert raw sewage sludge rapidly into inodorous matter that can be easily handled. The machine works automatically, drying the sludge by centrifugal action until a sufficient amount of comparatively dry sludge is accumulated, and then discharging in such a manner that it is broken up and is easy to handle. The machine consists essentially of a drum which is fitted with a central tube for the introduction of the raw sludge, and contains a number of chambers. The chambers are provided with sieves fitted with checking devices. From a reservoir above the sludge enters the chambers by way of the central tube. As the cylinder revolves, the sludge is forced toward the outer walls. The water passes through the sieves and flows off by an annular pipe. Fresh sludge enters and goes through the same process until the chambers are filled with dry sludge. Then a door is opened, the sludge thrown out by centrifugal force and as it strikes the walls of the outer shell, in which the revolving cylinder is encased, it is broken up, falls to the floor and is wheeled away in barrows. The process is then repeated. In installations now in operation from 70 to 140 cubic feet per hour of raw material have been treated, giving a residue of dry sludge weighing from 660 to 1000 pounds. The power required to operate varies from 8 to 10 horsepower.

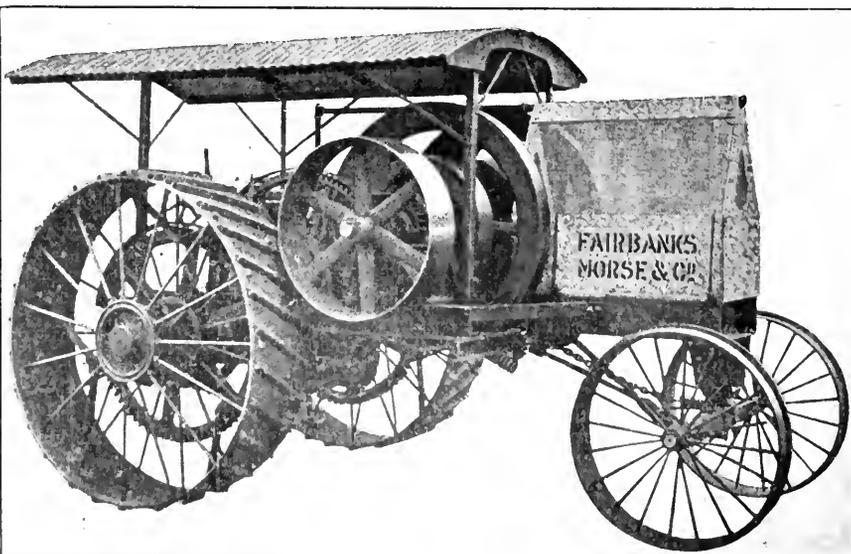

GERMAN SLUDGE DRYING MACHINE

Gasoline Traction Engine.

A TRACTION engine is made by Fairbanks, Morse & Co., Chicago, Ill., which is driven by a 25-horsepower, 1-cylinder, horizontal, water-cooled, 4-cycle gasoline engine of the usual Fairbanks-Morse construction. Make-and-break ignition is used with current from a magneto. Dry batteries are provided

for starting. The cooling water is circulated by a belted centrifugal pump and is kept cool by means of a screen cooling tank mounted at the front end of the frame. The tank has a peaked top consisting of two inclined screens. The heated water from the jackets is delivered at the peak of the tank and runs down over the screens, being cooled by evaporation. The engine is started by means of a hand pump with which the initial charge of air and gasoline mixture is forced into the cylinder. The transmission of power from engine to rear wheels is through a friction clutch, differential shaft and spur gearing. Only one gear ratio and a reverse are provided. The ratios are 1:20 forward and 1:32.5 on the reverse. Speeds of from 1.7 to 2.5 mi. per hr. are obtained by varying the engine speed from

GASOLINE TRACTION ENGINE—TWENTY-FIVE HORSE-POWER

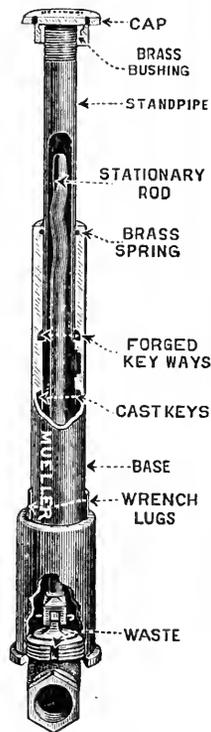

175 to 250 r. p. m. The maximum draw-bar pull available, after allowing for efficiency of transmission, should be about 2,700 lbs. The same clutch is made to serve for both the drive and the belt pulley. The truck frame is made of structural steel channels and l-beams. A removable canopy top of galvanized steel roofing is provided. The diameter of the rear wheels is 72 inches, with 20-inch face and diagonal cleats of malleable iron. The floor space occupied by the tractor is 8 feet 9 inches by 15 feet. The weight is 14,500 pounds. The manufacturers will send catalogue 1313 giving further details on request.

New Extension Service Box.

THE H. Mueller Manufacturing Company, Decatur, Ill., and New York City, have recently placed on the market a new extension service box of their own manufacture, which possesses many points of advantage. It is designed to obviate the annoyance and expense to which companies are subjected by reason of theft, breakage, and vandalism.

The box is made in the Arch and Minneapolis patterns, the latter being illustrated here:

The trouble arising with many service boxes, by reason of being raised by frost, cannot, it is claimed, occur with the Mueller Extension Service boxes. The standpipe slides freely in the base, and if there is any action by frost only the standpipe is moved. The base remains rigid. The standpipe returns to its original position under slight pressure. In case of a heavy weight on the cap the standpipe yields to the pressure and there is no strain on the base or the connection. The length of the box can be changed at any time through a range of one foot. On the lower end of the standpipe are two forged key ways which fit keys on the inside of the base, thus giving a double lock on the pipe. A strong circular spring in a recess of the base holds the standpipe to any desired position. The spring cannot be lost and it can only be removed by considerable effort.

The cap is extra heavy and has a brass bushing to fit the standpipe. The bushing is firmly imbedded in the cap. This is done by placing the flanged end up and permitting the iron to run around it when casting. It cannot be removed except by the actual destruction of the cap, and the cap cannot be taken from the box except by the use of the spanner.

The rod is of wrought iron with a malleable iron clamp forged on the lower end to fit flat or square head cocks. The rod is held in position on the cock key by means of an annealed heavy brass wire pin, which fits in holes drilled in both jaws of the clamp and

the key head. The upper end of the rod is forged to fit the shut-off key. In boxes for 1/2 to 1 1/4 inch cocks a wave is forged in the upper end of the rod to keep it in a central position. In the boxes for larger cocks the rod is of sufficient size to do this without the wave. The key for the smaller boxes is made of malleable iron, and for the larger boxes of wrought steel. All keys are of the combination type—that is, for taking off the cap and for digging away dirt and ice.

Dry Powder Extinguisher.

THE Manville Fire Extinguisher, made by the H. W. Johns-Manville Co., 100 William street, New York City, consists of a metallic tube 22 inches long and 2 1/4 inches in diameter filled with a dry chemical compound, composed of fire chemicals having the desired properties for extinguishing fire and harmless to anything else. This powder, when brought into contact with fire, generates a large quantity of carbon dioxide gas, which absorbs the oxygen in the air without which no fire can live. The extinguishers are hung on hooks placed conveniently where fire protection is needed. A downward jerk removes a friction cap at the top of the cylinder which carries the hook, and the extinguisher is ready for use. The Manville extinguisher will put out gasoline or other oil fires.

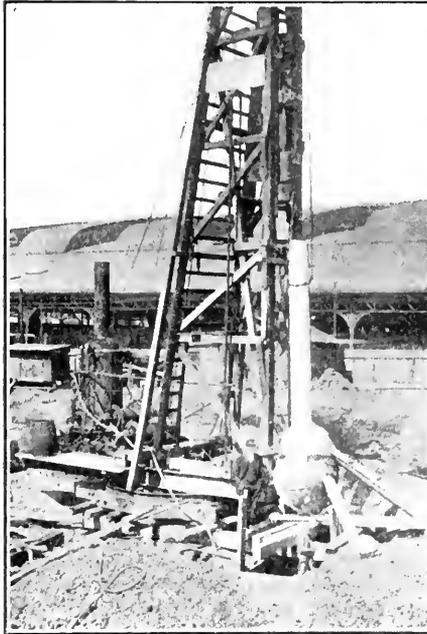

The Pedestal Pile.

THE apparatus necessary to form the pedestal pile consists of a casing and a core. The casing is a steel pipe, 16 inches in diameter and 3/8 inch thick, with outside reinforcing bands, top and bottom. The core is a smaller diameter pipe, with a cast steel point and an enlarged cast steel head. The core is inside the casing, its enlarged head engaging the top of the casing and its lower pointed end projecting some 4 or 5 feet below the casing. In the head of the core there is an oak driving block which receives the blows of the hammer. The core is fitted into the casing and both are driven into the ground to the desired depth.

The core is then pulled out, and a charge of concrete is dropped to the bottom of the casing. The rammer is lowered into the casing and driven down through this concrete. As a result the concrete is compressed and is forced out against the soil, pushing back and compacting the surrounding earth. The operation is repeated. The rammer being withdrawn, another charge of concrete is dropped down inside the shell and the rammer again driven through it, causing the concrete to be forced out still further into the surrounding earth. This process is con-

tinued until a sufficient volume of concrete has been rammed down to insure a footing of the desired size. The ram is then removed and the casing is filled to the top with wet concrete.

The casing is removed slowly and evenly, the concrete falling into position and filling out the thin space formerly occupied by the casing. For this reason, after the casing has been com-

PEDESTAL PILE EXCAVATED AND RAISED FOR INSPECTION

pletely removed, the surface of the concrete in the shell will be found to have sunk some 3 to 6 feet, according to the length of the pile. The volume of concrete represented by this sinkage has been found to agree exactly with the volume of the casing wall which it replaces. This fact has been confirmed with Pedestal Piles placed in mud, soft clay, trash fills and quicksand, proving conclusively that there is no flowing in of the earth after the casing is withdrawn. The resulting pile is a column 17 inches in diameter with an enlarged base or pedestal, as shown in the photograph.

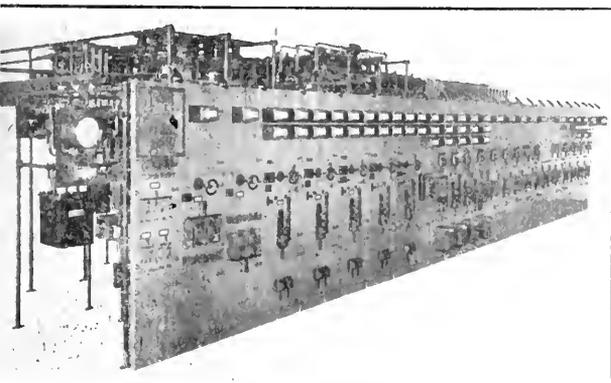

Switchboard for Kioto (Japan) Municipal Water Works.

Two switchboards of considerable size have lately been built by the General Electric Company of Schenectady, N. Y., for the Kioto Municipal Water Works, Japan. The generating station

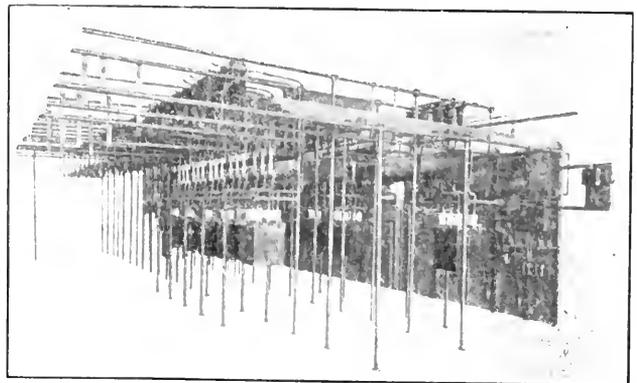

board is shown in the illustration. It is 40 feet long and consists of 24 3-section marble panels, supported on a pipe framework. This framework also carries the oil switches, disconnecting switches, instrument transformers and several sets of buses. The station equipment controlled from this board consists of 2 turbo exciters, 125 volts, 125 kilowatt; 5 3-phase turbo generators, 6600 volt, 1500 kilowatt, 60 cycles; 3 3-phase outgoing lines, 6600 volts, to sub-station; 1 bank of transformers, 6600/3500 volt; 7 3-phase feeders, 3500 volt; 3 3-phase, 4-wire feeders, 3500 volt.

Each exciter has a triple-pole, double-throw switch and a double set of buses so arranged that either exciter can be used to excite the generator fields, while the other is used for station lighting and auxiliary power. The alternating current generator panels, in addition to the usual instrument and synchronizing equipment, have reverse current relays for automatically tripping the oil switches on a reversal of current which might result from a short circuit in the winding of the generator or from a failure of the prime mover. The panels controlling the different lines and feeder circuits are equipped with inverse time limit overload relays in connection with automatic oil switches, in addition to the indicating instruments.

Continuity of service was considered of primary importance in the design of this switchboard, and to insure this an arrangement of spare equipment was adopted. For the transformer bank, consisting of 3 750-kilowatt single-phase units, one spare transformer of the same capacity was installed to take the place of any disabled unit. These four transformers are connected through transfer switches on the primary and secondary sides to enable the operator to disconnect any unit and connect the spare for service in the shortest possible time. Spare oil switches for both the three-phase, three-wire, and the three-phase, four-wire feeder systems, connect the main feeder bus with a set of emergency buses, to which any feeder circuit can be connected through transfer switches. The feeder oil switches are provided with disconnecting switches on each side and can be taken out of service for inspection and cleaning without interrupting the circuit. A ring-bus system is used, by which certain groups of feeders may be connected to different generators independent of other groups or of the whole system operated together. The sub-station switchboard consists of 12 marble panels and is very similar to the board for the generating station. Spare transformer systems and oil switch arrangements for the two stations are identical.

6600 AND 3500VOLT A.C. SWITCHBOARD

ARRANGEMENT OF SWITCHING APPARATUS

NEWS OF THE SOCIETIES

Organization of City Officials for Standardizing Paving Specifications.

The second annual convention was held in New York City, January 10 to 13 inclusive, the Executive Committee holding a final meeting on Saturday, the 14th. The convention opened Tuesday morning with an address of welcome, on behalf of the city, by President McAneny, which was replied to by Mr. John McVicar, of Des Moines. After the roll call the remainder of the day, up to 5 o'clock, was occupied with meetings of the Executive Committee and of the Committee on Credentials. At this time the convention reassembled and listened to the address of the President, report of the Secretary, etc. Thirty-two cities were represented by 73 delegates, and a number of contracting firms, associate members of the organization, were fully represented. Practically all of the corporate members were appointed on the several committees, and Wednesday and Thursday were devoted to the consideration by these committees of the nine specifications, reports of the committees being received from about 11 a. m. Friday until 7 p. m. The business meeting was held Friday evening. The time and place for the next meeting were left to the Executive Committee, which later decided upon New Orleans, and January 15, 1912. The election of officers resulted in the following: President, Geo. W. Tillson, New York; First Vice-President, Capt. W. J. Hardee, New Orleans; Second Vice-President, L. W. Rundlett, St. Paul; Third Vice-President, Geo. W. Craig, Omaha; Fourth Vice-President, Mr. Faris, Kansas City; Secretary and Treasurer, John B. Hittell, Chicago. Most of the committees presented what might be considered as final reports, and although no official action or intimation of the fact was made, it is quite probable that the next convention will see the winding up of all the work of revising specifications and the disbanding of the society, owing to the completion of the task which it set for itself.

A year ago we published the specifications recommended by the several committees of this organization, and there have been few changes made in these by the committees this year. Probably the most important change was the addition to the brick pavement specifications of clauses covering pitch and asphalt fillers. The three questions which seemed to have the most interest for the convention at large were this question of bituminous fillers for brick pavements, the creosoting oil for wood block and the specifications for asphalt in sheet asphalt pavements. The creosote oil specifications were left practically unchanged from last year, except that the specific gravity is defined as between the limits of 1.10 as a minimum and 1.14 as a maximum. The committee states that they recognize that the material called for must probably be formed by the addition of coal tar pitch. They consider it desirable to have the treatment provide waterproofing as well as preservative conditions. For wood they give as the standard "Southern yellow pine," as covering both long and short leaf. They would also, however, admit Norway pine, black gum and tamarack, with 20 pounds of preservative for pine and tamarack and 22 for gum; although 16 pounds may be permitted where the traffic is heavy, at the discretion of the

engineer. A five-year guarantee period was recommended.

The committee on brick unanimously decided to drop the absorption test and adopt the standard rattle and shot test of the National Paving Brick Manufacturers' Association. As stated above, they provided alternative specifications for coal tar pitch filler and for asphalt filler. They recommended a five-year guarantee.

The section of the sheet asphalt specifications which received the most discussion was the admission of the so-called artificial asphalts derived from Southern and Western oils. The specifications were finally reported in such form as to permit the use of asphalts from each of these districts. The committee on bituminous concrete (which is defined as a mixture for paving, consisting of broken stone, sand and bituminous cement, mixed before laying) recommended laying upon a macadam base from eight inches to four inches thick, depending upon the traffic. The specifications for the coal tar binder to be used should be based upon analyses of binders which have given satisfaction in the locality in question, so as to admit all the best of these binders. As to any patents which might be infringed by such mixture, this question was not considered, except to state that each city must do as it thinks best in this matter.

All of the specifications were adopted without any dissent, except for two negative votes in the case of the wood block specifications and four against the asphalt specifications. All of these specifications are to be withheld from the public until they can be printed and copyrighted by the association; consequently it will not be possible, or at least courteous, for us to publish the same at this time.

New York State Road Builders' Association—Seventy-six State road builders, all members of the State Road Builders' Association and representing over \$5,000,000 of "tied-up" capital, met at Albany January 9 and appointed a committee to wait on Governor Dix. The committee will place the position of the road builders before the Governor and ask that the delay in awarding the contracts for the summer's work be shortened as much as possible.

"We do not care whether the roads are built under the direction of a commission or the State Engineer," said Edwin F. Van Hoesen, a former deputy state engineer, "and our meeting has no political significance. We are not trying to force the issue of awarding the contracts, but simply wish to present our side of the case to Governor Dix, so that he may be aided in coming to a decision. The quicker the contracts are awarded the better it will be for the contractors and the cheaper for the state. If the road building firms do not get their contracts as early as possible, many of them will be forced to go into other branches of work. This will withdraw a number of them from bidding on the roads, and as the competition is lessened the prices will go up in proportion."

Following is the committee which called on the Governor: Chairman, Samuel Beskin, of Fishkill Landing; M. R. Aldridge, of Poughkeepsie; H. C. Merritt, of Tuckahoe; E. J. Cunningham, of Hudson Falls; T. C. Brown, of Schenectady; F. L. Cohen, of Buffalo; John Consalus, of Albany; H. B. Sproul, of Peekskill; E. C. Rynds, of Albany, and W. S. Smith, of Rochester.

From the road builders' point of view

it is essential that the work begin early in the spring as weather conditions will permit, for many reasons. Practical road builders and foremen are scarce, and for that reason many contracting firms keep a number of high salaried men on their payrolls during the winter, so that they will be sure of having competent superintendents when the building season opens. Many of them have to keep large numbers of horses during the winter, and one contractor said recently that his expense for this item alone was over \$35 a day.

Road building machinery cannot, in many cases, be used for any other kind of work, and if the contracts are not awarded as soon as possible in the spring, the contractors lose large amounts by reason of idle capital. In many cases the contracts specify local stone for use in building the roads. This stone has to be secured late in the winter or early in the spring before the farmers begin their planting, for the farmers will not allow the stone to be picked from their fields after the crop is in the ground.

Labor is also scarce, and all indications point to a greater scarcity this year than ever before. Many of the contractors carry many men in their "organization" over from year to year, but if the men can not secure work early in the spring, they go into some other branch of work, which leaves the contractor without the required number of men to carry on his work economically. As the season progresses labor becomes more scarce, so that in the months of July and August it is nearly impossible to secure enough men to even make a pretense of carrying on the contract. Then, if the work is not finished at the time specified in the contract, the contractors are forced to pay the State a fine of \$10 a day. The following officers were elected: President, Joseph Walker, of New Paltz; vice-president, John E. Consalus, of Albany; secretary, Edwin F. Van Hoesen, of Albany. M. R. Aldridge, of Poughkeepsie, and A. J. Rockwood, of Rochester, the former president of the association, were elected trustees for two years.

Carolina Municipal Association—The tentative program of the annual meeting at Raleigh, January 18, provides for addresses as follows: "Commission Form of Government," E. J. Justice, of Greensboro, and others; "County and City Government," Mayor Hawkins, of Charlotte, and Mayor John, of Laurinburg, and others; "City Taxation," Mayor McNeill, of Fayetteville, Mayor Wynne, of Raleigh, and others; "Municipal Sanitation," Dr. W. S. Rankin, secretary of the State Board of Health, and others.

Guilford County (N. C.) Good Roads Association—Dr. J. T. J. Battle, R. D. Douglas and S. L. Trogden compose a committee which is arranging with the county commissioners for a meeting in the spring, at which State Highway Engineer W. L. Spun will be asked to speak. The matter of road grading seems to be the problem of most immediate importance.

Virginia-Tennessee Agricultural and Industrial Association—At a meeting at Bristol, Va., January 5, the association endorsed the proposed State highway across Tennessee, whereby Memphis, in the west, and Bristol, on the Virginia border, are to be united by a road that will be fully 500 miles in length. Such a road, it is believed, will be of great value to the State.

Oklahoma Municipal League—The first annual convention was held in the city Council chamber, Oklahoma City, January 4-6. The sessions were opened by Mayor A. F. McGarr, president of the league. Mayor Dan V. Lackey delivered the address of welcome. H. L. Martin, Tulsa, responded. The following addresses were made: "Essentials of a State League of Municipalities," Hon. Frank G. Pierce, Marshalltown, Iowa, secretary of the Iowa League of Municipalities; "Benefits That Should Result from a State Municipal League," Hon. Grant Foreman, Muskogee; "The Dependence of the State of Oklahoma on Its Municipalities," Gov. Charles N. Haskell; "Importance of Uniform Municipal Accounting Among the Cities of the State," Prof. James H. Sawtell, chair of municipal science, State University, at Norman; "The State, the City and the Riparian Owner—The Sanitary Inter-relation," Alexander Potter of New York, consulting engineer for Muskogee and Oklahoma City; "Importance of a Sane Building Code for the Cities of Oklahoma," Charles W. Dawson, architect, Muskogee; "State Laws Governing Public Works in Municipalities of Oklahoma," Hon. Charles L. Daugherty, State Labor Commissioner; "Municipal Illumination," A. Larney, Cleveland, Ohio; "Municipal Franchises," Hon. Robert L. Williams, Associate Justice of the Supreme Court; "Legal Status of the Commission Form of Government Under the Constitution and Statutes of Oklahoma," Hon. W. A. Ledbetter, Oklahoma City; "Civic Righteousness," Bishop E. E. Hoss, Nashville, Tenn.; "Control of Public Utilities," Hon. James E. Ellison, chief engineer Public Service Commission, St. Louis; "Modern Fire Protection," J. Ed. Shantz, Dallas, Tex.; "How to Reduce Insurance Rates," C. T. Ingalls, Oklahoma City.

American Water Works Association—The thirty-first annual convention of the American Water Works Association will be held in Rochester, N. Y., June 10-16, 1911, with headquarters at Powers Hotel, where ideal arrangements for business sessions have been made.

The Water Works Manufacturers Association will have charge of the exhibits and entertainment features. The program will be arranged to allow ample time for entertainments and getting acquainted, yet the business features will not in any way be neglected. A number of excellent papers have been promised, and an interesting and instructive program will be supplied.

Special attention will be given to the "Question Box" and "Experience Meeting," for which ample time will be set apart. These features are of the greatest possible interest and benefit to water works managers. They give an opportunity to tell one's troubles, and receive the assistance of others who have had and overcome similar troubles.

A special circular concerning these features will be sent later. John W. Alford, 1207 Hartford Building, Chicago, Ill., is president, and John M. Diven, 14 George street, Charleston, S. C., secretary.

Engineers and Architects' Club of Louisville, Ky.—A committee of the club, composed of J. C. Murphy, G. Wilbur Hutley and Webster Gazlay, called upon Mayor W. O. Head last week and explained their views of what should be done toward planning the future development of Louisville. Mr. Murphy, who was the spokesman for the committee, informed the Mayor that at a meeting

of the Engineers and Architects' Club, resolutions were adopted in which the method of laying off streets and subdividing land were referred to as "deplorable and should be changed before the city is irretrievably ruined." Mr. Murphy called to the attention of Mayor Head that the foundation of all civic improvement is the proper planning of a city, and urged that the Board of Public Works and the General Councils provide a comprehensive plan of the city, so that all future extensions may be accomplished along rational lines. Mr. Murphy is in favor of a map being drawn that will show the extension of city streets for the next hundred years to come, so that factories locating in the county will be able to arrange their plants so as not to conflict with a future annexation, and subdivisions can be laid out uniformly with the city plan. A definite plan for the river front and for railroad tracks within the city is also deemed imperative by the Engineers and Architects' Club.

City Club of New York City—Dr. Ernest J. Lederle, Commissioner of Health, at a meeting January 7, spoke on what the department had accomplished and what is to be done for its improvement the coming year. Dr. Charles L. Dana presided, and told how, under the commissioner-ship of Dr. Lederle, the death rate had been reduced to less than 15 per 1,000. During the year, Dr. Lederle said, important changes had been made in the Sanitary Code, particularly in regard to the requirements in milk standards and in the killing of vicious dogs. The section regarding the smoke nuisance, particularly as applied to automobiles, was being rigidly enforced, he said, and since September 29, 947 arrests had been made for violations. The establishment of a bacteriological detective bureau had done effective work, especially in tracing the causes of typhoid fever. The Commissioner said the department had experienced a great deal of trouble from physicians who neglected to issue certificates of birth, but the department is going to strictly enforce the law. During past years, the Commissioner said, he had discovered that a large amount of whisky was consumed in the city hospitals, and an investigation had showed that it wasn't all consumed by the patients. He said he substituted another stimulant for whisky, and while 938 gallons had been used in 1906 only 25 gallons were consumed in 1910.

Kentucky State Fire Prevention Association—The annual meeting of the association was held at Louisville January 6. According to its report, one of the things which the Fire Prevention Association did during the past year was to secure much municipal legislation providing for better conditions. It has formulated a book of ordinances, which it seeks to have enacted in such cities as any member may feel there is a need for effective legislation. These ordinances provide for better fire equipment, improved water supply, the prevention of the erection of tile, terracotta, cement-block, brick-on-edge and metal flues; the prohibition of the storage of powder, explosives and combustibles in dangerous places; for the inspection of premises to prevent hazards and the regulation of garages and motion picture machines. The following officers were elected: William Sowards, Cincinnati, president; C. L. Foster, Lexington, vice-president; Miss Louise Stark, Louisville, secretary and treasurer.

Town Superintendents of Highways, New York State—The second annual convention was held at the Court House, Binghamton, N. Y., January 4. Deputy State Commissioner Frank D. Lyon in an address advocated the adoption of the patrol system of caring for roads. About 1,000 men would be required for the work. These patrolmen, according to the plan which he hopes to see adopted, would be employed for seven months of the year, and would travel over the dirt roads in their respective towns, making ordinary repairs after the manner of the patrolmen on the macadam highways. Though the men would be paid about \$75 a month, Mr. Lyon believed that they would do the work with less expense than is entailed by the present plan of intermittently sending out a "gang" of men to do the repair work.

The town superintendents also heard an interesting description of the method of caring for dirt highways by use of a "road hone," which is used like the "split log drag" to even the surface of roads, after rains, and level off the ruts. Superintendent of Highways John Hodgeman, of Saratoga County, who described the method, said that in his county it costs only about \$5 a mile to keep roads properly crowned and in good condition by the use of the "hone."

Calendar of Meetings

- January 16-20.
Canadian Cement and Concrete Association.—Annual Convention and Exhibition, Toronto, Ont.—R. E. W. Hagarty, Secretary, 662 Euclid avenue, Toronto, Ont.
- January 17-19.
American Institute of Architects.—Annual Convention, San Francisco, Cal.—Glenn Brown, Secretary, Octagon, Washington, D. C.
- January 18-19.
American Society of Civil Engineers.—Annual Meeting, New York.—C. W. Hunt, Secretary, 229 W. 57th street, New York.
- January 20.
Illuminating Engineering Society.—Annual Meeting, New York, N. Y.—P. S. Millar, Secretary, 29 W. 39th street, New York, N. Y.
- January 20-21.
Kansas Engineering Society.—Annual Meeting, Topeka.—W. S. Gearhart, Secretary, Kansas State Agricultural College, Manhattan, Kan.
- January 24.
New Jersey State Association of County Engineers.—Annual Meeting, State Home, Trenton.—Edward E. Reed, Secretary, Trenton.
- January 24-26.
American Society of Heating and Ventilating Engineers.—Annual Meeting, New York, N. Y.—W. M. Mackay, Secretary, P. O. Box 1818, New York, N. Y.
- January 24-26.
Ohio Engineering Society.—Annual Meeting, Columbus, O.—C. J. Knisely, Secretary, New Philadelphia, O.
- January 25-27.
Illinois Society of Engineers and Surveyors.—Annual Meeting, East St. Louis, Ill.—E. E. R. Tratman, Secretary, 1636 Monadnock Block, Chicago, Ill.
- February 1-3.
Nebraska Cement Association.—Western Cement Exposition, Omaha, Neb.—Peter Palmer, Secretary, Oakland, Neb.
- February 6-11.
National Brick Manufacturers Association.—Annual Convention, Louisville, Ky.—T. A. Randall, Secretary, Indianapolis, Ind.
- February 14-15.
Iowa Drainage Association.—Convention, Mason City, Ia.—W. H. Stevenson, Secretary.
- May.
City Commission Congress.—Meeting Galveston, Tex.—Mayor Lewis Fisher, Chairman of Committee, Galveston, Tex.
- June 6-10.
American Water Works Association.—Thirty-first Annual Convention, Powers Hotel, Rochester, N. Y.—John M. Diven, Secretary, 14 George street, Charleston, S. C.

TRADE NOTES

Cast Iron Pipe.—Chicago.—The city recently purchased 10,000 tons of 12 to 24 inch water pipe from the United States Cast Iron Pipe and Foundry Company for about \$24 a ton. Quotations: 4-inch, \$25; 6 to 12 inch, \$24; 16-inch and up, \$23.50. New York.—Pipe manufacturers are feeling much more cheerful as a result of increasing inquiries from private customers. Quotations: 6-inch, carloads, \$22. Birmingham.—Local quotations are unchanged, but are considered as firmer. Quotations: 4 to 6 inch, \$19; 8 to 12 inch, \$18 to \$18.50; over 12-inch, average \$17.

Lead.—Consumers are taking no interest in the lead market, but prices are held firmly. Quotations: New York—\$4.50; St. Louis, \$4.35.

Metal Culverts.—The Peoria Metal Culvert Company, Peoria, Ill., recently incorporated with \$40,000 capital stock, has erected a new factory building and has its equipment installed ready for operation.

Gasoline Traction Engine.—The Bates Tractor Company, Lansing, Mich., has been incorporated, with \$200,000 capital stock, of which \$125,000 is paid in. The company will manufacture a 20-horsepower engine. The erection of a plant will be commenced as soon as possible.

Sewerage Company.—The Texas City Light, Sewerage & Water Company, which was recently organized for the purpose of installing an electric light plant, sewer system and water works at Texas City, Tex., has begun work on the sewer system.

Municipal Street Cars.—The city of San Francisco, Cal., has ordered all supplies for the construction of the Geary Street Municipal Railroad, and if the work proceeds as planned a number of cars will be required before the end of the year.

New Bridge Company.—The Roanoke Bridge Company, Roanoke, Va., recently incorporated, is planning to build a structural steel and bridge plant. The main building will be of steel construction, 35 x 140 feet, with an addition 25 x 90 feet. An office building will also be erected. The total cost of the plant, including machinery, is estimated at \$30,000. E. C. McComb is president of the company.

Dryers.—The Atlas Dryer Company, Cleveland, O., have published a pamphlet entitled "A Thesis on the Art of Drying." It describes the principles underlying the construction and operation of the Atlas dryer for all classes of material.

Motor Patrol Wagons.—Six motor patrol wagons and ambulances have displaced 10 horse-drawn wagons and 36 horses in the Detroit Police Department. The efficiency of this branch of the department has been practically doubled since the installation was made, although considerable economy has resulted from the decreased number of drivers and helpers needed. Up to last September the first motor patrol wagon, which was placed in service last January, responded to 4203 calls and traveled 11,163 miles. The total expense incurred, exclusive of drivers' wages and depreciation, was \$731.85. Experienced police officers state that it would require 12 horses and two horse-drawn wagons, four patrolmen and one hostler to provide an equivalent service and that the cost for such an equipment for eight months would be practically \$4000.

American Concrete Mixers Abroad.—Vice-Consul-General Henry D. Baker, Sidney, Australia, reports that during recent visits to the scenes of public and private construction work he noted the popularity of American concrete mixers. A special advantage over other mixers was that the machines are more compact and can be worked in places where the others can not. Extensive irrigation works are requiring a large amount of concrete, and it is being used more extensively for buildings.

Garbage Disposal Plant.—Charles C. Fischer is now the owner of the Bridgeport (Conn.) By-Products Company's plant on Asylum street, the deeds having passed between John B. Livingston, representing the company, and his attorney, W. A. Boardman, and C. C. Fischer, representing the York, Pa., syndicate, and his counsel, A. M. Marsh. Mr. Fischer has taken possession and has already ordered new machinery. As soon as the plant is ready he will take the garbage from the city and reduce it at his price of \$1 per ton, which, it is said, leaves a good margin of profit. A clause in the contract was amended to read as follows:

In the event of a final judgment of the courts, at the suit of any land owner of the city of Bridgeport specially affected thereby, that the said Fischer, or his assigns, has been guilty of creating or maintaining a nuisance in the reception, reduction or disposal of said material so delivered under this contract, it is hereby agreed and stipulated that the said Fischer shall have a reasonable time in which to remove his plant to such place as will change the cause of said nuisance, if he can, but if such change and proper abatement of said nuisance cannot be made and had, then and in that case this contract may be cancelled at the option of the Board of Health, but nothing herein contained shall be construed as to waive any liability on the part of the said Fischer or his bondsmen to reimburse the city of Bridgeport for such damage as may be legally proven to the extent of said bond heretofore provided for. And it is also understood that the term "final judgment" is used in the sense of such termination of any action so brought against said Fischer or his assigns for creating or maintaining a nuisance after new trial, appeal or any proceedings that may legally be had in any court of law or equity; provided, however, that nothing in this paragraph contained shall be construed as a waiver or modification of any of the rights or obligations of the parties hereto as fixed and defined in any or all of the foregoing paragraphs hereof, and also provided that any proposed new location of said plant shall be satisfactory to the Board of Health of said city.

Auto Apparatus Received.—Savannah has received its auto fire engine. Notice was received last week by Superintendent Ballantyne that it has been shipped from the American La France Company, Elmira, N. Y. Savannah has been expecting this modern piece of equipment to arrive for the past several months. The engine was bought by the late Alderman Kavanaugh before his death and was to have been delivered last September. There was some delay at the factory, however.

Gas Lighting Contract.—The Rising Sun Street Lighting Co., Boston, Mass., of which P. J. Fitzgerald is President, has written a letter to Superintendent Rourke, declining to make a bid for street lighting under the present specifications, claiming that they are objectionable on account of indefinite features. The requirement that the contractor install any automatic device selected by the city at any time during the 10 years the contract is to run is objected to on the ground that the device might be a failure and the contractor suffer a large loss. It is also alleged that the requirement as to furnishing supplies is too indefinite to permit an intelligent bid.

Suit for Commission.—The Ames Iron Company, of Oswego, N. Y., which furnished the new engine and other equipment for the installation of the new city power plant at Portland, Ind., has been made defendant, together with the city of Portland, in a suit filed by Philip Bergman, seeking to collect \$625 alleged to be due him as commission on the sale of the property to the city. By reason of yet having in its hands \$6,000 of the purchase price due to the company, the city is made a defendant, and an attachment was served, tying up this money in the hands of Treasurer Jacob R. Jones, pending the hearing of the case. It is asserted the company was threatening to collect this money, and take it out of the State. Bergman asserts in his complaint that in the sale of the equipment to the city he acted as the agent of the Ames Iron Company, and was to receive for his services, if the deal was made, a commission equal to 5 per cent of the purchase price of \$12,500.

Paving Brick.—F. R. Ganengeiser, Sharon, Pa., is organizing a \$100,000 company for the manufacture of paving bricks. It is proposed to take over the J. V. Rose brick yard, near Rose's Crossing, Brookfield Township, Ohio, which has not been in operation for a year. Shale of the kind needed for the manufacture of paving bricks is said to be abundant near the works and in other parts of eastern Ohio and western Pennsylvania. The product will be called the Sharon Paving Block. Mr. Ganengeiser has been superintendent of the Bessemer Limestone Co.

New Quarry.—The Pacific Electric Company, Los Angeles, Cal., is preparing to open a rock quarry on the La Habra division.

Water Works Equipment.—The Weimer Machine Works Company, Lebanon, Pa., reports a very satisfactory growth in business in 1910, as compared with the previous year. Several large contracts in connection with water works equipment, which will take practically 12 months to complete, as well as numerous orders for cinder cars and blast furnace work, are on the books, and general business has been and is expected to continue in fair volume.

Foreign Trade Facilities.—The Bureau of Manufactures of the Department of Commerce and Labor, Washington, D. C., is establishing a file of the names of American manufacturers and traders, for use in distributing the valuable information which reaches it from time to time in regard to foreign trade. Those who desire to avail themselves of the facilities thus offered for extending their trade abroad should send to the bureau their names and advise it as to the class of business in which they are engaged.

Wheelbarrows.—The Cockburn Company, Monmouth and Twelfth streets, Jersey City, N. J., has been incorporated, with an authorized capital stock of \$50,000, to take over the business of the Cockburn Barrow & Machine Company, manufacturer of contractors' machinery, with a plant at the address given above. J. S. Harris is president of the new company.

Water Company Earnings.—The Terre Haute Water Works Company earned \$183,831 above the \$38,690 operating expenses in 1910. A 4 per cent dividend was paid on \$500,000 capital stock, and \$50,000 was spent in improvements. The city paid \$40,000 for hydrants. The company is the pet investment of N. W. Harris, the banker.

THE MUNICIPAL INDEX

Which Are Listed and Classified by Subjects All Articles Treating of Municipal Topics Which Have Appeared During the Past Month in the Leading Periodicals

It is our purpose to give in the second issue of each month a list of all articles of any length or importance which have appeared in all the American periodicals and the leading English, French and German ones, dealing more or less directly with municipal matters. The index is kept up to date, and the month of literature covered each time will be brought up to within two or three days of publication. Our chief object in this is to keep our readers in touch with all the current literature on municipal matters. In furtherance of this we will furnish any of the articles listed in the index for the price named after each article, except that where an article is continued in two or three issues of the paper, the price given is for each of said issues. In addition to the titles, where these are not sufficiently descriptive or where the article is of sufficient importance, a brief statement of its contents is added. The length also is given, and the name of the author when it is a contributed article.

ROADS AND PAVEMENTS

Highways of Indiana. Illustrated, 2 pp., Good Roads, December. 10 cts.
 New York State Roads. 1-3 p., Municipal Journal & Engineer, Dec. 14. 10 cts.
 Highways Development in the United States. Digest of papers before National Good Roads Convention, St. Louis. 4 pp., Surveyor, Dec. 23. 20 cts.
 United States Office of Public Roads. Legislative history, quarters, purpose, work, etc. Illustrated, 3 pp., Engineering Record, Dec. 17. 10 cts.
 State Aid in Road Building. Paper by Logan W. Page before American Road Builders' Assoc., Indianapolis. 2 pp., Engineering Record, Dec. 24. 10 cts.
 The Working of the "Road Development Act, 1909." By Reginald Brown. 5 pp., Surveyor, Dec. 9. 20 cts.
 Road Construction in Wayne County, Michigan. Illustrated, 2 1-2 pp., Good Roads, December. 10 cts.
 Annual Report of Road Commissioners of Wayne County, Mich. 6 pp., Public Officials' Magazine, December. 10 cts.
 Notes on Road Construction. From paper by W. Calder before Melbourne University Engineering Society. With drawings, 4 1-2 pp., Canadian Engineer, Dec. 29. 15 cts.
 Road Building Progress in Michigan. Paper before American Road Builders' Association. By T. A. Ely, State Highway Commissioner. 1 p., Contractor, Dec. 15. 10 cts.
 Road Construction and Maintenance. Discussion at Surveyors' Institution. 2 pp., Surveyor, Dec. 2. 20 cts.
 Parkway Construction at Portland, Me. By W. O. Thompson. Illustrated, 1 1-2 pp., Good Roads, December. 10 cts.
 How Oklahoma City Secured Its Park and Boulevard System. By W. H. Clark. Illustrated, 8 pp., American City, December. 10 cts.
 Earth Roads. Paper before Illinois Society of Engineers and Surveyors. By M. D. Eldridge. 2 pp., Good Roads, December. 10 cts.
 Gravel Roads, Notes on the Construction of. From Report of Michigan Highway Department. 1 1-2 pp., Engineering-Contracting, Dec. 21. 10 cts.
 Binding Materials in the Construction of Metalled Roads, Use of Paper before Brussels International Road Congress. By Robt. Drummond. 1 p., Good Roads, December. 10 cts.
 Experiments with Road-Binding Materials. Report of Ohio Highway Department. 1 1-2 pp., Surveyor, Dec. 30. 20 cts.
 An Experience in Road Treatment. Penetration method generally unsatisfactory. Results and cost of oiling, repairing and maintenance. From paper before Sanitary Association of New Jersey. By James Owen. 1 1-3 pp., Municipal Journal & Engineer, Dec. 14. 10 cts. 1 1-2 pp., Engineering-Contracting, Dec. 21. 10 cts. 1 1-2 pp., Engineering Record, Dec. 10. 10 cts.
 Road Tarring in Denmark. English Methods Studied and Applied. 1 p., Surveyor, Dec. 2. 20 cts.
 Experimental Roadways in the Borough of the Bronx. Illustrated, 2 pp., Good Roads, December. 10 cts.
 Ohio Experimental Road Tests. Seventeen materials and methods tested. Conditions after year's use. Illustrated, 2 1-2 pp., Municipal Journal & Engineer, Jan. 4. 10 cts.
 Bituminous Nomenclature. 1-3 p., Municipal Journal & Engineer, Dec. 21. 10 cts.
 Automobiles Destroy Our Roads, To What Extent. Paper before Southern Appalachian Good Roads Association. By L. W. Page. 2 1-2 pp., Municipal Engineering, January. 25 cts.
 The Development of Road Locomotion in Recent Years. From paper before Institution of Mechanical Engineers by L. A. Legros. With chart, 3 1-2 pp., Dec. 2. 15 cts.
 Road Administration and Maintenance. From address at National Good Roads Convention, St. Louis, by Logan W. Page, Director U. S. Bureau of Public Roads. 1 p., Surveyor, Dec. 16. 20 cts.

Concrete Roads in Wayne County, Michigan. Method of Construction. 2-3 p., Engineering Record, Jan. 7. 10 cts.
 New Method of Compacting Concrete Roadways. Illustrated, 1 p., Good Roads, December. 10 cts.
 Concrete Pavement in Bozeman. 1-4 p., Municipal Journal & Engineer, Jan. 4. 10 cts.
 Oil Concrete Road in Pennsylvania. By R. D. Beaman, Deputy State Highway Commissioner. 1-3 p., Municipal Journal & Engineer, Dec. 28. 10 cts.
 Paving Streets and Roads. Materials in common use. Improvements in construction details. Bituminous binders. 1 p., Municipal Journal & Engineer, Jan. 4. 10 cts.
 Road Construction and Maintenance within Large Cities. By H. F. Culan, Supt. Works Dept., City and County, Borough of Belfast. 2 pp., Canadian Engineer, Dec. 8. 15 cts.
 Streets of Indianapolis. Illustrated, 6 pp., Good Roads, December. 10 cts.
 Asphalt Block Pavement in Washington, D. C. Specifications under which constructed. 1 p., Engineering-Contracting, Dec. 21. 10 cts.
 Bituminous Patent Suit. 1-4 p., Municipal Journal & Engineer, Dec. 28. 10 cts.
 Wood Block, Repaving the "Loop" District in Chicago with Coesoted. By Wm. W. Marr, Assist. Chief Engineer of Streets, Chicago. With map and half-tones. 4 1-2 pp., Engineering News, Dec. 29. 15 cts.
 Granite Block, Method of Manufacturing Modern. Paper before American Society of Municipal Improvements. By W. A. Howell. 1 p., Good Roads, December. 10 cts.
 Repair Costs. An Incorrect Method of Determining When a Pavement Should Be Relaid Because of Increasing. Editorial, 1-2 p., Engineering-Contracting, Dec. 7. 10 cts.
 Paying for Pavements in New York. Editorial, 1-2 p., Engineering Record, Dec. 24. 10 cts.
 Assessing for Street Improvements. 1 p., Municipal Journal & Engineer, Dec. 21. 10 cts.
 Street Grading on Level Property in Savannah, Ga. Illustrated, 1-3 p., Municipal Journal & Engineer, Dec. 14. 10 cts.
 Correlating Sidewalk Grade to Curb Grade. Paper before American Society of Municipal Improvements, Erie, Pa., by Clark G. Anderson, City Engineer, Moline, Ill. 3 pp., Canadian Engineer, Dec. 8. 15 cts.
 Private Street Work as Administered under the Heywood Corporation Act, 1883. Paper before Institution of Municipal Engineers. By Tom Fogg, Assist. Surveyor, Heywood. With drawings, 2 1-2 pp., Surveying, Dec. 23. 15 cts. Illustrated, 1 1-3 pp., Municipal Journal & Engineer, Dec. 24. 15 cts.
 Sidewalks, Use of Space Under. 1 1-2 pp., Real Estate News, January. 25 cts.

SEWERAGE AND SANITATION

Sewerage of Seacoast Towns. By H. C. Adams. Drawings and half-tones, 2 1-2 pp., Surveying, Nov. 25; Drawings, 2 pp., Dec. 2; Drawings, 2 pp., Dec. 9; 1 1-2 pp., Dec. 16; Drawings, 2 pp., Dec. 23; Illustrated, 2 pp., Dec. 30. 15 cts.
 Sewerage and Sewage Disposal. Materials used for sewers and joints; pipe tests; amount of sewage purification necessary; methods available; possibilities and limitations of each; most recent developments. Illustrated, 2 1-2 pp., Municipal Journal & Engineer, Jan. 4. 10 cts.
 Sewerage and Sewage Disposal in 1910. Editorial Resumé. 1 p., Contract Journal, Dec. 28. 10 cts.
 Philadelphia's Sewerage System. 1-3 p., Municipal Journal & Engineer, Dec. 14. 10 cts.
 Sewer Construction, Difficult. 1-2 p., Municipal Journal & Engineer, Dec. 28. 10 cts.
 Syracuse Sewer and Creek Contract. Illustrated, 4 pp., Contractor, Jan. 1. 20 cts.
 Hartford East Side Intercepting Sewer.

To provide for sewerage and drainage during floods and prevent harbor pollution. Standard sections for good and bad ground; centers of steel and wood. Hauling broken stone by trolley. Illustrated, 5 pp., Municipal Journal & Engineer, Dec. 14. 10 cts.
 The North Shore Drainage Channel at Chicago. With half-tones, 1 p., Engineering News, Jan. 5. 15 cts.
 Laying Sewers in Wet Trenches. Methods employed by numerous engineers in all parts of the country. Planks and wedges, files, timber foundations. 2 pp., Municipal Journal & Engineer, Dec. 28. 10 cts.
 The North Trunk Sewer in Seattle. Problems presented in Seattle owing to irregularity of topography. With drawing and half-tones, 2 1-2 pp., Engineering Record, Dec. 10. 10 cts.
 New Drop Manhole Detail. Illustrated, 1-2 p., Municipal Journal & Engineer, Dec. 21. 10 cts.
 Intercepting Sewers and Outfall at New Bedford. Description of plans. Drawings, 1 p., Engineering Record, Dec. 17. 10 cts.
 Sewer Pipe Construction, History of Clay. By J. M. McCave. 1 1-2 pp., Contract Record, Dec. 21. 20 cts.
 Sewage Disposal Problems. Necessity for reliable automatic hypochlorite apparatus; better sprinkling nozzles; intensive sand filtration; disposal of sludge; utilization. 1 1-4 pp., Municipal Journal & Engineer, Jan. 4. 10 cts.
 Drainage Areas and Areas of Waterway for Highway Culverts and Bridges. 3-4 p., Canadian Engineer, Jan. 5. 15 cts.
 Sewage Treatment in New Jersey. Leads all states in preventing stream pollution. Brief description of 74 plants. Decreasing typhoid death rates. 1 1-4 pp., Municipal Journal & Engineer, Dec. 21. 10 cts.
 Sewage Disposal in Europe. Paper before American Institute of Chemical Engineers, by Rudolph Heing. 2 pp., Engineering Record, Dec. 17. 10 cts.
 Sewage Disposal Plans of Atlanta, Ga. By W. C. Waters. 4 1-2 pp., Municipal Engineering, January. 25 cts.
 London's Sewage. Its utilization with relation to relief for the unemployed. By Walter Taylor. 1 p., Surveying, Dec. 23. 15 cts.
 Peachtree Creek Sewage Disposal Works at Atlanta. With drawings, 4 pp., Engineering Record, Dec. 31. 10 cts.
 Principles of Sewage Disposal. From paper by George C. Whipple before Institute of Chemical Engineers. 3 1-2 pp., Engineering Record, Jan. 7. 10 cts.
 Trade Wastes, The Disposal of. Its relation to the purity of lakes and streams. Abstract from paper by George A. Johnson before New Jersey Sanitary Association, Lakewood. 1 p., Engineering News, Dec. 8. 15 cts. 1 p., Engineering Record, Dec. 31. 10 cts.
 Sludge Problem. How to dispose of sludge and prevent its production. From paper by W. C. Easdale, before Association of Managers of Sewage Disposal Works. 2 pp., Surveyor, Dec. 9. 20 cts. 2 pp., Surveying, Dec. 9. 15 cts.
 Sewage Sludge and Its Disposal. From paper before Association of Managers of Sewage Disposal Works, Manchester, by A. B. Ogden. 1 1-2 pp., Surveying, Nov. 25. 15 cts.
 A New Method of Handling Sewage Sludge. Describing method used in the Emscher District of Southwestern Germany. By Dr. Karl Inhoff, Chief Engineer, Sewerage Department, Emschergenossenschaft, Essen, Germany, and Charles Saville, Assistant Engineer. Drawings and half-tones. 4 pp., Engineering Record, Dec. 10. 10 cts.
 Sanitation of Villages and Premises without Sewers. By J. W. Hill. 6 pp., Bulletin, Ohio State Board of Health, December. 10 cts.
 Sanitation at Lebanon. 1-3 p., Municipal Journal and Engineer, Jan. 4. 10 cts.
 How to Abate Nuisances. By C. O. Probst. 3 pp., Bulletin, Ohio State Board of Health, December. 10 cts.
 Streams, Our Typhoid. By H. de B. Parsons. 9 pp., Stevens Indicator, January. 25 cts.

Sanitary Survey of the Ohio River in Pennsylvania. From report to Joint Ohio River Sanitary Commission by Samuel G. Dixon, State Commissioner of Health, and P. H. Snow, Chief Engineer, State Department of Health. 2 pp., Engineering News, Jan. 5. 15 cts.

Past, Present and Future of the Ohio River from a Sanitary Standpoint. By S. C. Swartsel. 6 pp., Bulletin, Ohio State Board of Health, December. 10 cts.

A Health Department Report on the Upper Ohio River. Joint report on pollution. 1-1-3 pp., Engineering Record, Jan. 7. 10 cts.

Board of Health, Powers of Ohio. Decision upholding constitutionality of the "Bense Act." May be appealed. Text of portions of this act relating to sewerage. 1 p., Municipal Journal and Engineer, Dec. 14. 10 cts.

Co-operation of Village and Township Boards of Health. By A. H. Hise. 3 pp., Bulletin, Ohio State Board of Health, December. 10 cts.

Physician's Duty to Boards of Health. By W. S. Rankin. 5 pp., Bulletin North Carolina Board of Health, October. 10 cts.

Milk Supply of Villages, How Shall We Improve and Protect the. By Dr. McKendree Smith. 2 pp., Bulletin, Ohio State Board of Health, December. 10 cts.

Examination of Milk from a Health Standpoint. By P. H. Lamb. 4 pp., Bulletin Ohio State Board of Health, December. 10 cts.

Measures to Be Taken at the Dairy When Typhoid Fever or Other Milk-Borne Diseases Occur. By Dr. H. W. Behmer. 3 pp., Bulletin, Ohio State Board of Health, December. 10 cts.

Hog, Shall the, Be Driven from Villages. By C. R. Campbell. 2 pp., Bulletin, Ohio State Board of Health, December. 10 cts.

WATER SUPPLY

Water: Its Purification and Use in the Industries. Ozone. By W. W. Christie. Illustrated. 4 pp., Industrial Engineering, January. 20 cts.

Wells, Types of; Their Comparative Cost and Merits and Methods of Protection from Pollution. From Water Supply Paper No. 255, U. S. Geological Survey, by Myron L. Fuller. Illustrated, 3 1-2 pp., Canadian Engineer, Dec. 15. 15 cts. Illustrated, 5 pp., Canadian Engineer, Dec. 22. 15 cts.

Methods and Cost of Sinking and Lining a Dug Well on Long Island. By J. J. Ingle. 1 1-2 pp., Engineering-Contracting, Dec. 7. 10 cts.

Water Supply and Sewerage of Chalons. By C. Dreyfus. 9 pp., La Technique Sanitaire, December. 50 cts.

Water System of Hankow. 1 p., Fire and Water, Dec. 14. 10 cts.

The Development of the Municipal Water Works of Spokane, Wash., and the Addition of an Electric Pumping Station. By Alexander J. Lindsay, Supt. of Water Department, Spokane. Illustrated with drawings and half-tones. 2 pp., Engineering News, Dec. 8. 15 cts.

The New Water Supply for Vancouver. How Obtained. From paper by H. M. Burwell before Canadian Society of Civil Engineers. 1 1-2 pp., Engineering Record, Dec. 24. 10 cts. Illustrated, 6 pp., Contract Record, Dec. 28. 20 cts.

Recent History of Buffalo Water Supply. 5 pp., Live Wire, January. 10 cts.

Outline of Sanitary Water Works in the Province of Quebec. By James O. Meadows, Sanitary Engineer of Board of Health, P. Q. 2 pp., Canadian Engineer, Dec. 8. 15 cts.

Association of Water Engineers. Extracts from papers read. 2 pp., Contract Journal, Dec. 11. 20 cts.

Water Works Report of Reading, Pa. Illustrated, 1 p., Fire and Water, Dec. 14. 10 cts.

Report on Dallas Water Supply. 2-3 pp., Fire and Water, Dec. 21. 10 cts.

Pipe, Unusually Tight Water, Springfield, Mass., Water Supply. 1-4 pp., Municipal Journal & Engineer, Dec. 14. 10 cts.

Protection Against Corrosion of Pipes. By P. C. Perkins. Illustrated, 1-2 pp., Fire and Water, Dec. 7. 10 cts.

Aqueduct, Large Portable Plant for Crushing, Mixing and Placing Concrete on Catskill. With drawings and half-tones. 6 pp., Engineering-Contracting, Dec. 7. 10 cts.

Water Tower Near Brussels, A Tall Concrete Block. With drawing. 1 p., Engineering Record, Dec. 10. 10 cts.

Concrete Protection Coating for Small Tank Power. With half-tone. 1-2 pp., Engineering News, Jan. 5. 15 cts.

A Reinforced-Concrete Water Tank with Dome Shaped Bottom. In use at University of Arizona, Tucson. Description of and method of construction. By L. A. Waterbury, Professor of Civil Engineering, University of Arizona. Illustrated, 1 p., Engineering News, Dec. 15. 15 cts.

Reservoir, Covered Reinforced Concrete.

Illustrated, 1 p., Fire and Water, Dec. 14. 10 cts.

Labor cost on Forms for a Covered Concrete Reservoir. From paper presented by J. D. Stevenson before Engineers' Society of Western Pennsylvania. 1 p., Engineering Record, Dec. 17. 10 cts.

Failure of a Reinforced Concrete Reservoir in Australia. Letters of C. O. Burge and E. M. de Burgh. 1-1-2 pp., Surveying, Dec. 2. 15 cts.

The New Central Reservoir of the People's Water Company, Oakland, Cal. Description and construction. By C. H. Fark and G. S. Jacobs, Assistant Engineers, People's Water Co. With half-tone and drawing. 1 p., Engineering News, Jan. 5. 15 cts.

Dams, Barrages and Weirs on Porous Foundations. A technical discussion, with drawings. By W. G. Bligh. 2-1-2 pp., Engineering News, Dec. 29. 15 cts.

Geology and Dam Construction. From paper by F. C. Wren before Institution of Civil Engineers of Ireland. 1-2 p., Engineering Record, Jan. 7. 10 cts.

Pumping, Cost of.—With tables. From report by Oscar E. Meizer, on the Ground Waters of New Mexico. 1-1-2 pp., Canadian Engineer, Dec. 22. 15 cts.

An Electrically Operated Municipal Pumping Station. Description of that at Spokane, by Alexander J. Lindsay, Supt. Water Department. Illustrated with drawings and half-tones. 2 pp., Engineering Record, Dec. 10. 10 cts. Illustrated, 2 1-2 pp., Electrical World, Dec. 29. 10 cts.

Electric Pumping in France. 1-3 p., Municipal Journal & Engineer, Dec. 21. 10 cts.

Report of Duty Trial on the Six Million Imperial Gallon Pumping Engine at the High Level Pumping Station, Toronto Water Works. By Robert W. Angus. With drawings. 5 pp., Canadian Engineer, Dec. 8. 15 cts.

Steam Turbine Centrifugal Pump. Paper before Central States Water Works Association. 2-3 p., Water and Gas Review, December. 20 cts.

Purification of Water Supply. Methods available. Slow and rapid sand filters; where each is most effective; cleaning filter sand; double filtration and "prefilters"; coagulation; hypochlorite sterilization; ozone treatment. Illustrated, 3 1-2 pp., Municipal Journal and Engineer, Jan. 4. 10 cts.

Water Purification Plant at Newport. From paper before New England Water Works Association. By Robert E. Milligan. Illustrated, 4 pp., Municipal Journal and Engineer, Dec. 28. 10 cts.

Filtration Plant at Portsmouth, England, New. Description of, with technical illustrations. Abstract of articles from "London Engineering." 1 p., Engineering News, Dec. 15. 15 cts.

Methods and Cost of the Construction of Pittsburg's Filtration Works. From paper by F. E. Field, formerly Division Engineer, Pittsburg Bureau of Filtration, before Engineers' Society of Western Pennsylvania. With drawings. 8 pp., Engineering Contracting, Dec. 28. 10 cts.

Filter Troubles Caused by Micro-Organisms at Louisville. Notes on filter troubles and methods of meeting them, by W. H. Lovejoy, chief chemist and bacteriologist. 1-2 pp., Engineering Record, Dec. 10. 10 cts.

Sprinkling Filter Plant for Suburban Community. Filters enclosed in building, provision for two hundred thousand gallons a day; preliminary and final sedimentation basins and dosing tanks; details of the plan; cost of construction. By Paul Hansen State Sanitary Engineer of Kentucky. Illustrated, 6 pp., Municipal Journal and Engineer, Jan. 4. 10 cts.

Methods and Costs of Construction of the Slow Sand Purification Works for the new Springfield, Mass., Water Supply. Paper before Boston Society of Civil Engineers. By C. R. Gow. Illustrated, 90 pp., Journal of the Association of Engineering Societies, December. 30 cts.

Contractor's Plant on Large Filters at Pittsburg. Paper before Engineers' Society of Western Pennsylvania. By F. E. Field. Illustrated, 5 pp., Contractor, Dec. 15. 20 cts.

Sterilization of Polluted Water by Ultra-Violet Rays at Marseilles, France. With drawing and table showing number of bacteria before and after treatment. 1-2 p., Engineering News, Dec. 8. 15 cts.

The Eliminating Effect of Chlorine upon the Bacteria of a River Water. From paper by Leslie C. Walker, Engineer, Reading Corporation of Water Works, before Association of Water Engineers. With discussion. 5 pp., Surveyor, Dec. 16. 20 cts. 2 1-2 pp., Canadian Engineer, Jan. 5. 15 cts.

Criticism of H. E. Jordan on Hypochlorite Treatment. By H. C. H. Shenton. 1 p., Canadian Engineer, Dec. 22. 15 cts.

Use of Hypochlorite of Lime in Filtration. Illustrated, 1 p., Fire and Water, Jan. 1. 10 cts.

Softening Plant, Wellingborough Water Works and Paper before Association of Water Engineers. By E. V. Harrison. Illustrated, 5 1-2 pp., Surveying, Dec. 30. 15 cts. 4 pp., Surveyor, Dec. 23. 20 cts.

Losses of Municipal Water Works. From paper before Pennsylvania Water Works Association. By Leonard Metcalf. 1 p., Public Service, January. 20 cts.

Water Waste and Leakage in Yonkers. One-fifth of supply unaccounted for with all services metered. Apparently unauthorized connections and surreptitious use. 1 p., Municipal Journal and Engineer, Dec. 14. 10 cts.

Toronto: Its Water Supply and Waste. Comment on conditions, and suggestions. 1 p., Canadian Engineer, Dec. 8. 15 cts.

Altering Factory Supplies. 1-2 p., Municipal Journal and Engineer, Dec. 14. 10 cts.

Rates in Fifty Cities, Water. By L. J. Kason. 1-2 p., Bulletin, League of American Municipalities, October. 25 cts.

Method of Making Water Rates Ordered in Wisconsin. Result of complaint in Madison. 1-1-2 pp., Engineering Record, Jan. 7. 10 cts.

Revenue from Water Main Extensions. Relating to decision rendered on application of the Beloit Water, Gas & Electric Co., for a rehearing of a petition brought by the company against the city of Beloit, Wis. 1 p., Engineering Record, Dec. 10. 10 cts.

Management, Some Comments Upon Water Works, Suggested by the Recent Special Reports of the U. S. Commerce and Labor Department. From paper by Leonard Metcalf, before Pennsylvania Water Works Association, Atlantic City, N. J., with tables. 3 1-2 pp., Canadian Engineer, Dec. 29. 15 cts. 3 pp., Engineering-Contracting, Dec. 21. 10 cts. 2 pp., Engineering Record, Dec. 24. 10 cts.

Advantages of Co-Operation in Rural Water Supplies. From paper before Association of Water Engineers, by F. G. Fairbank. With map. 3 pp., Surveying, Dec. 16. 15 cts.

Accounting System and Costs, Pittsburg Filtration Plant. Summary of paper by Morris Knowles, Chief Engineer, before the Engineers' Society of Western Pennsylvania. 1 p., Engineering Record, Dec. 31. 10 cts.

Minneapolis Water Works Bookkeeping. 1-4 p., Municipal Journal and Engineer, Dec. 21. 10 cts.

Rainfall, Stream-Flow, Evaporation and Reservoir Capacity. By W. Gore and D. H. Thomson. With charts. 3 1-2 pp., Surveying, Nov. 25. 15 cts.

Flow of Water Through Submerged Screens. By Henry Ryon. Illustrated, 6 pp., Cornell Civil Engineer, December. 20 cts.

Pilot Tubes to Find the Direction of Water Currents. Results of experiments, given by Dr. Schuster, of the Society of German Engineers. 1-2 p., Engineering Record, Dec. 17. 10 cts.

Surges in Pipe Lines. A technical discussion, with charts. 2 pp., Engineering Record, Dec. 24. 10 cts.

Gauging and Recording the Flow of Streams. From paper by S. C. Chapman before Association of Water Engineers. 2 pp., Surveying, Dec. 16. 15 cts.

Circulation of Water in the Soil and Subsoil. By Rene D'Andrimont. Illustrated, 7 pp., La Technique Sanitaire, December. 50 cts.

Sluice Gate, An Automatic, to Ensure Constant Water Level. Dam now in course of construction in Bavaria. By E. Lauchli. Drawing and half-tone. 1-2 pp., Engineering News, Dec. 29. 15 cts.

Water Power Development, A Proposed Platform of Principles Governing State and Federal Control of. Plan drafted by Philip P. Wells, formerly Law Officer for U. S. Forest Service and now counsel for the National Conservation Association. 1-2 p., Engineering News, Dec. 15. 15 cts.

STREET LIGHTING AND POWER PLANTS

Street Lighting During 1916. Lighting by private enterprise. Arches, lamp clusters and brilliant arcs. By E. L. Elliott. 1-3-4 pp., Municipal Journal and Engineer, Jan. 4. 10 cts.

Street Lighting and Power Rates. 1 p., Electrical Review, Dec. 24. 10 cts.

Private Street Lighting Unsatisfactory. 1-4 p., Municipal Journal and Engineer, Jan. 4. 10 cts.

Outdoor Lighting in England. By N. H. Humphreys. 1 p., American Gas Light Journal, Dec. 12. 1 1-2 pp., Dec. 19; 1 1-2 pp., Dec. 26. 10 cts.

Street Illumination. Increasingly general adoption of electricity; disadvantages of gas; efficiency of electric lamps doubled in last five years; proportioning illumination to street needs; location of lamps. 1-2 pp., Municipal Journal and Engineer, Jan. 4. 10 cts.

Street Lighting by Modern Electric Lamps. From paper by Haydn T. Harrison before Institution of Electrical Engineers. 2 pp., Surveying, Nov. 25. 15 cts. 1-2 pp., Contract Journal, Nov. 30. 20 cts. 2 pp., Canadian Engineer, Dec. 22. 15 cts.

Street Illumination in Germany. By R. P. Pierce. Illustrated, 4 pp., Illuminating Engineer, January. 20 cts.

Automatic Street Lights, Liverpool's. By Consul H. L. Washington. 1½ pp., Daily Consular Reports, Dec. 15. 10 cts.

Lamp Posts of New York, Arc. Details of ornamental standards. Illustrated, 5 pp., Electric World, Dec. 8. 10 cts.

Electrical Illumination, New Era in. Flaming, luminous, arc and vapor lamps. By R. W. Hutchinson, Jr. Illustrated, 13 pp., Engineering Magazine, Jan. 25 cts.

Recent Progress in Electric Lighting. From paper by E. W. Marchant, of Liverpool University, before Illuminating Engineering Society. 1 p., Contract Journal, Dec. 14. 20 cts.

Lighting Situation. By Louis Bell. 1½ pp., Electrical Review, Jan. 7. 10 cts.

Comparative Cost of Producing Light with Different Illuminants. 1 p., Electrical World, Dec. 29. 10 cts.

Gas Mains, Laying Large, Under Harlem River. Paper before American Gas Institute. By C. C. Simpson. Illustrated, 3½ pp., Gas Light Journal, Jan. 9. 10 cts.

Methods and Cost of Pneumatic Calking with Lead Wool of 30-in., 36-in. and 48-in. Gas Mains. Paper by C. G. Simpson, Jr., before American Gas Institute. With drawings. 2½ pp., Engineering-Contracting, Dec. 7. 10 cts.

Gas Companies and the Public. Presidential address before National Gas Association. By E. N. Wrightington. 1½ pp., Progressive Age, Dec. 15. 20 cts. 2 pp., American Gas Light Journal, Dec. 12. 10 cts.

Public Deceived by Faulty Data and Misleading Analysis of Data. Paper before American Gas Institute. By A. C. Humphreys. 4 pp., American Gas Light Journal, Jan. 2. 10 cts.

Electrification of a Small City. Editorial. 1 p., Engineering Record, Jan. 7. 10 cts.

Use for Spare Current. ¼ p., Municipal Journal and Engineer, Dec. 14. 10 cts.

Water Power, Valuation of. Paper before American Water Works Association. By Robt. E. Horton. 3 pp., Water, Dec. 15. 10 cts.

The Disposal of Surplus Water and Electric Power from the Los Angeles Aqueduct. Discussion of situation by Burt A. Heintz, Wm. Mulhol and Chief Engineer of the Los Angeles Aqueduct; J. E. Lippincott, Asst. Chief Engineer, and E. F. Scattegood. Illustrated, 3½ pp., Engineering News, Dec. 9. 15 cts.

Financial Aspect of Water Powers. Paper before American Institute of Electrical Engineers. By R. C. Beardsley. Illustrated, 6 pp., Electrical Review, Dec. 17. 10 cts.

Hydro-Electric Power Plant of The Jhem River, Kashmir, India. By Heinrich Romberger. Paper before Technical Society of the Pacific Coast. Illustrated, 9 p., Journal Association of Engineering Societies, Nov. 30 cts.

Power Sites, Investigation of. By the Geological Survey. Sites on public lands. p., Engineering Record, Jan. 7. 10 cts.

FIRE AND POLICE

Fires of the World, Great—Their Effects on Insurance Companies. By Lawrence Well. 2-3 p., Fire and Water, Dec. 28. 10 cts.

Account of the Disastrous Fire at Newark, N. J. 2 pp., Fireman's Herald, Dec. 5 cts. Illustrated, 1½ pp., Fire and Water, Dec. 7. 10 cts.

Fire Fighting, Apparatus for Efficient. ½ pp., Municipal Engineering, January. 10 cts.

Berlin and Its Fire Brigade. Illustrated. 4 pp., Fireman's Herald, Dec. 31. 5 cts.

High-Pressure Line in Bloomington, Ill. Invertible. ½ p., Municipal Journal and Engineer, Dec. 4. 10 cts.

Hose Purchasing Fire, in St. Louis. By Mas. Claude Casey. 3½ p., Municipal Journal and Engineer, Dec. 28. 10 cts.

Alarm System, New York Fire. Present system antiquated and liable to serious interruption; cables to be in subways; one special box to each circuit. Illustrated, 2 p., Municipal Journal & Engineer, Dec. 21. 10 cts.

Fire Resisting Qualities of Building Material. Illustrated, 1 p., Fire and Water, Dec. 14. 10 cts.

Gypsum a Fire-Resisting Material. From Bulletin by National Fire Protection Association. 2-3 p., Fire and Water, Dec. 14. 10 cts.

Roofing as a Fire Preventive. 2-3 p., Fire and Water, Dec. 28. 10 cts.

Factories and Prevention, Fires. By P. McKeon. 13 pp., Survey, Jan. 7. 25 cts.

Warding Off the Factory Fire Panic and

Its Loss of Life. By H. F. J. Porter. Illustrated, 12 pp., Survey, Jan. 7. 25 cts.

Gasoline Ordinance at Cochoe, N. Y. 1 p., Fireman's Herald, Dec. 17. 5 cts.

Mutual Assistance and Its Advantages. Paper before Chief Constables' Association of Canada. By Chief Detective Carpenter, Montreal. 2 pp., Canadian Municipal Journal, January. 10 cts.

GOVERNMENT AND FINANCE

Municipal Government, Presidential address before League of Nebraska Municipalities. By D. E. Love. 7 pp., Midland Municipalities, January. 10 cts.

Comparison of Des Moines and Indianapolis Forms of Municipal Government. By A. L. Mason. 4 pp., Municipal Engineering, January. 25 cts.

Commission Government, Cities Having. 1-4 p., Municipal Journal and Engineer, January 4. 10 cts.

Campaign for Commission Form of Government. By Christie Bennett. 3 pp., American City, December. 10 cts.

Advantages of Commission Form of Government in San Diego. Paper before League of California Municipalities. By A. E. Dodson. 6 pp., Pacific Municipalities, December. 20 cts.

Municipal Trading Relieves Rates. Tabular statement of British Official Reports. 2½ pp., Municipal Journal, Dec. 3. 15 cts.

Business Proposition, City as A. Paper before National Municipal League. By Wm. D. Fouke. 3-4 p., Municipal Journal and Engineer, Jan. 4. 10 cts.

Department of Public Works, Boston's New. Consolidation of present departments, embracing water distribution, paving, sewers, street lighting, and ferries. New departments of sewer and water, highways, and bridges and ferries. 2 pp., Municipal Journal and Engineer, Dec. 31. 10 cts.

Boston's New Department of Public Works Under One Engineering Head. Plan for promoting municipal efficiency through concentration of responsibility. By Benjamin Baker. With diagram. ½ p., Engineering News, Dec. 22. 15 cts.

Reorganization of the Boston City Engineering Departments. Comparison of old system with new. With diagrams. 1½ pp., Engineering-Contracting, Dec. 21. 10 cts.

Efficient Administration of Public Works. From address by L. K. Rourke, Supt. of Streets, Boston, before Society of Arts. 2-3 p., Engineering Record, Jan. 7. 10 cts.

Synopsis of the Report of the local Government Board. By John Burns. Illustrated, 2 pp., Municipal Journal, Dec. 31. 15 cts.

Public Service Corporations, Valuation of the. By N. T. Guernsey. 17 pp., Iowa Engineer, November. 10 cts.

Methods of Charging for Public Service. Paper before National Commercial Gas Association. By H. L. Dougherty. 3½ pp., Public Service, January. 20 cts.

Telephone Rates. Is a Rational Basis Possible for? From paper before National Municipal League, Buffalo, N. Y. By Dugald C. Jackson, Professor of Electrical Engineering, Massachusetts Institute of Technology, Boston, Mass. 1½ pp., Engineering News, Dec. 15. 15 cts.

Regulation of Massachusetts Telephone Company, State. 1½ pp., Municipal Engineering, January. 25 cts.

Franchises for Municipal Service Utilities, Some Provisions in Modern. Paper before American Society of Municipal Improvements. By C. C. Brown. 2 pp., Water and Gas Review, December. 20 cts.

Elements of a Constructive Franchise Policy. Discussion of Franchises as applicable to street railways. By Delos F. Wilcox, Chief of Bureau of Franchises, Public Service Commission for the First District, New York City. Part of paper before National Municipal League, Buffalo, N. Y. 1½ pp., Engineering News, December 8. 15 cts.

Accounting, Uniform Municipal. Paper before League of Kansas Municipalities. By F. G. Pierce. 4 pp., Midland Municipalities, December. 10 cts.

Bond Issues, Prodigality In. ½ p., Municipal Journal and Engineer, Dec. 21. 10 cts.

The Municipal Bond as an Investment. Description and reason for high rating. By John S. Gregory. 3½ pp., Munsey's Magazine, January. 10 cts.

Budgets and Balance Sheets. Paper before American Association of Public Accountants. By Harvey S. Chase. 11 pp., Journal of Accountancy, December. 25 cts.

New York Budget Exhibit of 1910. By H. G. Wade. Illustrated, 20 pp., Engineering Magazine, January. 25 cts.

STREET CLEANING

AND REFUSE DISPOSAL

Street Cleaning and Refuse Disposal. Flushing Methods of Cleaning; collecting ashes and garbage; refuse destruction by

high and low temperature furnaces; garbage utilization; disposal methods for small cities. Illustrated, 2½ pp., Municipal Journal and Engineer, Jan. 4. 10 cts.

Cleaning and Watering Streets in the Great Towns of England, Scotland and Ireland. By T. H. Yabbicom, City Engineer of Bristol, England. From report at International Road Congress, Brussels. 3½ pp., Canadian Engineer, Dec. 22. 15 cts.

Road Problem. Paper before Institute of Cleansing Superintendents. By R. O. Wynne-Roberts. 2½ pp., Surveyor, Dec. 30. 20 cts.

Snow Removal in New York. How contractor organizes force; kinds of carts and trucks in use; cost of labor and trucking; profits; both contractor and city robbed. By Walter G. Turini. 2 pp., Municipal Journal and Engineer, Dec. 21. 10 cts.

Removing Snow from Sidewalks. Methods employed in La Crosse, Wis.; organization of crews; notifying owners; opening gutters. By Geo. Falk, Street Commissioner. 3-1 p., Municipal Journal and Engineer, Dec. 21. 10 cts.

Refuse Collection in England. 1-2 p., Municipal Journal & Engineer, Dec. 21. 10 cts.

Refuse Disposal in American Cities. Early efforts, present methods, cost, etc. From paper by W. F. Morse before Boston Society of Civil Engineers. 2 pp., Surveyor, Dec. 9. 20 cts.

Incinerator, Easton's Garbage. Thirty-five ton plant; cost of operation at full capacity; fifty cents a ton; cost and method of collection. By John McNeal. Illustrated, 11-2 pp., Municipal Journal and Engineer, Dec. 28. 10 cts.

Milwaukee Incinerator. 1-4 p., Municipal Journal and Engineer, Dec. 28. 10 cts.

TRAFFIC AND

TRANSPORTATION

Street Railways, Municipal. Reports of the U. S. Consuls regarding conditions in British Cities. 4 pp., Daily Consular Report, Dec. 2.

Rapid Transit System of New York. Illustrated, 1 p., Scientific American, Dec. 17. 10 cts.

Public Side of Street Railroading. By Patrick Calhoun. Abstract from paper before American Street & Interurban Railway Association, Atlantic City. 2 pp., Canadian Engineer, Dec. 8. 15 cts. 2 pp., Water and Gas Review, December. 20 cts.

Electric Railway Situation. Paper before New England Street Railway Club. By Thos. N. McCarter. 21-2 pp., Electric Railway Journal, Dec. 21. 10 cts.

Rates and Valuation, Discussion by Railway Commissioners on. 11-2 pp., Electric Railway Journal, Dec. 17. 10 cts.

Traffic, Freight and Express. Discussed in New England. 13-4 pp., Electric Railway Journal, Dec. 17. 10 cts.

Terminals in Large Cities, Railway Passenger and Freight. Planning and construction. From paper by F. A. Delano in Chicago Tribune. Illustrated. 1 p., Engineering News, Jan. 5. 15 cts.

Subway, Construction of a portion of the Fourth Avenue, Brooklyn. Drawings and Half-tones. 3 pp., Engineering Record, Dec. 17. 10 cts.

Approaches to the La Salle St. Tunnel, Chicago. How the difficulties were met. Drawings and half-tones. 3 pp., Engineering Record, Dec. 24. 10 cts.

Stability of Tramway and other Poles. By Eric E. Walker. With drawings. 2 pp., Surveying, Nov. 25. 15 cts.

BRIDGES AND

STRUCTURAL MATERIALS

Bridge, Queen Street, Toronto. Method of construction. From address by R. E. Chadwick, Bridge Engineer, City of Toronto. Illustrated. 2 pp., Canadian Engineer, Dec. 29. 15 cts.

New Street Viaducts at Denver, Colo. Description and methods of construction. With drawings. 4 pp., Engineering News, Jan. 5. 15 cts.

New Charles River Bridge, Boston Elevated Railway. Drawings and half-tones. 3 pp., Engineering Record, Dec. 17. 10 cts.

White River Bridges in Indianapolis. Illustrated, 4 pp., Municipal Engineering, January. 25 cts.

Drawbridges, Electrical Operation of. Development and advantages. From paper by S. F. Nichols, before Railway Electrical Engineers' Assn. Illustrated. 5 pp., Canadian Engineer, Dec. 15. 15 cts.

Concrete Viaduct, Asylum Ave., Knoxville, Tenn. Description of and manner of construction. By L. W. Frierson. Illustrated. 1½ pp., Engineering News, Dec. 15. 15 cts.

Foundations, Grouting Natural Soils for Bridge and Building. By W. D'Rohan. ½ p., Engineering-Contracting, Dec. 21. 10 cts.

MISCELLANEOUS

Iron and Steel, Notes on the Corrosion of, and Its Prevention. By G. W. Thompson. Paper before American Institute of Chemical Engineers. 4½ pp., Chemical Engineer, December. 25 cts.

Concrete, Cost of Mixing. By C. E. Paul. Illustrated. 4 pp., Cement World, December. 15 cts.

Some Thermal Properties of Concrete. Paper read by Charles L. Morton, of Mass. Institute of Technology, before National Association of Cement Users. 2 pp., Engineering Record, Dec. 21. 10 cts.

Waterproofing Concrete Without Altering Its Appearance. From paper by C. M. Chapman, before National Cement Users' Association. 1 p., Canadian Engineer, Dec. 15. 15 cts.

Handling Concrete in Cold Weather. By J. H. Chubb. 2½ pp., Contractor, Dec. 15. 20 cts.

How to Put in Concrete in Winter Months. By Ernest McCullough. 1½ pp., Canadian Engineer, Jan. 5. 15 cts.

Tufa Concrete, Composition, uses, etc. From paper by J. B. Lippincott, Assistant Chief Engineer, Los Angeles Aqueduct, before National Association of Cement Users. Drawings. 2 pp., Engineering Record, Dec. 31. 10 cts.

Reinforced Concrete in Indianapolis Water Works Filters. By F. C. Perkins. Illustrated. 7 pp., Cement World, December. 15 cts.

Reinforced Concrete Pier Construction. From paper by Eugene Klapp, before American Society of Civil Engineers. Hall-tone and drawing. 2½ pp., Canadian Engineer, Dec. 29. 15 cts.

Forms of Concrete, Summary of ideas brought together during construction of Pittsburg Filtration works. From a paper by J. D. Stevenson, formerly division engineer on the work, presented before the Engineers' Society of Western Pennsylvania. 2 pp., Engineering Record, December 10. 10 cts.

Depositing Concrete Under Water in France. From paper by Henri Tavernier, in "Annales des Ponts et Chaussées." ½ p., Engineering Record, Jan. 7. 10 cts.

Cost of Seventy-foot Concrete Dam at East Earl, Pa. By H. L. Bauman. Illustrated. 1 p., Concrete, January. 15 cts.

Concrete Used for Gas Pipe and Joint Coverings. Use of simple wooden form or box to insure protection of joint or valve supporter. Illustrated. 1 p., Concrete, January. 15 cts.

Town Planning, The Practice of, under the Housing and Town Planning Act, 1909. From paper before Institution of Municipal Engineers, Manchester, by Frederick W. Platt, Building Surveyor, Salford Corporation. 3 pp., Surveyor, Dec. 16. 20 cts. 2 pp., Surveying, Dec. 16. 15 cts. 1 p., Municipal Journal, Dec. 17. 15 cts.

Economic Aspect of City Planning. Paper before Union of Canadian Municipalities. By Benj. C. Marsh. 1½ pp., Pacific Builder and Engineer, Dec. 17. 15 cts.

Buffalo's Plans to Transform Bird Island. By H. G. Anderson. Illustrated. 2½ pp., Municipal Engineering, January. 25 cts.

The planning of an Industrial Suburb. By E. A. Slater. With drawings. 3 pp., Surveyor, Dec. 2. 20 cts.

Housing and Town Planning, Regulations governing town planning procedure. 1 p., Surveyor, Dec. 23. 20 cts.

Housing and Town Planning, Paper before Union of Canadian Municipalities. By Robt. Green. 1½ pp., Surveyor, Dec. 30. 20 cts.

Housing Conditions in Milwaukee. By C. D. Thompson, city clerk. Illustrated. 10 pp., Survey, Dec. 3. 25 cts.

Slums in Berlin. By Joan Ihlder. 1½ pp., Survey, Dec. 17. 10 cts.

Housing Conditions in Indiana. By A. F. Pacon. Illustrated. 6 pp., Survey, Dec. 17. 10 cts.

Tenement Houses in New York. 3 pp., Bulletin League of American Municipalities, October. 25 cts.

Model Tenements of Rome, Italy. By H. M. Pellock. Illustrated. 5 pp., American City, December. 10 cts.

Congestion and Its Relief. 4 pp., American City, December. 10 cts.

From Cave Life to City Life. Pageant at Harvard Stadium. Illustrated. 5 pp., Survey, Dec. 3. 25 cts.

Recreation Centers, Evening. By C. A. Perry. 12 pp., Playground, January. 25 cts.

Small City Recreation Problems. By F. A. McLean. 7 pp., Playground, January. 25 cts.

Art Commission, New York. Abstract of report. Illustrated. 2 pp., Municipal Journal and Engineer, Dec. 24. 15 cts.

Ideals and the City, New. By J. H. Holmes. 2 pp., Survey, Dec. 24. 10 cts.

Trees to Go, Poplar. Illustrated. 3-4 pp., Municipal Journal and Engineer, Jan. 4. 10 cts.

Forestry in Germany. From official report of W. C. Fischer, Canadian Trade Commissioner at Berlin. 2½ pp., Canadian Engineer, Dec. 15. 15 cts.

Abattoirs, Public. By M. S. Dodington. 1 p., Municipal Journal, Dec. 17. 15 cts.

London's Public Abattoirs. Illustrated. 11-3 pp., Municipal Journal, Dec. 17. 15 cts.

Sepulchre, City. By Albert C. Dieffenbach. Illustrated. 11-4 pp., Municipal Journal and Engineer, Dec. 28. 10 cts.

Municipal Work, Supervision of. Some evils in city management. From paper by Will P. Blair before American Society of Municipal Improvements. 2 pp., Canadian Engineer, Dec. 8. 15 cts.

Contracting as a Specialized Business. By D. J. Hauer. 2 pp., Contractor, Dec. 15. 20 cts.

Contractors' Construction Camps. By D. J. Hauer. Illustrated. 2 pp., Contractor, Jan. 1. 20 cts.

Rock Crushing and Storage Plant at Tomkins Cove, N. Y. Drawings and half-tones. 4 pp., Engineering Record, Jan. 7. 10 cts.

Waterproofing of Tunnels. Paper before National Association of Cement Users. By A. H. Harrison. 1½ pp., Contractor, Jan. 1. 20 cts.

Structural Steel Designing, Elements of. By Wm. Snaith. 3 pp., Canadian Engineer, Jan. 5. 15 cts.

Coal, Clinkering of. Results of tests for effect of various constituents in the ash. By Lionel Marks, Harvard University. Illustrated. 4 pp., Engineering News, Dec. 8. 15 cts.

Engineering and the Engineer. Address by Archibald Barr, President, before Institution of Engineers and Shipbuilders in Scotland. 3 pp., Surveying, Dec. 2. 15 cts.

Influence of Pure Science in Engineering. From Presidential address by Sir J. J. Thomson, before Junior Institution of Engineers. 2 pp., Surveying, Dec. 9. 15 cts.

Limitations of Efficiency in Engineering Education. Extracts from address of Prof. George P. Swain, at opening of General Engineering Bldg., Union College, Schenectady. 3½ pp., Engineering Record, Dec. 17. 10 cts.

Adjustment of Theodelite and Level. How effected. By G. W. M. Boycott. With drawings. 4 pp., Surveying, Dec. 9. 15 cts.

Blue Printing. By W. E. Wilbur. 3 pp., Iowa Engineer, November. 10 cts.

Municipal Journal and Engineer, Aims and Purposes of the. ½ p., Municipal Journal and Engineer, Jan. 4. 10 cts.

PERSONALS

BALDWIN, NATHAN A., East Orange, N. J., has been re-elected President of the Board of Fire Commissioners, John Reeve, Vice-President, and Edward O. Wieters, Secretary.

BUTLER, M. B., has been appointed Police Commissioner at Niagara Falls, N. Y., by Mayor P. J. Keller.

BRUN, MORRIS, Fort Smith, Ark., has been appointed Chief of the Fire Department, succeeding the late Henry Smatt.

COYNE, JOSEPH, was elected President of the Cincinnati Board of Aldermen, succeeding Frank Johnson.

EARL, JOHN R., Lockport, N. Y., has been re-elected President of the Police Board. Commissioner F. J. Reynolds and Alexander Clark were also reappointed.

EMERSON, WM., Newport, Ky., has been elected President of the Board of Aldermen, and Albert Beyer President of the Council.

GREEN, J. B., Arabi, Ga., has been elected Mayor over R. B. Bowen.

GREEN, JAMES A., Youngstown, O., has been elected President of the Park Commission, succeeding Alfred Liebman. Dr. W. H. Hayden was re-elected Secretary and Lionel Evans Park Superintendent.

HARDY, GEO. W., Portland, Me., has resigned his office of City Electrician, to accept a position with the New England Fire Underwriters.

HARTSHORNE, CHARLES F., Waterfield, Mass., Town Clerk for 40 years, the oldest town clerk in point of service in Massachusetts, died January 7.

HOPPER, WALTER C., Paterson, N. J., has been elected President of the Board of Aldermen.

HOPPER, R. L., Winston-Salem, N. C.,

has been elected Chief of the Fire Department, T. Miller Assistant Chief, J. A. McGee Secretary.

KLUEMPER, THEODORE, Covington, Ky., has been re-elected President of the Council.

KRAEMER, MICHAEL, Alexander, Minn., has been elected Mayor, succeeding John J. Anderson, resigned.

LAUBY, CHARLES, Vincennes, Ind., has been appointed Police Commissioner, succeeding Chas. L. Kuhm.

MCGUIRL, HUGH, Geneva, N. Y., has been elected President of the Board of Health, succeeding Prof. H. A. Harding.

MCMAHON, HENRY A., Niagara Falls, N. Y., has been appointed Grade Crossing Commissioner, succeeding former Mayor M. B. Butler, who has been appointed by Mayor Keller to the Industrial Commission.

MERKLE, GEORGE, Hasbrouck Heights, N. J., has been unanimously elected President of Council.

OWENS, THURSTON H., Consulting Engineer, New York City, has been appointed associate editor of the *American Gas Light Journal*, 42 Pine street, New York City. Mr. Owens is a member of the American Gas Institute, National Commercial Gas Association, New York Electrical Society, the U. S. Illuminating Engineering Society, and a corresponding member of the British Illuminating Engineering Society.

REDMOND, SMITH, Ardmore, Okla., has been appointed Chief of Police, succeeding Chief Ganett, resigned.

RICHARDSON, Dr. A. L., is Mayor of La Grande, Ore., succeeding F. L. Meyers.

RICHARDSON, FRANK, Jacksonville, Fla., has been elected a member of the Board of Bond Trustees.

RIGHTER, IRVING, Port Jervis, N. Y., has been appointed City Engineer, and Theodore Ludlum, Superintendent of Streets and Sewers.

SEAMAN, J. WESLEY, Long Branch, N. J., has been appointed City Engineer for a term of two years; Ellsworth Jackson, Street Commissioner, and Theodore Howland, Superintendent of Fire Alarms.

SLACK, GEORGE W., Burlington, N. J., has been elected Chief of the Fire Department.

STRYNG, EDWARD, Syracuse, N. Y., has been appointed Engineer of the middle division of the New York State Barge Canal, succeeding Guy Molton, who has held the position for the last two years. Mr. Molton will become Resident Engineer of the Third Division.

TIEDEMAN, GEO. W., Savannah, Ga., has been re-elected Mayor for a term of two years, defeating Capt. R. J. Devant.

WELLS, SEYMOUR, Tonawanda, N. Y., has been re-elected President of the Board of Public Works.

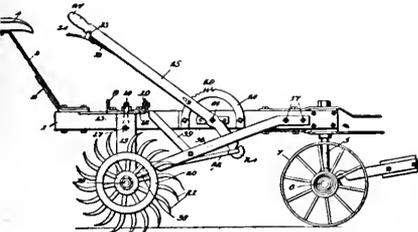

WHEELER, DWIGHT C., has been chosen Chairman of the Board of Fire Commissioners at Bridgeport, Conn.

Mayors Elected—West Virginia

Keyser—R. A. Welch.
Harper's Ferry—George L. Marten.
Bellevue—Joseph Katzner.
Teria Alta—W. Roy Shaw.
Davis—W. E. Weimer, re-elected.
Thomas—Martin.
Elk Garden—W. H. Kight.
South Keyser—J. G. Wolfe.
Kenona—J. H. Lambert.
Matewan—W. R. Hoskins.
Monongah—W. H. Moore.
Fairview—S. T. Barr.
Farmington—Gilbert Musgrave.
Star City—Flay.
Shinnston—Walter Hussey.
Elk Garden—W. H. Kight.
Fayetteville—R. H. Dickinson.
Montgomery—Benjamin Davis.

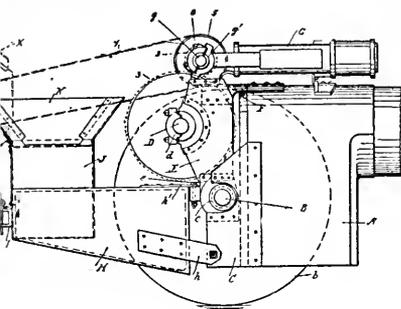

PATENT CLAIMS

980,116. **ROTARY ROAD SCARIFIER.** Walter A. Gillette, Los Angeles, Cal. Serial No. 560,086.
 In a rotary road scarifier, the combination of a right angled supporting frame, a gang of disks provided with curved spikes

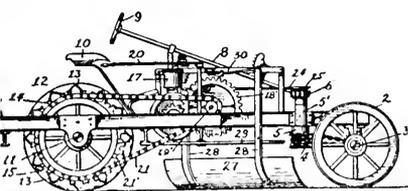

supported on each side of the central portion of said frame, and means for separate adjusting and locking each gang of spike disks, substantially as described.

980,393. **ROAD ENGINE.** Gustaf Arvid Anderson, Waynesboro, Pa., assignor to The Geiser Manufacturing Company, Waynesboro, Pa. Serial No. 534,043.
 In a road engine, the combination, with a boiler, of two lower frame plates secured to the sides of the boiler and projecting forwardly thereof in the same planes as the sides, two upper frame plates arranged

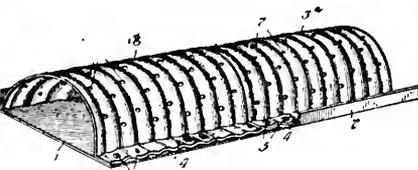

wholly behind the rear end of the boiler parallel to and between the said planes, means for securing the said upper frame plates in position, an axle and road wheels mounted in the lower frame plates, a countershaft mounted in the upper frame plates, and a tooled countershaft wheel secured on the countershaft and arranged wholly behind the rear end of the boiler and not at the side thereof.

980,394. **APPARATUS FOR MAINTAINING CROWNED ROADS.** William C. Anderson, San José, Cal. Serial No. 481,933.
 In an apparatus for the described purpose, the combination of a frame, pressure rolls arranged side by side, ribs on

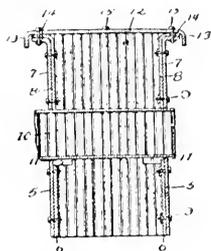

the respective rolls, the ribs on each roll being spirally arranged upon the periphery thereof and the ribs of one roll constituting in effect a continuation of the ribs on the other roll, the said rolls adapted to form and leave in the surface of the road a succession of water draining grooves, a scraper arranged in front of and overlapping the respective rolls, and means carried by the frame for operating said rolls, and means whereby said rolls may be operated there independently or together.

980,442. **DRAINING CULVERT.** Julius H. Schlafly, Canton, Ohio, assignor to The Canton Culvert Company, Canton, Ohio, a Corporation of Ohio. Serial No. 536,395.

A sheet metal culvert section provided with circumferential corrugations and with draining apertures, substantially as and for the purpose specified.

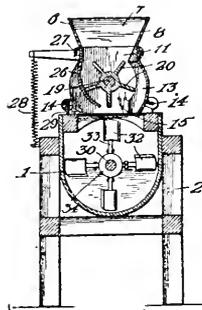

980,754. **ATTACHMENT FOR ROAD CULVERTS.** George S. P. Brannen, Danforth, Me. Serial No. 553,508.
 An end wall for culverts comprising a pair of U-shaped sections having the term-

inals of their opposite limbs connected together and provided with aligning recesses which co-operate to present an opening for the reception of a culvert end, a space flanked by the inner surfaces of the said sections presenting an opening for the reception of a filling material, for the purposes described.

980,834. **FEED REGULATOR FOR CONCRETE MIXERS.** Oliver P. Raber, Kendallville, and Isaac Grogg, Auburn, Ind. Serial No. 441,097. Renewed May 24, 1910. Serial No. 563,154.

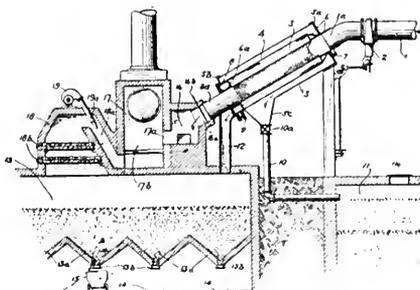

A feed regulator for a concrete mixing machine comprising a supporting frame, a cylindrical casing consisting of oppositely disposed curved side plates, and intermediate and end plates, the last mentioned plates being formed with central bearing openings, and with outwardly projecting apertured lugs arranged at the upper and lower edges of said plates, said plates being adapted to receive the curved side plates between them, and the intermediate plate forming the partition to divide the casing

into two compartments, a rotatable shaft in the bearing openings of said end and intermediate plates, rotary feeding and proportioning wheels arranged on the shaft in said compartments and having blades to form pockets, a longitudinal pivot arranged in certain of the upper ears of said plates, one of said curved side plates being fixed to said pivot and depending therefrom to swing outwardly and upwardly, a horizontal arm projecting radially from said pivot, a coil spring having its lower end fixed to said frame, and its upper end fixed to said arm, whereby the swinging side plate will be yieldably held in contact with said wheels, connecting rods arranged in the remaining apertured ears of said plates to unite the parts of the casing, a hopper above said casing, and means for driving said shaft.

980,463. **SEWAGE DISPOSAL SYSTEM.** Earnest T. Welcme, New York, N. Y. Serial No. 507,936.

In a sewage disposal system, the combination of a conduit, a filter, a reservoir,

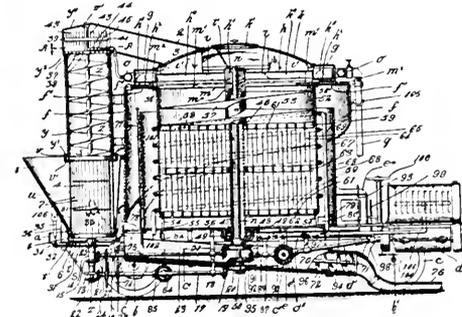

mechanism comprising a plurality of screens in said conduit for separating matter delivered by said conduit, means for carrying liquid separated by said mechanism to said filter, and means for carrying a constituent of said matter to said reservoir.

980,513. **MEANS FOR LAYING DUST AND THE LIKE ON AND MAKING ROADS.** Robert Hacking, West Bridgford, Nottingham, Harry Hill, Ollerton, and Henry Walker Hill, Nottingham, England. Serial No. 526,237.

A composition for surfacing roads, comprising a flux composed of silicate of soda and spirits of turpentine mixed with tar water in the proportions of 30 gallons of water, 120 pounds of silicate of soda and 1/2 gallon of spirits of turpentine, to which is added from 60 to 70 gallons of tar and 100 gallons of water, the whole being mixed and intimately combined with the recited ingredients, as set forth.

980,564. **SNOW DESTROYER.** Patrick D. Piordan, New York, N. Y. Serial No. 581,264.

In an apparatus of the character de-

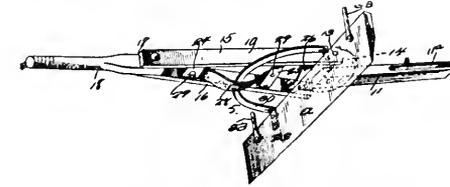

scribed, the combination of triturating mechanism; means for feeding the material to said mechanism; means for supplying water to the latter; and a discharge device for the triturated material.

980,612. **ROAD GRADING MACHINE.**

William H. Dawkins and Tranis G. Dorrough, Royston, Ga. Serial No. 532,136.

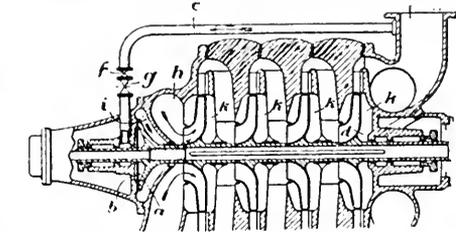

In a road grading machine, a platform frame, a supplemental frame mounted thereon, said supplemental frame comprising two parts, longitudinal yielding means for one of the parts, one of said parts comprising two angularly arranged members converging toward one another at their ends, a curved plate carried by and fixed

to the other part and having pivotal connections with the free ends of said members, one of said parts having a longitudinal slot therein, means for pivoting the slotted end of one of the parts to the platform frame, three U-shaped members arranged between the angularly arranged members, a scraper blade pivoted to one of the U-shaped members and having a semi-annular ring, a bowed guide strip connected to the other two U-shaped members for guiding the semi-annular ring, and means for adjusting and manipulating the blade, as specified.

980,624. **HIGH-PRESSURE CENTRIFUGAL PUMP.** Hans James Schwade, Erfurt, Germany. Serial No. 516,709.

In a high-pressure centrifugal pump, the combination with a spindle and a plurality of wheels mounted thereon; of a casing wherein said wheels are disposed provided with a pair of interiorly-located spaced walls producing a chamber there between,

the rear wall being formed with an opening leading into the suction chamber in front of the first wheel, and the front wall with an opening in communication with the exit side of the pump behind the last wheel; and a relief disk secured to said spindle within the first-named chamber, said disk having its rear face spaced from the rear wall of said chamber to provide a conduit leading to the suction chamber, and its front face spaced from the front wall of said chamber to provide a channel leading to the said conduit.

Parties in charge of proposed work are requested to send us information concerning it as early as possible; also corrections of any errors discovered.

BIDS ASKED FOR

STATE	CITY	RECEIVED UNTIL	NATURE OF WORK	ADDRESS INQUIRIES TO
STREET IMPROVEMENTS				
Ohio	Cincinnati	Jan. 20 noon	Imp. Dayton Pike Sycamore twp., Spec. No. 127; Bond \$1,000.	Fred Dreih, Clk. County Comrs.
Ohio	Cleveland	Jan. 20, noon	Paving portions of 20 streets.	A. B. Lea, Dir. Pub. Serv.
Ohio	Youngstown	Jan. 20	Pave portion South Logan and Millicent aves.	W. H. McMillin, Clk. Bd. Pub. Serv.
Indiana	Frankfort	Jan. 21, 1 p.m.	Constr. various gravel roads.	Chas. F. Cromwell
New Jersey	Alpine	Jan. 21	Bl'g. stone rd. 2,570 ft. long, from Tenafly to Alpine, Sylvan av.	Franklin W. Hopkins, Mayor.
Alabama	Wetumpka	Jan. 23	Road improvements to cost \$170,000.	Solomon Norcross, C.E., Atlanta, Ga.
California	Los Angeles	Jan. 23	Improving Valley Road.	C. G. Keys, Clk. Bd. Superv.
Indiana	Lebanon	Jan. 23, 7:30 p.m.	Constr. gravel roadway, cement curbs and gutters.	Edmund Connor, City Clerk.
New York	New York	Jan. 23, 2 p.m.	Repair, pave approx 270,000 sq yd. asphalt pave, incl. binder course, 500 cu. yd. Port. cement, concrete, 1,000 sq. yd. old stone pavement.	Geo. McAneny, Boro. President.
Texas	Hillsboro	Jan. 24, 3 p.m.	Lay. 31,500 sq. yd. pave 12,711 ft. curb and gutter. Specific cover brick, bitulithic and concrete pavement.	Ed. Woodhall Mayor.
California	Hemet	Jan. 25	Imp. Harvard st. includ. cement curb and gut & conc. culverts	C. G. Hamilton, City Clerk.
Washington	Wenatchee	Jan. 25, 5 p.m.	Grad. and surf with gravel and conc. sidewalks of Okanogan ave. distance of 4,400 ft.	S. R. Sumner, City Clerk.
Ohio	Cleveland	Jan. 27, noon	Paving portions of 20 streets.	A. B. Lea, Dir. Pub. Serv.
Wisconsin	Menomonie	Jan. 31	Pave with vit. brick, asphalt macadam, bitulithic, broken limestone and liquid asphalt bonding solution, or sarcolithic mineral rubber pave. Also cement curb, 7-in. base, 5-in. top and 16-in. depth.	F. W. Rowe, City Clerk.
Indiana	Fowler	Feb. 1, noon	Construction of one mile of gravel road in Benton County.	Lemuel Shipman, County Auditor
Michigan	Hancock	Feb. 1	Constr. 4 mi. of 15 ft. macadam road.	County Clerk.
Indiana	Huntington	Feb. 6, 2 p.m.	Constr. gravel rd. known as P. W. Forest Road.	John W. Weaver, Co. Aud.
West Virginia	Huntington	Feb. 6, 1 p.m.	Grad. and pave. 70 streets with vit. brick, bitulithic, sheet asphalt, asphalt block or concrete asphalt.	John Coon, Comr. of Streets.
Georgia	Atlanta	Feb. 6, 3 p.m.	Lay brick, tile and cem. sidew. and furn. mat. for rep. to sts.	W. J. Campbell, City Clerk.
Indiana	Tinton	Feb. 6	Constr. gravel road in several townships.	J. H. Tranbarger, County Auditor.
Indiana	Brazil	Feb. 7, 11:30 a.m.	Improving various highways in Clay County.	E. A. Staggs, Auditor.
Kansas	Manhattan	Feb. 7, 6 p.m.	Pave with brick block, wood block, concr., asph. concr. or sheet asphalt, requiring approx, 12,200 yds. pave. and 4,000 cu. yd. excav. on Poyntz ave., and 16,200 yds. pave. and 5,450 cu. yd. excav. on Houston and Fourth sts.	C. T. Gist, City Clerk.
Florida	Palatka	Feb. 7, 7:30 p.m.	Constructing approx. 16,500 sq. yd. concrete sidewalks.	A. T. Triay, City Clerk.
Canada	Vancouver, B. C.	Feb. 7	Furnish road roller, weight not less than 15 tons.	Wm. McQueen, City Clerk.
Florida	Tampa	Feb. 7	Paving with shell 1 1/2 mile road.	Hillsboro County Commissioners
Indiana	Crawfordsville	Feb. 7, 2 p.m.	Constr. gravel road known as L. T. Rush Road.	B. B. Engle County Auditor.
Pennsylvania	Erie	Feb. 13, 8 p.m.	Paving part of W. 20th street.	F. Hanlon, City Clerk.
Oregon	Portland	Feb. 23	Constructing pavement on Jersey st.	J. W. Morris, City Engineer.
SEWERAGE				
Washington	Spokane	Jan. 20, 2 p.m.	Furn. 7,000 ft. of 10-in. corrugated drain pipe, perf. bottoms.	John Gifford, City Purch. Agt.
Ohio	Elyria	Jan. 20	Constr. trunk sewer, cost approx. \$26,000.	Rose Moriarty, City Clerk.
Kentucky	Louisville	Jan. 20	Constr. sewer known as 2d St. sewer, incl. 2,430 ft. of 42 and 48-in. concrete sewer.	Comr. of Sew., 605 Equitable Bldg.
New York	Troy	Jan. 20	Constr. salt glaze vit. drain pipe sewer.	J. M. Riley, Secy. B.I. Con. & Sup.
Ohio	Toledo	Jan. 20	Constructing sewer in Huron street.	Fred Shane, Secy. Bd. Pub. Serv.
Ohio	Youngstown	Jan. 20	Constructing sewer in Homewood street.	W. H. McMillin, Clk. Bd. Pub. Serv.
Indiana	Lebanon	Jan. 23, 7:30 p.m.	Constr. sewers in Barrone street.	Edmund Connor, City Clerk
New York	Syracuse	Jan. 26 10 a.m.	Bl'g. Harbor brook intercepting sewer and imp. stream.	G. D. Holmes, Ch. Engr. Inter S. Bd.
Indiana	Richmond	Jan. 26	Constr. sewer system, incl. approx. 4,200 ft. 12 to 42 in. sewer.	Homer Hammond, Pres. Bd. Pub. W.
Ohio	Lorain	Jan. 27, noon	Storm water sewer in Dallas ave.	L. B. Johnston, City Clerk.
Texas	Corpus Christi	Jan. 27	Furn. sewer material, incl. 1,100 sq. ft. of steel sheet piling, 85 c. i. manhole covers, 10 flush tank siphons, 4,000 lin. ft. of c. i. pipe, 2 carloads of lumber, 2,000 ft. of 15-in vitrified sewer pipe, 7,000 ft. of 12-in vitrified sewer pipe, 3,300 ft. of 10-in. vitrified sewer pipe, 9,660 ft. of 8-in vitrified sewer pipe, 57 "Ys" 6 on 15, 78 "Ys" 6 on 10, 288 "Ys" 6 on 12, 258 "Ys" 6 on 8.	O. O. Wright, City Clerk.
South Dakota	Alexandria	Jan. 28, 1 p.m.	Constr. approx. 7 1/2 mi. 5 to 24-in. tile drains.	M. Volz Auditor.
Washington	Spokane	Jan. 29	Furn. 7,000 ft. of 10-in. corrug. drain pipe corrug. bottom.	John Gifford, City Purchas. Agt.
Manitoba, Can.	Souris	Feb. 1	Furn. 31,000 ft. vit sewer pipe, etc spring and summer, 1911.	C. R. Heath, Health Engineer.
Georgia	Atlanta	Feb. 6, 3 p.m.	Constr. sewers and furn. vit. pipe, cem. and castings.	W. J. Campbell, City Clerk.
Ontario, Can.	Toronto	Feb. 7, noon	Constr. several sections low level interceptor.	G. R. Greary, Chin. Bd. Control.
WATER SUPPLY				
Washington	Spokane	Jan. 20, 2 p.m.	Furn. 1,950 lin. ft. 8-in. water pipe and 9,600 ft. 16 in. pipe.	John Gifford, City Purchas. Agt.
Ohio	Newburg	Jan. 21, noon	Constructing water mains.	J. W. Shimek, Clk. B.I. of Control.
Illinois	Chicago	Jan. 21	Furn. 12,500 lbs. packing, also tapping connections, also approx. 15 tons lead pipe.	B. J. Mullaney, Comr. Pub. Wks.
Texas	Georgetown	Jan. 23	Furn. approx. 300 tons class "B" water pipe.	R. E. Ward, Mayor.
Oregon	Astoria	Jan. 23, 2 p.m.	Furn. labor and material for wood stave pipe.	Lars Bergsvik, Engr. Wt. Com.
California	Vallejo	Jan. 23, 7:30 p.m.	Furn. 1,120 pieces of c. i. bell and spigot water pipe 14 in. internal diam., 12 ft. long, 66 in. thick and 340 pieces c. i. bell spigot water pipe 8-in. internal diam., 12 ft. long, 51 in. thick with fittings.	W. J. Torney, Clk. Bd. Wtr. Comrs.
Kentucky	Louisville	Jan. 24, 2 p.m.	Erect 64 fire hydrants.	Chas. Cronan, City Clerk.
California	Ontario	Jan. 25	Furn. Ontario or upland pipe, pipe and spls. for constr. domestic water system.	R. O. Breckenridge, Town Clerk
Missouri	Kansas City	Jan. 26	Bldg. horizontal shaft centrifugal pump, direct connected to vertical cross com. engine, capacity 30,000,000 gals.	W. Kiersted, Ch. Engr. Water Dept
Illinois	Chicago	Jan. 27	Furn. and install. two 20,000,000 cent. pumps and two 1,000 H. P. synchron. elec. motors, piping, switchboard, etc.	B. J. Mullaney, Comr. Pub. Works
Washington	Spokane	Jan. 30, 2 p.m.	Furn. two 14 in. single suction, hor. shaft, two-stage centrifugal pumps, valves, etc.	John Gifford, City Purch. Agt.
California	Los Angeles	Jan. 30, 2 p.m.	Franchise for lay water-pipe in Lankershim; 40 years.	C. G. Keys, County Clerk.
Iowa	State Center	Jan. 31, noon	Drilling well.	J. W. Sparks, City Clerk.
Manitoba, Can.	Sours	Feb. 1	Furn. 425 tons c. i. water pipe, specials, fire hydrants, gate valves and boxes, pig lead, etc., in spring and summer of 1911.	J. W. Breakev, Secy. -Treasurer.
Iowa	Rippey	Feb. 6, 8 p.m.	Construction of water works system.	J. A. Haberer, Town Clerk.
Manitoba, Can.	Winnipeg	Feb. 6	Erect two pump plants; cap. 1,000,000 imperial gal. per 24 hrs.	M. Peterson, Secy. B.I. Control

Carlyle, Ill.—Grading and keeping in repair township roads during year to S. Cov. Angelo.

East St. Louis, Ill.—Improving 40th st. and Forest Blvd., to Meyer & Thomas, \$20,956.45; Linden ave., to same, \$3,584.50.

Cary, Ind.—Paving Massachusetts st. to S. A. Smith.

Huntington, Ind.—Construction of the Thomas or county line gravel road to Hutsell & Wolfcave, Markle, \$17,997.

Wabash, Ind.—Construction of the M. Kilty road in Chester Township, 2½ miles in length, and Sharp road in Chester Township, 3 miles in length, to George M. Sewell, Jamesville, \$9,200, and to William Refert, Monroe, \$10,434.

Washington, Ind.—Constructing 3 miles of road in Davess County to M. H. Wilson, Montgomery, \$10,201.

Hutchinson, Kan.—To Wheeler & Kelcher Construction Co., Garden City, for rebuilding Haston road, \$3,510.

Baltimore, Md.—Paving Patuxent st. with vit. brick, to Martin T. Beach, Knickerbocker Bldg.

Sedalia, Mo.—To Jos. W. and Geo. T. McNelee, city, for paving Prospect st. with brick block on a 4-in. concrete base, cement fill, 8.20 sq. yds. at \$1.72 per sq. yd. Other bidders: F. W. Keller, \$1.73 per sq. yd.; Johnson & Hyatt, \$1.73½, and Carl P. Werner, \$1.74½—bidders all of city.

Rochester, N. Y.—Furnishing 180,000 ft. of lumber for Street Department, to Wm. B. Morse Lumber Co., \$5,315.50.

Akron, O.—Barges st. paving, to McAllan Bros., \$17,963.73.

Columbus, O.—Contract No. 12, covering paving of Mound st. viaduct, to A. G. Pugh, city, about \$18,000; work includes all paving incident to elimination of grade crossing at Mound st.

Hamilton, O.—To Andrews Asphalt Paving Co. for paving with sheet asphalt, East ave., \$48,938; North 6th st., \$21,065; South B st., \$23,998.

Jenerson, O.—Building North Ridge road, Ashtabula County, to Buckeye Engineering Co., Norwalk, for macadam with Wampum or Bessemer stone, Tarvia X, silica gravel, \$11,720; other bidders: Oatley & Ensign, Cortland, macadam Bessemer stone, Tarvia X, limestone chips, \$11,997; macadam Bessemer stone, Tarvia X, silica gravel, \$11,991; Thomas W. Nicholson, Cleveland, macadam with tar or asphalt, \$12,000; C. J. Chinnock, Warren, macadam, Tarvia X, Cambrian stone, limestone chips, \$11,761; macadam, standard asphalt binder, Cambrian stone, limestone chips, \$11,391; macadam, Tarvia X, Cambrian stone, silica gravel, \$11,933; macadam, standard asphalt, Cambrian stone, silica gravel, \$11,546; Callaghan & Farkinson, Bellevue, macadam, standard asphalt binder, limestone chips, \$11,389; R. P. Burnett, Cleveland, macadam, Bellview stone, standard oil treatment, silica gravel, \$12,412; macadam, Bellview stone, standard oil treatment, limestone chips, \$12,412; Walter F. Clifford, Ashtabula, macadam, Tarvia X, limestone chips, Bessemer or Wampum stone, \$12,238; macadam, Tarvia X, silica gravel, Bessemer or Wampum stone, \$12,416.

Altoona, Pa.—Paving with Clearfield brick, to Bell-Bockel Co.; Lehigh brand of cement will be used; former action rejecting bids rescinded.

Fuyallup, Wash.—Paving in Districts 27 and 28 to Warren Construction Co., 1105 A st., about \$23,448.

Tacoma, Wash.—Paving with brick a portion of Pacific ave., to Kessel Construction Co., \$65,948; other bidders, W. J. Murphy, \$37,667; Wright & Sweeney, \$41,190; N. A. Jones, \$37,293; Lister Construction Co., \$39,820; Anderson Construction Co., \$36,260.

BIDS RECEIVED

Bairdstown, Cal.—Grading and gravelling in Road District No. 1: H. V. Gentry, \$12,516 and A. W. Beesemeyer, \$24,991.

San Diego, Cal.—Street improvements, as follows: Improving J st., Barber Asphalt Paving Co., 19c. per sq. ft. for paving, 35.9c. per sq. ft. for granite block gutters; Fairchild-Gilmore-Wilton Co., 18c. for paving, 35c. for gutters; E. P. Sweeney, Fairchild-Gilmore-Wilton Co., 18c. for paving, 35c. for gutters; Barber Asphalt Paving Co., 19c. for paving, 35.9c. for gutters; for improving F st., Barber Asphalt Paving Co., \$100 for storm drains, 38.4c. for paving, 37.8c. for cement curb, 38.4c. for granite block gutters; Fairchild-Gilmore-Wilton Co., 19.3c. for paving, 37c. for granite block gutters, 35c. for cement curbs, \$60 for cement pipe drain.

East St. Louis, Ill.—Improving Linden ave.: (a) laying 1,090 lin. ft. limestone curb, (b) 56 cu. yds. excavation placed in fill, (c) removing 694 cu. yds. excavation; Myers Construction Co., (a) 70c., (b) 35c., (c) 45c.; Meyer & Thomas, (a) 64c., (b) 35c., (c) 35c.; Gaynard & Sweeney, (a) 75c., (b) 45c.; laying 1620 ft. paving, Myers Construction Co., Egyptian \$1.89, Superior \$1.89; Meyer & Thomas, Albion \$1.64, Alton \$1.64, Egyptian \$1.62, Superior \$1.64; Gaynard & Sweeney, Banner \$1.71, Egyptian \$1.78, Superior \$1.72; improving 40th st., (a) Myers Construction Co., (b) Meyer & Thomas, (c) Gaynard & Sweeney, (d) Walter Coonan, 1,255 cu. yds. excavation placed in fill, (a) 35c., (b) 35c., (c) 45c., (d) 30c.; 350 cu. yds. excavation removed, (a) 45c., (b) 35c., (c) 45c., (d) 30c.; 8880 lin. ft. limestone curb, (a) 70c., (b) 66c., (c) 75c., (d) 79c.; 180 lin. ft. 15-in. vit. clay pipe, (a) 75c., (b) 85c., (c) 75c., (d) 90c.; laying 8,665 sq. yds. paving, (a) Egyptian \$1.89; (b) \$1.66, (c) \$1.78; Superior, (a) \$1.89, (b) \$1.67, (c) \$1.72, (d) \$1.83; Albion, (b) \$1.67, (d) \$1.79; Alton, (b) \$1.67, (c) \$1.72.

Louisville, Ky.—Improving Ramsdell ave. with vit. block gutters and asphalt driveway; American Standard Asphalt Co., lowest bidder, \$1.97 per sq. yd.

Grand Haven, Mich.—Street paving: W. W. Hatch & Son Co., 1005 Hammond Bldg., Detroit, brick paving on 6-in. concrete foundation, \$25,957; on 6-in. concrete, if contract is awarded before Jan. 15, \$35,665; Westrumite, with brick between rails, \$35-

30; Marble Cement and Coal Co., Muskegon, Tarvia X on 5-in. base course, and 1/2-in. top, \$24,064; Tarvia X on 6-in. base course, and 2 1/2-in. top, \$26,038; Tarvia X on 6-in. base course and 3-in. top, \$29,988; C. H. Kanmeir, 919 6th st., Port Huron, brick paving on 6-in. concrete foundation, \$35,554; C. Marshallman, 226 6th st., Grand Rapids, brick paving on 6-in. concrete foundation, \$32,217; treated macadam, \$24,203; asphalt concrete, \$32,086; Farrell Bros., 701 Main st., W. Lansing, brick paving on 6-in. concrete foundation, \$34,738; Carpenter and Anderson, 310 Shepard Blk., Grand Rapids, brick paving on 6-in. concrete foundation, \$31,050; C. E. Williams, 33 Paddock st., Grand Rapids, brick paving on 6-in. concrete foundation, \$31,828; asphalt macadam on 6-in. concrete foundation, \$23,314; asphalt macadam on 6-in. stone foundation, \$23,051; tar macadam on 6-in. concrete foundation, \$22,835; tar macadam on 6-in. stone foundation, \$22,583; Anson Grune, 47 South Union st., Grand Rapids, brick paving on 6-in. concrete foundation, \$360 to be allowed or use of city roller, \$31,485; Tarvia on crushed stone and 4-in. top course, \$22,161; Tarvia on concrete, and 4-in. top course, \$23,012; John Vander-Wheele & Cornelius Vander-Wheele, 51 Baldwin st., Grand Rapids, brick paving on 6-in. concrete foundation, \$32,695.—Riggs & Sherman Co., Toledo, O., Engineer-in-Charge.

New York, N. Y.—Repairing and maintaining sheet asphalt pavements in Manhattan Borough: (a) 270,000 sq. yds. asphalt pavement, including binder course; (b) 500 cu. yds. Portland cement concrete; (c) 1,000 cu. yds. old stone pavement, to re-lay; (d) total: Uvalde Asphalt Co., 1 Broadway, (a) 90c, (b) \$7.50, (c) 75c, (d) \$47,500; Barber Asphalt Paving Co., (a) 3c, (b) \$7.81, (c) 90c, (d) \$255,900.

Seattle, Wash.—Paving Western ave., Ferguson Coit Co., Arcade Annex, lowest bidders, \$58,996.60; only other bidder, Macadam & Co., \$60,996.

SEWERAGE

Ensley, Ala.—Jefferson County Board of Revenue will construct \$50,000 concrete septic tank to purify drainage of county sanitary sewer.

Clebe, Ariz.—City is considering fund plan for establishment of sewerage system. Address Mayor Coplen.

Pasadena, Cal.—Council is considering construction of sewer on Mountain st. and in portions of Hudson and Belvidere sts.

Washington, D. C.—Improvements for northwest section of city have been ordered which will include laying of a sewer in Mount Pleasant and Irving sts.

Washington, D. C.—Superintendent of Sewers Asa E. Phillips has \$40,000 available for construction of sewer from P st. to Massachusetts ave.

Augusta, Ga.—Commissioner of Public Works Nisbet Wingfield has recommended liberal appropriation for construction of lateral sewers.

Gainesville, Ga.—City will extend sewer system; E. P. Eppes, City Engineer, and Consulting Engineer Barnett, Athens, have been selected to supervise construction.

Macon, Ga.—Alderman Elkin, Chairman of the Sewer Committee, has stated that laying of sewers in South Macon and on Napier Heights would be taken up after present work on Boundary st. is completed.

Murphysboro, Ill.—Council has authorized construction of sewer system to drain north half of city.

Peoria, Ill.—Superintendent of Sewers Sherman Eckley has recommended construction of sewer on south side.

Jefferson, Ia.—Plans will be prepared by Engineers J. S. Worley Co., 206 Reliance Bldg., Kansas City, Mo., for system of sewers.

Keokuk, Ia.—Construction of sewer on 1st st. is being considered.

Topeka, Kan.—City Commissioners are considering construction of drains in First Ward to relieve surface water; cost \$6,000.

Wellington, Kan.—Plans will be prepared by J. S. Worley Co., 206 Reliance Bldg., Kansas City, Mo., for proposed sewage disposal plant.

Paducah, Ky.—E. F. Layman, Cincinnati, O., has been selected to prepare plans for septic tank to be installed for purification of sewage of Colonial Heights.

Cassopolis, Mich.—Citizens have defeated proposition to issue \$30,000 bonds to install sewer system; dredging of Stone Lake and beautification of its shores are being urged.

Laurium, Mich.—Citizens are considering construction of septic tank for purification of sewage; cost \$10,000.

Duluth, Minn.—County Board of Poor Commissioners has decided to wait until spring before beginning work on installation of new sewerage system.

Linden, N. J.—Township has decided to construct lateral sewer in Elizabeth ave.—J. P. Winans, Chairman Township Committee.

Northmouth Beach, N. J.—Establishment of \$50,000 sewer system is being considered.

Sea Island City, N. J.—Plans have been accepted by Councils and bids will soon be asked for construction of a sewer system and sewage disposal plant to be built during coming spring; cost, between \$35,000 and \$40,000.—S. R. Goff, Ocean City, Engineer; T. E. Devow, President Councils.

South Amboy, N. J.—City has sold \$75,000 sewer bonds to R. M. Grant & Co., New York.

Verona, N. J.—Mayor J. R. Pratt has recommended installation of sewage system.

Binghamton, N. Y.—Plans are being prepared for peculiar shaped sewer along Park Creek.

North Pelham, N. Y.—Citizens have voted to enter into contract with Pelham and Pelham Manor to go through villages for construction of outlet sewer to disposal plant; also \$15,000 bonds for construction of outlet sewer; village of Pelham Manor has defeated proposition to enter into contract, while Pelham voted favorably.

Poughkeepsie, N. Y.—Board of Public Works has voted to construct sewer in N. Clinton st. and North st.

Red Springs, N. C.—Citizens have voted bonds for construction of sewer system.—B. Iearshall, Mayor.

Cincinnati, O.—Plans will be prepared for construction of sewer in Riverside and Hillside aves.

Sandusky, O.—Mayor Geo. T. Lehler has recommended reconstruction of city's sewerage system.

Ligonier, Pa.—Application has been made to State Health Department for permit to build sewerage system and sewage disposal plant according to plans prepared by F. H. Shaw, of Lancaster; work contemplated is 5 miles of 6-in., 8-in., 10-in., 12-in. and 15-in. sewers, disposal plant with sedimentation tanks of "Emscher" type and sprinkling filter beds and pumping station; bond issue will be voted on.—Frank N. Keffer, Chairman Sewerage Committee.

Sharpsville, Pa.—Town is considering construction of sewers during year.

Murfreesboro, Tenn.—Mayor G. B. Giltner has recommended laying of line of sewerage.

Texarkana, Tex.—Council has adopted ordinance creating improvement district No. 10 for purpose of installation of system of sewerage.

Antigo, Wis.—Plans are being prepared by Engineer Wm. G. Kirchoffer, Madison, for sewer and sewage disposal plant; cost \$50,000.

Watertown, Wis.—City Engineer Arnold Kraelt is preparing plans for proposed sewerage system.

CONTRACTS AWARDED

Tucson, Ariz.—Construction of sewer in southwest portion of city; pipe, to Pacific Sewer Pipe Co., of Los Angeles, Cal., \$8,001; to the Tucson Concrete Construction Co., of Tucson, for laying sewers, \$4,856.

Oroville, Cal.—Building sewer system, to Contia Costa Construction Co., \$90,019; bid of J. W. Pierson, Sacramento, rejected.

Washington, D. C.—Building sewer from P st. near Rock Creek to Military road, to E. G. Gummel, 300 Rhode Island ave., N. W.

Jacksonville, Fla.—Laying 1,100 ft. of 15-in. and 200 ft. of 12-in. reinforced concrete pipe to the Reinforced Concrete Culvert Pipe Co., city.

Louisville, Ky.—Contract for Section C of Middlefork sewer, involving \$30,000, has been awarded to the Henry Lickel Co., Louisville.

Houghton, Mich.—To Chester O. Davis, for construction of sanitary sewer.

St. Joseph, Mo.—Construction of sewers, to E. F. Mignery; 59 1/2c. per lin. ft., Dist. No. 53; 51c. for Dist. No. 114, and 55c. for Dist. No. 117.

Plainfield, N. J.—Furnishing and installing sewage pumping machinery, to Blaisdell Machinery Co., New York City, \$3,745; plant is to consist of motors, air compressors, ejectors and operating devices in duplicate, air receiver, pipe connections, gates and valves complete, cap. 175 gal. per minute through 8-in. force, main 1,900 ft. long, actual lift from bottom of ejectors to outlet of force main, 21 ft.

Newburgh, N. Y.—To Pietro Luciano, White Plains, for sewer in Lake st., \$8,912.

Akron, O.—Second ave. sewer, to E. McShaffrey & Son, \$11,234.75; Water st. sewer, to H. O. Toole, \$3,191.65.

Seattle, Wash.—Building sewers on 12th ave. to V. Romaglia and C. Christoforo, 6506 3d ave., N. W., \$21,883.

BIDS RECEIVED

Monrovia, Cal.—Construction of a sewer system: (a) furnishing all labor and material complete; (b) furnishing labor only, exclusive of vitrified pipe, brick and cement; Nukropina & Meletich, Lcs Angeles, (a) \$18,889; Pekich & Tomich, of Los Angeles, (a) \$83,273, (b) \$41,115; R. C. Lowell, (a) \$85,744, (b) \$43,895; Register & Hendricks, of Los Angeles, (a) \$87,770, (b) \$43,507; Zambica & Nikceirch, (a) \$87,773; Chamberlain & Williamson, Pasadena, (a) \$89,180, (b) \$50,000; E. R. Werdin, Los Angeles, (a) \$83,944; John Balch, Los Angeles, (a) \$90,727, (b) \$45,479; B. R. Davidson, Monrovia, (a) \$91,218; Andrew Holoway, Pasadena, (a) \$95,110, (b) \$43,741; J. D. Kneen, (a) \$95,822; W. A. Frick, (a) \$88,978; Peter Grbovoch, Los Angeles, (a) \$99,031; A. S. Bent, Los Angeles, (a) \$101,000; Thomas H. Shea, (a) \$105,919; Westlake Construction Co., (a) \$113,008; Mesmer & Rice, (a) \$79,672; for material: Vitrified pipe by Pacific Sewer Pipe Co., \$38,271; concrete pipe by Reinforced Concrete Pipe Co., \$11,000; brick by Los Angeles Pressed Brick Co., \$10 per M, and Standard Pressed Brick Co., \$8 per M; cement by Riverside Portland Cement Co., \$3,000. Engineers, Olmstead & Gillett, Wright & Callender Bldg., Los Angeles.

WATER SUPPLY

Benson, Ariz.—Board of Supervisors has granted franchise to J. S. Douglas, Douglas, and W. H. Brophy, Bisbee, to supply town with water works.

Riverside, Cal.—Riverside Artesian Water Co. has issued \$200,000 bonds for installation of larger service pipes and improving system.

Sacramento, Cal.—Board of City Trustees has decided to install a steam pump for city pumping plant.

St. Petersburg, Fla.—F. S. Guthrie desires pipes on water works plant; daily capacity, 400 gals. of water.

Augusta, Ga.—Commissioner of Public Works Nisbet Wingfield has recommended installation of additional filter units.

Gainesville, Ga.—City will extend water works; E. B. Eppes, City Engineer, and Consulting Engineer Barrett, Athens, have been selected to supervise construction.

Chicago Heights, Ill.—City will ask for bids in spring for laying 1,600 ft. of 6-in. c. i. water main.—W. E. Lemertz, Clerk; J. C. Mote, Mayor.

Moline, Ill.—Mayor Olsen has appointed committee, G. A. Stevens, W. L. Velie and others, to investigate water works and report if improvements are necessary.

Stamford, Ill.—Citizens have voted to install \$13,500 water works system with new central plant.

Gas City, Ind.—Municipal water and electric light plant destroyed by fire will be rebuilt.—Thos McKee, Chief Engineer.

South Bend, Ind.—National Board of Fire Underwriters has recommended obtaining of additional well supply, providing of suction storage at pumping station and additional pumping capacity of at least 16,000,000 gals. per day; rebuilding of all frame structures at pumping station with brick; extension of mains and installation of gate valves.

Atlantic, Ia.—The W. K. Palmer Co., Engineers, 717-720 Dwight Bldg., Kansas City, Mo., are preparing plans for pumping and electric light plant for city; bond issue \$50,000.

Englewood, Kan.—Bonds have been sold for construction of water works.—J. S. Worley Co., 206 Reliance Bldg., Kansas City, Mo., Engineers.

Hugoton, Kan.—Stevens County Commissioners have decided to bore for artesian water.

Fugo, Kan.—City is considering installation of water works system.

Mound City, Kan.—Engineers J. S. Worley Co., 206-7 Reliance Bldg., Kansas City, Mo., have been selected to prepare plans for system of water works.

Patterson, La.—City has selected Fred A. Jones Co., Houston, Tex., as Engineer in charge of construction of water works; cost \$30,000; will erect \$1,000 building, construct steel elevated tank and install 1,000-gal. pump.

West Brookfield, Mass.—Town is considering construction of a water system; cost, \$30,000.

Marquette, Mich.—Light and Power Commissioner will erect dam at outlet of Silver Lake.

Argyle, Minn.—Village is considering bond issue for installation of water works system.

Minneapolis, Minn.—Bids will be received Feb. 2, 2 p. m., for \$500,000 water works bonds.—D. C. Brown, City Comptroller.

St. Joseph, Minn.—Village is planning extensions to water works system.

Laurel, Miss.—Mayor Noble has recommended improvement and enlargement of city water works plant.

Moberly, Mo.—City has had plans prepared by Rollins & Westover, Kansas City, for extension of water works; will install pumping plant; cost \$50,000; contracts will be let in early spring.

Helena, Mont.—Citizens have voted \$650,000 bonds to install water plant.

Fairbury, Neb.—Burns & McDonnell, Scarritt Bldg., Kansas City, Mo., are completing plans of water works and electric lighting improvements; cost \$40,000; bonds sold.

Lodge Po'e, Neb.—Geo. Potts is preparing preliminary plans for water works; cost about \$10,000.

Milford, Neb.—City has sold \$18,500 water bonds to Investors' Securities Co., Des Moines, Ia.

Florence, N. J.—Taxpayers have forwarded petition to the Township Committee to ascertain lowest probable cost of installing a municipal water service.

Hillsboro, N. J.—Town is considering construction of water works system.

Hopewell, N. J.—Borough is considering \$3,000 bond issue for repairing reservoir and extending water mains.

Verona, N. J.—Mayor J. R. Pratt has recommended extension of water system and erection of stand pipe.

East Aurora, N. Y.—Engineer Fred. K. Wing, 910 White Bldg., Buffalo, has completed tentative plans for sewage disposal plant and sewer system; citizens will vote on the question soon; estimated cost \$100,000. Address Village President Brotherhood.

New York, N. Y.—Bids will be received Jan. 21 by City Controller Prendergast for \$21,500,000 bonds for developing water supply system.

Red Springs, N. C.—Citizens have voted issuance of bonds for construction of water works and sewerage system; will construct iron tank 190 ft. high, 125,000-gal. capacity; cost \$30,000; engineer not yet selected. —A. B. Fearsall, Mayor.

Thomasville, N. C.—Construction of water works and sewer system is being considered.

Mandan, N. D.—Plans and specifications are being completed by Burns & McDonnell, Scarritt Bldg., Kansas City, Mo., for water works improvements, including new pumping station and settling basins, approximate cost \$65,000.

Barberton, O.—City is considering purchase of 30 more acres of land for purpose of drilling more artesian wells to make water supply of city nearer adequate.

Cincinnati, O.—Bids will be received, Jan. 23, noon, for \$125,000 bonds to improve water works.—E. Von Barg-n, City Auditor.

Sandusky, O.—Mayor Geo. T. Lehler has recommended general overhauling of water filtration plant.

Madras, Ore.—City will install \$10,000 water plant.

Portland, Ore.—National Board of Fire Underwriters has recommended additional storage facilities for the 50,000,000 to 100,000,000 gallons of water for use of the Fire Department; increase by two inches in size of service pipes, prevention of water waste, improvement of western low gravity water system, installation of duplicate main arteries from the reservoirs, laying of twelve new water mains, two fire hydrants at each street intersection in the business section, and the establishment of gate valves in water pipes.

Ligonier, Pa.—Plans have been submitted to State Department of Health for its approval of contemplated enlargement of the municipal water works, which includes a circular, concrete reinforced distributing reservoir of 500,000 gal. capacity, and about 2 miles of 10 in. and 12-in. mains; bonds will be voted on.—F. H. Shaw, Lancaster, Consulting Engineer; Frank M. Keffer, Member Water Committee.

Newton, Pa.—Newton Water Co. has decided to make improvements to its plant and sink another artesian well to supply town.

York, Pa.—Land fronting on the east branch of the Codorus Creek in York and Springfield townships has been purchased by York Water Company for purpose of erecting impounding basin to store surplus water during winter for use in the summer; proposed improvements will begin early next spring, and will require outlay of about \$125,000.

Columbia, S. C.—City has \$6,000 available for new hydrants, service connections, etc.

Gainesville, Tex.—Citizens have voted \$150,000 bonds to purchase water works.

Paris, Tex.—Council has selected F. H. Lancashire, Dallas, Tex., to submit report on improvement of water pumping plant.—Edward H. McCusiston, Mayor.

Taylor, Tex.—Council has made agreement with A. T. Zilker, owner of Taylor water works, to increase water supply by

erection of concrete pump house, increasing of storage capacity, installation of additional and larger pumps and boilers and 10-in. instead of 6-in. mains.

Park City, Utah.—Mayor Frank Daley has selected Messrs. Kearns, Thompson & Beggs to secure plans and specifications for proposed water system.

Spokane, Wash.—Plans for 12-in. high-pressure mains on Main and Sprague sts. and 10-in. mains on all cross streets from Division to Monroe have been drawn; installation of 12-in. main on 2d ave. at cost of approximately \$120,000 suggested.

Pembroke, Ont., Can.—Citizens have passed by-law to raise \$65,000 to extend intake pipe of water works system.

Winnipeg, Man., Can.—Specifications will be prepared for pump for two wells which city will sink.

CONTRACTS AWARDED

Fort Wayne, Ind.—To Thrasher & Herman, deep well contractors, Barr st., to drill test wells on east side, where it is proposed erecting pumping station No. 4, \$1.68 per ft. from top to bottom.

Newton, Kan.—Furnishing 2,500,000-gal. pumping engine to Laidlaw-Dunn-Gordon Co.

St. Paul, Minn.—Hydrant and valve supply for coming year to South Park Foundry & Machine Co., St. Paul.

Kansas City, Mo.—To Chapman Valve Co., of St. Louis, for valves, about \$4,690.

Cimarron, N. M.—Construction of water works to the Cook & Gregory Construction Co., Joplin, Mo., about \$32,329.

Fort Worth, Tex.—Furnishing duplicate air compressor for city water works system, to the Ingersoll-Rand Co., St. Louis, \$21,574.

BIDS RECEIVED

Los Angeles, Cal.—Furnishing all fabricated steel and rivets necessary to construct 1,409 ft. of riveted steel siphon 9 ft. 6 in. in diam.; Camden Iron Works, \$9,400 f.o.b. cars or alongside wharf, Camden, N. J.; time of shipment 7 weeks from receipt of order; shipping weight, 505,500 lbs.; East Jersey Pipe Co., \$15,279 f.o.b., Paterson, N. J.; time of shipment 6 weeks from receipt of notice; shipping weight, 265 tons; Springfield Boiler & Mfg. Co., \$13,735 f.o.b., Springfield; time of shipment 4 months; estimated weight, 537,200 lbs.; United Iron Works, \$12,000 f.o.b., Warren, Pa.; time of shipment first carload 30 days from date of order; shipping weight, approximately 506,962 lbs.; Power & Mining Machinery Co., \$14,816 f.o.b., Cudahy, Wis.; time of shipment 90 days; shipping weight, 516,000 lbs.; Llewellyn Iron Works, \$10,681 f.o.b., Alliance, O.; time of shipment, begin in 6 weeks, complete in 90 days; shipping weight, 250 tons; Scully Steel & Iron Co., per drawings, specify 476,462 lbs.; 4 per cent light of 19,078 lbs.; 435,520 lbs. at \$10,150 f.o.b., Chicago, Ill.; start shipping 30 days, complete shipments in 90 days; shipping weight, 489,000 lbs.; Pacific Coast Mfg. Co., \$9,450 f.o.b., Pittsburg, Pa.; complete in 5 weeks; shipping weight, plates 506,000 lbs., rivets 21,000 lbs.; Wm. B. Follock Co., \$10,725 f.o.b., Youngstown, O.; time of shipment, 75 days; shipping weight, 466,000 lbs.; Kennicott Co., \$12,172 f.o.b., Chicago Heights, Ill.; time of commencement of shipment two months after receipt of contract; estimated shipping weight, 490,000 lbs.; Struthers-Weils Co., \$14,610 f.o.b., Warren, Pa.; for steel plate of open-hearth flange quality, made according to Manufacturers' Standard Specifications; estimated weight, 523,687 lbs.; could commence shipping in 4 weeks after order reached shop; Braun, Williams & Russell, Inc., \$10,400 f.o.b., Sharon, Pa.; time of shipment, complete in 70 days; shipping weight, 540,000 lbs.; Wildman Boiler Works, \$9,990 f.o.b., Chicago; time of shipment, 60 days; shipping weight, 492,000 lbs.; Ritter-Conley Mfg. Co., \$9,330 f.o.b., Pittsburg, Pa.; time of shipment 60 days; shipping weight, 523,000 lbs.; Shaw-Patcher Co. Pipe Works, \$13,250 f.o.b., Sacramento, Cal.; time of shipment, begin delivery in 35 days and complete in 30 days thereafter; shipping weight, 505,898 lbs.

Spokane, Wash.—Completion of Lincoln Heights reservoir, S. A. Fish and C. Harnett, lowest bidders, \$162,500.

LIGHTING AND POWER

Mobile, Ala.—Board of Public Works will consider permanent lighting of Bienville Square.

Benson, Ariz.—Board of Supervisors has granted franchise to J. S. Douglas, of Douglas, and W. H. Brophy, of Bisbee, to use streets for installing electric lights and power and for water system, and another for transmission of electric power and light up Sulphur Springs valley from Douglas.

Northside, Cal.—Citizens League has endorsed plan for installation of light plant.

Willows, Cal.—Town Trustees have rejected bid of Northern California Power Co. to furnish arc lights for streets at rate of \$72 a light a year for period of five years, considering price too high.

Carbondale, Colo.—Town Trustees have granted W. M. Dhukel franchise to furnish light and power to town for period of 2 years.

Palisades, Col.—Franchise has been granted to Municipal Light, Power and Telephone Co. to string wires; new company will furnish a 24-hour service.

Stratford, Conn.—Town has voted \$2,500 appropriation to install 100 additional street lights.

Washington, D. C.—An American Consulate in an Asiatic country has reported that certain municipality has decided to erect \$85,000 central electric light plant. Address No. 6107, Bureau of Manufactures.

Washington, D. C.—Report from an American Consul in Latin America containing particulars of organization and plans of company which will establish large hydroelectric plant; American manufacturers of electric machinery and equipment should look after this business directly if they desire to have the first opportunity to sell the materials which will be required to complete plant and transmission system. Address No. 6106, Bureau of Manufactures.

Streator, Ill.—Illinois Valley Gas & Light Co. will erect a large power plant; cost \$250,000.

Fairmount, Ind.—Town Council is planning to award contract for lighting streets.

Gas City, Ind.—Municipal electric light and water plant destroyed recently by fire will be rebuilt.—Thomas McKee, Chief Engineer.

Atlantic, Ia.—W. K. Palmer Co., Engineers, 717 Dwight Bldg., Kansas City, Mo., are preparing plans for electric light and pumping plant; bond issue \$50,000.

Central City, Ia.—Citizens will vote Jan. 30 on granting franchise to F. J. Cross, Monticello, to install \$30,000 light, heat and power plant.

Opelousas, La.—City will make improvements to electric light plant and install additional machinery.—Armas Durio, Superintendent.

New Bedford, Mass.—Street Lighting Committee has asked \$80,000 appropriation for year; about \$3,936 will be used for improvements.

Eveleth, Minn.—Details will be secured by City Clerk McIntyre for proposed white way.

St. Paul, Minn.—Minneapolis General Electric Co. will erect \$750,000 steel and concrete plant.

Marionville, Mo.—Construction of electric light plant is being considered.

Hillsboro, N. J.—Town is considering construction of electric light plant.

Easthampton, L. I., N. Y.—Easthampton Electric Light Co. has petitioned the Public Service Commission for permission to issue \$14,000 bonds, to be used for enlargement of the power house and for improvements to plant.—N. N. Tiffany, Manager.

Oneida, N. Y.—Taxpayers are considering municipal ownership of electric light plant.

Pittstown, N. Y.—Public Service Commission at Albany has authorized Hoosac River Electric Light & Power Co. to exercise franchise granted by town for furnishing of electricity for light, heat and power.

Akron, O.—E. B. Tyler and S. E. Conner, Cleveland, have asked for heat and power franchise for 25 years.

Harrisburg, Pa.—Select Council has passed ordinance providing for placing 11 arc lamps and one incandescent.

Kleppertal, Pa.—Electric plant owned by Metropolitan Electric Light Co., Reading, will be reconstructed at cost of \$60,000.

Steeleton, Pa.—The Steeltion Light, Heat and Power Co. is considering erection of generating station.—Fred E. Keeney, city, Superintendent and Chief Electrician.

Irene, S. D.—Jensen Bros. have been granted franchise for installation of electric light plant.

El Paso, Tex.—Col. A. C. Sharpe, Commander of Fort Bliss, has received notice from War Department that his request for appropriation to install electric lights at fort in place of the old-fashioned oil lamps has been allowed; electric light plant will cost about \$17,000.

Paris, Tex.—Council has selected F. H. Lancashire, Dallas, to submit report on construction of street lighting plant.—Edward H. McCusiston, Mayor.

Flainville, Tex.—J. E. Powell, representing capitalists of Springfield, Ill., is making preparations for putting in gas plant. Mayor James R. DeWay and City Secretary James Hamilton have matter in hand.

Camas, Wash.—If franchise is secured E. E. Goff, Portland, Ore., will build a 500-h.p. electric plant on Washougal River.

South Bend, Wash.—Council has passed Jay D. Crary electric street car and power franchise ordinances.

Wausau, Wis.—City will get proposed municipal lighting plant if State Rate Commission will consent to city operating.

Amherst, N. S., Can.—Canada Electric Light Co., Ltd., has decided to expend \$13,000 on extensions and improvements to plant.—Charles Bert, Amherst, Chief Engineer.

Listowel, Ont., Can.—Citizens have voted to expend \$5,000 to complete electric lighting system.

CONTRACTS AWARDED

Bluffton, Ind.—Installing 450 h.p. engine. Fleming & Harrisburg Co., Harrisburg, Pa.; dynamo and other electrical equipment, to Forsythe Electric Works.

Boston, Mass.—Installing electrical apparatus in Currier Hall, Jamaica Plains, to Edwin C. Lewis, \$4,471; other bidders: T. Kelly & Co., \$4,882; A. C. G. Luke Co., \$5,000.

Rome, N. Y.—Lighting streets for five years, to Rome Electric Light and Power Co., \$33 per year for arc lamps.

St. Marys, O.—Installing gas producing plant in electric light plant, to St. Marys Machine Co., \$18,500.

Pottstown, Pa.—By Suburban Gas and Electric Co., to Westinghouse Machine Co., Pottstown, for 625-kw. turbine, and to Westinghouse Electric and Manufacturing Co., for 2,300-volt generator.

Brookston Falls, N. B., Can.—Unit of water wheels to be installed for Main and New Brunswick Electrical Power Co., to Morgan Smith Co., York, Pa.; unit will develop 2,400-h.p. under a head of 72 ft.—R. Gould, Presque Isle, Me., Managing Director.

FIRE EQUIPMENT

Helena, Ala.—City will erect fire station.

San José, Cal.—Board of Fire and Police Commissioners has asked \$48,000 appropriation for fire department, to be used as follows: New fire house on North 8th st., to replace present house, \$5,000; 30 head horses, \$10,000; two combination chemical wagons, \$4,500 each; lot extreme south end lot extreme north end of city, \$500 ch; house for each lot, \$1,500; one fire engine, \$6,000; 2,000 ft. fire hose, \$2,000; 10 fire hydrants, \$3,000; to place wiring underground in business section, \$6,250; hose for fire alarm, \$1,250; 20 new fire alarm boxes, \$2,500.

Chicago, Ill.—Chief Chas. Seyferlich is favorable to better equipment of department with auto apparatus.

Huntington, Ind.—Mayor Milo Feightner has recommended equipment of east end station.

South Bend, Ind.—National Board of Fire Underwriters has recommended installation of 900-gal. steam fire engine at headquarters, equipment of truck with quick-releasing device and ladder pipe, installation of 70-h.p. auto chemical engine with two chemical tanks at headquarters, equipment of each hose wagon in service with one-gal. tank, purchase of 2,000 ft. of hose at headquarters and minor equipment.

Des Moines, Ia.—Fire Chief Wm. Burnet has recommended purchase of two fire engines.

Chanute, Kan.—Fire Chief Herod is considering purchase of chemical engine.

Leavenworth, Kan.—Fire Chief Michael Ahler has recommended erection of fire station in southern part of city.

Cnicopee, Mass.—Chief John E. Pomret has recommended purchase of motor-driven apparatus for Grape St. house, also erection of a new station for Falls, to be equipped with motor fire truck.

Haverhill, Mass.—Council has decided to bid for 2,000 ft. of hose.

Saugus, Mass.—Cliftondale residents are giving purchase of auto chemical by this town.

Worcester, Mass.—Fire Chief Geo. S. Sleman has recommended purchase of two double tank automobile chemical engines of 5,000 ft. of new hose, also engine for the Burncoat st. station.

Laurel, Miss.—Mayor Noble has recommended purchase of combination auto fire-fighting machine.

St. Louis, Mo.—Architect F. A. Huser has ordered prepared plans for erection of house for auto apparatus.—W. B. Dryden, Secretary Board of Public Improvements.

Egota, N. J.—Fire Chief H. P. Ross is giving purchase of \$525 chemical engine for New Heights fire company.

Millville, N. J.—Fire Chief P. T. Ludlam has recommended purchase of combination chemical engine and hose wagon and quantity of hose; also erection of fire station on West Main st.

Newark, N. J.—West Side Improvement Association is urging establishment of hook and ladder in western part of city.

Princeton, N. J.—Council has allowed \$10,000 for fire protection, including purchase of auto engine.

Lockport, N. Y.—Fire Chief Cunningham has recommended purchase of 2,000 ft. 2½-in. hose, two shut-off nozzles, two 35-gallon chemical tanks, and one small chemical for chief's rig.

Saranac Lake, N. Y.—Village has voted \$18,000 appropriation for purchase of site on Broadway and erection of fire house to cost \$11,000; apparatus will cost \$4,000.

Brevard, N. C.—City desires prices on fire alarm whistle operated preferably by compressed air.—C. M. Doyle, Chief of Fire Department.

Akron, O.—Bids have been rejected for purchase of auto for Fire Chief.

Gallipolis, O.—Director of Public Safety W. S. Mauring will purchase 1,150 ft. of 2½-in. fire hose.

Sandusky, O.—Director of Public Safety Claude B. De Witt has recommended purchase of aerial truck and costly repairs at various fire stations.

Portland, Ore.—National Board of Fire Underwriters has recommended the establishment of four fire companies and erection of five fire houses; also placing underground of overhead wires and extension of fire alarm system.

Reading, Pa.—C. Mathias, Superintendent of Fire Alarms and Police Telegraph System, has recommended improvements to fire alarm system to cost about \$7,100 and to telegraph system, \$4,000.

Reading, Pa.—Mayor Wm. Rick has recommended furnishing of hook and ladder truck for northern part of city.

Robesonia, Pa.—Pioneer Hose Co. No. 1 will purchase combination wagon and erect fire house.

York, Pa.—Council is considering purchase of aerial truck for Rex Hook & Ladder Co.

Oaklawn, R. I.—Fire Association is considering purchase of site for erection of fire station.

Blunt, S. D.—Volunteer fire department has been organized with John Howard as Chief.

Cheraw, S. C.—Council is considering need of better fire equipment.

Austin, Tex.—Colorado Hose Co. No. 2 is considering purchase of combination auto engine, hose and chemical engine.

Claremont, Va.—Corporation, C. S. Santmeyer, Recorder, Box 154, desires catalogues, prices, etc., on fire apparatus for town of 1,000 population.

Portsmouth, Va.—Chief of Fire Department asks for purchase of one repeater, one store house, auxiliary tapper system, hose dryers for each house, 3,000 ft. of hose, six additional paid men, five horses, switchboard, relief valves for all three engines, heaters for keeping steam on engines at all times, shut-off nozzles, four additional fire alarm boxes, six high pressure platforms, six dozen rubber coats and six dozen pairs of rubber boots.

Seattle, Wash.—Board of Public Works has rejected all bids for furnishing motor wagon for use of the city electrician and new bids will be asked; bidders were as follows: H. F. Norton Co., \$950; Automobile Exchange, \$750; Hallidie Machinery Co., \$1,150.

Seattle, Wash.—Plans and specifications have been adopted for 3 and 3½-in. hose.

Racine, Wis.—City will rebuild house of company 2 at cost of \$7,000.

Spokane, Wash.—Fire Commissioners have recommended erection of fire station for North Hill district.

CONTRACTS AWARDED

Jersey City, N. J.—Combination engine and hose motor wagon, to the Pope Motor Co., Hartford, Conn., \$5,200; wagon to be delivered within 90 days; 750 ft. of 2½-in. 4-ply cotton jacketed rubber lined hose, to Eureka Fire Hose Co., \$1.20 per ft.; to Voorhees Rubber Mfg. Co., for 1,150 ft. of 2½-in. hose, 95c. per ft.

Seattle, Wash.—Furnishing three auto hose wagons, to Pacific Coast Fire Supply Co., representing Waterous Engine Works Co., \$11,235.

BRIDGES

Denver, Colo.—Eridge is to be constructed over Dry Creek at 12th ave. and Sheridan boulevard.

Rome, Ga.—County Commissioners are planning to build 240 culverts and 60 steel bridges on main county roads during next two years; cost \$100,000.

Indianapolis, Ind.—Board of Public Works will consider erection of concrete bridges across Pleasant Run at State ave. and Minnesota st.

Normal, Ind.—City is considering erection of concrete bridge on Virginia ave.—G. C. Broyhill, City Engineer

Powhatan, La.—Natchitoches County Police Jury, Natchitoches, will construct iron bridge across Three League Bayou.

Baltimore, Md.—State Road Engineers have completed survey for proposed new State bridge over Nanticoke River at Sharptown, between Wicomico and Dorchester Counties.

Pittsfield, Mass.—Construction of a bridge over Housatonic River at Elm st. is being considered, at cost of \$14,000.

Menominee, Mich.—City Engineer Hillis, Marinette, has about prepared plans for erection of proposed bridge over Menominee River.

Port Gibson, Miss.—Clalborne County Commissioners will rebuild bridge over Little Bayou Pierre at foot of Farmer st.

Fulton, N. Y.—Council has taken up matter of constructing new bridge across Oswego River at Broadway.

New York, N. Y.—Park Commissioner Stover will ask for \$50,000 appropriation to restore Terrace bridge.

New York, N. Y.—Bids will be received Jan. 24 by City Controller Prendergast for \$2,000,000 bonds for bridges.

Northampton Beach, L. I., N. Y.—Citizens have voted to construct bridge over canal; cost \$8,000.

Warsaw, N. Y.—Town is considering construction of bridge across Oatka Creek.

Cincinnati, O.—City is considering erection of bridge at East Ridgeway ave.—F. H. Shipley, City Engineer.

Zanesville, O.—New bids will be asked by County Commissioners for building substructure of Fifth st. bridge.

Durwood, Okla.—County is planning to erect bridge across Wolf Creek.

Portland, Ore.—Preliminary plans for proposed new bridge across Willamette, from Ellsworth to Meade st., have been prepared by City Engineer Morris.

Harrisburg, Pa.—Select Council recommends advertising for bids for constructing bridge at 13th st. over Reading Railway.

Portsmouth, Va.—Superintendent Bergman, of Southern Railway, will recommend bridging of street crossings and installation of corrugated iron culverts under tracks.

Pasco, Wash.—Representative E. B. Horigan, Franklin County, will recommend construction of bridge across Columbia to connect Pasco with Kennewick.

Seattle, Wash.—Council has passed ordinance authorizing Board of Works to build bridge at 10th ave. South and Kenyon st.

CONTRACTS AWARDED

Edwardsport, Ind.—To Vincennes Bridge Co., for construction of bridge across White River, \$16,548.

Defiance, O.—Making big fill leading to north end of Frances st. bridge, to Jos. Webber, 23c. per cu. yd.

Wagoner, Okla.—By Wagoner County Commissioners, to Canton Bridge Co., Canton, O., for construction of \$14,000 bridge across Verdigris River at Mingo Ferry.

Austin, Tex.—To Ray McDonald, Austin, to construct reinforced concrete bridge or culvert across Shoal Creek at 5th and Nueces sts., \$2,300.

BIDS RECEIVED

Portland, Ore.—Substructure of Broadway bridge: Union Bridge and Construction Co., Kansas City, Mo., \$557,645; Missouri Valley Bridge and Iron Co., \$565,953; Porter Bros., \$683,660; Robert Wakefield, \$707,180; Bates & Rogers Construction Co., \$678,287.

MISCELLANEOUS

Montgomery, Ala.—Erection of city hall is being urged.

Berkeley, Cal.—Council is considering need of auto ambulance.

San Francisco, Cal.—Board of Harbor Commissioners has adopted plans and specifications submitted by Engineer Barker for construction of pier 32 at foot of Main and Brannan sts.; estimated cost \$320,000 with a wooden floor system, and \$377,000 with concrete floor, which has not been decided; Board also directed Engineer to prepare plans and specifications for construction of permanent bulkhead from pier 40 to the south end of the sea wall at Channel st.; also to prepare plans and specifications for the construction of pier 46; for extension of the sea wall from pier 44 to the north side of Channel st., inclusive of bridge across street; also for construction of sea wall to confine land from north side of Channel to 2d st.

San Bernardino, Cal.—County will vote on bonds for purchase of site and erection of hospital buildings.

Washington, D. C.—A Mexican city is preparing to erect a new country and city jail, and the municipal officials wish to be put in touch with manufacturers of steel

cages and prison supplies, etc. Address No. 618 Bureau of Manufactures.

Delmar, Del.—City is receiving bids for erection of two-story city hall.

Jacksonville, Fla.—Council has ordered purchase of site for erection of garbage crematory.

Augusta, Ga.—Chief of Police Elliott has recommended installation of Gamewell signal system and purchase of auto patrol wagon and 80 overcoats.

Chicago, Ill.—West Park Board is considering erection of \$30,000 field house at Holstein Park.

Michigan City, Ind.—Mayor F. C. Miller has recommended liberal appropriation for Washington Park to supply water fountains.

Portland, Me.—Mayor Oakley C. Curtis has recommended bond issue for erection of city hall; cost, about \$1,100,000; also erection of \$50,000 police station.

Baltimore, Md.—Erection of nurses' quarters, cost \$20,000, at Sydenham Hospital for Infectious Diseases is being urged; \$30,000 ward will be erected at once.—Dr. W. P. Morrill, Head of Hospital.

Cumberland, Md.—Bids have been rejected for construction of city hall; cost about \$75,000.—Holmboe & Lafferty, Clarksburg, W. Va., Architects.

Frederick, Md.—Delegation of citizens and taxpayers, Joseph D. Baker, Chairman, has urged that county erect at Montevue a building or buildings for care and treatment of colored persons of Frederick City and county who are suffering with tuberculosis.

Abington, Mass.—Town has secured site at Massachusetts ave. and Academy st. for erection of town hall.

Dracut, Mass.—Erection of public hall to cost \$3,000 is being considered. Rev. T. A. Walsh, St. Mary's Church, Collinsville, is interested.

Holyoke, Mass.—Playground Commission has asked for \$18,000 appropriation for its work during year.

Holyoke, Mass.—Park Board is planning to erect recreation and shelter house at Riverside Park this coming summer.

Cheybogan, Mich.—County will vote in spring on \$25,000 bonds to erect jail.

Saginaw, Mich.—Police Commissioners have asked for erection of police station.

Duluth, Minn.—Grand Jury has recommended immediate erection of county jail.

Chaffee, Mo.—City will issue \$26,000 bonds for erecting city hall and water works.—J. M. Massengill, Mayor.

Manchester, N. H.—Purchase of auto ambulance is being considered.

Albany, N. Y.—Mayor Jas. B. McEwan has recommended enlargement of First Precinct station house and complete signal system for police.

Corning, N. Y.—Board of Supervisors has decided to erect tuberculosis hospital.

New York, N. Y.—Bids will be received Jan. 24 by City Controller Prendergast for following bonds: \$2,000,000 for docks and ferries, \$1,000,000 for hospitals, \$15,000,000 for lands, etc., \$3,000,000 for schools, \$5,000,000 for finance and \$8,500,000 for construction of rapid transit railroads.

Schenectady, N. Y.—Mayor Chas. C. Duryc has recommended erection of public market and need of garbage and sewage disposal plants.

Cincinnati, O.—City Engineer Shibley has estimated cost of retaining wall on Butler st. at \$9,790.

Cincinnati, O.—Police Department is considering purchase of three more autos.

Defiance, O.—City hall is to be rehabilitated at a cost of \$8,000.

Newport, O.—Police Chief Floeger has recommended purchase of auto patrol and installation of Bertillon system.

Sandusky, O.—Mayor Geo. J. Lehler has recommended establishment of rest and waiting rooms along river front.

Sandusky, O.—Director of Public Safety Claude B. De Witt has recommended purchase of auto patrol.

Arlington, Pa.—Plans have been prepared for enlargement of township building.

Patterson Heights, Pa.—Council has decided to issue \$4,000 bonds to purchase site and erect city building.

Wilkes Barre, Pa.—Erection of public comfort stations will be considered by Park Commission.

York, Pa.—Mayor Jacob E. Weaver has recommended underground conduits for fire alarm and police telegraph systems; also investigation of flashlight patrol system and establishment of street cleaning system.

York, Pa.—Council will purchase site on West Market st. for erection of proposed city hall.

Providence, R. I.—Board of Trustees of State sanatorium has recommended erection of tuberculosis hospital at Wa'lum Lake.

Columbia, S. C.—City is planning erection of jail.—W. H. Gibbs, Mayor.

Chattanooga, Tenn.—Park Commission is planning to improve all city parks during year.

Norfolk, Va.—Council has adopted ordinance providing for renumbering of houses.

Huntington, W. Va.—City Commissioners are considering erection of proposed building for fire and police.

Racine, Wis.—Citizens will vote in spring on erection of city hall.

CONTRACTS AWARDED

Grove Hill, Ala.—By County Commissioners of Clarke County, for \$8,000 annex to the court house to be completed by June 1, to Stratton Bros. & Ward, Greensboro, under plans drawn by W. A. Kerridge, of Clarke County.

Randolph, Mo.—To Matt & Bemis, Seward, Neb., for furnishing 40,000 yds. of rock to be used in building 13,000 ft. of standard revetment; work will be commenced at once; bid was as follows: Standard revetment, \$8.60 per ft.; yellow pine piling, driven, 40c. per ft.

Brooklyn, N. Y.—Building municipal bath house at Coney Island to Northeastern Construction Co., 225 Fifth ave., New York City, \$176,000.

Rochester, N. Y.—To Wm. Baker for snow cleaning on Trafalgar st.

Seattle, Wash.—Building chimney for Refuse District No. 4, to Chas. C. Moore & Co., \$3,545.

BIDS RECEIVED

Cumberland, Md.—Bids received Jan. 10 for construction of city hall: C. W. Dowling, Marietta, O., \$107,747; Chas. J. Cassidy Co., Washington, D. C., \$108,864; W. H. Fissell & Co., New York City, \$110,000; Henry S. Rittel, Baltimore, \$111,000; Olin Gerlac, Frostburg, \$133,502.01; all bids rejected.

New York, N. Y.—Furnishing materials and completing abandoned contracts for the removal of snow and ice from the Bronx: (a) 3d district; (b) 4th district; (c) 5th district; (d) 6th district; Chas. De Marco, (a) \$4c, (b) 56c, (c) 47c, (d) 45c; Canavan Bros. (a and b) 64c, (c and d) 62c; F. A. Palidino, (c) 76c, (d) 46c; Wm. J. Fitzgerald, (a) 73c; Thos. Tarpay, (d) 75c.

St. George, S. I., N. Y.—Bids received Jan. 10 for construction of furnaces, steam boilers and appurtenances of Clifton destructor: (a) McDonald Engineering Co., Chicago, Ill.; (b) Destructor Co., New York; lump sum bid price for construction, (a) \$50,350, (b) \$67,867; guaranteed cost of incineration per ton, (a) 70c., (b) 50c.; basis of award, value of plant to city in annual operating basis, investment charges; cost of destructor as per bid, (a) \$50,350, (b) \$67,867; cost of chimney, estimated by city, (a) \$4,000, (b) \$4,100; cost of building estimated by city, (a) 254,006.25 cu. ft., \$50,801.25, (b) 176,764 cu. ft., \$34,152.80; totals, (a) \$105,151.25, (b) \$106,019.80; annual costs, 10 per cent of total investment charges, (a) \$10,515.12, (b) \$10,601.98; incineration of 12,000 tons, estimated annual tonnage, (a) \$8,400, (b) \$6,000; totals, (a) \$18,915.12, (b) \$16,601.98; gross cost per ton, (a) \$1.57, (b) \$1.38; low bidder, annual basis, as per contract; Pauly Jail Co. \$rdrl utmh mth mthm tract, the Destructor Co. by \$2,313.14.

San Antonio, Tex.—Remodeling the Bexar County jail, general contract: Loessberg & Reinhold, \$57,286; Banspach Bros., \$54,884; J. A. Barry, \$47,885; Gordon Jones Lock Co., \$46,857; H. B. Rheiner & Bro., \$44,925; cell work from Van Don Iron Works, \$39,400; Pauly Jail Co., \$30,999.81; Stewart Iron Works Co., \$43,000, and Southern Structural Steel Co., last named making five propositions.

Seattle, Wash.—Construction of additional stalls at the Pike pl. market, T. H. Ryan, bid on specifications, \$18,500; alternate reductions, \$915, \$2,861, \$1,240, \$2,484.50 and \$35.50; Finne & Gjaide, on specifications, \$19,986; alternate reductions, \$748, \$3,100, \$1,258, \$1,798 and \$22.

TOO LATE FOR CLASSIFICATION

STREET IMPROVEMENTS

Gadsden, Ala.—Council has decided to pave, drain, curb and improve portions of Chestnut and S. Fourth sts.—R. M. Wilbanks, Clerk.

Evansville, Ind.—County Commissioners will estimate cost of improving 1st ave. road with rock from city limits to Camp Ground road.

Pointe a la Hache, La.—Police Jury of Plaquemines has adopted resolution having as its purpose preliminary steps toward construction of a shell road from the St. Bernard line to the Courthouse at Pointe a la Hache; distance of 32 miles; bond issue of \$40,000, with similar amount from the State highway fund, will be necessary to build a thoroughly modern shell road.

Gloucester, Mass.—Council has appropriated \$2,400 for purchase of Reliance stone crusher.

Holyoke, Mass.—Improvement of Railroad st. and repaving of High st. is being considered.

Escanaba, Mich.—Delta Board of County Supervisors has declined to submit to vote of people proposition to bond the county for \$40,000 for construction of roads.

Minneapolis, Minn.—City will spend about \$1,550,000 for street improvements during the next two years.

Rochester, N. Y.—Mayor Edgerton has recommended extension of water system.

Rochester, N. Y.—Council has adopted ordinance of pavement on Goodman and Arch sts. at cost of \$23,000; also is considering ordinance of brick pavement on Shafer st. to cost \$25,000.

Toledo, O.—Repaving and widening of Main st. is being considered.

McMinnville, Ore.—Mayor Leroy Lewis, accompanied by Councilmen Campbell and Hendershott, is making a tour of different valley towns with idea of investigating street paving.

Chester, Pa.—Supervisors of Tinicum township have petitioned Court for permission to construct a grade crossing on Fourth ave. over Reading tracks.

Meadville, Pa.—Mayor F. M. Graff has recommended paving of Liberty st., widening of portion of Plum aly, repaving of Chestnut st. and improvement of several other streets.

York, Pa.—Council has decided to pave portion of Hartley and Philadelphia sts. and Richland ave.

Chattanooga, Tenn.—Board of Public Works has decided to pave East Terrace and Tenth st. with brick and West Fourth st. with asphalt; profiles will be prepared for sidewalk grades on Eleventh st.

Fort Worth, Tex.—Citizens have voted \$50,000 bonds to improve streets.

Norfolk, Va.—Finance Committee has recommended paving of Martin's lane with smooth material.

Portsmouth, Va.—Specifications will be prepared for paving with bitulithic, brick, asphalt and fiberline; streets not yet selected.

SEWERAGE

New Decatur, Ala.—City will build additional storm sewers in west and south part of city.

New Bedford, Mass.—Council has approved petition for expenditure of unnamed sum of money for proposed sewers.

Poughkeepsie, N. Y.—Superintendent Harding recommended that sewer be laid on Main st., Innis ave. to the city line, and at same time to lay water mains, both to be laid under sidewalk.

Tuckahoe, N. Y.—Survey has been made recently of Waverly Square with view of obtaining information as to where it would be best to construct sewer in Waverly Heights, which is greatly needed there.—Robt. J. Bellew, Superintendent of Public Highways.

Toledo, O.—Council will be asked to direct Service Director to have prepared and placed on file plans, specifications, estimates and profiles for proposed drainage of big marsh in North Toledo by artificial means.

Eugene, Ore.—Council has ordered plans and specifications for proposed Fairmount sewer system.

Clairton, Pa.—Council is considering need of sewage disposal plant.—E. O. Knight and Chas. Supplee are interested.

Dallas, Tex.—Bids will be asked for constructing storm sewer on Haskell st., San Jacinto to Live Oak st., \$3,558.48; Victor to Gaston st., \$4,754.98, and for grading of Peak st.

Colonial Beach, Va.—Citizens have voted \$37,500 for sewers and other improvements.

WATER SUPPLY

Santa Ana, Cal.—Citizens will vote on \$20,000 bonds to better water system; well will be dug and reservoir built.

New Bedford, Mass.—Council has approved petition for expenditure of \$150,000 to extend and alter water mains.

No. 4

GROUP OF AMERICAN ELMS, BUFFALO'S FINEST SHADE TREE

WORK OF BUFFALO'S FORESTRY DEPARTMENT

Charge of City Forester and Board of Park Commissioners—Has Operated for Three Seasons—Sixty Thousand Quarts of Egg Masses Purchased from Children—Spraying and Pruning

By H. B. FILER, CITY FORESTER OF BUFFALO, N. Y.

FOR years the shade trees of Buffalo, N. Y., were allowed to grow with little or no attention from the authorities, but a few years ago it became apparent that many of them were suffering from lack of care and were losing their vitality and beauty. About this time there appeared a scourge of tussock caterpillars which destroyed the foliage, and many trees, owing to their low vitality, died completely in consequence.

Scarcely a street in Buffalo is not well provided with shade trees, and this danger of their extinction was felt to be a serious matter. A few public spirited citizens took up the

cause, and later the Society for Beautifying Buffalo became interested and introduced legislation as far back as 1904. The proposed bill was sent to Albany and died a natural death; it was evidently in advance of the times.

Meanwhile conditions were getting worse and the forestry movement was gaining impetus. Finally, in the winter of 1908, an amendment to the city charter passed both houses and was signed by the Governor, which contained the following provisions:

Sec. 323-a. The board of park commissioners shall have full power and authority over all trees planted and to be planted in any of the streets or public places of the city, including the

right to plant new trees and to care for the same, and to remove trees, living or dead, and to trim, spray and otherwise care for all such trees.

Sec. 323-b. The board of park commissioners is authorized to appoint a city forester and such other employes and assistants as may be necessary and to prescribe and define their respective duties and to fix the amount of their compensation. Such forester shall be an expert, trained in the care and culture of trees.

Sec. 323-c. The board of park commissioners shall recommend to the common council from time to time ordinances to be enacted by the said common council for the planting, care and protection of trees in the streets and public places of the city; but no such ordinance not recommended by said board shall be enacted by the common council. Nor shall any ordinance enacted pursuant hereto be altered or repealed without the recommendation of said board.

Sec. 323-d. The common council shall every year grant to the board of park commissioners such sum of money as it shall require and as to the said common council shall appear reasonable and just for planting, maintaining and caring for the trees of the city, for purchasing or raising new trees and for other expenses contemplated by sections 323-a to 323-d of this title.

There are a number of salient features in the foregoing act which are believed to make it the best piece of shade tree legislation ever placed on a statute book.

In the first place it vests the authority in the board of park commissioners, thus doing away with one of those special commissions which have of late been making the government of large cities more cumbersome.

It gives the board full power and authority, which is important if a comprehensive tree campaign is to be successfully carried on for a series of years.

It authorizes the board to appoint a city forester, who must be an expert, trained in the care and culture of trees.

This clause alone insures the proper care of the trees of Buffalo, so long as it remains on the statutes, and it practically removes the office from political interference.

But the creation of a city forestry department is of comparatively small import if it is not provided with funds to carry out systematic work. Of course, one man can do much in an educational way, but most people need to be shown, and it takes a corps of men to work along the streets and demonstrate to the taxpayers what can be done in the way of saving and increasing the beauty of their trees.

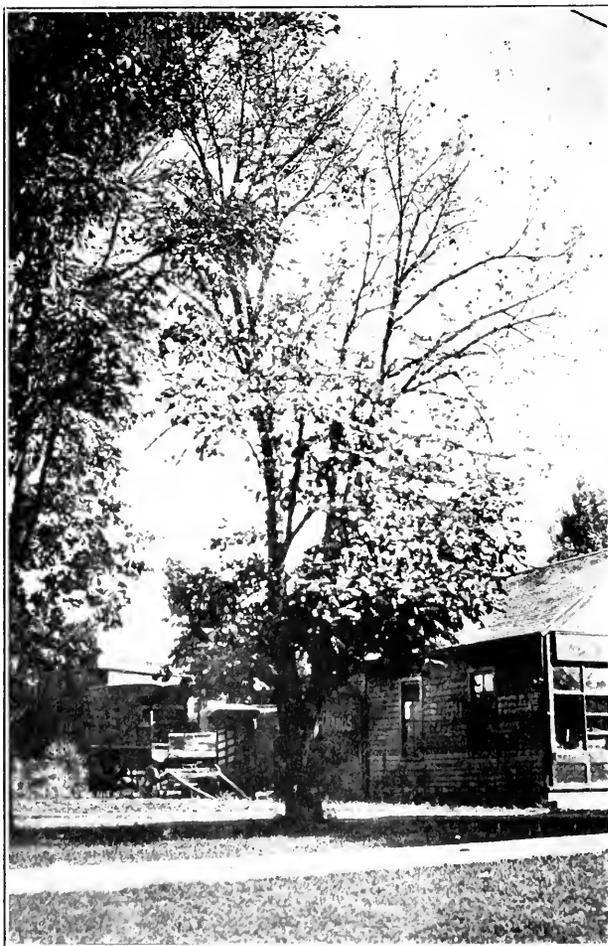

It is right and just that the residents at large should provide the funds for such an enterprise, and it is peculiarly just that the board should go to the common council for these funds. The common council represents the rank and file of the taxpayers; and as the councilmanic representative is beholden to his constituents, the people thus become the important factor in the amount of work that can be done in their section.

The department was organized in June, 1908, and active work was started at once. As the budget for the fiscal year had already been passed, the board of park commissioners was authorized by the common council to spend such money as their judgment directed, and at the proper time a deficiency bond would be issued to cover the amount expended. This was believed to be the most satisfactory way, as the department was an innovation and by many considered in the nature of an experiment.

About this time the chamber of commerce adopted the slogan of "Buffalo Means Business," and this slogan was imbedded in the mind of the forester when he took up the duties of caring for the trees.

A vigorous campaign was inaugurated against the insect pests of the city's shade trees. The white-marked tussock moth was present in alarming numbers. To combat this voracious leaf-feeder several large spraying machines were purchased and used constantly during favorable weather, both night and day. The caterpillar season lasts about six weeks, and during that time over 250,000 street trees were sprayed, and the caterpillars were worsted in the first battle of what has since developed into constant warfare for supremacy.

The results of the spraying campaign were a revelation to the public. All trees which had been sprayed retained their foliage throughout the summer, although formerly they had been practically leafless during the month of July, and the caterpillars

AN UNSPRAYED TREE

TREES WHICH WERE SPRAYED

BUYING COCOONS FROM CHILDREN

swarmed everywhere to such an extent that it was unpleasant to walk through the streets. Periodic spraying is carried on yearly, as it is practically impossible to eliminate the pest entirely.

Immediately upon the successful termination of one year's warfare against the caterpillar plans are laid to lessen the crop of the ensuing year. (Each individual caterpillar increases about 500-fold each generation.) Men are sent over all the streets with long poles which are attached to wire brushes and move the cocoon and egg-masses which are found hidden in all sorts of nooks and crevices, and these are carefully gathered and destroyed. An important feature of this work is the enlistment of the army of children, who often prove to have sharper eyes than the men. These children are paid ten cents per quart for all cocoons and egg-masses which they collect and deliver to certain stations, where they are measured and destroyed. Over 60,000 quarts were turned in by the children in one month. There are about 100 egg-masses to a quart and about 500 eggs to a mass. Three billion caterpillars destroyed by the children yearly is a potential factor in saving the beautiful trees of Buffalo, to say nothing of the benefit to the trees of future years by getting the children interested.

During the late summer and the fall and winter strict attention is given to tree pruning, surgery or tree dentistry, as it is popularly called.

About 20,000 trees are treated annually. All dead branches are removed; decayed portions are gonged out and cemented; wounds are treated antiseptically and covered with paint to preserve the wood; in fact, the tree is treated individually with a view to future health and beauty. This is an immense task, for each year the work of the previous season is gone over so that the tree has every possible chance of recovery and growth. A careful record is kept of trees that are in a sickly condition, and if of sufficient value they are fertilized and stimulated until they show signs of a new lease of life. If, however, they are of a variety poorly suited to the existing conditions or beyond the hope of recovery, they are pulled out, roots and all, and a new tree is planted in their place.

During the winter months some of the streets take on the appearance of a logging camp, for at this season of the year the department is busy removing unsuitable varieties such as the hardy and Carolina poplars. These have long been a nuisance, as they have literally robbed the soil of its fertility, extended their fast growing roots to the sewers and caused a great amount of damage. It might appear that the department is destructive, but it is so only that it may become constructive. In the late autumn and early spring the force turns its attention to tree planting. About six thousand trees are planted yearly, all ranging from 3 to 5 inches in diameter, nursery grown and personally inspected and selected from the nurseries by the city forester.

Only suitable varieties of shade trees are chosen for the streets of Buffalo, such as the American elm, Scotch elm, Norway maple, pin oak and a few others. Only one variety is planted on a street and those at suitable intervals. They are regularly planted, which is perhaps most important.

The only streets selected for tree planting are those which have a tree belt of at least four feet between sidewalk and curb. The young tree is supplied with a liberal amount of good soil and fertilizers in order that it may successfully withstand the shock of transplanting and become adapted to its new condition of soil and climate. Those streets in each ward of the city which are for the most part residential are planted first; vacant streets afterward. These young trees are supplied with stakes and guards to protect them until they become firmly established. They are watered and mulched during each successive summer and very carefully pruned in order that they may grow to become graceful and shapely.

These various lines of effort complete the cycle of the year's work. An annual expense of \$65,000 is incurred, but every penny is expended along useful lines. There is no more maltreatment by public service corporations, careless contractors and indifferent citizens whose wanton destruction has been noticeable in the past.

A tract of land has been secured for a municipal nursery, and 60,000 seedling trees are on the way from Holland, to be grown until they are large enough to be transplanted to the streets and parkways.

A tree census is under way, which will classify and place in the office records an accurate description of every tree on the streets and boulevards of the city. It is believed that Buffalo can proudly boast of having the largest and most active forestry department of any city in the United States.

MONTGOMERY REFUSE DESTRUCTOR

A high-temperature refuse destructor has just about been completed for the City of Montgomery, Ala., along the general lines of those already in use at Staten Island, New York; Westmount, Montreal; Milwaukee, Wis., and one or two other places, the capacity of which is 60 tons per 24 hours. The plant is located near the city water-works pumping plant, and the building containing it shows none of the ordinary architectural features of disposal plants, looking, in fact, more like a pumping station with two living stories above it.

The main floor of the building is about 15 feet below street level, the street being carried through at this point on an embankment. A bridge connects the street with the upper or tipping floor of the plant. The refuse carts, on crossing this bridge, enter directly onto the tipping floor and dump their contents into a storage hopper immediately beneath. On the ground floor, between the storage hopper and the feeding doors of the furnace, is a feeding space sufficiently wide to permit the convenient handling of the rubbish by the stokers. A hot air duct supplying air to the furnace passes under this feeding space.

The plant contains four grates, each with an independent ash pit. Preheated air is supplied by forced draft, and is controlled by a valve at the entrance to each ash pit. This permits the use of a lower, less expensive and less prominent smokestack than is generally used for such plants. As in other recent plants of this nature, the air supplied by the forced draft is drawn from the interior of the building with the idea of thus removing any odors and forcing them through the hot fire where they will be destroyed. The air is heated by being passed through a pre-heater, which is kept hot by the waste gases from the fire. It is calculated that the air required for combustion in one hour is about eight times the total air contents of the building, and that consequently the air in the building will be renewed once every seven or eight minutes. This also assists in keeping the temperature at a lower point and thus making it more comfortable for the operators.

There are four units, each with its grate, and back of each grate is a drying hearth. Over each drying hearth is a container of about one cubic yard capacity, the top of which is flush with the feeding floor and that of the storage hoppers. The bottom of each container swings open so that the contents of the container may be dropped onto the hearth, the

bottom at the same time that it is dropped closing the opening into the drying hearth. The containers are filled and their contents dropped onto the drying hearth, and after having been sufficiently dried the refuse is raked forward onto the grates. After being burned to a clinker, this is drawn out of the furnace and dropped directly into cars running on a track in a tunnel below the clinking floor; the car being drawn by a cable out of this tunnel and up an incline, when it automatically dumps into a crusher, where the clinker is crushed, after which it is screened and deposited in bins.

The gases from the grates pass first into a large dust-settling chamber, where it is expected that most of the dust in suspension will be deposited. The gases then pass through a 180-h. p. water-tube boiler, in which it is expected that their temperature will be lowered to 500 degrees from about 1600 to 1700 degrees. These boilers are supplied with Foster superheaters. The steam generated in the boilers it is expected to use in the water-works pumping station, which is but 150 feet away. After passing through the boiler, the gases pass through the air heater before referred to and from this directly to the chimney. The chimney is built of radial brick and is 4 feet in diameter in the clear at the top and is 100 feet high. The plans for this plant were prepared by Robt. W. Gibson, of New York, and the plant was constructed by the Destructor Company of New York City.

OPERATING SEWAGE PLANTS

Instructions Issued by Ohio State Board of Health—Screens, Sedimentation Tanks, Sludge Beds, Filters—Form for Records

As we have taken occasion to state a number of time, we believe that much more attention should be paid to the operation of sewage purification plants, and there should be a power of supervision and regulation of these placed in the hands of State Boards of Health, or some other authority, with power to enforce the sanitary and effective operation of them. A sewage disposal plant is really maintained as a safeguard for communities other than the one operating it, in the majority of cases, and it is consequently a matter which some authority representing a combination of cities—either county, state or national—should have supervision over.

In Ohio such supervision has fortunately been placed in the hands of the State Board of Health, and in exercising its authority in this regard it has given or is preparing to give to each community operating a sewage disposal plant a set of instructions for the proper operation of the same. Owing to the varied nature of the several plants it would seem best not to attempt to prepare a set of standard rules to apply to all cases, but rather to adapt to each plant a set of rules fitted to its particular character.

Such a set of rules has recently been prepared for the plant at College Hill, which was described in our issue of Jan. 4. The greater part of this is applicable to a considerable number of plants throughout the country, and we are therefore presenting it, believing that some part of it will offer serviceable suggestions to almost any plant. Some of the suggestions made we believe to be comparatively novel, and not to be found in the text books.

INSTRUCTIONS FOR THE OPERATION OF SEWAGE PURIFICATION WORKS AT COLLEGE HILL

General Remarks.—In connection with the operation of any sewage purification works it must be recognized that they can not be built so as to be entirely automatic in their operation. Even the simplest in form requires regular attention by a competent person. In the case of College Hill the need of intelligent attendants is emphasized by the fact that these works include devices which are the most complex in use, and they are, moreover, liable to frequent derangements which require immediate attention. It is believed that the care-taker should visit the works at least twice a day, and two full days in each week should be devoted to cleaning and placing the plant in general good order. If required, additional labor should be furnished for doing this work.

One phase of the care of sewage purification works which should not be overlooked is the maintenance of the works and their surroundings in a neat and tidy appearance. A prejudice naturally attaches to sewage purifications works, whether they create a nuisance or not, but, as a rule, this prejudice can be entirely overcome if the works always present a neat appearance. These comments are especially applicable to the Colley Hill plant, owing to its proximity to a large sanitarium and a much-traveled electric railroad. As soon as possible the earth work surrounding the plant should be smoothed up and carefully sodded. The judicious laying out of paths and planting of small trees would add very greatly to the appearance and it is suggested that an expert gardener be employed to supervise this work.

In describing the operation of the plant the care of the various devices will be taken up in the order in which the sewage reaches them.

Screen Chamber.—The care of the screen chamber requires no special instructions. It is understood that the design of the screen chamber renders it very difficult to clean the screens. As the screening of the sewage in a sprinkling filter plant is a very important function, it is suggested that the screen chamber be modified, if necessary, to increase the efficiency of the screens and facilitate their cleaning.

Sedimentation Tanks.—One sedimentation tank should be sufficient for the present, at any rate, to give the sewage an adequate period of sedimentation. In order to render less offensive the operation of sludge removal the tanks should be used alternately. When a tank is thrown out of service it should not be emptied immediately, but should be permitted to stand full of sewage until it is desired to again place it in service. Immediately before the sewage is passed through it should be emptied and cleaned. The object of this procedure is to give the foul sludge deposits and scum formations an opportunity to digest. This digestion will be found to assist in rendering the contents of the tank comparatively free from odor so that it can be discharged onto the sludge bed without creating offensive conditions in the neighborhood.

Inasmuch as most effective sedimentation takes place when the sewage passes through the tanks quietly and without agitation, it follows that active fermentation which results in violent ebullition should be taken as a signal for throwing a tank out of service. The length of time which a tank may remain in service cannot be stated, since this varies greatly with different sewages and with different temperature conditions. With weak sewage it may not be necessary to throw a tank out of service during the entire winter season. On the other hand, with a strong sewage and during the summer time it may be necessary to permit a period of operation of a few weeks only.

It has been observed that great difficulty has been encountered in removing sludge from the tanks owing to the flat slope and roughness of the concrete bottoms. It is believed to be highly desirable to modify the bottoms of the tanks so as to provide a minimum slope of 5 per cent toward the outlets. The surface of the new bottoms should be floated to a smooth finish similar to that of a smooth granolithic pavement. This change should be made as soon as funds will permit.

In connection with any sewage purification plant fairly complete records should be maintained of the volume of the sewage flow, since the flow factor, in almost all cases of difficulty encountered in operation, affords an explanation, or partial explanation, for such difficulty. Inasmuch as there is a good opportunity for the placing of weirs at the outlets of the sedimentation tanks these should be installed. It is recommended that in each of the openings leading to the dosing chamber they be constructed a weir with a 9-inch crest. It would be preferable to construct the edge of the weir of brass, since this metal best withstands the action of the sewage and can be given a sharp edge.

Dosing and Equalizing Chambers.—The dosing and equalizing chambers, as a rule, require but little attention. They should, however, be maintained in a cleanly condition and the attendant should make an effort to understand thoroughly the workings of the syphonic apparatus in order that he may make all ordinary adjustments and repairs. To this end it is suggested that a request be made of the Merritt Company, of Philadelphia (the manufacturers of the automatic device), for a complete description of the principles on which the automatic apparatus is designed.

Filter.—The sprinkling filter will require more labor in its care than any other portion of the plant. The most essential feature to proper operation is to see that all of the sprinkling nozzles are clean and in repair and properly adjusted.

A tendency toward ponding of sewage upon the surface of the beds is an indication that the proper operation is being entirely destroyed, and, therefore, ponding should receive immediate attention. It may be found that the clogging causing the ponding is near the surface and may be remedied by merely disturbing the surface layers of broken stone.

If the filter throughout the entire depth seems to be clogged or saturated with water, in all probability it will be found that

Operation Records of College Hill Sewage Purification Plant for Month of.....19....

Date	Rainfall in Inches.	Sewage Flow at 10 A.M. Expressed in Gallons per 24 Hours	Screenings Removed Cu Ft.	Putrescibility of Final Effluent	Number of Defective Nozzles Repaired or Replaced	REMARKS: To include dates of removal of sludge from tanks and basins, disturbance of filtering material and any other unusual operations. Record any peculiar conditions or phenomena relating to the operation of various devices.
1						
2						

underdrains have become filled with humus matter or organic growth which prevents the effluent from passing to the tanks. When this occurs it becomes necessary to flush the underdrains by applying a jet of water from a hose nozzle at the outlet of the drains into the effluent collecting channels.

Should the removal of the stone from the surface of the filter and the flushing of the underdrains fail to produce satisfactory results it is then apparent that the filtering material has become clogged throughout the mass. This may be due to the rapid formation of humus matter, to disintegration of the stone, or to the original presence of too much fine material in the water. Where this condition obtains the only remedy is to remove the filtering material entirely and replace it after cleaning or provide new material.

Final Sedimentation Basins.—The final sedimentation basins have no special difficulties of operation. After the basins become so filled with sludge that further sedimentation is seriously interfered with the sludge should be removed. Great care must be observed not to remove the sludge excepting during a period when the flow in the stream receiving the effluent is very large. It will, therefore, follow that it is inadvisable to attempt the cleaning of the final sedimentation basins except during or immediately after storms.

Sludge Bed.—The sludge bed will require considerable labor and maintenance. After receiving the contents of the sedimentation tank it should be permitted to thoroughly dry out in the sun. It will be found that the sludge remaining on the surface of the sand will become more or less matted and may be peeled off from the sand without much difficulty. The most convenient and at the same time profitable method of disposal is to break it up finely with shovels and spread it on the ground surrounding the purification works.

In the present condition of the sludge bed it is liable to become clogged at the surface by clayey material washed from the surrounding embankments. To overcome this difficulty the embankments should be carefully sodded and in addition a curb (preferably of concrete, though wooden plank will serve for the purpose) should be placed about the bed at the sand line. The curbing should rise fully a foot and a half above the surface of the sand.

Tests of Operation of the Plant.—The plant when operating successfully should produce a so-called non-putrescible effluent comparatively free from suspended matter. The putrescibility of a poor effluent may ordinarily be readily enough detected by its characteristic odor of hydrogen sulphide, but this test is very delicate enough to maintain proper control over the performance of the plant. A better test is to add to an 8-ounce sample of the effluent a sufficient amount of methylene blue to give it a light, yet decided, blue color. Owing to the great strength of this coloring matter an exceedingly minute quantity is required for the purpose. Methylene blue depends for its color upon the presence of oxygen. If the oxygen supply is drawn, as obtains in the case of a putrescible liquid, the color will disappear. If, therefore, the blue color in a tightly stoppered sample of effluent which has had methylene blue added to it disappears within the course of several days it is an indication that the effluent is not up to standard.

Records.—Records of the operation of the purification works should be maintained on blanks furnished by the State Board of Health. One set of blanks will hold the records for an entire month. At the end of each month a copy of the records should be forwarded to the State Board of Health for review. These blanks, it is believed, are self-explanatory, but for the sake of clearness the following is offered:

The quantity of screenings may be expressed in cubic feet. Measurements may be made by using a receptacle, such as a bucket of known contents. The sewage flow should be expressed in gallons per 24 hours. The height of sewage over the crest of the weirs may be readily converted into gallons per 24 hours by means of tables or diagrams, copies of which should be furnished by the State Board of Health on application. The head on the weir expressed in inches and fractions thereon, if desired, be given without converting same into gallons per 24 hours. In the column headed "putrescibility" the fact that a sample is putrescible may be recorded with a "plus" and the fact that it is non-putrescible may be recorded with a "zero."

Excessive Sewage Flow.—The objections to excessive sewage

flow have already been hinted at. Such excessive flow may be due to one or both of two causes, the first of which is the admission to the sanitary sewers of roof water, surface drainage, sub-surface drainage and other comparatively clean and inoffensive water. The second cause is the entrance into the sewers of ground water through defective joints and broken pipes or because the sewers are not properly underdrained in very wet soil. In any event, the excessive flow places an unnecessary burden upon the sewage purification works and should, therefore, be eliminated if possible. There is no reason why down-spout connections should be permitted and the proper authorities should be very vigorous in suppressing such connections. If the difficulty is due to the presence of excessive ground water, a careful survey should be made of the sewerage system to locate all points at which this water enters with a view to shutting it out by suitable reconstruction.

Records of House Connections.—It is very essential, especially where the sewage is purified, that careful records be maintained of the exact location and construction of all house connections. It very often happens that the greatest difficulties due to excessive sewage flow or the entrance into the sewers of improper wastes may be traced to house connections. All house connections should be carefully inspected by a village inspector before they are covered up, and conformity with high standards of construction should be insisted upon.

A FLORIDA STRAW ROAD

Just outside of the municipal limits of Lake City, Fla., is a piece of very heavy sandy road, a portion of one of the principal county highways, which it was found necessary to improve at once and at minimum expense about the middle of December last. The method employed was as follows:

The road was cleared of stumps and plowed up, the traveled roadway being straightened at the same time, and was shaped up with a road grader and gone over with a drag to compact the sand. In the meantime, a mowing machine had been cutting broom straw in a neighboring field. A mulch of this broom straw was then laid to a depth of five inches on the 15-foot bed of the roadway, and traffic was encouraged to pass over it, the vehicles being directed to travel in a straight path. The work was completed at the end of the third day at an expense of \$71.60.

While broom straw forms at best but a temporary road covering, it furnishes a noiseless surface of low tractive resistance as compared to the sand, and proves effective for making practicable for teams spots of soft sand in an otherwise naturally good road. A similar method has been employed elsewhere in the same state, pine straw having been used extensively for surfacing sandy roads in Marion County. For this information we are indebted to Mr. A. S. Miller, of Lake City.

CINCINNATI WATER WORKS EFFICIENCY

In his annual report for 1910 the Superintendent of Water-Works, of Cincinnati, Ohio, gives some very satisfactory statements concerning the operation of the water-works plant. The cost for pumping per million gallons during the past year averaged \$14.35, the cost in 1909 having been \$15.74 and in 1908 \$16.09. Previous to this, with the old water-works plant, the average cost was \$33 per million gallons. The ordinary head pumped against is 182 feet for the low service and 450 feet for the high.

A filtration plant was installed in 1908, as described by us at the time. In 1910 only 22 deaths resulted from typhoid, and according to the Health Department reports most of these cases can be traced to importation from outside of the city. In 1906, when the water was not filtered, there were 1,940 cases of typhoid and 239 deaths.

GARBAGE COLLECTION

Only Dry Garbage, Wrapped in Paper Collected in Minneapolis—Can Does Not Become Offensive—Less Frequent Collections Required

By DR. P. M. HALL, COMMISSIONER OF HEALTH, MINNEAPOLIS

Paper before American Public Health Association.

GARBAGE collection and garbage disposal have been treated of in a general way so many times that it would seem that the last word had been said. Instead of handling this great subject in a general way now, probably more can be learned by taking up some phase of the subject in detail. I will, therefore, confine this paper to the discussion of the "garbage receptacle" alone.

As a text for this discussion let us quote the description of the "garbage receptacle" as found in a well-known book on sanitation:

The garbage receptacle, especially when separation of true garbage is made, is usually one of the commonest forms of nuisance to be found. Every garbage can, unless it is emptied daily and thoroughly washed after emptying (which is practically never done) is in hot weather sure to be offensive. The annoyance from it can probably never be entirely done away with, and it is only with great care and at some expense that it can be reduced to a minimum.

When we consider that practically all municipalities collect and dispose of garbage separately from other forms of refuse we have exactly the condition as defined—a separation of true garbage. As a basis for this paper letters of inquiry were sent to all cities of 100,000 population and over in the United States and Canada. Replies were received from practically all of them. In the majority of cities it is specified by ordinance or rule that the garbage receptacles shall be water-tight; shall be covered; shall have handles on the side of the can or on the cover; the size is designated from two gallons to two bushels; the materials from which the receptacle is to be made are specified; that it shall be kept in a place remote from dwellings or placed on walks when the hours of collection are known; that the collector shall neither go upstairs nor down cellar for it, but that the can must be placed on the ground floor, etc.

A very little analysis will show that the sanitary condition of the garbage can has been the principal factor in determining the cost of the collection of garbage. It may be set down as an axiom in the collection of garbage that the cost of collection increases with the frequency of service. The ability of a man and team to collect is not the amount he collects, but the number of stops, the distance of travel and the number of cans he is obliged to handle, so that a daily collection would necessarily cost more than a collection every other day, and a collection twice a week more than a weekly collection.

The demand for frequent collection has arisen from and because of the sanitary condition of the garbage receptacles. Furthermore, undoubtedly, the sanitary condition of the garbage receptacle has had everything to do with making the mere mention of the word "garbage" an offense. Immediately comes to our minds that same noisome garbage can.

Garbage is almost universally described in the rules or ordinances of cities as the animal and vegetable waste from the kitchen, or as resulting from or growing out of the preparation of food. Garbage is subject to rapid decay, and this decay is hastened by three things—heat, moisture and flies, and yet what we call garbage is but an hour removed from our tables—has been served to us as food.

The first step in the disposal of garbage is carrying it from the house and placing it in the can, and the question naturally arises, why should not this step be a sanitary one and be made in the direction of educating the householder? Under existing conditions in almost every city the can is as great if not a greater nuisance than the garbage itself. In the primitive days the Indian, when the offense from the waste products of his housekeeping became too noisome, moved away, but in our day

and generation we remove the garbage and keep the same. Take the first step—the placing of the garbage, the waste food or droppings from our tables, into any kind of receptacles of wood, galvanized iron or what-not, and with the presence of heat, moisture and flies you will very soon have a foul, maggoty, fly-breeding mess of putrefaction. Such a mess is necessarily a nuisance, requires frequent removal and is a nuisance every time it is handled from the can to final disposal. Is it necessary that this condition of things should be? Is there no way to eliminate these breeders of putrefaction—heat, moisture and the fly? Is it not a little bit inconsistent that we legislate and talk about fly infection when we are perpetuating the nuisance in the garbage can by furnishing a most prolific breeding place? It has been said that the annoyance of the can probably never will be done away with. It seems that this condition of things has been accepted everywhere and that nobody has tried. We find, however, exceptions in two cities—one in the United States and the other in Canada, where at least an effort has been made to keep the garbage can from being a constant nuisance, and that is what I have come to tell you about—how these two cities have been trying, and I wish to say with a great measure of success, to make the garbage can no longer a nuisance.

Drain garbage of all moisture, then wrap it in paper before putting it in the can, and it will neither smell badly in hot weather nor freeze and stick to the can in cold weather. Do this and have a clean can at all times.

Heat, moisture and the fly are all eliminated. This rule was put into practice in Minneapolis in February, 1907, and is still in force. The campaign of education was a hard one, but we have won. As one of the garbage collectors said to me within the week, "the garbage cans in my district are clean enough to keep pies in."

It all rests with the collector. He has but to report to the department that the garbage is not properly drained and wrapped in paper, and no further service is rendered until the rule is complied with. If the householder then fails properly to care for his garbage or to have it cleaned up he is brought into court and fined.

The operation of this rule has its economic as well as its sanitary side. The life of the can is very much prolonged. The garbage will roll out of the can in cold weather as well in the summer; if it does not and the garbage is frozen, the can is not emptied, for the householder has failed to drain off the moisture. The collector is forbidden to carry or use a pick or crow-bar to dig out frozen garbage, so the can is not battered up. Garbage kept in this way is not a nuisance; does not invite flies; does not need to be collected more than once a week even in warm weather, thus making a great saving in the cost of collection. It follows naturally that garbage which is not foul in the can will not be so in the wagon or cart. The garbage can should be kept water-tight, and when not used should be discarded and a new one provided. A great deal of trouble has arisen from the tipping over of the cans by dogs. A recent invention in the shape of a small appliance on the cover makes the cover self-locking, and the dog nuisance is a thing of the past.

The size of the can depends so much on the frequency of collection that it need hardly be discussed here. We have found that a 20-gallon can will take care of the garbage of an average sized family for a week and is easily handled by the collector. It is not necessary, even in a cold climate, to have different receptacles in the winter time, for if the rule regarding drainage of moisture and wrapping with paper is followed a metal can is just as easily emptied and kept clean in the winter months as a wooden one.

The question of location of the can is determined largely by the method of collection. In general terms it may be said that cans should be placed where they are most accessible to the driver.

The results of over three years of experience with this method of handling garbage in our city have been entirely satisfactory. At first it was laughed at as a fad of the department. We were asked when we would also require that the packaging

...tied with baby ribbon, but we persisted and now the public in accord with us, for they have seen actual results in the use of clean, sanitary cans which are no longer a nuisance. It is not a pertinent question that in the collection and disposal of garbage the first step should be a system of collection that would give to the citizen a garbage can which is not a nuisance?

IMPROVING POUGHKEEPSIE'S MAIN STREET

As is the case in a great many cities, Main street of Poughkeepsie, N. Y., had gradually come to be considered by the merchants along it as being their own property, and sheds, awnings, signs and stands for the display of goods obstructed and disfigured a large part of its sidewalks. In addition to this, a great number of poles of every description had been allowed to be planted, the resulting condition being that in many places there was space for only a single file of pedestrians.

Fortunately the citizens some years ago awoke to the need for an improvement in these conditions, and the first move was to get rid of about one-third of the poles over about one-third of the length of the street. Then the merchants were required to remove their stands and display their goods only within the store windows; and, following this, swinging signs were ordered removed. With the sidewalks thus uncovered so as to be plainly visible the desirability of improving them was apparent, and concrete sidewalks were constructed for 5,700 feet, or over one-half the length of the street. One improvement followed another, standard cellarways were adopted, all electric wires were placed under the sidewalks and finally the old trolley poles were replaced with combination light and trolley poles.

This last improvement was effected by a combination between the lighting company, which placed the conduits; the property owners, who paid for the sidewalks, and the city, which paid for the poles, fixtures and placing. The poles cost

MAIN STREET AFTER IMPROVEMENTS

\$65 each and \$35 additional for setting them. They are placed 90 feet apart on each side of the street. Each pole has a cluster of four lights suspended 13½ feet above the sidewalk, each light being a 100-watt tungsten of about 80 candle-power. Thirty of these poles have been placed already, and the effect is so generally appreciated that it is proposed to install 100 more in the near future. For this information we are indebted to Robt. J. Harding, Superintendent of Public Works.

NEW YORK FIRE COLLEGE

A GENERAL order was issued by Chief Edward F. Croker, of the New York City Fire Department, on December 28 last establishing a "Fire College," the purpose of which "is to disseminate knowledge of fire fighting, to establish and maintain the highest professional standards, and to afford to men starting in the profession of fire fighting the advantage of the experience of men who have devoted their lives to this profession. Instruction in the various courses will be limited to what must be known to practical firemen in order to efficiently perform their duties. Where possible, courses will be limited to practical work." The college is to be composed of four schools, known as the officers', engineers', probationary firemen's and company schools. Courses of instruction are to be given in general fire fighting, the use of apparatus and tools, engines and boilers, use of high-pressure systems, marine fires, care of horses and of hose, sapping and mining, high-tension electric currents, combustibles and explosives, gasoline motor engineering, fire-alarm telegraphs, auxiliary fire appliances, first aid to the injured, discipline and administration.

The college will be administered by a board, subject to the control of the Fire Commissioner. This board at present consists of eleven instructors and Chief Croker as president *ex officio*. These instructors are deputy and battalion chiefs and foremen, a medical officer, electrical engineer and veterinary surgeon. This board will give instruction in the several subjects and at the conclusion of each course will hold examinations and report upon the same to the Commissioner.

It is the present intention that officers of the department will be divided into sections of 25 members each. Each section will be required to attend the classes three times a week from 10 a. m. to 1 p. m. for a period of six weeks, two sections being under instruction at the same time on alternate days.

The engineers' school must be attended by all engineers, and firemen of the first and second grades may receive permission to do so. All probationary firemen must attend the probationary firemen's school for at least 30 days after their appointment. No probationary fireman will be given a full appointment who has not satisfactorily completed this course; no fireman will be promoted to the grade of engineer who has not successfully completed the course in the engineers' school, and no officers will be promoted unless they have successfully concluded the course of instruction in the officers' school.

STANDARD LAMP AND TROLLEY POLE

The company school is to be attended by companies with their entire complement of officers and men, where instruction will be given in the use of apparatus and tools, and of engines and boilers in the case of engine companies.

A part of the instruction given in the New York fire department college comprises the names and uses of the various tools and appliances used. The mere list of the names of these appliances considerable space and is as follows:

For hook and ladder companies:

Axe, life belt, ladder strap, large maul, small maul, rivet cutter, cotton hook, signal flag, shovel, wire cutter, Hale door forcer, hay fork, ram, Milburn light, gas wrench with T. & S., gun (complete), claw tool, life net (Browder), megaphone, medical bag, junior searchlight, 6-foot hook, 10-foot hook, 15-foot hook, 20-foot hook, 25-foot hook, body bag, Vagen-Bader mask, pyrene extinguisher, pick.

The following are used by engine companies:

4½-inch suction, 10 feet 6 inches long; 4½-inch suction, 4 feet long; 4½-inch suction, swivel; 4½-inch x 2½-inch reducing suction swivel; hydrant connection, portable hydrant nipple, fresh water connection, fresh water hose, thaw hose, hydrant pump, suction basket and rope, play pipes, engine squirt oil can, flat chisel, chipping hammer, monkey wrench, combination wrench, Stillson wrench, socket wrench, hydrant wrenches, double end hydrant wrench, suction wrench, high pressure hydrant wrench, hub cap wrench, hydrant wrenches, alligator wrench, union nut wrenches, open end wrenches, piston rod stuffing box wrench, main pump rod stuffing box wrench, feed pump rod stuffing box wrench, slide valve rod stuffing box wrench, shovel, slice bar, poker, starting bar, seat cushion, driver's safety strap, set of packing tools.

MAGNESIUM CHLORATE FOR REMOVING SNOW

In the city of Berlin, according to an article in the December number of the *Zeitschrift Mitteleuropäischen Motorwagen Vereins*, an oil emulsion has for some time been used for laying the dust on smooth surfaced streets. This was not serviceable, however, for cobblestone streets, and for these a 30 per cent solution of magnesium chlorate in water was tried. This was found to give fairly good results, especially in winter, as it did not freeze or make the streets slippery; and the use of a solution of this material was adopted for cobble pavements and is sprinkled on them every three or four days, as the effect does not last longer than that. When the temperature had fallen to minus 5 degrees centigrade (23 degrees F.) a solution of equal parts of magnesium chlorate and water was used without the streets freezing or being covered with ice. Ice had begun to form on the pavement at a number of places, but several hours after sprinkling this began to crack and was easily removed. This suggested its use on sidewalks and streets generally and was found to reduce the time of removing the ice by two-thirds. If streets are sprinkled with the solution before a snow fall the snow is prevented from clinging to the pavement and its removal is thus facilitated.

CREOSOTING WOOD BLOCKS IN ENGLAND

Mr. John W. Menour, borough engineer of Sunderland, England, in a discussion before the Institution of Municipal Engineers, gave some information concerning the nature of wood block paving used in that country. According to his statements as quoted by *Surveying and the Civil Engineer*, the wood blocks used are of the best quality of beech, 6 inches in length, 3 inches in width, and 5 inches in depth. The creosote oil is specified to be free from coal tar and other impurities, and to be applied to the blocks at the rate of not less than 10 pounds per cubic foot. These blocks are dipped from one-half to one inch into their depth in pitch and tar and are then bedded on fine sand having a depth of not more than one-fourth inch, with close joints, after which the joints are filled to the surface with pitch and tar. The whole surface is then covered with fine pea gravel or crushed granite which is thoroughly rolled into the wood and kept on the surface for seven days after traffic is allowed to use it, and then thoroughly cleaned off.

Apparently we have here the double object aimed at by the committee of the Organization of City Officials for Standardizing Paving Specifications—preservation, secured by the creosote,

and the sealing of the pores against moisture and a leaking out of the creosote, secured by dipping the block in tar. It will be noticed that the amount of creosote is only about one-half of that required in this country. Also that there is an effort to secure a denser and harder pavement surface, and presumably a less slippery one also, by forcing stone screenings or gravel into the top surfaces of the blocks.

PUBLIC COMFORT STATION IN GENOA

A PUBLIC comfort station has recently been opened in Genoa, Italy, which is said to be the only one of its kind in Europe because both of its construction and also of its equipment. The harbor and business sections are a considerable distance from the homes of the working people and the city decided to build a recreation and comfort center there. Here may be found barbers, tub and shower baths, package and parcel room, telephone, reading and writing rooms, promenades and lavatories. The station is located in the heart of the business district where it is easily accessible to all, the ground beneath Ferraro Square being selected for the structure. This, which is the most important and busiest square in Genoa, rests on solid rock, and there was no ground water to interfere with the construction.

The underground building is in the form of a rectangle, 100 feet long and 40 feet wide, with two wings. The entrance is from a side street near the columns of a theatre, and does not interfere with traffic. The stairways leading down to the hall are of solid marble and very broad, and end in the promenade or arcade which leads to all the other parts of the hall. One side of this promenade is occupied by the offices, telephone booths and reading and writing rooms, while on the other side are the shower and tub baths. Each bathroom contains an enameled bathtub and an enameled table on porcelain feet. Over the tubs are cold and hot water shower baths. At the end of the promenade are the barber shops, package and parcel rooms, and in a small extension are the boiler and engine rooms, the fans and ventilators. Still further at the extreme end are the lavatories. The building is well ventilated and lighted.

All the outer walls are built double with an air space between the inner and outer walls, which spaces serve as air chambers and also as conduits for carrying all the piping. The inner walls are painted with an enamel proof against water, soap and all disinfectants. The floors are finished in white tile with a blue pattern.

The main walls of the structure are of reinforced concrete. The roof rests on reinforced concrete columns with bases enlarged to such area that the load upon the foundation is 100 pounds per square inch. The roof is supported by 13 reinforced concrete girders, 9 feet apart in the clear, which in turn are supported by concrete columns 20 feet apart. The girders are 15 by 31 inches outside measurement. The reinforcement consists of twelve rows of 1½-inch round iron rods, two rods being near the inner surface. These are interlaced by numerous cross rods. Spanning these girders are beams which are strongly reinforced with Kahn reinforcements. The open spaces between girders and beams are filled with hollow concrete tile. The supporting columns, which are 12 by 15 inches in cross section, are reinforced by eight round iron rods 1½ inches in diameter, joined by iron hoops.

The hall is heated by the hot water system. The boiler which supplies water for the baths holds 1,300 gallons of water. The hot water from this is conducted in stone-walled conduits to the different bath rooms. The capacity of the plant is 450 tub baths, or 23,400 gallons, in ten hours, at a temperature of 95 degrees F.

The hall is ventilated by electric fans driven by 28-horsepower motors, separate fans being used for supplying the fresh air and for removing the foul. Both the supply of fresh air and the foul air which is removed are led through brick conduits and the air chambers between walls mentioned above. The electric current required is obtained from the central station. For this description we are indebted to *La Revue de l'Édition Technique*.

Unreliability of City Records

We desire to call attention to an abstract on another page
of this issue of a paper giving a sensible and timely discussion
of city planning. It has seemed to us for some time that the
matter of city planning was being considered too much from
the esthetic and not sufficiently from the engineering stand-
point; too much attention was being paid to civic centers and
boulevards which cut wide swaths through blocks of costly
buildings, and not enough to the designing of street systems
in advance of the opening up of districts, such designing being
made with an eye to maximum utility as well as to pleasing
effect.

An important matter, and one which certainly deserves con-
sideration by city engineers, is referred to as follows: "The
first essential for effectively planning physical changes in any-
thing is a truthful knowledge of the existing physical condi-
tions. The conditions of maps, surveys and records of exist-
ing physical conditions in most American cities and towns, so

far as my observation has gone, is almost incredibly bad.
Where the problem is as large and complex as a whole city,
the value of the right kind of map is incalculable.

"To take a single aspect of the work, for example, the rec-
ords ought to show the exact location of every underground
pipe, sewer or conduit in the streets of the city, corrected up
to date. As it is, in the general absence of such records, new
structures are laid out more or less blindly and involve a huge
amount of needless expense in the alteration of older struc-
tures encountered in the digging."

This arraignment of city records not only asserts the entire
absence of information concerning many underground struc-
tures, but questions the accuracy of many of the records which
exist. The writer has found this to be the case in several
cities. In some where he had been called in to prepare sewer-
age designs he has endeavored to use the level notes and
profiles found in the engineer's office; but after several days
of perplexing efforts to discover some consistency between the
several sets of notes and to eliminate errors, he has found
the shortest and only safe method to be to entirely resurvey
the whole city. The same unreliability of the records has
been found later in excavating for the sewers, when no
amount of care in locating the lines to avoid existing struc-
tures, taking the records as a guide, was successful in accom-
plishing this, as water or gas mains were continually being
found where they were not expected.

We believe that every city should, at the first opportunity,
have all the records in the engineer's office carefully examined,
compared, compiled and indexed, and a series of accurate
lines and profiles run through some of the main streets in all
sections of the town and compared with existing records to
determine their accuracy.

We expect to publish next week a description of the method
employed in one city for locating and mapping all existing
underground structures; and believe that some such system
should be followed by every city, large or small, where ac-
curate records of such structures do not already exist.

Bituminous Concrete and Macadam

Without specifically stating it as their intention to establish
any standard in nomenclature as well as in construction of
bituminous paving, the committee of the Organization of City
Officials for Standardizing Paving Specifications, which de-
voted its attention to that class of pavements, practically pro-
posed such a standard of nomenclature. Bituminous concrete
was defined by the committee as a mixture for paving pur-
poses of broken stone (or gravel?), sand and bituminous
cement, heated and mixed before laying. Any combination
of bitumen and road metal not so mixed they classed as bitu-
minous macadam.

This seems to us a very acceptable definition and distinction,
and to meet the views which have been expressed in this
journal by ourselves and by others. It still remains to dis-
tinguish between combinations of bitumen and broken stone,
made by mixing or by the penetration method. Possi-
bly an agreement as to how far the "penetration" really pen-
etrates must precede such definition. We would suggest
"mixed bituminous macadam" and "bituminous surfaced
macadam," the latter to include all surface applications.

Purifying the Ohio River

We have in previous issues referred to the Ohio River San-
itary Commission, an interstate commission whose object is
to prevent pollution of the Ohio river. This commission held
a meeting on January 5 in the office of the Secretary, Dr. C. O.
Probst of Columbus, O., and drafted a bill which is to be
recommended to the Legislature of West Virginia and Indiana.
This bill, entitled "A bill to prevent contamination of the
Ohio river and to regulate its use as a source of public water
supply," provides that no municipality, corporation or person
shall install any public water supply or sewerage system until
the plans and specifications have been approved by the State

Board of Health; nor make any additions or alterations to a public water supply which involve a change in the source of supply or method of purification, until the plans have been similarly approved. Also that no additions or alterations shall be made in any sewerage system which involves a change in the outlet, an increase in the amount of sewage or a change in the method of disposal until the plans have been approved by the State Board of Health. Also that no corporation, institution or person shall adopt a site for the location of any industry which produces putrescible or other liquid wastes until the site is approved by the State Board of Health or until some method of adequately purifying the waste is adopted satisfactory to the board. By this act the decisions of the board are final and conclusive except for fraud or abuse of discretion; in which case the aggrieved party may appeal to the court of common pleas of the county where the system is located, the appeal not acting as a stay, but the board's decision standing until reversed or modified by the court. The penalties for violating the act are a fine of not exceeding \$500, imprisonment for not more than six months, or both.

CORROSION BY HYPOCHLORITE SOLUTIONS

IN discussing a paper before the New England Water Works Association on the corrosive action of water on metals, Mr. Harold C. Stevens, assistant engineer of the New York Board of Water Supply, gave a brief statement of the experience of that board in the handling of hypochlorite of lime by the department, which looks after the sanitation of the contractors' camps. They found wrought iron pipe to be most readily affected, the inverts of 2-inch pipes through which a one per cent solution trickled being completely rusted through in about four months. Three-inch galvanized iron pipes, conveying at different times one per cent and one-half per cent solutions and flowing full, were replaced after about a year's service because of the accumulation of lime deposit and the formation of tubercles, although the galvanizing was not seriously attacked. Brass pipe was corroded by the hypochlorite solutions, but very much less rapidly than iron; the pipe becoming coated with a smooth layer of lime which protected the metal from further corrosion. Brass valve stems in a tank holding a hypochlorite solution showed general but shallow pitting after three months. Twenty-gauge copper used for floats and tank linings did not meet expectations, the tank lining being eaten through in less than three weeks and an orifice can becoming leaky in about three months. Copper floats also became leaky in about three months through general pitting of the surface.

Tin resisted the action of hypochlorite solution very well. Two ordinary tinned copper ball floats, in solutions of one-half per cent to one per cent strength, lasted for nineteen months. Bronze orifice plates made of "Worthington anti-corrosive metal" have stood well. The edges are not quite so sharp as originally, but the discharge coefficient has increased only about three per cent during nearly two years of service, and part of this may be attributable to wear.

Wood is readily affected by hypochlorite solution. Mixing tanks of white pine began to show serious damage within a month, the end grain at the rabbet being affected most and so softened that it could be crushed or scraped out. Storage tanks containing two per cent solutions were not much affected during the same time. Wooden stilling boxes lasted for nearly two years in solutions of one-half per cent and one per cent strength, but at the end of a year and a half the wood was so softened that edges could be broken off with the hand. Wooden floats boiled in paraffine and coated with a thick layer of paraffine were entirely unaffected after many months' service.

Mr. W. C. Hawley, engineer and water superintendent of Wilkensburg, Pa., stated that they had used galvanized iron pipe for feeding hypochlorite solution to the suction well and found after six or eight months that there had been little action except where the iron was exposed, as at the joints. Ordinary brass was attacked quickly, but a good grade of bronze showed no sign of damage.

Both these gentlemen noticed an unexpected effect on organic matter which had collected in certain pipes. Mr. Stevens stated that when hypochlorite was turned into a large metal supply main a large amount of organic matter was detached and quickly appeared at the reservoir; the next measurement of the capacity of the pipe showing an increase in this of 6 per cent over the previous year, whereas before that there had been an average yearly reduction of 4 per cent. Mr. Hawley stated that they had been compelled to run one of their large engines for some months without an opportunity to clean the condenser, which is located on the suction pipe, and the vacuum had dropped from about 26 inches to 19 inches. Within twenty-four hours after the introduction of hypochlorite in the water, however, the vacuum was found to have increased to about normal. Fear was entertained that there might be a rapid eating away of the metal, but investigation showed that no damage had been done to the tubes, but that they had been thoroughly cleaned of all the organic matter and sediment which had previously collected on them.

CITY PLANNING IN PRACTICE

What It Comprises—The City Plan Never Finished, But Should Grow with the City—Special Department or Official Desirable

IN a recent paper before the American Civic League, Mr. Frederick Law Olmsted discussed the subject of city planning from a point of view somewhat different from that taken by most speakers upon the subject. At the outset he defined city planning as being:

A systematic attempt to do the following three things:

First, to make the best practicable analysis and forecast of such existing and future needs of an urban community as may require its existing natural features or physical equipment to be changed or extended.

Second, to prepare or search out and gather together the most promising tentative plans for the meeting of those several needs; to ascertain the relations of one plan to another and to the interests of the community as a whole; to propose such adaptation of each plan to the others as would minimize any conflicts of purpose or duplication of expense that would be likely to result from their independent execution; and to make apparent any possibilities for increased efficiency through combination or wholesale methods or otherwise.

Third, to keep this combination of plans constantly up to date so as to represent at all times the latest and best judgment as to what physical changes are to be expected, in order that no project for an immediate improvement need be entered upon without a clear understanding of its relation to other changes that are likely to occur.

It is a popular impression that if only a comprehensive general plan can be prepared and then established as the Laws of the Medes and Persians, the job of city planning is done. But in my opinion this "once for all" idea is a most pernicious fallacy. It is associated with the too prevalent American attitude of attending to all public affairs by spasms. It looks to the formation of a Special Temporary Commission on City Plan, to the temporary drafting of the services of a few citizens of conspicuous ability and discretion; to the calling in of noted experts, and to the preparation in the course of a year, or three years, or ten years, of a comprehensive "city plan," followed by the complete transference of the activity of the said conspicuous citizens and noted experts to other fields. Doubtless the educational effect of such a city planning spasm may be very important, but if the regular officers of the city government and of the public service corporations have, for years, been carrying on the administration of the physical equipment of the city in a short-sighted, unco-operative, planless way, it is futile to suppose that the educational effect of seeing somebody else do some constructive planning is going to revolutionize their methods. The best that can be hoped is that some of the features of the plan may be so commendable and receive such strong popular endorsement as to force them permanently upon the consciousness of the community as things that must be provided for. There is always a residue of substantial gain when a wave of spasmodic attention to public duties sinks back into the sea of public indifference.

He then expresses his opinion that a city plan legalized or in any way made compulsory upon future generations or even future administrations is to be avoided, because this would

prevent that improvement in the plan which is almost sure to be rendered possible by the increased knowledge and wisdom of the future or because of unforeseen developments. While the plan must at any given time represent the best practicable forecast of future conditions, it must also be possible for it to grow and improve with the development of the city and with the growth of the science and art of city planning. If either the character of the officials who would have this matter in charge or the organization of any of its departments is such that this continuous development of the city plan is impossible or even improbable, then some change should be sought in either or both of these which will make it possible.

Concerning the real value of experts' reports on city plans, Dr. Olmsted said:

While I cannot over emphasize the fact that city planning must be regarded as a continuous function of some permanent administrative agency in every city, I would not disparage the services which may be rendered by the independent expert. . . . But I do think that the function of the independent expert in such matters has been somewhat misconceived and perhaps exaggerated in importance by enthusiastic laymen. Plans and reports on city planning by temporary commissions, or by experts called in for a flying visit and having but a temporary connection with the problems in hand, may be of great value for educating, for stimulating, for clearing the air, for calling attention to opportunities and indicating effective lines of action. . . . But such a report, or so-called city plan, is not the real thing.

The first essential for effectively planning physical changes in anything is a truthful knowledge of the existing physical conditions. . . . The condition of maps, surveys and records of existing physical conditions in most American cities and towns, so far as my observation has gone, is almost incredibly bad. Where the problem is as large and complex as a whole city, where, on account of the values of land and buildings, a difference of a few inches in location may involve huge sums of money, where comparatively slight differences in level may completely alter the whole plan of a sewer system or bring transportation lines into fatal conflict, where it is necessary to provide sooner or later for such an enormous complex of public utilities in close juxtaposition, the value of the right kind of map is incalculable.

New York, Baltimore, Washington, and some other American cities have awakened to the importance of modern active, comprehensive topographical maps as a basis for the intelligent and economical planning of public improvements, and have provided themselves therewith, at least as to their outer zone; but generally the official surveys consist of incomplete and casual records of streets, properties and public works, gradually accumulated through a long series of years. These records consist for the most part of independent piecemeal surveys of all degrees of accuracy and inaccuracy, made for all sorts of special purposes, and of compilations and transcripts of these piecemeal records patched together in attempts to reconcile irreconcilable data.

This is not the place to enter upon a technical discussion of city surveying as a basis for city planning. I can only emphasize the fact that it is essential, that it pays for itself over and over again, but that it is a big and somewhat costly undertaking in itself when it has been neglected for years. The way to get it is for the citizens to authorize and demand the employment by the city or town of a competent permanent engineering staff, and provide adequate funds for their work.

It is a highly technical matter, and in making a new start or in judging of the efficiency of the local technical staff, the intelligent non-technical citizen or official can very profitably seek advice from independent experts.

But it is not to be assumed because complete and accurate record maps are a necessary basis for a complete and accurate city plan, that all work of planning should wait until the former is complete. In fact, if the city is a live city the topographical map is never complete, any more than the city plan is ever complete and final. The topographical map should be an up-to-date record of existing physical conditions in the city not at one period of its history alone, but always. Like the plans based thereon it is not to be regarded as a picture, but as a kit of working tools, part of it in daily use and the rest kept in good order, ready for instant use when needed.

To take a single aspect of the work, for example, these records ought to show the exact location of every underground pipe, sewer or conduit in the streets of the city, corrected up to date. As it is, in the general absence of such records, new structures are laid out more or less blindly and involve a huge amount of needless expense in the alteration of older structures encountered in the digging. This is but one illustration, but it makes clear that mapping, like planning, must be a continuous function, and that while the mapping must to some degree pre-

cede the planning, they should both advance continually toward a greater degree of accuracy and comprehensiveness.

Mr. Olmsted goes on to state that the same scientific handling and interpretation of statistics which is now common in designing water supply, gas and electric service and the like is seldom used in planning streets, parks, schools and playgrounds or the building accommodations required by the various municipal services, and yet that it is clear that this ought to be done, and that some central authority should be provided to see that the plans which are prepared should co-ordinate and harmonize, and should periodically be revised and brought up to date.

It is rare to find operating officials who are not driven by the pressure of immediate problems to a comparatively nearsighted and narrow view of their field. It is of the greatest importance, therefore, to provide some agency which is sufficiently free from this pressure to take the long look ahead, which can take the initiative in getting the plans made, which will be in a position to force the larger and more distant problems upon the attention of the various responsible officials and command their co-operation in reaching a tentative solution of them, and which finally will compare the various projects and see that they are kept properly correlated.

What the best agency may be for accomplishing these ends I do not pretend to know. There has been so little serious effort to accomplish them that much experiment will yet be needed before any standard method can be evolved. Doubtless the varying forms of existing municipal machinery will call for corresponding local variations in the machinery for city planning. But it is clear that a course should be steered to avoid two opposite dangers. One is that those who are made primarily responsible for the city planning will be too isolated from the regular administrative officers, will fail to be in vital touch with the organization which their work is meant to serve, and will become academic and visionary and therefore subject to arbitrary change of views with changing personnel. The other danger is that they will drift imperceptibly into the temporizing, timid, uncreative attitude which afflicts so many permanent officials.

This last is the disease of bureaucracy. Every official who gets out of the well worn ruts of established routine encounters obstacles and opposition, hurts the feelings of his neighbors and friends and gets little credit and no thanks. After he has suffered this experience a good many times and found that he can accomplish but little good by these individual sallies he is apt to get tired and to settle down into the habitual official attitude of "not looking for trouble."

I am inclined to think that the best organization might include two parts. On the one hand it would have a central bureau of surveys and plans under a permanent able engineer, which would serve all of the administrative departments of the city, record the physical result of all their operations, and keep in close touch with all their projects, thus maintaining the practical contact with current work and the continuity of method which can only come from a permanent technical staff. On the other hand it would have a small supervisory board operating through this bureau and intended to supply greater initiative and breadth of view in dealing with the larger and more distant questions than could be expected of men whose whole time the city could afford to employ. The men of this supervisory board ought to be the very biggest men available. Moreover, the organization ought to be such as to place no routine duties whatever upon them and to make the demands upon their time as infrequent as possible, but the demands upon their concentration of thought and imagination unlimited.

GARBAGE DISPOSAL AT PASADENA

THE city farm of about 500 acres, a considerable part of which is operated by Pasadena, Cal., as a sewage farm, has been described by us in previous issues. One of the more recent features of this farm is the section devoted to the raising of pigs, the garbage of the city being used in connection with this. On one side of the road which passes through this section of the farm are kept the litters while still with the sows; and after weaning they are taken to another section across the road, and as they increase in age and size they are moved from pen to pen until, by the time they reach the last in the series, they are large enough for sale. Alfalfa as well as table refuse is used in feeding them. Great care is taken to collect the garbage regularly and frequently and feed it to the pigs while still fresh. They are not turned loose upon refuse piles, as is sometimes done, but the garbage is sorted over and fed to each individual pen. Clear water from a piped supply is furnished at all times to each of the several pens.

NEWS OF THE MUNICIPALITIES

Current Subjects of General Interest, Under Consideration by City Councils and Department Heads—Streets, Water Works, Lighting and Sanitary Matters—Fire and Police Items—Government and Finance

ROADS AND PAVEMENTS

Highway Committee Approves Paving

York, Pa.—Approval of street paving recently completed here was given last night by the highway committee of the City Council after hearing the reports of chemists upon samples of the material which they had been given for analysis. The Barber Asphalt Company was released from its bonds for the repair of North George street, South Beaver street, West Market street and West York avenue, the five-year term for which the company was bound to make repairs having expired October 10, 1910. Mayor Weaver's effort to show by cutting samples from South Beaver street that the materials had not given the required amount of wear had not been successful, and as the City Engineer said all repairs had been made there was no opposition to the release of the bonds.

Better Sidewalks for Boston

Boston, Mass.—More granolithic sidewalks, particularly in the business district of the city, and the replacing of gravel sidewalks in the outlying districts by some form of permanent walk are among the recommendations of the municipal and metropolitan committee and the directors of the Chamber of Commerce, in a report sent to Mayor Fitzgerald. This report was made by the municipal and metropolitan committee in reply to a request from the Mayor as to the opinion of the chamber. Mayor Fitzgerald in his letter called attention to the prevalence of brick sidewalks, suggesting that "a brick sidewalk in front of a department store or theater is certainly incongruous." These sidewalks are generally of poor quality. The chamber committee points out that this is due to the practice of allowing the abutter to furnish the brick while the city pays for laying it, the result being that the abutter frequently gets brick of poor quality. On the other hand, the city pays for less than one-third of the cost of granolithic walks, which does not encourage the building of this kind of walks.

Reverses Its Paving Decision

York, Pa.—After approving about \$45,000 worth of asphalt paving done here recently by the Filbert Paving Company, the Highway Committee of City Councils has reversed its action and will have a second analysis made of samples of the material used.

Indianapolis Street and Sewer Work in 1910

Indianapolis, Ind.—During 1910, according to City Engineer Klausmann, nine street improvement contracts let the previous year were completed at a cost of \$143,682. Contracts let in 1910 were completed at a cost of \$161,483. In the sewer department 21 contracts let in 1909 were completed, the cost being \$120,692.88, while two 1909 contracts were uncompleted. Eleven contracts let in 1910 were finished and accepted, at a cost of \$37,039.41, and eight contracts were completed but had not been accepted Jan. 1. The city asphalt plant laid 105,594.44 square yards of surface, of which 16,983.66 square yards, for which \$16,841.26 was received, were laid for public service corporations, etc. The gross cost a square yard was 69.5 cents, and the net cost 53.6 cents. In the city engineer's inspection department 3,162 lineal feet of curb, 384,000 paving brick and 4,800 feet of sewers were condemned.

El Paso's Paving Record

El Paso, Tex.—Six miles of paving were laid in El Paso in 1910, and as much more is planned for 1911. Six miles of cement sidewalks were also laid. El Paso now has 60 miles of graded and paved streets, 24 of which are bitulithic or petrolithic. The revolving fund, from which the property owners borrow the money to pay the assessment, is responsible for the progress.

Wills Money for Road Machinery

Binghamton, N. Y.—Out of an estate of \$27,000, the will of T. V. Furman, of Windsor, gives \$2,500 to the village for the purchase of a stone crusher, sorting bins, spreading wagons and necessary tools for handling and crushing stone to be used on the improvement of the village streets. The giver recommends that the crusher be set up near the creek beds which supply stone. "Then," says the will, "it can be readily crushed, screened and sorted in readiness for the streets. In this way the expense of purchasing stone can be cut down and the creek beds lowered at the same time." Should the village fail to use the machine for two consecutive years, the town of Windsor shall come into possession of it, the will declares.

Brick Costs More in Freeport

Freeport, Ill.—On top of the freight rate raise for the transportation of brick, which amounted to 3 cents a square yard for paving brick, comes the announcement that the brick which sold last year for \$12.25 per 1,000 will be furnished this year at \$14.50. The advance of \$2.25 per 1,000 means an additional cost of 10 cents per square yard. A good deal of paving work in Freeport is planned for this year and the high cost of brick will make a big difference in the estimates. As the situation is at present, no brick contractor will take a big contract for fear of some further change in price, and the brick market will not be settled for some time. Last year there was a raise in price of about \$4.

Highway Construction in Santa Clara County

San José, Cal.—The permanent highway improvements made in Santa Clara County during the past year will probably exceed those of any other year. During the past year the county has been getting ready for extensive road improvements. Besides one road roller that was purchased several years ago the county has purchased three new 13-ton road rollers. There have been about 15 miles of good macadam roads built in the county in that period and many miles of the branch roads through the farming districts have been put in excellent shape.

Much Road Building Near St. Joseph

St. Joseph, Mo.—The record for 1910 for the building of permanent county roads in Buchanan County far exceeds the record of any previous year. Ten miles of rock road were constructed during the 12 months ending December 31. During the year the contracts for 10 miles of macadam were awarded at a cost of \$67,565.35. The grading cost \$25,616.39; culverts, 50 in all, \$18,740.15; bridges, 19, \$5,045, and the amount to be paid to the road overseers, which will not be due until the annual settlement which is to be made February 1, 1911, is \$28,000.

Washington Needs Paving Plant

Washington, D. C.—A municipal paving or asphalt plant has been asked for by the Commissioners, according to Major Judson at the hearing, because the two paving concerns in the District have consolidated and the price of paving has gone up from \$1.45 to \$1.77. Asphalt repairs have cost the District about \$400,000 in the last 12 months, and the ownership of a municipal plant is asked for in the interests of economy.

Pavement Construction and Reconstruction

Cincinnati, O.—In his annual report City Engineer Meinert calls attention to the wretched condition of the asphalt streets and recommends that Council adopt ordinances as soon as possible for the resurfacing of them. He recommends the construction of six trunk sewers in various parts of the city. The report shows that 2.22 miles of streets were constructed during the year at a total cost of \$38,452.44, 1.08 miles of sewers costing \$11,827.46 and 2.25 miles of sidewalks, costing \$7,551.57.

Newark's Record for Paving in 1910

Newark, N. J.—Newark paid the sum of \$474,231.89 for paving work in the city streets during the year of 1910, and an additional amount of \$116,174.04 was paid for grading, curbing and flagging. All of which meant a busy year for the Department of Streets and Highways, under the supervision of Engineer William A. Howell, and added materially to the cleanliness and comfort for traffic of the city thoroughfares. In all, the city laid 8.31 miles of new pavement during the year, together with .307 mile under private contracts. This brings the total mileage of paved streets in Newark up to 207.8, a stretch which, if marked out in a continuous line and allowing for the usual width of a street, would extend farther than from Newark to Boston. There are now only about 80 miles of unpaved streets in Newark; this, too, considering the fact that 17 new streets were opened in the city during the last year. Two species of pavement new to the city were introduced here during the year. One of these was the Medina block variety, 4,481 square yards of it, which was laid in Frelinghysen avenue at a cost of \$12,015.56. The other was phalt block, 1,643 square yards or 558 lineal feet, laid in great place at an expenditure of \$6,144.60. In all, the city laid five kinds of pavement by ordinance during the year. One brick paving, of which there was laid 88,791 square yards, amounting to 24,226 lineal feet, cost \$246,903.65, including inspectors' fees, advertising and other expenses. Granite on concrete was laid to the extent of 38,580 square yards, at a cost of \$209,168.08, and bitulithic pavement, 12,711 square yards of it, at a cost of \$37,732.54. The Public Service Corporation, operating under the supervision of the city engineering department, also improved a greater mileage of pavement between the car tracks last year than ever before, the total amounting to 15.7 miles. The greatest part of this work, 9.7 miles, consisted of new standard construction with reclipped granite block. The new specification block was used over a stretch of 4.5 miles. Work was started last year on contracts calling for the grading, curbing and flagging of 29 streets, at an estimated cost of \$91,830. Contracts were also awarded for the flagging of sidewalks on 12 other streets, at a cost of \$22,955.74, bringing the total up to \$116,174.04. Ordinances were passed providing for the opening of 17 new streets at a cost of \$1,130.12.

Mayor Favors Narrow Streets and Wide Parkings

Des Moines, Ia.—That many miles of unpaved streets in the city can be paved at a nominal cost by making the streets narrower, while the traffic can still be taken care of, is the belief of Mayor Hanna, who has investigated paving methods in many large cities. If such a policy is followed Mayor Hanna believes that within a few years the city can pave twice as many miles of pavement as at present. His inquiries show that the narrower streets have been found satisfactory in other cities. Following is his statement, in part:

"Des Moines has nearly 600 miles of streets. Of these only one-seventh are now paved. Our big street question now is how can we get more streets paved without a prohibitive expense. There is no practical reason why pavings from 12 to 22 or 24 feet in width in purely residential districts will not serve all of the purposes of the pavings 30 and 40 feet wide. We can then have parkings of double the present width filled with trees, green grass and flowers.

"Now is the time to prepare paving petitions. The people should get together and discuss the kind of paving and the widths desired and get their petitions in early so as to get ready for next season's work. If we follow out some such policy as this we can pave twice as many miles of streets as we are now paving by using the wider pavements, and can soon have our city presenting a very much cleaner and more beautiful appearance, and that, too, without an outlay so great as to be a burden on the property owners."

New Rock Road Planned for Kansas

Topeka, Kan.—Senator T. A. Milton, of Wyandotte, will make an effort before the legislature to have some action taken upon a proposed rock road to run from Fort Riley to Fort Leavenworth, Kansas City, Topeka and west to Hutchinson, and branching south between Topeka and Kansas City to Olathe and Osawatomie and running to Oklahoma to join the proposed Fort Sill road.

SEWERAGE AND SANITATION

To Investigate Sewage Problem

Boston, Mass.—An investigation of the discharges of sewage and other matter into the Connecticut River within the borders of Massachusetts is called for in a bill filed by Senator Malley of Springfield. The bill provides for the appointment of a board of three experts to conduct the investigation and the board may extend its researches into the entire watershed in this State. If the measure is passed the board will report to the next Legislature.

Municipal Tuberculosis Sanitarium Announces a New Feature

Chicago, Ill.—A free clinic for the care and treatment of members of the colored race suffering from tuberculosis will be the next feature of the constructive campaign in the Municipal Tuberculosis Sanitarium. This plan was announced last week by Frank E. Wing, general superintendent, as the result of a meeting of the board of directors of the sanitarium—Harlow N. Higinbotham, Dr. William A. Evans and Dr. Theodore B. Sachs—at the City Club. The new dispensary will be opened soon at Provident Hospital, West Thirty-sixth and Dearborn streets, and in order to reach the people for whom the dispensary is designed the directors plan to place a colored physician and a colored nurse in attendance.

Erie Plans New Sewerage Plant

Erie, Pa.—The end of one of Erie's greatest problems of recent years—the gathering and destruction of sewage that was formerly emptied into the harbor, polluting the water supply—appears to be in sight. The plans for the large new sewage disposal plant to be built on the bay front at a cost of nearly a quarter of a million dollars, including the necessary main sewer connections, have been approved by the State Health Department and reported to the Mayor and Councils by City Engineer Briggs. In working out the system, the problem of the engineering department has been to make a gravity system, so far as possible, in order to avoid the expense of pumping, which would cost thousands of dollars in future years. City Engineer Briggs drew the plans very carefully and had consultations with Engineer Fuller, of New York, the leading American expert. He decided finally to make use of the system perfected by Dr. Carl Imhoff, in Germany, by which the plant on the harbor front can be developed and converted into a park.

Cost of Operating Sewage Disposal Plant

Pelham, N. Y.—At a joint meeting of the Sewerage Commission and the Town Board Engineer Roberts presented an estimate of the cost of operating the new sewage disposal plant. He showed that the estimated quantity of sewage treated a day would be 400,000 gallons, and that there would be needed from 12 to 15 lights for 12 hours, one centrifugal pump one-half time with 15-minute intervals including the pumping of the sludge. The pump Mr. Roberts thought would consume 150 kilowatts per day of 24 hours, at a minimum rate of 4 cents. Mr. Roberts also said that three men were needed at the plant, a superintendent at \$100 a month, an assistant at \$60 and a night man at \$50; oil packing, waste, fuses, etc., 50 cents a day; repairs, renewals and depreciation, \$2.75 a day; making total expense for the maintenance of the plant \$15.92 a day, or \$5,480 a year. In conclusion the report said: "It has been deemed advisable to have a superintendent at the disposal plant at least for the first year in that every precaution may be taken to properly care for the machinery and the plant under the supervision of a competent man." The members of the commission thought that the plant could be run much cheaper than Mr. Roberts stated. It was the belief that a good engineer could be secured for at least \$80 a month, and an assistant for \$50, and that only two men were needed. It was decided that the plant could be run, including all the expenses, for at least \$3,000 a year. It was finally voted that the supervisor levy against the taxable property that sum for the ensuing year for the maintenance of the plant. Later Supervisor Beecroft discovered that the interest on the bond issue for the year would amount to \$2,642.10, and he was authorized to levy this amount also, making the total cost for the year \$5,642.10.

City Fined for Sewage Nuisance

Henderson, Ky.—The city of Henderson was fined \$50 and costs recently, in the Circuit Court, under an indictment charging the maintenance of a nuisance in running a sewer and emptying sewage into Canoe Creek. The remedying of this alleged nuisance will necessitate, so experts say, an entire change of the sewer system of Henderson, and will cost in the neighborhood of \$150,000.

Sewage Nuisance Disturbs Lynn

Lynn, Mass.—A recent meeting of the Harbor Commission, called for the discussion of harbor improvements, turned instead into a discussion of sewage conditions on the Lynn flats and methods by which the nuisance can be done away with. One speaker declared that a city of 90,000 population should be ashamed to have a front yard such as Lynn has at the present time. Another said that at low tide there was at least two feet of sewage on the Lynn flats, and that in nine cases out of ten the odors would kill a person in less than six months. Another hearing will be held soon to consider the matter further.

Ordinance Regarding Tuberculin Test Sustained

Milwaukee, Wis.—The city of Milwaukee can now demand of shippers milk from tuberculin-tested cows. The celebrated "tuberculin test case" has been decided by the Supreme Court, which affirmed in all points the decision of Judge Turner, Circuit Court, which was that the ordinance is valid and that the tuberculin test is reliable. Of widespread interest is this decision because many other large cities have passed or planned ordinances demanding only tuberculin-tested milk from shippers, and in a number of instances enforcement has been withheld until a decision should be handed down by the Wisconsin Supreme Court. "This decision is one of the most important given in years," said former Health Commissioner G. A. Bading on Tuesday. "It is a great step forward in the fight on tuberculosis. About 20 per cent of tubercular cases in children have been shown to be due to infection by bovine tuberculosis. The city has won on all points and there is now nothing to prevent rigid enforcement of the ordinance." Health Commissioner Kraft says he will give shippers who supply milk to Milwaukee six months to comply with the terms of the ordinance. The case involved the validity of the ordinance prohibiting the sale of milk or cream from cows not tested for tuberculosis and requiring owners of cows to file certificates of test from reputable veterinarians.

Will Fight Sewage Disposal Order

Mount Holly, N. J.—The authorities here have decided to fight the sewage question in the high courts before any steps are taken looking to action in compliance with orders issued by the State Board of Health for the establishment here of a sewage disposal plant, in order that all pollution of the waters of the Rancocas Creek and Delaware River from this point may cease. There are a number of other places along the Delaware that use the river as a receptacle for sewage, and many of the residents of this place feel that it is unjust to compel Mount Holly to erect a sewage disposal plant, while other places are allowed to go on in the same old way.

Investigating Possible River Pollution

St. Paul, Minn.—Residents of the Twin City interested in the high dam project will have to wait until Dr. L. L. Lumsden, of the Government Public Health and Marine Hospital Service, files his report with the Surgeon-General at Washington before learning what the Government officially thinks of the possible pollution of water above the high dam by sewage from Minneapolis. Dr. Lumsden, with Dr. Bass, of the State Board of Health, and Major Shunk, United States Engineer, inspected the sewerage systems of both cities adjacent to the territory which may be affected last week, but none would say what conclusions had been reached. The recommendations will become known through the office of the Surgeon-General at Washington. The investigation follows complaints made to the Federal authorities by members of the Mississippi River Boulevard Association that the sewage of Minneapolis will become offensive and insanitary in the slack water caused by the dam's erection.

WATER SUPPLY

City Would Buy System

Bellefontaine, Ohio.—The city of Urbana will make one more offer of \$100,000 for the water works system in Urbana, now owned by a private company. If the offer is refused, as it has been in the past, the Council expects to build a municipal plant.

Barberton's Water Plant Pays

Barberton, Ohio.—The Board of Public Affairs has submitted the following report showing the operation of the Water Works Department for 1910: Total receipts, \$18,294.86; total expenditures, \$11,970.05; balance on hand to date, \$6,324.81; balance on hand Jan. 1, \$5,160.84.

Numerous improvements were made by the board during the year. Two additional wells of the corkscrew type were added and the other wells were repaired and lined with concrete, thus saving a great quantity of water that was wasted through defective walls. Roofs to cover the wells were also erected. Numerous water mains were extended, five fire hydrants installed, 116 service connections made. Total number of gallons of water pumped, 400,982,000; coal consumed, pounds, 2,677,590; water, daily average gallons, 1,098,580; coal, tons per day, 3.66. The board continues by saying that the available water supply is 1,500,000 gallons every 24 hours. The report says that 6 of the 12 original wells being used produce very little water. More wells are needed to afford adequate fire protection. Two more wells are contemplated being drilled this year and it is thought that these will thoroughly cover the territory.

Not only can the water board show a balance on hand of \$6,324.81, but they produced a statement of expenditures for 1910 showing that they had expended \$8,950 for the benefit of the city. This total, together with the balance on hand Jan. 1, shows a complete saving for the city from this department of \$14,110.81.

Following are expenditures turned over to the city: 165 fire hydrants, at \$40, \$6,600; 33 flush tanks, at \$50, \$1,650; sewer flushing, \$150; fire station, \$50; schools, drinking fountains and watering troughs, \$500; total, \$8,950. And the total receipts were only \$18,294.86.

Poor Foundation Hampers Filtration Plant

Binghamton, N. Y.—Superintendent Moses Stoppard, of the Water Works, has presented to the Water Commission his annual report, in the course of which he reviews the construction and maintenance of the system for the year 1910. In the course of this report Superintendent Stoppard says: "The filtration plant is keeping up the quality of the finished product, as the report of Chemist Nelson will show. Our main troubles with the plant are the result of inferior and careless construction of the substructure originally. This has caused us no end of trouble with leakage. A gradual settling of the bottom, for lack of good foundation, pulls the walls apart and there is no remedy but constant repairing. And this must be done without interfering with the process of filtration. With our limited storage capacity, as at present, we can supply the city with water for only 40 minutes if the filtration plant is shut down."

Expect to Buy Water Plant

Farmville, Va.—The citizens of Farmville are determined to own all utilities of the town. The electric plant has for years been run by the town, the sewer system has recently been bought and negotiations are now pending looking to the purchase of the water company's property. The two last-named systems need to be extended. This will be done as rapidly as possible.

Water Plant Almost Completed

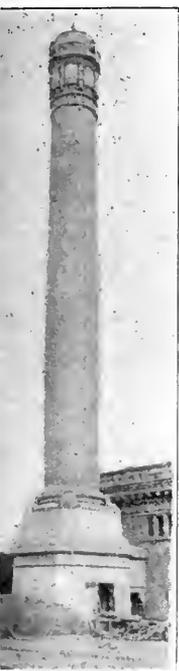

Gadsden, Ala.—The pumping engines for the municipal water works plant have been received here and will be installed in a very short time. The engines are capable of pumping 3,000,000 gallons of water every 24 hours. This amount will more than supply the city for the present and Gadsden will have to grow to be a city of 25,000 or 30,000 before the plant will be inadequate to meet the demand upon it. The cofferdam has been completed.

Recommends Completion of Water Works System

Springfield, Ohio.—In his annual report Superintendent George Cotter, of the Water Works Department, recommends the completion of the water works system, as has been planned for several years; that the city consider the installation of a new 15,000,000-gallon pump, or the use of meters by all consumers as a means of decreasing the amount of water used, and that the new 20-inch main be constructed from the new to the old pumping station. The total receipts from the department for the year were \$81,044. Operating expenses \$26,335, balance \$54,708. Bonds and interest to the amount of \$21,000 were paid during the year. The cost of pumping was \$2.58 per million gallons the cheapest in the history of the city, and cheaper than any other city of which a record can be obtained. Attention is called to the fact that only two cases of typhoid fever developed in the city in the last year, and these were both traced to wells outside the city limits.

Handsomest Chimney in America

Philadelphia, Pa.—The chimney of the Queen Lane Filter Plant, Philadelphia, Pa., is reputed to be the handsomest chimney in America. The plant is located in a high-class residential section, and for this reason it was thought justifiable to go to some expense in the matter of ornamentation. The chimney is 125 feet high and 6 feet in diameter inside. It serves six horizontal return-tubular boilers, the total rated capacity of which is 900 horsepower. The lower portion or base of the chimney is of granite and terracotta. The upper portion or shaft is constructed of radial brick, faced with pearl-gray blocks to match the terracotta ornaments of the cap and base. The round column or shaft of the chimney has a double entasis; that is, a double curvature, which is used to overcome the optical illusion which a straight shaft gives of being concaved. This is the design which was applied by the Greeks and Romans to the columns in their temples. The general scheme of ornamentation is Italian Renaissance. The architect employed conventionalized water forms as motives of decoration, both on the chimney and the power house itself, as being indicative of the character and use of the structure. It will be noticed in the view that use is made of shells, cat tails, dolphin heads, star-fish, etc., cleverly placed, as motives of decoration instead of the more commonplace garlands and flowers, etc. The total cost of the chimney was \$15,000.

ly placed, as motives of decoration instead of the more commonplace garlands and flowers, etc. The total cost of the chimney was \$15,000.

Engineers Report on Fort Worth Water

Fort Worth, Tex.—In a preliminary report to Commissioner Powell just made public the three expert engineers employed to find a suitable site for a surface reservoir on the river above the city announced that an adequate supply of surface water can be secured on either fork of the Trinity with a site at a cost of about \$1,000,000. Two suitable sites on the Clear Fork are recommended and one on the West Fork. The Parker County site on the Clear Fork, which now belongs to the city, is not recommended except as an adjunct.

The sites suggested are as follows: Live Oak Ridge on the Clear Fork, containing 2,000 acres, at a cost of \$908,000; Eagle Cliff, 10 miles above the city on the West Fork, comprising 3,000 acres, at a cost of \$995,000; Mound Dam site on West Fork, eight miles from the city, 600 acres, at a cost of \$1,235,000. The Eagle Cliff reservoir would hold 6,000,000,000 gallons of water and the Mound Dam 30,000,000,000 gallons. The Live Oak Ridge reservoir, it is estimated, would contain 6,000,000,000 gallons. The estimates in each include the cost of the overflowed land, earthwork, concrete spillway, slope paving, pipe line, filter beds and engineering design, supervision and contingencies.

United States Moves to Take Jersey Water

Newark, N. J.—United States District Attorney Vreeland has notified the Newark Board of Works that it is the purpose of the Federal Government to take possession by condemnation proceedings under Congressional authority of such rights as Newark may have in the wells of the Hudson Water Company at Belleville, unless Newark comes to an agreement as to the price and the damages to be paid to the United States Government. To bring the matter to the point the Government offered Newark \$10 for the rights which the former desires to acquire and has "determined to take for the provision of a public water supply to said Government at its fortifications and sea coast defences in Staten Island." The notification also sets forth that in the inability of the Government to come to such an agreement the Secretary of War has power to take land or any right pertaining thereto needed for the site, location, construction or prosecution of works for fortification and coast defence. It is believed that the primary purpose of the letter sent to the city authorities of Newark is to establish more firmly the right of the United States to appear in court as a party to the suit of the Hudson Company in its efforts to upset the McCran law of New Jersey, which forbids diversion of water to other States and to place the Government in a position to be able to condemn the water rights if such a course becomes necessary.

May Take Over Water Works

South Omaha, Neb.—The executive committee of the charter revision committee has formulated several amendments to the city charter. One of the amendments suggested bears directly upon the proposition of the West End Improvement Club and favors a municipal water supply system. This amendment would confer upon the city the right of condemning for the purpose of purchase any system of water pipes or mains within the corporate limits, and also empower the city to enter into contracts to control, lease or buy any existing water mains or pipes within the city.

Municipal Ownership Sentiment Prominent

Plainfield, N. J.—Municipal ownership sentiment predominated at the Common Council's public hearing on the water question last week, when more than 2 per cent of the voters gathered, despite the weather, to express their opinions. Councilman Frederic Mygatt, chairman of the Water Committee, presided, and a score of prominent citizens strongly urged the consummation of public control of the water supply.

STREET LIGHTING AND POWER

Start Year Without Electricity

Morgantown, W. Va.—For the first time in many years Morgantown people, on the first day of the new year, had a taste of living without electric lights and without street car service, electric elevators and motors of various kinds. From daylight in the dawn of the new year until 6 o'clock in the evening not even a modest eight-candle incandescent shed its feeble rays through darkened rooms, halls and corridors. Not a street car turned a wheel, and those who desired to reach a floor in any of the taller buildings had to walk. There was neither electric power nor electric light. The shut-down was due to the fact that the Union Utilities Company, the local source of all electric light and power for public use, was connecting its new steam turbine, engines and generators at the power plant, and making necessary changes and repairs.

Passaic Wants Underground Wires

Passaic, N. J.—At the meeting of the Committee of Public Safety last week Passaic, as a municipality, for the first time in its history gave to the public its often intimated desire to have wires put underground. It was decided that bidders for future lighting contracts will have to make provision for the stringing of wires underground. The committee feels that the rates for lighting charged the city by the Public Service Corporation are too high, and unless there is a reduction steps will be taken to build a municipal plant.

Will Test Gas Pressure with Portable Gauges

Baltimore, Md.—Acting on the suggestion of the Public Service Commission the Fire Board has ordered the removal of all the gas-pressure gauges from the engine houses and truckhouses. They were placed in these places some years ago by Superintendent of Lamps and Lighting McCuen for the purpose of keeping tab on the gas pressure in the different sections of the city. By their means, he says, he was able to have a uniform supply of gas. He contends that they are absolutely necessary for the protection of the consumers. Chief Engineer Charles E. Phelps, of the Public Service Commission, explained that the gauges had been ordered removed by the Commission on his recommendation. He said that in place of these gauges, many of which have long been out of commission, and few of which were ever looked at, the Commission proposed to keep one stationary gauge at the City Hall, and to use portable gauges to test the pressure from time to time in other sections of the city.

Repairs to Light Plant Leave Galesburg Dark

Galesburg, Ill.—This city has been in darkness for two weeks because of the inability of the city to operate its electric street lamps, and the prospect is that the same conditions will continue for the next two weeks. On account of the poor condition of the old boilers the city could not maintain both water and light service and, owing to the need of giving fire protection at all hazards, is operating only the water plant. Delay on the part of the contractors in putting in new boilers has added to the complications, and the Mayor and Council are frantically trying to hurry the contractors.

Aside from the inconvenience to which the city is put from lack of light, business is suffering and the difficulty of policing the streets is increased.

Municipal Acetylene Gas Plant Blows Up

Pembina, N. Y.—The town's acetylene gas plant blew up when two men using a gasoline torch for soldering were repairing the gas tank. The tank was supposed to have been emptied of gas. One of the men was killed, the other one escaped uninjured. The damage to the plant amounted to \$1,000.

Springfield Considering Municipal Gas

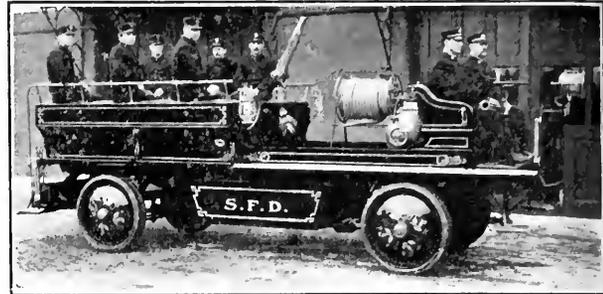

Springfield, Mass.—Speaking of the possibilities growing out of Mayor Lathrop's recommendation that the city acquire for municipal operation the plants of the two lighting companies, Charles H. Tenney, president of the Springfield Gas Light Company, one of the two concerns involved in the proposition, says:

"Municipal light and power looks attractive, the city seeing an opportunity to take up with a paying business. But there seems to be a misunderstanding among the people as to the status of the Massachusetts law. After the City Council has passed two votes in favor of the project and it has been ratified by vote of the people, then the municipality can go into it. The company in question has from 30 to 60 days in which to make the decision as to whether it will sell. If it votes not to sell, the city's only alternative is to build a plant of its own and go into competition with the private institution. In such event the city would have to build a plant at least as good as that of the Springfield company, which we consider worth from \$2,500,000 to \$3,000,000. It would be necessary to put in duplicate lines for the entire system and no man would want two meters and two services in his house, with his front lawn dug up twice. In Main and Water streets there are as many as four pipe lines, some of them 24 inches in diameter. In Chicago there are both private and municipal lighting plants, also in Berlin. In Philadelphia the city operated a gas plant for a number of years and then leased it to the United Gas and Electric Company at rental. Whether a city would benefit by municipal lighting depends to a great extent on what the private company is charging for its product. Our average price for gas during the five months ending with December was 75 cents per 1,000 feet. Jan. 1 the price was reduced 5 cents, making the present average rate 74 cents. A duplicate system would cost for service and meters for each customer \$40."

FIRE AND POLICE

Electric Auto Fire Apparatus in Service

Springfield, Mass.—The Fire Department has received two pieces of apparatus, the motive power of which is supplied by electric storage batteries. One is a chemical apparatus and the other an aerial truck. The propulsion is by the couple-gear system. There is a motor inside of each

CHEMICAL ENGINE AND SQUAD WAGON

wheel, acting directly on a gear which is an integral part of the wheel. So far as known, this is the first application of the system to motor fire apparatus. An advantage in control and decrease in liability of skidding are claimed

AERIAL TRUCK—ELECTRICALLY PROPELLED BY THE COUPLE GEAR SYSTEM

from the fact that power is applied to each of the wheels. The action of this apparatus under service conditions will be watched with interest by fire department officials of other cities.

To Buy No More Horses

New York, N. Y.—Commissioner Waldo has announced that he will buy no more horses for the Fire Department, and will gradually replace the horse-drawn vehicles with motor apparatus.

Philadelphia, Pa.—Chief Baxter, of the Fire Department, hearing of Commissioner Waldo's decision to buy no more horses for the New York Fire Department, expressed his approval of the plan and said that Philadelphia should follow the example and substitute autos for horses as rapidly as practicable.

Fire Report Shows Efficiency

Topeka, Kan.—One of the best years in the history of the Topeka Fire Department, as far as the actual fire loss in the city is concerned, was made by Chief Wilmarth and his men in 1910. In the year 1910 the fire loss in this city was \$34,000, including the damage to buildings and to contents of buildings. The fire damage to buildings was \$20,000 and to contents was \$14,000. The showing made by Chief Wilmarth will compare most favorably with the fire loss in 1909, when Topeka suffered to the extent of \$108,000. And in the year 1908 the loss was \$294,000. Once before the city has gone under the \$34,000 mark, but it was a number of years ago when the population and the fire district were not as large and extensive as at the present time.

Fire Emphasizes Need of Water Works

Tower, Minn.—The most disastrous fire in years burned up a row of houses and threatened to destroy the business district. The fire is said, according to a local paper, to have "emphasized the need of water works."

Motorcycle for Assistant Fire Chief

East Bridgeport, Conn.—A seven or eight horsepower motorcycle will be purchased by the Fire Commission for the Assistant Chief. It will carry a small chemical extinguisher, a searchlight and a siren horn that will be operated by connection with the motor. Commissioner Cogill purposely put off making the purchase until after the motor show at Madison Square Garden, New York, that he might see what it had to offer in the way of powerful motorcycles. Mr. Cogill would prefer that bidders give a competitive test of what their cycles are able to do.

Plans to Have Gasoline Fire Ordinance Passed

El Paso, Tex.—Fire Marshal Henry Reynaud, having succeeded in having an ordinance passed preventing the placing of inflammable materials in wooden boxes, is now planning to have a gasoline ordinance passed by the Council. It is his idea to have the amount of gasoline which may be kept near a building limited to ten gallons, unless it is stored in an underground steel tank.

Year's Work of Fire Department

Indianapolis, Ind.—The Fire Department answered 1,402 alarms, an increase of 79 alarms over 1909. Thirty-six citizens were injured, in five instances the injuries proving fatal. Firemen, including the cellar inspector, made 3,264 inspections. All the fire companies, combined, worked in response to alarms a total of 1,716 hours and 42 minutes. The steam fire engines, combined, worked a total of 72½ hours. Fire apparatus traveled a total of 11,735.8 miles. Ninety-one fire hydrants were installed, making a total of 2,709. The Department cost \$338,475.

Year's Work of Indianapolis Police Department

Indianapolis, Ind.—The report of Superintendent of Police Hyland shows 12,208 arrests were made, an increase of 1,651 arrests over 1909. Of those arrested 10,682 were men and 1,526 were women. There were 271 arrests for violating the liquor laws, an increase of 107; for drunkenness 2,487 were arrested, a gain of 406; there were 50 arrests for keeping gambling houses, an increase of 10, and 461 arrests for visiting gambling houses, an increase of 162. Other arrests included, murder, 27; violating motor speed law, 183; loitering, 2,250; petit larceny, 727; burglary, 93; embezzlement, 29, and grand larceny, 202. The detective department investigated 3,211 cases and recovered stolen goods valued at \$17,991.44. During the year reports were made that a total of 20,970 watches were pawned. The bicycle police made 3,827 arrests. The police emergency automobile made 1,163 runs, covering 7,291 miles and hauling 442 prisoners. The patrol wagons answered 6,501 calls besides hauling prisoners to the workhouse, making a total of 20,647.10 miles, and hauling 8,283 prisoners. The humane officers investigated 2,071 cases, made 259 arrests and the fines aggregated \$25,173.70.

Will Protect Indianapolis

Indianapolis, Ind.—On account of material improvements in the fire protection facilities and water supply, the fire insurance interests will advance this city to a class 2 rating, which means a reduction in premium rates. New water mains are to be installed, the pumping station protected, 50 men will be added to the Fire Department, which is to be put under civil service rules, standard building laws will be adopted and stringent ordinances enforced regarding the use and storage of explosives and inflammables. The City Aldermen, before authorizing the improvements, wanted a signed agreement from the companies that the reductions would be made. It was pointed out, however, that no such agreement was possible under the recent interpretation of the State anti-trust law. It is expected that some kind of agreement as to rating can be obtained from the private inspection bureau.

New Fire Signal Will Call Police Ambulance

Los Angeles, Cal.—The Police Commission has established a new signal in the code of fire alarms. In future, when the signal 1-1-7 is tapped on the gongs, followed by the number of the box, the police ambulance, accompanied by a police surgeon, will respond to the box. Heretofore it has been necessary to use the telephone to get the ambulance when an accident occurred at a fire.

Fire Department Frozen Up

Mason, Mich.—When George Shaw, Chief of the Mason Fire Department, went over to the engine house one morning last week he found the hose carts frozen down in 18 inches of solid ice, the boots standing up were filled with ice, also the hats and coats were coated with ice. The damage was caused by the bursting of water pipes overhead in the Maccabee hall. In case of a fire Mason would have to call on the Lansing or Jackson Fire Departments.

Install Bells in Addition to Flash Light

Moline, Ill.—A new signal system used in summoning an officer on the beat to headquarters will be given a trial by the city. Heretofore when a patrolman has been wanted at the police station an incandescent lamp with a red globe has been lighted. The new system is known as the bell-light, and the gong sounds simultaneously with the lighting of a red electric lamp. The system is not a new one, but it has never been tried out locally. It is manufactured by the Signalphone Alarm Company, which installed the present telephone system now used by the police. E. E. Salisbury, superintendent of the company, has written Chief of Police Bisant that his company will furnish the city one of the bell-light signals free. After conferring with Mayor Olson it was decided to accept the offer. The signal alarm will be placed on the same circuit that controls the telephone system. It will be installed at the northeast corner of Third avenue and Fifteenth street. It will be controlled by a switch in the police station. The gong can be heard for several blocks and when it rings the officer will know that he is wanted at once. The city of Peoria has 80 of the alarms in use at the present time, and they are said to work satisfactorily. It is possible that if the one alarm proves a success here more will be purchased. As soon as the alarm is received it will be installed.

Police Band to Be Officially Recognized

New York, N. Y.—Steps have been taken by Deputy Police Commissioner Driscoll to change the status of the Police Band. As it stands at present the band is of the department, and yet apart from it. The police commissioner may request the band to play at any function, but he cannot command it to do so. The change will be made by making the band an integral part of the department—recognizing it officially and taking over its instruments, music and other property in a manner satisfactory to the members. Then the name will be changed to The Police Band of the City of New York.

Portsmouth's Fire Chief Makes Report

Portsmouth, Va.—Portsmouth's fire loss in 1910 was \$33,358.50 according to statistics compiled by Chief William R. Walker, of the Fire Department. Loss on buildings was \$13,349; on contents, \$20,009.50. He reports that the expenses of the department for the year were \$21,000, including the purchase of horses and harness for Nos. 4 and 5 companies at an outlay of \$900.

Water Lacking, Town Burns

Welch, W. Va.—A fire, January 12, burned the principal business section of the town and caused a loss of \$200,000. The water supply gave out an hour after the fire started.

Wheeling Fire Chief Makes Report

Wheeling, W. Va.—The annual fire report of Chief M. L. Deegan has been submitted to the Council and approved. The report was of the most pleasing nature, showing a total of but thirteen fires for the entire year with a loss of only about \$350. Many of the fires were of such a nature, however, that serious conflagrations would have resulted had it not been for the excellent work of the department. The total value of the property of the department is close to \$50,000.

Will End Shingle Roofs

Boston, Mass.—The result of the two big fires which broke out simultaneously last year and called fire departments from many neighboring towns is found in a bill prepared for passage this year. It provides among other things for the removal of all shingle roofs and their replacement with non-combustible material before 1920. Frame buildings must be no nearer adjoining buildings than 20 feet. They cannot be more than three stories high nor more than 2,000 square feet in area on the ground.

GOVERNMENT AND FINANCE

Municipal Legislation Prepared in Pennsylvania

Harrisburg, Pa.—The law committee of the League of Third Class Cities has prepared drafts of proposed laws for consideration by the Legislature covering the following points:

A tax on the real estate of all public service corporations. Quo warranto proceedings whereby cities may deprive public service corporations of their franchises where violations have occurred.

Placing all telephone and telegraph wires in conduits; the cities may construct their own conduits and compel the companies to install their wires in them or if this is not done, compel the companies to construct their own conduits.

Notification of municipalities within thirty days after an accident on a public highway of the intention of a plaintiff to bring suit against the city for damages. At the present time such a suit may be filed within two years after the accident and it is difficult for the city to get witnesses.

The election of city assessors for four year terms, one to be elected in 1911 for a term of two years and two for four years.

That annexed territory to a city be either added to adjacent wards or ward or be designated as a separate ward, according to the discretion of the court.

That the State contribute one-half the cost of constructing sewage disposal plants.

Referendum on Franchises

Indianapolis, Ind.—A referendum bill has been introduced in the senate by Senator Grube, of Plymouth. This measure provides that no ordinance, granting a franchise, passed by any city council or town board, shall go into effect sooner than thirty days after its passage. If, during the thirty days, any protest, signed by 15 per cent of the voters, casting ballots at the last preceding election, is filed, the ordinance is suspended until an election, at which the ordinance is referred to the voters, is held. This petition, it is provided, need not be only on paper, but may be filed by the "card system," such as is legal in remonstrances. The referendum vote may be taken either at a general election, if such an election is held within sixty days after the filing of the petition, or it may be at a special election. More than one ordinance may be submitted to the voters at one election, and it is provided that special elections shall not be held oftener than once in each six months. No ordinance against which a legal protest has been filed, can go into effect until at an election a majority of voters shall vote in favor of the ordinance. The city clerk is required either to publish the protested ordinance in two newspapers, together with a sample ballot showing the manner of voting, or to mail to every voter a copy of the ordinance and a sample ballot. This must be done at least ten days before the referendum election.

Large Balance is Pleasant Surprise

Indianapolis, Ind.—A pleasant little surprise was sprung on city officials when Howard Kimball, former City Controller, announced that the city's so-called available cash balance on January 1 was \$200,545.19. This is the amount of money the city had on hand at that time, with which to start the year's business, unincumbered by appropriations. The sum is much larger than has been estimated all along by Mayor Shank and members of the city council, and incidentally is larger than Mr. Kimball had expected. On January 1 the controller's balance, after deducting all outstanding warrants, was \$300,617.35, of which \$100,072.16 was held in reserve for specific appropriations, leaving the available cash balance mentioned. On January 1, 1910, the available cash balance was \$268,083.88.

Milton to Ask a New Charter

Milton, Del.—To run a town of more than 1,000 residents on \$1,000 a year is a problem which the Town Board will present to the Legislature, with a request for a new charter. Under the present charter only \$1,000 is allowed to be raised by taxation for town purposes, including street building, payment of town officers and other necessary expenses.

Plan Greater Rehoboth

Rehoboth, Del.—Rehoboth citizens have had a bill of reincorporation drawn up and will ask the Legislature to annex adjoining villages into a greater Rehoboth, under a board of seven commissioners, to be elected every July; three auditors, an assessor and a collector. With the reincorporation and enlarging of the town limits, the population of Rehoboth will be nearly doubled.

Public Improvements Held Up in Spokane

Spokane, Wash.—Corporation Counsel F. B. Morrill has called a halt to the business of the city. Holding that there is a serious doubt about the legality of any acts which the present city government might transact, the corporation counsel, in an opinion to the board of public works, advises that as little business as possible be transacted till the new commissioners take office in March and that no important contracts be entered into. The opinion means that the board will hold up over \$500,000 worth of city contracts which should be awarded at once if the 1911 improvement work is to start in proper season. Acting in conformity with this opinion, the Board of Public Works, the City Council and other city departments are expected to put business other than the merest routine at a standstill.

Mayor Favors Bonds for Small Investors

Toledo, Ohio.—The practicability of a popular municipal bond issue in which bonds of small denominations would be sold to buyers of little means first hand, without a profit to a bond dealer, is being discussed among city officials in whose charge the issue of bonds is placed. It has been suggested that a good opportunity to test the desire of the people to invest their savings in city bonds would be in the issue of \$110,000 for new market purposes, providing the legislation for this issue now in Council passes. Both Mayor Whitlock and Councilman Thomas L. Gifford, who have given the idea some study, have expressed themselves in favor of giving the people a chance to buy city bonds in the denomination of \$100. The Mayor said that the law on its face isn't so bad since it provides that bonds shall be sold to the highest bidder with preference given to the bidder for small amounts. The trouble is that the man with the small amounts cannot watch legislation, nor know the bond business. He would have some means by which any man or woman who had saved up a little money could go to the treasurer and buy the security without giving anybody a premium.

Expenses Increased Under Commission Government

Topeka, Kan.—The commission form of government in Topeka is a success from every viewpoint with the exception of the amount of money paid as salaries to officials. The commission in the nine months of its power in this city has raised the pay rolls from \$177,000 to \$210,000—an increase of more than \$33,000.

Bond Limitation Act Blocking Improvements

Youngstown, Ohio.—The cities of Ohio, particularly the larger ones, find themselves in a predicament with hands tied in the matter of making improvements because of a law passed by the Legislature and effective January 1, 1911, reducing the bond limitation. The bond limitation is reduced by the new law without providing an extension of time when the new tax valuation of 100 per cent. is available. Under the old Longworth act a city could issue bonds up to 1 per cent. on the tax valuation without a vote of the people. Also, the bonds issued at any time must not exceed 4 per cent. of the tax valuation without a vote of the people. With a vote it was possible to issue bonds up to 8 per cent. Under the new law the 1 per cent. issue was not changed, but the 4 per cent. and 8 per cent. were cut to 2½ and 5 per cent., respectively. In the case of Youngstown the net debt is \$1,237,300, and the duplicate valuation is \$34,593,880. Under the new law but 2½ per cent. of the duplicate or \$864,345 can be issued with a vote. This therefore leaves the net debt in excess of the bond limitation of 2½ per cent. by over \$300,000. This leaves the city up to the limit of bond issues under the present tax duplicate. Where the hitch occurs, as explained by City Solicitor Jenkins and City Auditor Davies is in the failure of the Legislature to provide means whereby it was possible to base the new percentages on the new valuation which will amount here to over \$100,000,000, or not to have the law effective until this valuation is available, which will be possible in October. No improvement bonds can be issued for this city under this act except for specials. This law was taken up at length at the solicitor's convention held recently in Columbus, and the Attorney General of the State ruled that there is no way out until relief is afforded either by a special act postponing the limitations until the new valuation is available or some other measure.

TREET CLEANING AND REFUSE DISPOSAL

Park Department Would Clean Walks and Assess Cost

Buffalo, N. Y.—One inducement for living on parkways seems to be in danger of being wiped out on a question of law, and people who have been sitting still and letting the Park Department clean their sidewalks may soon have to get busy, for Corporation Counsel Hammond has sent an opinion to Park Superintendent Seymour informing him that this practice of the department in cleaning sidewalks free of charge (for it has been found practically impossible to collect money for the work) may be stopped by the passage of a bill in the Legislature authorizing the Park Department to assess the cost of such work against the abutting property. Judge Hammond holds that there is no authority under the present charter and ordinances to assess the cost of such work against the property abutting. The Park Department desires to have the privilege of keeping sidewalks along parkways or park approaches clean of snow and ice, so the bill proposed by Judge Hammond will probably soon be on its way to Albany.

Would Substitute Pigs for Incinerator

Milwaukee, Wis.—The city refuse incinerator which was recently completed at a cost of \$210,000 will be abandoned and the piggery system of garbage disposal adopted, if plans under consideration by the city administration are carried out. It is understood that the firm of Barber & Malhoun, which operates a piggery in Grand Rapids, Mich., has opened offices in the Majestic Building with the intention of securing a contract for all garbage of Milwaukee, which is to be consumed on the piggery which it is proposed to establish on a 600-acre tract of land south of the city, on which an option has been secured. Under the proposition the city is to build and maintain delivery stations near proper railroad facilities for the delivery of garbage which is to be collected by the city. The city is to build and equip the necessary tanks to hold the garbage and to deliver it to the piggery in special cars. By this method the city will be compelled to continue to pay the cost of collection, but the disposal of the delivered garbage is to be taken care of by the firm. Only pure garbage is to be taken.

As it requires a proper mixture of garbage and refuse to operate the new incinerator by its own heat, the plant will be abandoned, as it is useless for the incinerating of refuse alone. The Socialists are known to be dissatisfied with it and are said to be looking for an opportunity of getting it out of their hands. Consideration of the piggery system of garbage disposal follows closely on the heels of the attempt to adopt the reduction system which was considered a few weeks ago when a former commissioner of public works of Cleveland attempted to convince the Mayor and his cabinet that the reduction method was superior to the incinerating process. This plan has been temporarily abandoned. Piggeries are in existence in a few cities, but it is said that they have been a failure in large municipalities. St. Louis is said to be the largest city to abandon the system.

Alleged Failure of Garbage Plant to Meet Requirements

Portland, Ore.—During the first eight days of the six months' test of the new garbage crematory, which started December 27, the incinerator has failed to meet the requirements of the contract between the city and the Public Works Engineering Company, which built the plant, according to daily reports of Superintendent Napier filed with City Health Officer Wheeler. Much of the garbage taken to the plant has been burned, but in order to do so immense amounts of extra fuel were required. In fact, the gas furnaces have to be continually fed with extra fuel to keep the heat at such a temperature that the garbage placed in them will be properly reduced. This extra fuel is bringing the total cost a ton for the reduction of garbage to an immense amount. In fact, the cost to the city for reducing the garbage during these first nine days has averaged \$1.26 a ton, when the guarantee is 55 cents a ton. In this cost are not included the salaries of all the men required to operate the plant, as the contracting firm, according to the reports, has several men employed who are not on the pay rolls of the city.

Fire Pipe Line Nearly Down

Baltimore, Md.—While the majority of Baltimoreans have wondered what those boarded-over holes at intervals along Baltimore street have meant, the pipe line on that street, from Gay to Eutaw, its western limit, has been practically completed. It was about the most unostentatious job that was ever carried out by the city. The entire pipe line on Baltimore street has been laid by tunneling. The street has not been torn up except at intervals—three to a block—and traffic has been only slightly impeded. Most people did not know what the holes were for and had no idea that under the bed of the street men were digging all day long and laying the pipes of the city's newest fire-fighting system. Daniel B. Banks, the engineer who designed the pipe line, gets the credit for the tunneling idea. He didn't want the city's main thoroughfare blocked by piles of dirt and paving stones, so he decided to let the way for the pipes be burrowed through the earth below the street bed. In some parts of the street it was necessary to dig down through the sand to a depth of 20 feet to avoid other pipes. At several places it was found necessary to shift sewers and water mains, and all this, was done in the tunnel's depths, away from the public gaze.

Clean Sidewalks at the Capital

Washington, D. C.—The District is one step nearer to having its sidewalks free from snow and slush and ice. The Senate has passed the Dillingham bill requiring residents to clean the sidewalks in front of their homes after a snow storm. There was practically no opposition to the measure, although Senator Heyburn asked several questions regarding its provisions. The bill requires "every person, corporation, joint stock company or syndicate, whether he be owner, tenant, occupant, lessee or other person in charge or control of any building, or lot of land, within the fire limits of the District of Columbia, fronting on a paved sidewalk," to clean the sidewalk in front of his premises within the first four hours of daylight after snow has stopped falling. The condition of many of the streets as well as sidewalks of the capital is commented upon frequently, and not always flatteringly, by visitors.

RAPID TRANSIT

Trolley Franchise Granted and Freight Stations Designated

Hagerstown, Md.—The Mayor and City Council have passed the franchise granting the Hagerstown & Clear Spring Railway Company the right to build its line into this city. The franchise, which, had been under consideration for a month, was submitted to the Council in a revised form, the question of hauling freight through the city, objected to by Mayor Scott, being settled by designating two points east of the Western Maryland Railroad for loading and unloading freight. The company is required to give \$5,500 bond to indemnify the city against damaging the streets or failure to complete the road. M. A. Milton, superintendent of the Gas Company, asked to have a clause inserted in the franchise protecting the gas company, but the Council decided it had no authority in the matter.

Complaints of Car Service

South Bend, Ind.—Protests against the service of the South Bend street car system through the press and in indignation meetings have resulted in the appointment of a committee of city officials to conduct a rigorous investigation. The matter a few nights ago reached its climax at a regular meeting of the Common Council when a petition asking municipal action was presented by residents of the southwestern part of the city. In the opening paragraph of the petition the signers report "that the service on the line is inadequate, erratic and thoroughly unsatisfactory, and we hereby petition you to use your authority to require the Indiana Railway Company to give service that is consistent with good business management. The cars are seldom on time," the petition continues, "they are too small for the traffic and are not run often enough for reasonable convenience, and very little attention is paid to having street signs visible and correct, nor is any attempt made to make transfer connections."

English Regulation Regarding Street Car Traffic

Manchester, England.—The Manchester Corporation has adopted a new by-law regulating the passage of tramcars through the city, which reads as follows:

In the central area the distance at which a carriage shall follow a preceding carriage using the same tramway shall be not less than 10 yards, with the following exceptions: When a carriage is stopped at a stopping-place or tramway terminus, or by direction of any police officer, or in case of accident or emergency, each of the carriages following the stationary carriage and using the same tramway may stop within a distance which shall not be less than two yards from the stationary carriage immediately in front of them respectively; when a carriage is restarted after having been stopped as hereinbefore mentioned, it may, for the space of 40 yards from the place where it was stopped, follow a preceding carriage using the same tramway at a distance of not less than two yards. In the portion of Piccadilly, between Portland street and Mosley street, a carriage using the same tramway may follow a preceding carriage at a distance of not less than two yards.

Subway Station Far Underground

New York.—The new station on the Broadway division of the subway at 191st street has been opened. This station is about 170 feet below the surface of the ground, and is farther from the surface than any other station of the Interborough subway. It has cost about \$350,000, the work being done as an extra under the original subway contract. Besides the stairway at 191st street, there are four elevators, all in one shaft, and going down as far as the mezzanine floor of the station. The city authorities are also planning to construct a sort of subterranean street, or promenade, from a point about 900 feet to the west, to connect with the station.

Rapid Transit Subway Plans for Newark

Newark, N. J.—Replying to a letter from President Thomas W. McCarter, of the Public Service Railway Company, which outlined a plan for a rapid transit subway and connections, Mayor Haussling stated the following fundamental consideration from the city's point of view:

1. The subways should be built and owned by the city and leased to the company at a rental to be readjusted at reasonable intervals. If the bonds necessary for the construction of the work should be issued so as to mature in a relatively short period of time, say twenty-five or thirty years, then the rental charge might be based upon interest and amortization charges. If, however, the city should find it convenient to issue bonds running for a longer period of time, say, forty or fifty years, the rental charge should be more than sufficient to pay the interest and establish the sinking fund for the retirement of the securities when they become due.

2. It should be understood and agreed that when the city has constructed a subway in a street, all the lines at present running along that street should be operated through the subway, so that the cars would be entirely removed from the surface. It can be readily appreciated that even one or two lines only, operating on the surface would, with the enormous and inevitable increase of ordinary vehicular traffic, produce within a few years as great a congestion as that from which we now suffer.

3. The city should have the right to extend the subway system from time to time, or to build new subways as it may deem necessary, and to require the company to operate its cars through these extensions or new subways upon terms similar to those governing the use of the original under-surface routes. It need never be anticipated that this power would be unreasonably used. It is certain, however, that new centers of congestion will be created from time to time by the growth of the community. The city should always be in a position to deal with these.

MISCELLANEOUS

Last Voting Machine in South Jersey

North Wildwood, N. J.—The special election held January 10 resulted in a vote of 39 to 6 against the retention of the voting machine. It was the last machine in Cape May County and south of Camden County, and brings the total to 323 out of 336 districts in the State that have voted to discontinue the use of the devices.

Year's Work in Smoke Abatement

Indianapolis, Ind.—Smoke Inspector Jacob P. Brown, in his annual report, says he made 1,820 inspection visits and prosecuted 29 cases, as compared with 5 prosecutions in 1909. There are 710 power plants, using 1,390 boilers, aggregating 128,801 horse-power, as compared with 669 power plants, using 1,305 boilers, aggregating 119,000 horse-power in 1909. New boilers costing \$268,770 were installed last year. January 1 there were 300 plants using smokeless coal, a gain of 50, and 118 smokeless devices were put in in 1910 as compared with 28 in the preceding year. There are now 635 smokeless devices in use. Of the 1,390 boilers in service, 785 are either equipped with smokeless devices or are using smokeless coal, while in 1909 the number similarly equipped was 545.

Purchasing Agent Tests Automobiles

Milwaukee, Wis.—In order to test the efficiency of engines for the automobile ambulance to be purchased for the Police Department and Emergency Hospital, City Purchasing Agent Campbell had a run made to Madison and back a few days ago. The following were entered: Franklin, Stoddard-Dayton, Studebaker, Pope-Hartford, Peerless and C. F. Megow truck car.

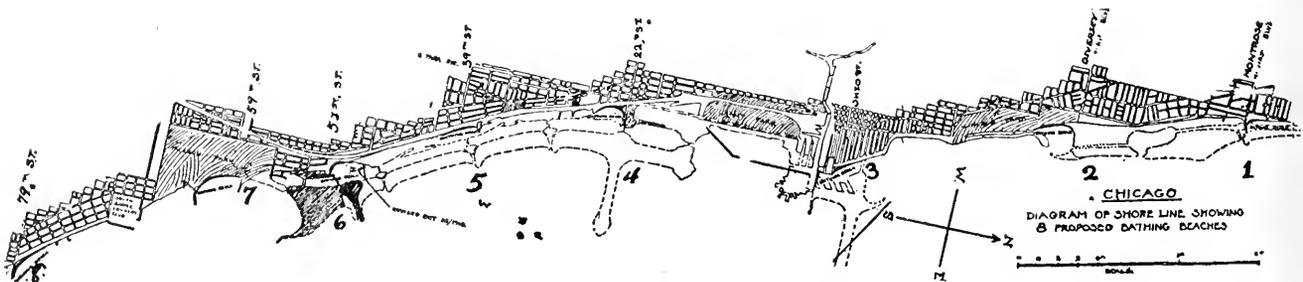

City Plan Commission Recommended

New Britain, Conn.—A proposition to have a "city plan commission" has been made. Speaking of the scope of the commission in Hartford, Judge Roche says that, according to the reading, such a commission would have the authority to say where the schools should be built. The right to take land is given in the proposed provisions and such a commission would have been desirable in the past year. Small plots could have been taken. Judge Roche says that there are several pocket streets in the city which the city has not accepted, but for which the city would probably be liable in case of accident. While such a commission is conceded to be desirable, the city authorities are not prepared to take action on it.

Municipal Bathing Beaches for Chicago

Chicago, Ill.—The diagram indicates the location of the proposed chain of municipally owned bathing beaches on the lake shore. The joint report of the City Council's special committee on bathing beaches and recreation piers and its lake shore reclamation commission recommended the adoption of a consistent program calling for the final construction of eight bathing beaches and two recreation piers. Following is the key to the diagram:

1. New beach and recreation pier—the latter shown by dotted lines—to be built by city at Montrose boulevard.
2. Present beach near foot of Diversey boulevard, to be developed by Lincoln Park Board.
3. Plans for beach at Ohio street, to be considered later.
4. Small beach at Twenty-fifth street, to be extended to Twenty-second street immediately. Recreation pier—shown by dotted lines—to come later.
5. New beach at Thirty-ninth street, to be built by city at once.
6. Recreation island and beach to be built by city at Fifty-first street.
7. New beach to be built by south park commissioner near yacht harbor inlet in Jackson Park.
8. Present beach at Seventy-ninth street, to be extended by city.

LOCATION OF CHICAGO'S PROPOSED BATHING BEACHES

LEGAL NEWS

A Summary and Notes of Recent Decisions—Rulings of Interest to Municipalities

Cities on Ocean—Control of Beach Front

Fishblatt vs. Atlantic City.—The following title of the act found in P. L., 1894: "An act to enable cities in this State, located on or near the ocean and embracing within their limits or jurisdiction any beach or ocean front, to open and lay out a public park or place for public resort or recreation on and along the beach or ocean front of such city and to purchase or condemn lands, property and property rights therefor and to preserve the same from obstruction or encroachment"—fairly expresses an object that includes the establishment of a park lying wholly on the oceanward side of high-water mark, if the limits of the city so far extend.—Court of Errors and Appeals of New Jersey, 78 A. R., 219.

Dangerous Premises—Liability of Municipality

Bisbing vs. Asbury Park.—Where a dangerous condition exists in a public park or way, in a portion thereof not leased, the power to rent portions only of such public lands having been conferred by statute, such condition not arising from or in consequence of the management or control of the municipality over the rented parts of the public lands or connected therewith, the negligence of the public authorities in permitting such condition to exist will not render such municipality liable to respond to the suit of one of the general public injured in consequence thereof.—Court of Errors and Appeals of New Jersey, 78 A. R., 196.

Street Improvements—Appeal

Widener et al. vs. Board of Trustees of Town of Lapel.—Towns and cities act and section 267 authorize the board of town trustees to improve the streets of the town; and section 270 provides the method of exercising the authority so granted. Acts 1909 authorizes abutting property owners to object to a street improvement, provides for the submission of the final order for the improvement and the objections to the circuit court, and declares that the court's order shall be final. Held, that no appeal lies from the order of the circuit court.—Appellate Court of Indiana, 93 N. E. R., 240.

Gas Companies—Competing Franchises

Cumberland Gaslight Company vs. West Virginia & Maryland Gas Company.—Where, as in Maryland, the public policy of the State, as evidenced by years of legislation, is to permit, with the sanction of the municipal authorities, the freest possible competition in the use of the public streets for the laying of gas pipes, a gas company having such a franchise in a particular city is not entitled to recover damages at law against another company which, with the municipal consent, exercised a similar franchise, because the latter had failed to comply with some statutory requirement, especially when such franchise was exercised for several years, during which the State took no action in the matter.—United States Circuit Court, 182 F. R., 667.

Park Commissioners—Corporate Authority

State ex rel. Gerry vs. Edwards, Mayor et al.—The Board of Park Commissioners created by Laws 1901, providing for a board of park commissioners as a department of the city government of cities of the first class, authorizing their appointment by the Governor, and empowering them to levy taxes for carrying out the work of the board, is not a corporate authority of a city within constitution, article 12, prohibiting the Legislature from levying taxes for municipal purposes, but authorizing them to vest by law in the corporate authorities of cities powers to assess and collect taxes, and the Legislature in adopting the law, so far as it bestows on the board the power to levy taxes, violated this constitutional provision and also the theory of local self-government established in the State as a fundamental principle of government.—Supreme Court of Montana, 111 P. R., 734.

Injunction—Usual and Ordinary Business of City

Bowman et al. vs. City of Waverly et al.—Where in answer to injunction proceedings against the officers of a city restraining them from constructing a sidewalk in front

of complainant's premises issued without notice required by Code, defendant in response to a motion to dissolve admitted that they were about to commit acts which were conclusively shown by their own affidavits to be unlawful, they were thereupon estopped to claim that the injunction restrained them from performing the general and ordinary business of the city, and that it had therefore been improperly granted without notice.—Supreme Court of Iowa, 128 N. W. R., 950.

Condemnation of Land—Deed

City of Atlanta vs. Jones et al.—Where a municipal corporation instituted proceedings to condemn a strip of land with a view of opening a street and the owner of the tract of which such land formed a part made a conveyance to the city in fee simple, the inclusion in the deed in connection with the description of the land of the statement that "the land condemned by the assessors duly appointed for that purpose to be used in extending (a named street) from its present terminus westward to (another named) street," did not constitute a condition subsequent authorizing a forfeiture, a cancellation of the deed or a recovery of the land by the grantor upon the ground that the city had abandoned the extension of the street.—Supreme Court of Georgia, 69 S. E. R., 571.

Lands Under Water—Grants

McAndrews & Forbes Company vs. City of Camden.—Conveyances by the State riparian commissioners of tide lands previously leased did not operate to extinguish the public easement in a street already dedicated over such lands, where they expressly provided that the grant was subject to the rights of the public to all easements over the land conveyed, nor did subsequent conveyances by the commissioners do so which merely confirmed the title of their grantees under the prior conveyances.—Court of Errors and Appeals of New Jersey, 78 A. R., 232.

Local Improvements—Statute

Cobe et al. vs. City of Chicago.—Local Improvement Act, June 14, 1897, providing that no special assessment shall be levied for any local improvement until the land necessary therefor has been acquired, except in certain cases, is designed to prevent assessment for improvements on private land not yet acquired by the city, but proposed to be acquired by condemnation.—Supreme Court of Illinois, 93 N. E. R., 46.

Defective Street—Water Box

Powers vs. Village of Mechanicville.—In installing its water system, defendant village set an iron pipe shut-off water box in a brick sidewalk. The cap on top of the box, which was less than a foot from the coping, was $3\frac{1}{4}$ inches in diameter, and projected $\frac{3}{4}$ of an inch above the sidewalk. On one side of the box a brick had settled $\frac{3}{4}$ of an inch, making the cap project on that side $1\frac{1}{2}$ inches above the surface. Held, that the defect was so slight that the village was not liable for injuries caused by catching plaintiff's foot under the cap on the side the brick had settled. That which would not be a defect in a sidewalk, if resulting from an omission of the village, does not become so because it was created by an affirmative act of commission.—Supreme Court of New York, 125 N. Y. S., 801.

Taxation—Assessment—Change by City Council

Gelders et al. vs. City of Fitzgerald et al.—The charter of the city of Fitzgerald as created by the act approved August 22, 1907, authorized the Mayor and Aldermen to elect a board of tax assessors and conferred jurisdiction upon the tax assessors, when so elected, to assess the value of all real estate and personal property within the city, and to make their return to the Mayor and Aldermen. Upon complaint, the Mayor and Aldermen were authorized to raise the assessment so made by the assessors; but the jurisdiction of the Mayor and Aldermen over such matters was purely revisory, dependent upon complaint being filed by the taxpayer, and was in no sense original. A municipal tax on real estate based on values designated by the Mayor and Aldermen of the city of Fitzgerald under color of office in excess of those at which given property was returned by the tax assessors without any complaint having been filed by the taxpayer was ultra vires, and may be enjoined at the instance of a taxpayer, the assessment of whose property has been illegally increased.—Supreme Court of Georgia, 69 S. E. R., 569.

MUNICIPAL APPLIANCES

Vehicles for Municipal Use at National Automobile Show

The exhibit of commercial vehicles at the Eleventh National Automobile Show, Madison Square Garden, New York, January 14-21, interesting and instructive as it was, cannot be considered as representative, at least so far as vehicles for municipal use are concerned, because only those manufacturers who are members of the Automobile Association took part in the show. This circumstance excluded such manufacturers of fire apparatus as the American La France Co., the Seagrave Company, the Webb Motor Fire Apparatus Company, the Luitweiler Pumping Engine Company, and others. In fact, only four pieces of fire apparatus were exhibited—a pumping engine, a chemical and two combination hose and chemical outfits.

used the advantages of having the hose on the ground ready for the engine when it arrives, in case the chemicals are insufficient, is obvious. The Boyd combination wagon has capacity for 1,000 feet of 2½-inch fire department hose in the wagon body. The motor is 2-cylinder, 4-cycle, horizontal opposed type, 4¾-inch base, 4½-inch stroke, water cooled. The wheel base is 97 inches. The transmission is of the sliding gear type, three speeds forward, one reverse, direct drive on high speed. Two hundred feet of ¾-inch chemical hose with heavy brass couplings is carried in a hose basket mounted over the body wagon. A full complement of accessories, tools and equipment are carried, including a 20-foot extension and 12-foot roof ladder.

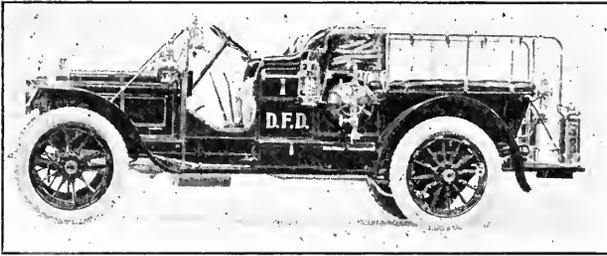

The Knox Automobile Company exhibited their new pumping engine. This

throughout. The pump is driven from the main driving shaft by Hindley worm and gear through a counter shaft mounted on annular ball bearings. The latter is connected with the crank shaft of the pump through a jaw clutch, spur gears and 1½-inch pitch Renold silent chain 4 inches wide.

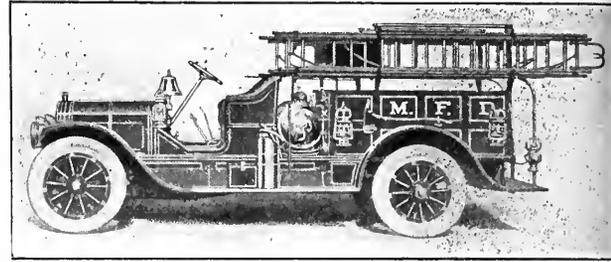

The Packard Motor Car Company exhibited one of their auto chemicals such as are used in Detroit and Indianapolis. The machine is a squad wagon as well, having a seating capacity for six men inside and two on the seat. One chemical tank is carried and, as is now generally customary, connection is made so that when the chemical tank is emptied water can be quickly turned on and delivered through the tank and hose, thus enabling the firemen to hold the fire in check, if it is not extinguished, until heavier apparatus arrives. The essentials of the fire wagon are as follows:

Chassis—Packard "Thirty" touring car chassis.

Body—Open: front seat, regular Packard

PACKARD CHEMICAL FIRE AUTO

POPE-HARTFORD COMBINATION CHEMICAL

James Boyd & Bro., Inc., showed their combination chemical fire engine and hose motor truck. This is a moderate priced machine, having all the essentials of a chemical engine and a hose wagon with motor equipment. In fact, the capacity for chemicals is unusually large. The Boyd company have been manufacturers of chemical tanks long before they made motor driven apparatus. The machine carries two tanks of 35 gallons capacity each, of the Holloway type, made of the best cold rolled Lake Superior copper. Two extra charges of acid and soda are carried in acid receptacles, with lifters and in bags, respectively. The combination chemical and hose motor is probably the most valuable piece of apparatus made for general purposes. In cities where there is a high water pressure engines are seldom needed. The chemicals hold the fire in check if they do not extinguish it, as they do in about 80 per cent of all cases, until the water hose can be run. Where the water pressure is low and engines must be

is a large machine, weighing 11,000 pounds, with a substantial trussed channel iron frame, made necessary, presumably, from the use of solid rubber tires. The pump is a piston pump, 2-cylinder, double-acting, 4¾ by 8 inches. The body of the wagon carries 1,000 feet of 2½-inch fire department hose. A Hart turret nozzle is mounted on the front of the wagon. This engine has not so far had an actual trial in use by any fire department. Trial tests, however, show that it has thrown from 600 to 700 gallons of water per minute, according to the conditions of the test. In general, it is built to equal in capacity a third size Metropolitan steam fire engine. The gasoline motor which propels both vehicle and pump is of the 6-cylinder, vertical water cooled type. The official rating of the motor is 60-horsepower. The transmission is of the 3-speed selective sliding gear type, and weighs complete 600 pounds. Timken roller bearings and Timken axles are used

open car style; side seats, lengthwise of body.

Seating Capacity—Two men on front seat, six men on side seats.

Finish—Entire car, except radiator, "fire department" red. Radiator and all other metal parts, brass finish. Side and rear running boards black.

Equipment—One 35-gallon chemical tank, two 3-gallon chemical tanks, 250 feet of ¾-inch hose, snaps for helmets on sea rails, fire department bell, hand-lantern on bracket at rear, combination gas and electric headlights, combination oil and electric side and tail lamps.

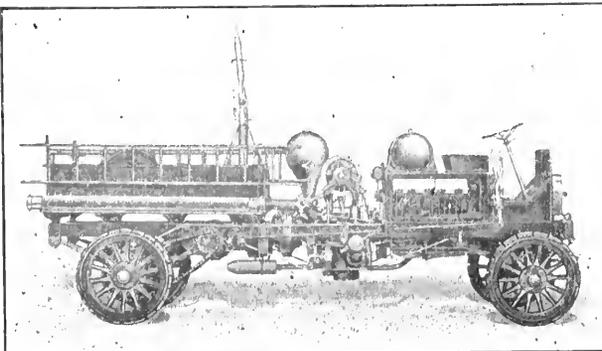

Motor—Four-cylinder vertical; 5-inch bore by 5½-inch stroke; 30 brake horsepower at 650 revolutions.

Wheelbase—123½ inches.

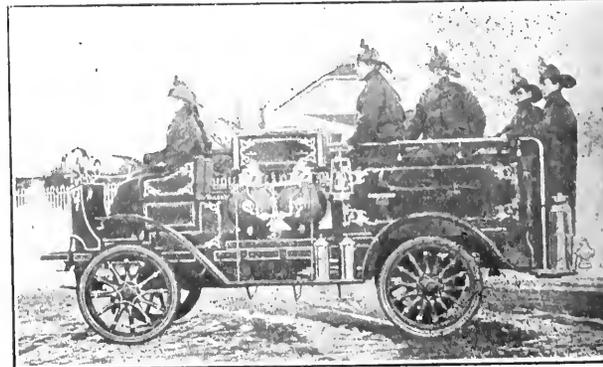

Transmission—Sliding gears, three speed forward and reverse.

Tires—36 by 5 inches; demountable rims.

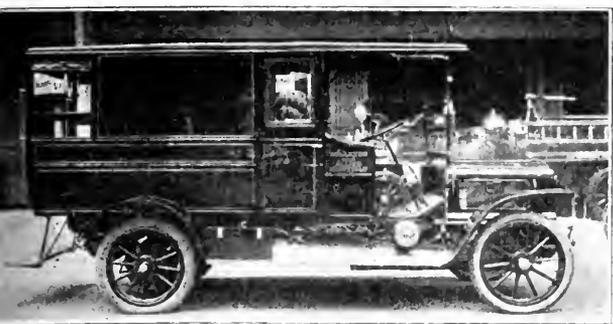

The Pope Manufacturing Company show a Pope-Hartford combination chemical and hose wagon which will be delivered to the Jersey City Fire Department. Similar machines have been used by Hartford, Conn., Meriden and other towns in New England. The fire equipment consists of a 35-gallon Accurate chemical tank with connection

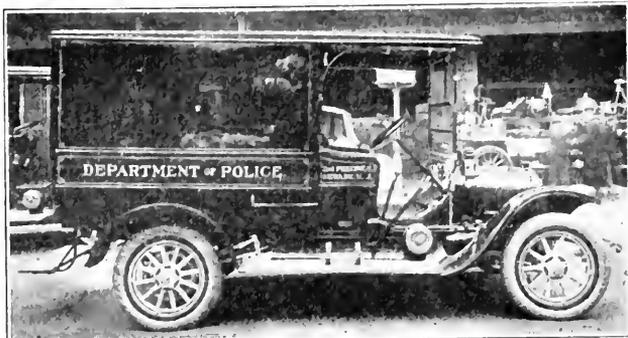

KNOX AUTO PUMPING ENGINE

BOYD COMBINATION CHEMICAL

WHITE STEAM AMBULANCE

WHITE GASOLINE POLICE PATROL

water hose, 250 feet of 3/4-inch chemical hose, two 17-foot extension ladders, 1,000 feet of 2 1/2-inch hose. Our men can be carried, two in front and two on the rear step. The wheel base is 136 inches; tread, 56 inches; wheels, 38 inches in diameter, with 5 1/2-inch tires in front and 39-inch wheels and 6-inch tires in the rear. The engine is 4-cylinder, water cooled, 50-horsepower. The drive is by shaft and gears. The controlling lever for spark and throttle are located on top of steering wheel, engaging with a single sector.

Ambulances and Patrols

Classifying hospital ambulances and police patrol wagons together, for the chassis and wagon body of both are substantially alike, there were more of these vehicles exhibited than of any other kind of municipal autos. There were four patrol wagons, White, Packard, Knox and Pope-Hartford, and three ambulances, White, Lansden and Franklin, at the show. Other manufacturers who perhaps make as many of these autos as any of the other firms did not exhibit specimens of their work. Notable among these were the tube makers.

The White Company showed a gasoline patrol wagon just completed for the city of Newark, N. J., to be attached to the Second precinct. The wagon is painted black, with gilt lettering, and is of handsome appearance. The specifications are essentially as follows: Four cylinders cast en bloc, 4 base, 5/8 stroke; horsepower, 30. The throttle and spark advance is controlled by levers mounted on the steering wheel. The throttle is also operated by acceleration. There are four forward speeds with the direct drive to the third gear and a reverse. The transmission is of the selective type; that is, it is possible to shift from one gear to any other without engaging an intermediate gear. The gear shifting mechanism is enclosed within the gear case, which forms an oil well and is free from dirt and grit. The valves are mechanically operated and interchangeable. The water circulation is accomplished by means of a gear-driven centrifugal pump. The ignition is Bosch magneto. The carburetor is water jacketed and has an automatic auxiliary air valve, furnishing correct mixtures at all speeds. The crank case is made in two sections of special aluminum alloy. Crank shaft is of forged nickel steel. Lubrication is a combination of the splash system with positive feed. The steering is the worm and sector type, with ball thrust bearings. The drive is by means of a shaft from gear case to rear axle. The frame is heat treated crucible chrome-nickel steel.

The Packard Motor Car Company showed a police patrol which is built on the Packard "30" chassis, the same as already described in connection with the combination chemical and hose apparatus. In Detroit seven of these patrol wagons have entirely displaced the horse service. The wagon seats nine passengers and a driver. It is equipped with dome lights, rolling storm curtains, police department gong and hand lantern and canvas stretcher. The right seat may be converted into an additional stretcher.

The Knox Automobile Company showed a police ambulance which is for use in police departments where a large part at least of the hospital work is under their control, so far as the transportation of patients is concerned.

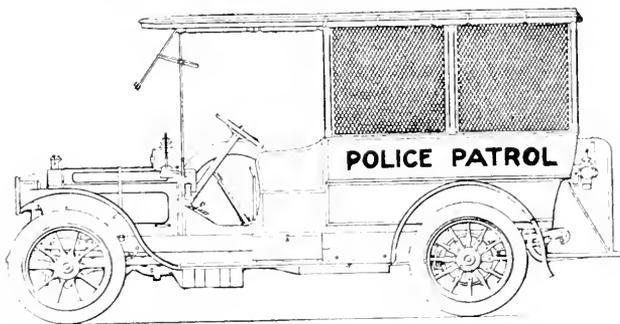

The Pope-Hartford Company showed a patrol wagon such as is used by the city of Hartford. The wagon body is built upon the same chassis as the combination chemical and hose wagon already described.

The White Company exhibited a steam-driven ambulance made for the Bellevue and Allied Hospitals, New York City. The generator or steam maker is the feature which more than any other distinguishes the White from any other type of steam car. The generator consists of nine coils of steam tubing placed one above the other and connected in series. If the whole were to be unwound and straightened out, it would be seen that the generator is made up of a single long piece of tubing. In operation water is pumped into the upper coil and steam issues from the lower coil. There is but a very small quantity of water and steam in the generator at one time, but the process of making steam is so rapid that it is always available in the quantity which the running conditions make necessary. Tubing used in the generator has stood a pressure of 19,000 pounds per square inch without showing any sign of rupture. From the generator the steam is conducted to the engine where it first does its work in the high-pressure cylinder and then passes over the low-pressure cylinder, where its expansion is continued. The steam then exhausts into the condenser located on the front of the car. The power is adapted for a wide range of fuels. Practically all of the 1910 models are run on kerosene, and even lower grades of fuel may be used. The White power plant—generator, engine and all accessories—de-

velops one horsepower for each 14 pounds of weight, and the water consumption per horsepower per hour is equaled only by that of the largest triple expansion condensing engines.

The Lansden Company showed an electric-driven ambulance made for the New York Hospital. The advantages claimed for the electric vehicle for this use are ease and economy in operation, perfect control and smooth running qualities, making the ride comfortable for the patient. The Lansden ambulance is operated by an Edison storage battery, which is lighter than any other in proportion to its capacity. The manufacturers claim that the light weight of these vehicles reduces tire wear to a minimum and entails much less strain on the wearing parts, thereby producing the most economical wagon in maintenance cost.

The H. H. Franklin Manufacturing Company exhibited the handsomest ambulance in the show. The outside was painted lead gray with a red Greek cross on each side. The inside of the body is finished in white enamel, making a very striking appearance and suggesting the extreme of cleanliness. This Franklin has an air-cooled motor, 3 1/4-inch base, 4-inch stroke, individual

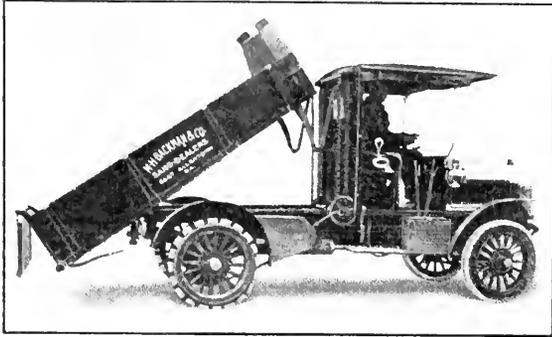

PACKARD POLICE PATROL—DETROIT PATTERN

cylinders and flywheel suction fan. The cylinders are cast singly with vertical steel cooling flanges fitted into outside cylinder walls. The rear axle is tubular of the semi-floating type. The drive is by means of a worm gear, the thrust of which is taken by ball thrust collar bearings. The tubing is of special nickel steel, heat treated. Pall bearings are used in the differential case. Timkin roller bearings are used in the wheels. The front axle is special nickel steel tubing, heat treated, the tubular section giving maximum strength in all directions with minimum weight. All parts are hot-riveted in place. Crank shafts are made of special nickel steel. Oil is fed to each base bearing by a multiple force feed. The carburetor is of special design. The ignition is Bosch magneto. Front springs are 40 inches, full elliptic, with auxiliary light coil.

Trucks

The most interesting part of the show was the display of heavy trucks. During the past year the progress in this branch of automobile construction has perhaps been greater than in any other. This, in fact, is the reason for the exhibit of commercial vehicles as a separate show—the first of its kind ever held. This development has a bearing on municipal affairs, and it does not require any gift of prophecy to see that in the near future automobile trucks will play a large part in the

MACK 7-TON DUMPING TRUCK

construction and maintenance of municipal public works. Two years ago automobile fire apparatus was just beginning to attract attention, and even last summer the International Association of Fire Engineers gave but an indifferent approval to their use. Individually the fire chiefs have been much less conservative than they were collectively and now the chiefs of the largest cities are considering the abandonment of horse-drawn apparatus as fast as is practicable. In two years more it is not unlikely that commissioners of public works and superintendents of streets and street cleaning will be advocating the gradual abandonment of horse-drawn wagons of all sorts and the substitution of commercial trucks.

The argument on which the use of auto trucks for the transportation of construction materials is based can be stated in a general way in very simple terms. The commercial 3-ton truck hauls about 50 per cent more material in a load than the best horse-drawn truck, and it will travel twice as far, consequently will haul three times as much. Figures for the operation of 5-ton trucks, which are a convenient size for municipal work, show that with the liberal allowance of 20 per cent for depreciation, 6 per cent interest on investment, labor, care, storage, and, in fact, everything, the cost is from \$10 to \$12 per day. One truck being equivalent to

three teams, and the cost of teams being assumed at \$6 per day, on the basis assumed there is a saving of one-third in the cost of hauling, an amount that no responsible official can afford to overlook.

For city work, the hauling of sand and stone to points where construction is going on and the removal of ashes and waste, the dumping truck is the vehicle in general use. Three trucks of this kind were shown, the White, Mack and Reliance. Other companies which mount box-shaped bodies on their trucks showed the chassis used, but the bodies were platforms or vans. Among these were the Morgan and the Metzger.

The White Company show a truck that they class as a 3-ton truck, one of which they say is in daily use drawing over five tons to the load. The chassis is claimed to be as strong as trucks classed as 5-ton capacity. The truck is similar to that described in the Municipal Journal and Engineer of January 4, page 39, except that a dumping device has been added. The object of this device is to

avoid the shock of allowing the body to strike the ground in dumping. A winch at the forward part of the truck has two spools of different diameters, each figured to accomplish the work for which it is designed. A wire rope from one spool pulls the body backward on rollers running on a track; the wire from the other spool takes the strain after the body is pulled back to the position where it tends to dump. In addition there is a hump in the track like an inverted V which gives the body the initial lift. Beyond the V the wagon tends to dump itself.

The whole arrangement seems simple, effective and convenient. The wheel base of this truck is 144 inches, the tread of rear wheels 65½ inches. The length over all is 19 feet 7½ inches and the platform of the body 13 feet 3 inches by 6 feet 5 inches. In general appearance the wagon seems compact and looks as if it could get in and out of difficult places for loading and unloading.

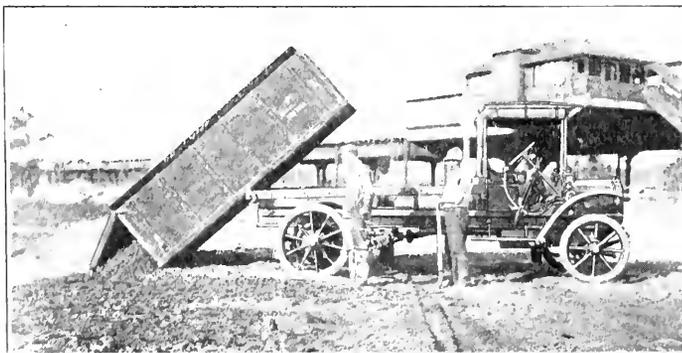

Mack Bros. Motor Car Company, Allentown, Pa., showed a 7-ton dump truck which has been sold to the Goodwin Sand & Gravel Company, New York, and will be used in delivering gravel from the docks to contractors in New York City. The dumping device is shown in the illustration. It consists of a crank, shaft, vertical chain belt and a peculiar link arrangement, one end of which is attached to the wagon body and the other to the

chain belt. In dumping as the crank is turned the chain lifts the body and the link pushes it back until the load is dumped. The motor of the Mack truck is 4-cylinder, 4-cycle, vertical type, 5½-inch bore, 6-inch stroke. The carburetor is float feed and automatic. The double system of ignition is used. The substantial nature of the construction is shown by giving a few of the dimensions. The crank shaft pins are 2 inches in diameter, 3½ inches long. Main bearings are 2½ inches diameter, 4½ inches long. The lubrication is force feed, each bearing receiving its oil through hollow crank shaft from an independent pump. The transmission is the Mack patent, a selective clutch transmission with gears always in mesh. The Mack gears do not slide.

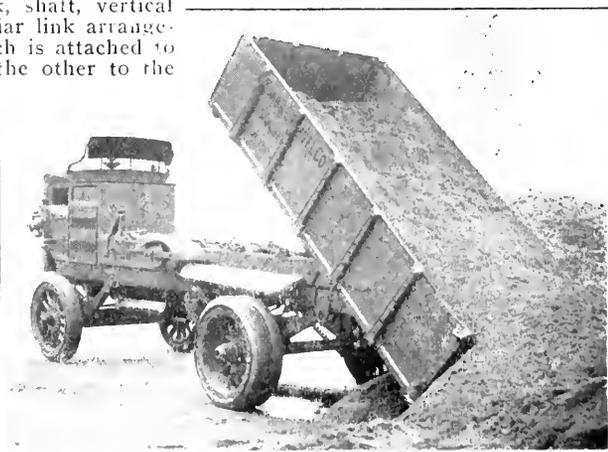

The Rainier Motor Truck Company showed a 5-ton truck made by the Reliance Truck Company. A truck similar to this was used for five months by the Cranford Company, Brooklyn, N. Y., in hauling crushed stone, gravel and sand. A statement of weekly averages of performances of the truck shows about an average of 40 miles a day on this work. The dumping is accomplished by pulling the body truck on roller and track by means of a winch. It has no device for preventing the body from striking the ground. The truck will make 12 miles an hour and has three speeds forward and one reverse. The chassis is 8-inch channel steel. The rear axle is 4-inch nickel steel, front axle is of heavy hand-forged I-beam steel. Wheel base is 130 inches. Tread, 63 and 65 inches. Net weight, 10,000 pounds.

Platform trucks, both large and small, are likely to be of use for city streets, and of these there were many exhibited of capacities ranging from one to ten tons. Small platform wagons are already in use as general purpose and repair wagons in some cities. The Metropolitan Water Works, Boston, Mass., for instance, have operated an emergency wagon for over a year and found it very useful.

R. L. Morgan Company showed their 5-ton platform truck, which they also equip with a dumping body. The platform is 14 feet by 6 feet. Axles, front, are drop-forged steel, single-piece, 5-inch I-beam section; rear axles, 3½-inch solid steel, Timken roller bearings. Cylinders have 5-inch bore, 5-inch stroke. Speed is given at from 6 to 10 miles an hour. One truck at the show was equipped with three-speed sliding gear transmission, another with the regular Morgan planetary type.

WHITE 3-TON DUMPING TRUCK

RAINIER 5-TON DUMPING TRUCK

Rubber Tires

With the adoption of motor vehicles cities the appropriations hitherto made for oats and hay are destined in part to be diverted to the rubber industry. Hence the matter of rubber tires becomes one of increasing interest, although for many years the cities

K PNEUMATIC TIRE AND REMOVABLE RIM

have been good buyers of solid rubber tires to protect vehicles, particularly those of fire departments, from undue wear.

Of the new things in tires shown by the Firestone Company, the most notable is the improved side-wire motor truck tire. The most noticeable of the improvements is the use of flat-faced cross bars and retaining wires. This construction has been found to prevent wear on these parts and make a more

FIRESTONE QUICK REMOVABLE SIDE WIRE

variable fastening, resulting in a service unheard of heretofore for truck tires.

The regular line of pneumatic tires exhibited includes the Firestone non-skid for slippery streets and the smooth tread tire for ordinary service.

Another entirely new feature is the approved motor truck equipment, Firestone quick removable side-wire tires. This combines the standard side-wire tire with a removable rim that permits quick tire changes by the driver anywhere. The principle is similar to their demountable rim for pneumatic tires. The use of this equipment does away with delivery delays and lay-ups on account of the tires.

The Hartford Rubber Works Company showed both solid and pneumatic

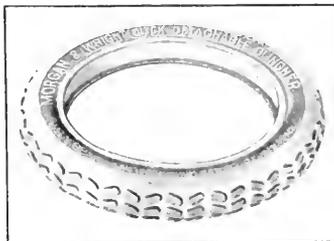

GOODYEAR SOLID—WIRELESS

tires. The solid motor tire is an endless motor tire with longitudinal wires running through its base which is vulcanized. The construction is shown in the illustration.

Among the tires, Morgan & Wright exhibited the Nobby Tread, a non-skidding tire which attracted favorable attention. In making these tires enough extra rubber is used so that when they are finally worn smooth a plain tread tire still remains good for many more miles of service.

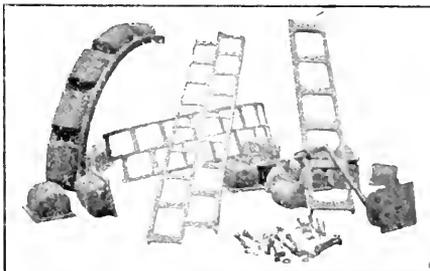

The Republic Rubber Company exhibited their solid motor tires. They are made of one piece of rubber; that

MORGAN & WRIGHT PNEUMATIC NON-SKID

is, the tread and the base portions are one and inseparable. Through the base of the tire cross wires are inserted transversely about 1 1/2 inches apart. Through the center of the base is a strip of vulcanized rubber just deep enough to permit the cross wires to pass through it. About the entire base of the tire and completely covering the ends of the cross wires a multiple of layers of fabric heavily reinforced are placed.

The Consolidated Rubber Tire Company showed the Kelley-Springfield sec-

KELLEY-SPRINGFIELD SOLID SECTIONAL

tional tires. These tires are made up of from 30 to 40 independent blocks, any one of which can be replaced if injured. The blocks are held by the external metal frame. The tires are made in all sizes from 3 to 8 inches.

The Swinehart Tire & Rubber Company exhibited both solid and pneumatic tires. In making the Swinehart pneumatic tires the fabric is laid, not

stretched, smoothly over the core. All treads are wrapped, even in the non-skid type. This is claimed to give a more uniform thickness and secure more perfect adhesion between tread and soft rubber body of the tire.

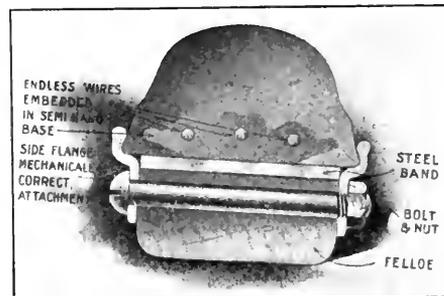

The Fisk Rubber Company exhibited their line of pneumatic tires, including

SWINEHART PNEUMATIC WRAPPED TREADS

bolted-on, clincher, quick detachable clincher and removable rim. In the bolted-on type the tire is absolutely fastened to the rim by a mechanical device.

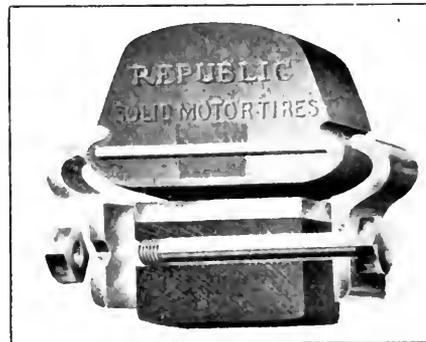

The Goodyear Tire & Rubber Company exhibited their hard rubber base tires. Retaining wires are imbedded in a hard rubber base or core and by a

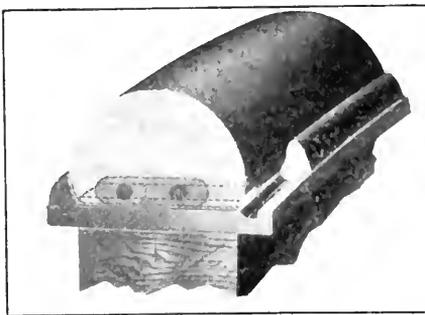

HARTFORD SOLID—LONGITUDINAL WIRES

patented process the hard rubber base is perfectly united to the soft rubber tread, making it practically one piece.

The B. F. Goodrich Company exhibited their wireless tire, which eliminates the factor of friction between the rubber and the wire fastening devices sometimes used. It consists of three integral factors: (1) a special steel base having dovetailed grooves on the top surface; (2) a hard rubber sub-base which is inseparably united with the steel base; and (3) a soft rubber tread, or tire proper, which is inseparably vulcanized upon the hard rubber sub-base. A transverse key on the steel felloe band fits into a key seat in the steel base of the tire, preventing circumferential movement.

REPUBLIC SOLID—CROSS WIRES

GOODYEAR SOLID RUBBER—HARD BASE

NEWS OF THE SOCIETIES

Illinois Society of Engineers and Surveyors.—The society will hold its twenty-sixth annual meeting at East St. Louis, Ill., January 25, 26 and 27. This will be in the nature of a "jubilee" celebrating the completion of 25 years of active work of the society, which is composed of civil engineers engaged in municipal, drainage, water supply, land drainage and other lines of work; it has also a number of county and other surveyors, contractors, professors of engineering colleges, etc. The meetings will be held at the City Hall, and will be opened by the Mayor, Hon. Silas Cook. The President of the society is Mr. A. N. Johnson, State Highway Engineer; the Vice-President is Mr. J. W. Dappert, Drainage Engineer of Taylorville; the Secretary is E. E. R. Tratman, C. E., of Chicago; Mr. W. J. Crocken, City Engineer of East St. Louis, and Mr. W. A. Thompson, Assistant City Engineer, are on the local committee.

A review of land drainage work in Illinois will be presented by the Committee on Drainage. There will be a paper also by E. E. R. Tratman (Chicago) on the different kinds of machines used in the excavation of trenches for sewers and ditches for drainage. The Committee on Water Works will report on the question of preventing the pollution of streams, which is a matter of growing importance. The report of the Committee on Streets and Pavements will deal largely with the use of creosoted wood block paving, which material is growing in favor for the smaller as well as the larger cities. Another subject of special interest is the treatment of macadam and earth roads with tar and bituminous compositions; this will be covered by a paper by T. R. Agg, Assistant Engineer of the State Highway Commission. Mr. A. N. Johnson, State Highway Engineer of Illinois, and Mr. Curtis Hill, State Highway Engineer of Missouri, will talk on the road improvement question.

A series of papers on engineering works in and around East St. Louis will include the city's municipal engineering, its water works and its outlet sewer with pumping station for use during high water in the river. Other papers will deal with the park system, the new "free bridge" now being built over the Mississippi at this point and the drainage works for the relief of the low bottom lands. The papers will be supplemented by a visit to the water works, the sewer outlet, the four bridges over the Mississippi and the Cahokia Creek drainage canal.

Dr. George W. Webster, President of the State Board of Health, will talk on "Vital Statistics in Illinois," showing the sanitary, social and legal, as well as medical, importance of the international system of registration of births, marriages and deaths, which Illinois has not yet adopted. Other sanitary matters will include a report on the sewer system of Illinois towns, a paper on "Sewage Disposal and Purification," by W. S. Shields, Chicago, and the Calumet drainage canal, by L. K. Sherman, Chicago. A topical discussion on garbage disposal and street cleaning methods in Illinois towns is expected also. Mr. A. H. Baer, Belleville, a recognized authority on the Illinois local improvement law, will open a discussion on this subject.

A paper on special surveying and leveling instruments and methods used by the Government departments for precise leveling will be presented by Prof. W. H. Burger, Northwestern University. Mr. H. H. Rankin, County Surveyor of Henderson County, will advocate the abolishment of the office of County Surveyor and the creation of that of County Engineer, with control of road and bridge work, land surveys, etc. The report of the Committee on Surveying will deal with surveys of roads, drainage systems, etc., and the advisability of better monuments for corners and more complete public records of surveys. A paper by E. McCullough (Chicago) will discuss the matter of licensing engineers and surveyors by the State, which has been under consideration by the society for some years. A paper on "The Design of Highway Bridge Abutments" will be read by Mr. H. E. Bilger, Assistant Engineer of the State Highway Commission, and Prof. Dufour, University of Illinois, will lecture on the development of bridge trusses.

Iowa Cement Users' Association.—At the convention, Cedar Rapids, Ia., January 12, Chas. P. Chase, consulting engineer, Clinton, presented a paper reviewing the history of the use of cement in roadway pavements. C. J. Wilson, City Engineer, Waterloo, spoke on "The Use of Cement in Municipal Work"; T. R. Warriner, on "Cement Sidewalks"; W. M. Barr, on "Disintegration of Concrete in Sewage Disposal Plants"; T. H. MacDonald, Engineer, Iowa Highway Commission, on "Concrete Bridges and Culverts." The following officers were elected: President, J. W. Budd, Des Moines; First Vice-President, C. C. Merrillat, Winfield; Second Vice-President, H. H. Dean, Payne; Treasurer, G. E. Tathwell, Waterloo; Secretary, Ira A. Williams, Ames.

American Institute of Architects, San Francisco, Cal.—At a meeting on January 6 a resolution was passed urging the Mayor and Board of Supervisors to create a municipal commission which shall have power to develop a comprehensive plan for all improvements in the city, including those carried on by the United States military authorities, the State Board of Harbor Commissioners, the Park Board, the Board of Works and other departmental bodies. The resolution urges postponement of action with regard to the construction of the new City Hall until such a commission is appointed. The resolution further urges that the various boards, commissions, commercial bodies, improvement clubs and associations request the Mayor to call a convention of representatives of these bodies for the purpose of discussing the question.

Kansas Peace Officers' Association.—A permanent organization was formed at Wichita January 4-5 and the following officers were elected: President, J. H. McPherson, Wichita; first vice-president, J. T. Taylor, Leavenworth; second vice-president, M. Jenkins, Topeka; secretary, W. H. Boston, Wichita; treasurer, G. T. Hern, Hutchinson; board of managers, H. H. Germain, Topeka; Charles Segowser, Wellington, and R. T. Sullivan, Atchison. The convention declared in favor of an amendment to the anti-pass law, allowing railroads transportation for peace officers; a law establishing a bureau of identification; a law making it a criminal offense for a parent to desert a

minor child; a law giving a peace officer the right to make an arrest any place in the State, and a stringent law against any person other than a peace officer carrying any weapon into any public meeting or voting precinct.

The question of making it a felony for parents to desert minor children, and that having to do with the establishment of a bureau of criminal identification, were forthcoming from Chief Taylor, who has expressed the opinion that two-thirds of the instances of desertion reported to the police nowadays result from that cause. The chief's address at the convention was appreciated, and little time was lost in passing a resolution to endeavor to have a law passed which will be the means of eliminating the abandonment nuisance. The bureau of criminal identification is expected to be the means of decreasing to a considerable extent the number of bank and train robberies which annually take place in Kansas.

New Jersey State Association of County Engineers.—The annual meeting will be held at the State House, Trenton, January 24. Officers will be elected and general road matters discussed. The officers who will conduct the meeting are: President, Frank J. Eppele, engineer of Mercer County; vice-president, William P. King, engineer of Morris County; secretary, Edward E. Reed, of Trenton, assistant State road supervisor; treasurer, Joshua Doughty, Jr., engineer of Somerset County; State Road Commissioner, Frederick Gilkyson.

Michigan Engineering Society.—The thirty-second annual meeting was held at the City Hall, Lansing, January 9-12. The following officers were elected: President, Byron E. Sparks, Grand Rapids; vice-president, Prof. John R. Allen, Ann Arbor; secretary, Alba L. Holmes, Grand Rapids; treasurer, Dorr Skeels, Grand Rapids. Directors, Prof. H. K. Vedder, East Lansing; Frank F. Rogers, Lansing; J. J. Hubbell, Manistee. Chairman A. R. Sawyer, of the Legislative Committee, proposed that the Legislature be urged to pass a law providing for the services of a competent engineer connected with the State Highway Department to have charge of the construction of all highway bridges above a certain specified size. Other proposed legislation was to the effect that a drain commissioner should be permitted to keep county and township drains in repair without waiting for the petition of five persons who are subject to taxation for the repairs.

New England Water Works Association.—Allen Hazen, a New York Consulting Engineer, was elected president of the association at the annual meeting January 11 at the Hotel Brunswick. The other officers elected are: Vice-presidents, J. Waldo Smith, of New York; Michael F. Collins, of Lawrence; Leonard Metcalf, of Boston; Irving S. Wood, of Providence; Frank A. McInnes, of Boston, and Morris Knowles, of Pittsburg, Pa.; Willard Kent, of Narragansett Pier, R. I., secretary; Lewis M. Bancroft, of Reading, treasurer; Richard K. Hale, of Boston, editor; William E. Maybury, of Braintree; Edwin A. Fisher, of Rochester, N. Y., and John J. Kirkpatrick, of Holyoke, executive committee. For the first time in many years there was a contest over the election of some of the officers. Not content with the selections of the nominating committee appointed by the president, several members made nominations of their own.

American Society of Civil Engineers.—The fifty-eighth annual meeting of the society was held in the Society House, New York City, January 18-19. A report of the Board of Directors at the business meeting showed a membership, January 1, 1911, of 5,797, divided as follows: Honorary members, 8; corresponding members, 2; members, 2,767; associate members, 1,084; associates, 170; juniors, 745; fellows, 21. The net increase in membership for the year was 305. The total of individual pieces in the library is 8,620, the number of titles 24,906. During the year 29 formal papers were presented at the meetings and 7 other papers were printed in the proceedings. The mortgage debt on the property of the society was reduced \$10,000 to \$35,000. The report of Secretary C. V. Hunt showed that the receipts during the year were \$129,708. The general balance sheet shows a surplus of \$39,792, the total assets amounting to \$27,188.

The special committee on steel columns and streets reported that it cannot at the present time recommend the adoption of any particular formula. A special committee on engineering education reported that it had investigated the courses in civil and mechanical engineering in 20 of the leading technical schools, and after classifying the courses in certain groups and then gain in the individual studies had arrived at the number of semester hours devoted to each subject. It was then discovered that a semester hour is not a uniform unit, but varies considerably with different institutions. While this interposes great difficulties in the examination, the committee hopes that it may result in bringing about the standardization of catalogues in the different institutions. The special committee on uniform tests of cement presented a final report in which a specification is added covering the making of comparison tests. The committee's commendations are now generally accepted except by the Corps of Engineers of the United States Army, and an attempt will be made to harmonize these.

An amendment to the constitution as reported adopted exempting members and associates from the payment of dues after a certain age and number of years' connection with the society.

The report of the Board of Directors on the licensing of engineers was adopted after considerable discussion. The report was to the effect that the licensing of engineers by the State was desirable.

A motion by Charles Hansel to the effect that a special committee be appointed to consider and report on the methods of evaluating public utilities as referred to the Board of Directors with power to act.

The tellers announced the election of the following officers for the ensuing year: President, Rear-Admiral Mordred T. Endicott, civil engineer, U. S. N. (retired); Vice-Presidents, to serve two years, Alfred P. Boller, of New York City, and Charles L. Strobel, of Chicago; for Treasurer, to serve one year, Joseph M. Knap, of New York City; for directors, to serve three years, George C. Clarke, of New York City; Henry G. Stott, of New Rochelle, N. Y.; Jonathan P. Snow, of Boston; Robert Ridgway, of Poughkeepsie; Leonard F. Rundlett, of St. Paul, Minn.; William H. Courtenay, of Louisville.

Three special meetings for topical discussion were held Friday and Sat-

urday on the general subject of Road Construction and Maintenance. The subject was introduced by a paper by L. W. Page, read by A. R. Blanchard, on Preliminary Investigations. The relative value of three methods of carrying on work were discussed: 1. That in which both labor and materials are furnished by the contractors. 2. That in which material is supplied by the party of the first part and the labor by the contractor. 3. That in which both labor and material are supplied by the party of the first part. The bearing of overhead charges on this subject was brought out in the discussion. The fact that depreciation of machinery and general managerial expenses were not always charged up made an apparent difference in favor of services performed by the party of the first part. Good reasons were urged by a number of speakers in favor of the purchase of materials by the party of the first part. The tendency of prices to go up when a number of contractors competed for them was mentioned as an important factor. One speaker urged the purchase of all cement and reinforcing steel by the party of the first part, as is the practice in work done by the Massachusetts Highway Commission. The advantage of the purchase of bituminous cement by the party of the first part was stated to be that the whole subject of the value of bituminous cements was so uncertain that contractors were not in as good a position to decide what to buy as the authorities who had chemists in their employ. Charles W. Ross spoke of the need of a clean surface on the roadway before oil is applied, stating that it was his practice not only to clean the street, but to wash it. The oil is then applied when the surface is slightly moist. Harold Parker described the use of English power spraying machines and expressed the opinion that $\frac{1}{4}$ gallon applied by the machine was more effective than $\frac{1}{2}$ or $\frac{3}{4}$ gallon when poured. Speaking of the use of calcium chloride, he said the results near the coast where the air is moist were good, but the benefits in the dry interior regions less satisfactory. Samuel Whinny introduced the subject of the use of water, calcium chloride, light oils, etc., as dust palliatives and expressed the opinion that there is nothing superior to scientific watering. In order to reduce the cost he would have the watering done by motor vehicles with power spray, if necessary, so that the whole roadway could be sprinkled at one trip of the sprinkler.

Indiana Engineering Society.—The thirty-first annual meeting was held at the Dennison Hotel, Indianapolis, January 12 to 14. The programme consisted of forty papers and reports. Professor W. K. Hatt presented the report of the Committee on Materials of Construction, which dealt with specifications for methods of waterproofing concrete, tests of paving brick and of creosote oils. He also presented a paper describing the new cement and concrete laboratory at Purdue University. C. W. Boynton presented a paper on the manufacture of Portland cement. J. S. Spiker made the report for the Committee on Drainage, which consisted of a summarized report from the surveyors of 31 counties. Prof. R. L. Sackett, Purdue University, presented a paper on Recent Tendencies in English Sewage Purification Plants, as well as the report of the Committee on Stream Pollution. The report showed that sewage bacteria live longer in

water covered by ice than in open water. Mr. Theo. Leisen, Louisville, in the report of the Committee on Water Works, dealt with the subject of standardizing hose attachments. He also referred to the need of action by the Federal Government in preventing stream pollution. In a paper on the evolution of a pumping station Mr. Leisen described the station of the Louisville Water Works. Charles Grossman, Indianapolis, in a paper on wells and well pumping machinery, dealt particularly with the air lift and the impeller pump placed in the well pipe.

Prof. R. L. Sackett, Purdue University, in a paper on road improvements, spoke of macadamizing, tarring and the construction of burnt clay and sand clay roads. The use of crusher run stone in building roads was advocated by Mr. Watts, Princeton. Prof. Albert Smith, Purdue University, presented a paper on bridge specifications. F. A. Kaufman described a concrete girder bridge of 40-foot span, and D. B. Luten maintained that concrete arch bridges were preferable to girder bridges. The Committee on Bridges expressed a preference for creosoted wood block as a paving material. M. W. Blair presented statistics of paving for Indiana cities and described the design of the standard roller for brick tests as adopted by the National Paving Brick Manufacturers' Association.

The following officers were elected: Daniel B. Luten, president, Indianapolis; Prof. Malver A. Howe, vice-president, Terre Haute; Charles Grossman, secretary, Indianapolis.

City Club of Philadelphia.—On Saturday, January 21, Lawson Purdy, President of the Department of Taxes and Assessments of the city of New York, spoke on "Municipal Taxation."

Chamber of Commerce, Pittsburg, Pa.—An educational campaign to explain the new charter plan of the Pittsburg Charter Committee has been decided upon.

Calendar of Meetings

January 24-26.

American Society of Heating and Ventilating Engineers.—Annual Meeting, New York, N. Y.—W. M. Mackay, Secretary. P. O. Box 1818, New York, N. Y.

January 24-26.

Ohio Engineering Society.—Annual Meeting, Columbus, O.—C. J. Knisely, Secretary, New Philadelphia, O.

January 25-27.

Illinois Society of Engineers and Surveyors.—Annual Meeting, East St. Louis, Ill.—E. E. R. Tratman, Secretary, 1636 Monadnock Block, Chicago, Ill.

February 1-3.

Nebraska Cement Association.—Western Cement Exposition, Omaha, Neb.—Peter Palmer, Secretary, Oakland, Neb.

February 6-11.

National Brick Manufacturers Association.—Annual Convention, Louisville, Ky. T. A. Randall, Secretary, Indianapolis, Ind.

February 14-15.

Iowa Drainage Association.—Convention, Mason City, Ia.—W. H. Stevenson, Secretary.

February 16.

Fourth Annual Chicago Cement Show. Coliseum, Chicago, Ill.

February 28-March 1.

Northwestern Cement Products Association. West Hotel, Minneapolis, Minn.—Henry B. Smith, Secretary, 834 Security Bank Building, Minneapolis, Minn.

May.

City Commission Congress.—Meeting, Galveston, Tex.—Mayor Lewis Fisher, Chairman of Committee, Galveston, Tex.

June 6-10.

American Water Works Association.—Thirty-first Annual Convention, Powers Hotel, Rochester, N. Y.—John M. Diven, Secretary, 14 George street, Charleston, S. C.

PERSONALS

ANDERSON, ANDREW, has been appointed Water Superintendent by George C. Jewett, Mayor of Palouse, Wash.

ARNOLD, AMOS, Mechanicsburg, Pa., has been elected Chief Marshal of the Fire Department.

CAMP, D. C., has been elected Mayor of Lumberton, Miss.

CAMPBELL, FRANK, Hackensack, has been reappointed Borough Engineer for Bogota, N. J.

CARTER, J. C., has been elected Mayor of Dade City, Fla.

CAULFIELD, W. V., has been elected Mayor of Gloster, Miss.

CLIFTON, WILLIAM C., Troy, N. Y., has resigned his position as Assistant City Engineer and joined a construction company in New York City.

DUNLAP, MOREY M., former Mayor of Anderson, Ind., is dead, following a surgical operation.

FAUCETTE, J. P., has been elected Mayor of Argenta, Ark.

HALLEN, EDWARD F., has been again chosen president of the Bridgeport Board of Police Commissioners.

JACKSON, D. C., of the firm of D. C. & W. B. Jackson, which has been retained by the Government of Great Britain to advise the Postmaster-General in regard to the plant of the National Telephone Co., which will be taken over this year, sailed for England on Jan. 18.

JOINER, J. M., has been again chosen Chief of the Waycross, Ga., Fire Department.

KASTL, ALBERT E., M. Am. Soc. C. E., of New York City, has been appointed Special Deputy in charge of New York State Barge Canal work by State Engineer Bensel. The salary of this position is \$6,000. Mr. Kastl succeeds William B. Landreth, M. Am. Soc. C. E., as a result of the change in dominant political parties in New York State.

KOON, DR. THOS. W., has been appointed Commissioner of the Police and Fire Department of Cumberland, Md., succeeding Dr. Theodore A. K. Hummelshime.

LATROBE, F. C., who served seven terms as Mayor of Baltimore, is dead.

MAYER, HARVEY, has been elected Mayor of Dover, Del.

MCBEATH, DAN, former Mayor of Washburn, Wis., was murdered in Washington by a Sicilian laborer.

MCDONALD, F. B., Waycross, Ga., has been re-elected Chief of Police.

PARKHURST, FREDERICK S., Niagara Falls, N. Y., has been elected City Engineer.

PERRY, L. E., Jun. Am. Soc. C. E., formerly engaged on the sewage purification works at Philadelphia, has been appointed secretary and engineer for Houston, Perry & Co., Seaford, Del.

PRIOR, HARRY, has been chosen Chief Engineer of the Fire Department at Portsmouth, N. H.

PUTNAM, W. R., has resigned his position as Superintendent of the Marinette, Wis., Electric Light & Power Co.

SHANNON, MAURICE D., has been elected Mayor of Morgan City, La.

SHAY, WILLIAM, has been elected Mayor of Star City, W. Va.

THOMPSON, JAMES T., has been elected Mayor of Lewes, Del., for the tenth consecutive term.

WORRELL, W. L., Rome, Ga., has been made Superintendent and Manager of the water works at Meridian, Miss., to fill vacancy caused by the resignation of W. F. Wilcox.

ZIMMERMAN, W. W., Mayor of Richmond, Ind., has married Mrs. Viola Godkin.

TRADE NOTES

Cast Iron Pipe.—Chicago—This is the active season for water pipe and good bookings are expected in the next 30 days. Quotations: 4-inch, \$25; 6 to 12-inch, \$24; 16-inch and up, \$23.50. Birmingham—Production has been decreased by the closing of two plants for repairs. Prices have been advanced. Quotations: 4 to 6-inch, \$20.50; 8 to 12-inch, \$20; over 12-inch, \$18. San Francisco—While figures are being taken on a number of large inquiries, January business has been confined to small lots. New York—Public lettings are few in number, but private companies are making inquiries and placing some orders. Quotations: 6-inch, carload, \$22.

Lead.—Quotations: New York, \$4.50; St. Louis, \$4.35.

Rubber Tires.—The United States Tire Company, with a nominal capital of \$500,000, will be incorporated within a few days, if present plans are carried out, to handle the sales of the Hartford Rubber Works Company, the Morgan & Wright Company, the G & J Tire Company and the Continental Caoutchouc Company, all of which are subsidiaries of the Rubber Goods Manufacturing Company, which in turn is the largest subsidiary of the United States Rubber Company. E. S. Williams, President of the Rubber Goods Manufacturing Company, will be president of the new company, and C. J. N. Butler, President of the Morgan & Wright Company, will be Vice-President. J. M. Gilbert, General Manager of the Continental Caoutchouc Company, will have a similar position with the United States Tire Company, and J. B. Anderson, president of the Hartford Rubber Works Company, will be its General Sales Manager. According to the plans for the new company, the country will be divided into three districts in the handling of sales. New York will be the center of the Eastern district, Chicago of the Central district and San Francisco of the Pacific Coast district. It is understood that the four manufacturing companies will retain their corporate existence. The various branch stores of the different companies, which are now maintained separately, will be consolidated. Each of these consolidated branches will carry tires made by the four companies.

Paving Company Troubles.—W. J. Gilvin, Finance Commissioner, Fort Worth, Tex., has refused to approve the bonds of Roach & Manigan, the Tennessee paving concern that has taken over the contracts of the Metropolitan Construction Company, until the local creditors of the Metropolitan Company have been satisfied. The certificates held by the Metropolitan Company were assigned to one member of the company and the contracts have been assigned to two other members of the same company.

Indian Liquid Asphalt.—Sam E. Finley, manager of the Indian Refining Company, Atlanta, Ga., states that arrangements have just been made by the Commissioners of Mecklenburg County, N. C., to treat six miles of their fine macadam roads with Indian liquid asphalt. The city of Fayetteville has also arranged to treat five and a half miles of macadam streets with it and in both places samples of the material were put down last summer for a test. The company now has down in the State of North Carolina 40 miles of liquid asphalt.

Water Company Reorganization.—The Vancouver (Wash.) Water Works Company has passed into the hands of Isaac Anderson, Tacoma; A. Welch, Portland, and their associates. The two named are President and General Manager, respectively, of the Oregon & Washington corporation, a \$5,000,000 company, formed as a holding company to take over the water works system, the plant of the Independent Light & Water Company, which controls the manufacture and sale of gas, and the operation of the street car system of the Vancouver Traction Company.

Flashlight System.—In his annual report Chief F. W. Krieg, Wilkes-Barre, Pa., speaks as follows regarding the flashlight system: "At the present time when a policeman, patrolling his beat, is wanted it is necessary to wait for him to report. In case of an emergency, if he had the new flashlight signal system and telephones installed in our police alarm boxes, we could get the officer to the telephone on very short notice. This system has proven a great success wherever it has been used. After midnight, under the present system, it is practically impossible for officers on some beats to get to a telephone and they often have to leave their beats and go to a fire engine house to call up headquarters. If the flashlight system and telephones were installed the whole shift could be communicated with in less than 10 minutes from headquarters. This would be a great assistance to the department in case of a burglary, murder or other crime being committed. This also has passed the experimental state, and I most earnestly urge that your honorable body appropriate money for the installation of this much needed system."

City Will Complete Work.—Revoking the contract because the Hudson Terminal Construction Company, now bankrupt, which was constructing the sewage system, abandoned the work, the Bridgeton (N. J.) City Council will complete the work. City officials have been notified by the Fidelity Surety Company, of Baltimore, which held the surety bond of the Hudson Company, that the city could complete the construction of the disposal plant and the laying of the sewer pipes at the expense of their company. The work will be started at once, as several streets for weeks have been impassable owing to the high piles of dirt thrown from the open trenches.

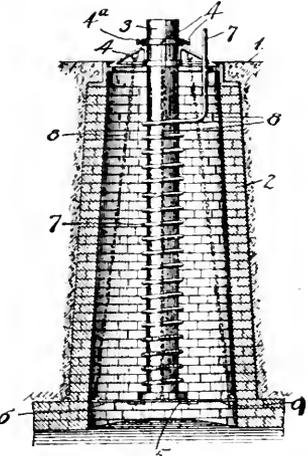

Pacific Power Consolidation.—Deeds transferring the interests of the Suburban Light & Power Company to the Pacific Gas & Electric Company, with headquarters at 445 Sutter street, San Francisco, have been signed by the officers of the absorbed corporation, the final arrangements for the sale of the property having recently been completed. The legal documents have been turned over to the officers of the purchasing concern, which now controls all of the light and power companies in California, with the exception of a few scattering and much smaller corporations.

Cresoted Blocks.—A plant for the manufacture of cresoted paving blocks is to be erected in the vicinity of Little Rock, Ark., by the Ayer & Lord Tie Company, of Chicago and Memphis.

Asphalt Plants.—Hentherington & Berner, iron manufacturers, Indianapolis, have increased their capital stock from \$27,000 to \$81,000.

PATENT CLAIMS

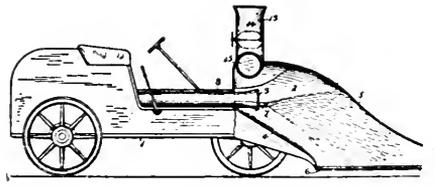

980,314. SNOW MELTER FOR MANHOLES OR SEWER PIPES. Thomas McGill, Brooklyn, N. Y. Serial No. 593,132. In a snow melting apparatus for use in sewer manholes, a backbone element,

means carried thereby for supporting the same at the manhole opening, snow supporting means at or near the lower end of said backbone, and heating means associated with said parts and carried thereby.

980,332. SNOW REMOVING APPARATUS. Lueder Raschen, San Francisco, Cal. Serial No. 580,346.

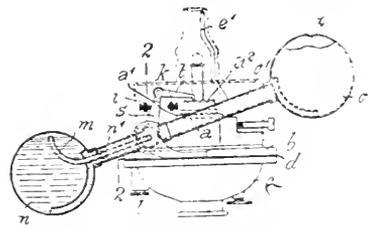

In combination with a vehicle, and means carried by the vehicle for propelling the same, a combustion chamber arranged at the front end of the vehicle and having,

close to the ground, an outlet arranged to direct the products of combustion horizontally and in a partly forward and partly lateral direction, on each side of the vehicle, means carried by the vehicle for producing said products of combustion and means carried thereby for forcing them through said outlet, substantially as described.

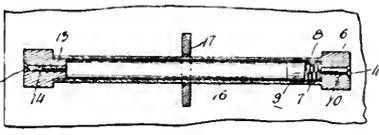

980,334. SYSTEM FOR OPENING AND CLOSING GAS VALVES FROM A DISTANCE. Emil Renkewitz Berlin, Germany, assignor to The Firm of Berlin-Anhaltische Maschinenbau-Actien-Gesellschaft, Berlin, Germany. Serial No. 457,964.

In a system for opening or closing gas valves, the combination with the main valve, and a gas supply thereto, of two receptacles communicating with each other and partly filled with liquid, one of said receptacles being hermetically closed at its top and the other one communicating with

the atmosphere, a rigid connection between said receptacles, a pivot intermediate said receptacles providing a rocking support therefor and having a bore communicating with the closed receptacle at the upper part thereof and with the gas supply, a spring actuated valve adapted to close the communication between the gas supply and the bore of said pivot under the normal pressure of the gas and to open the same upon an increase of the pressure, the bore of said pivot communicating with the atmosphere through a minute aperture, and a connection between the rockable receptacles and the main valve adapted to operate the latter.

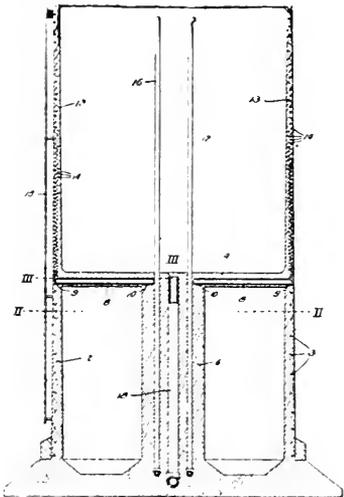

979,856. DEVICE FOR HOLDING KEYS IN FIRE ALARM BOXES. Frank B. Holbrook, Rome, Ga. Serial No. 575,164.

In a guard for a fire alarm box, posts on the exterior of the box, a frangible guard held by the posts, and a key having an aperture to receive the guard.

982,081. CONCRETE WATER-TANK. John Hugh McCoy, Harrisville, Pa. Serial No. 578,678.

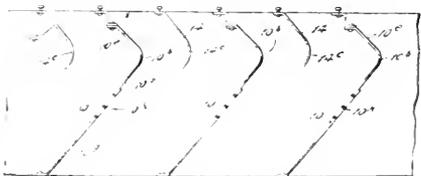

In a concrete water tank, the combination of a circular foundation wall, a central pier, radially arranged floor beams free from each other resting by their free ends over said foundation wall and said pier respectively, separate bearing elements

for the floor beams, reinforcing members free from each other extending radially inward between the outer portions of said floor beams, a floor incorporated with said beams and reinforcing members, and a circular tank wall extending above said floor and circular foundation wall having inclosed within it annular reinforcing members, substantially as set forth.

922,020. CONCRETE-MIXER. Arthur W. Ransome, New York, N. Y. Serial No. 470,028.

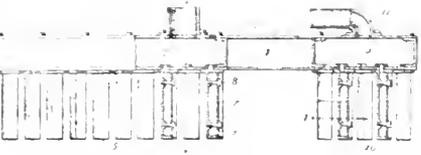

A rotary drum mixer having a mixing

blade with a lifting pocket in one end portion, thereof and its middle portion of less width than either end portions for the purpose specified.

581,635. PROCESS OF MAKING ROADWAYS, RAILROAD BEDS, PAVEMENTS AND THE LIKE. Michael A. Popkess, Kansas City, Mo., assignor to Bituminized Road Company, Phoenix, Ariz., a Corporation of Arizona. Serial No. 484,325.

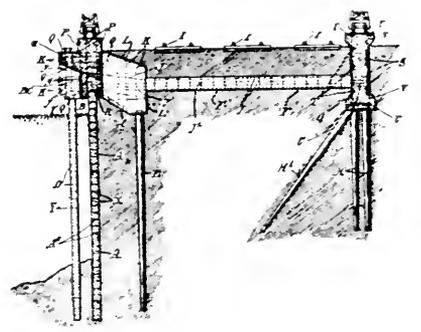

The process of making roadways, railroad beds, sidewalks, etc., the same consisting in pulverizing the earth to a suitable depth

and in injecting into such pulverized earth below the surface of the same, a liquid binder, then in stirring up or loosening the earth thus impregnated with the liquid binder, then in forming substantially V-shaped grooves in such prepared earth, and then in compressing or compacting such prepared earth down upon the underlying or said bed of earth, to form

981,822. CONCRETE-PILING RETAINING WALL STRUCTURE. Maxwell M. Upson, Englewood, N. J. Serial No. 566,591.

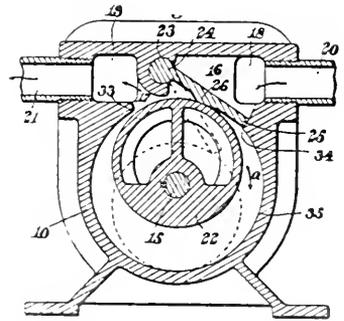

An element of a retaining-wall structure, which comprises a series of substantially solid concrete piling units individually penetrating down into the earth bottom and extending up above the bottom substantially to the surface, and arranged successively adjacent to each other in a row and longitudinally interlocking, to constitute a tight sheet-piling retaining wall of concrete; and a concrete horizontal beam maintained in position transversely along the upper portion of the retaining wall and

co-operating therewith to take the horizontal loads from the respective individual constituent concrete piling units thereof; the concrete of said horizontal beam having embedded in it means disposed horizontally along its length for reinforcing it against the horizontal loads of the retaining wall as a whole; and the concrete masses of the respective piling units having embedded in them vertically disposed means for reinforcing the individual units against the horizontal loads along their lengths intermediate their earth-footings and the horizontal beam, to thereby vertically transmit the horizontal loads downwardly and upwardly.

981,660. WATER METER. Justus Royal Kinney, Boston, Mass. Serial No. 537,344.

In a device of the class described, the combination of a casing having a cylindrical chamber, an opening in its cylindrical wall, and inlet and outlet passages communicating with said chamber through said opening; a revoluble shaft concentrically disposed in said chamber, and pro-

vided with an extension through an end wall of said casing; a register mechanism operable thereby; a cylindrical piston concentrically mounted upon said shaft and a pivoted blade extending across the inlet passage and adapted to be retained in contact with said piston by the pressure of the fluid passing through said inlet passage; and to close said inlet during portions of the revolution of said piston.

981,710. ROAD-GRADER. John T. Starr, Nowata, Okla. Serial No. 512,051.

In a road grader, a main frame member, a block pivoted to the forward end of said member for movement in a vertical plane, a front frame member swingingly supported in said block, a latch pivoted on one of said frame members to move in

a vertical plane, a scraper blade pivotally mounted in said block on the front frame member, a brace connecting said scraper blade and the main frame member, and means to vary the effective length of the brace and change the angle of the scraper blade relative to said main frame member

BIDS ASKED FOR

STATE	CITY	RECEIVED UNTIL	NATURE OF WORK	ADDRESS INQUIRIES TO
STREET IMPROVEMENTS				
Ohio	Cleveland	Jan. 27, noon	Paving portions of 20 streets.	A. B. Lea, Dir. Pub. Serv.
Indiana	South Bend	Jan. 27, 10 a.m.	Paving alley.	A. P. Perley, Clerk. D. P. W.
Tennessee	Newport	Jan. 27, 2 p.m.	Grade 18 mi. and macad. 35 mi. roads in Cocke County.	Geo. W. Gorrell, Secy. Pike Con.
Oklahoma	Tulsa	Jan. 27, 9:30 a.m.	Paving various streets.	E. B. Cline, City Auditor.
Massachusetts	New Bedford	Jan. 27, 2:30 p.m.	Furn. curb., pav. block, brick, sand, shovels, lumber and hay.	C. F. Lawton, Supt. of Streets.
Indiana	Terre Haute	Jan. 28	Constr. gravel road in Sugar Creek twp., cost, \$13,000.	N. G. Wallace, County Auditor.
Wisconsin	Appleton	Jan. 30, 2 p.m.	Constr. concrete sidewalk.	E. L. Williams, City Clerk.
Wisconsin	Menomonie	Jan. 31	Pave. with vit. brick, asphalt macadam, bitulithic, broken limestone and liquid asphalt bonding solution, or sarcolithic mineral rubber pave. Also cement curb, 7-in. base, 5-in. top and 16-in. depth.	F. W. Rowe, City Clerk.
Indiana	Fowler	Feb. 1, noon	Construction of one mile of gravel road in Benton County.	Lemuel Shipman, County Auditor.
Iowa	Cedar Rapids	Feb. 1, 10 a.m.	Constr. curb on various streets.	L. J. Storey, City Clerk.
Michigan	Hancock	Feb. 1	Constr. about 4 miles of 15 ft. macadam road.	County Clerk.
California	Oakland	Feb. 1, 11 a.m.	Grading in various parts of city.	Frank R. Thompson, City Clerk.
Utah	Logan City	Feb. 1, 4 p.m.	Paving 28½ blocks.	Wm. Worley, Comr. on Sidewalks.
Iowa	Monroe	Feb. 1, 2 p.m.	Road work for year commencing April 1.	W. M. Livingston, Town Clerk.
Wisconsin	Appleton	Feb. 2, 10 a.m.	Paving 28,000 yds. street.	E. L. Williams, City Clerk.
Indiana	Fort Wayne	Feb. 2, 10 a.m.	Grade, gravel or macad. various highways.	C. H. Brown, County Auditor.
New York	Buffalo	Feb. 3, 11 a.m.	For repaving various streets.	F. G. Ward, Comr. D. P. W.
Ohio	Youngstown	Feb. 6, 1:30 p.m.	Improving road with slag macadam for 1,040 feet.	Frank Agnew, Secy. Road Comrs.
Indiana	Huntington	Feb. 6, 2 p.m.	Constr. gravel rd. known as P. W. Forest Road.	John W. Weaver, Co. Aud.
West Virginia	Huntington	Feb. 6, 1 p.m.	Grad. and pave. 20 streets with vit. brick, bitulithic, sheet asphalt, asphalt block or concrete asphalt.	John Coon, Comr. of Streets.
Georgia	Atlanta	Feb. 6, 3 p.m.	Lay brick, tile and cem. sidew. and furn. mat. for rep. to sts.	W. J. Campbell, City Clerk.
Indiana	Tipton	Feb. 6	Constr. gravel road in several townships.	J. H. Tranbarger, County Auditor.
Alabama	Montgomery	Feb. 6, noon	Paving with brick, asphalt, bitulithic, Blome granitoid block, mineral rubber, wood block, Hassam granite block or Hassam comp. concr. pave, with necessary grad. curb. and sev. Constr. cement and brick sidewalk for 1911.	C. J. Fay, Acting Treasurer. E. A. Heise, City Clerk. E. A. Staggs, Auditor.
Indiana	Michigan City	Feb. 7, 10 a.m.	Constr. cement and brick sidewalk for 1911.	C. J. Fay, Acting Treasurer.
Indiana	Brazil	Feb. 7, 11:30 a.m.	Improving various highways in Clay County.	E. A. Heise, City Clerk.
Kansas	Manhattan	Feb. 7, 6 p.m.	Pave. with brick block, wood block, concr., asph. concr., or sheet asphalt, requiring approx. 12,200 yds. pave. and 4,000 cu. yd. excav. on Poyntz. ave., and 16,200 yds. pave. and 5,450 cu. yd. excav. on Houston and Fourth sts.	C. T. Gist, City Clerk. A. T. Triay, City Clerk. Wm. McQueen, City Clerk.
Florida	Palatka	Feb. 7, 7:30 p.m.	Constructing approx. 16,500 sq. yd. concrete sidewalks.	Hillsboro County Commissioners.
Canada	Vancouver, B. C.	Feb. 7	Furnish road roller, weight not less than 15 tons.	B. B. Engle, County Auditor.
Florida	Tampa	Feb. 7	Paving with shell 1½ mile road.	J. E. Wallace, County Auditor.
Indiana	Crawfordsville	Feb. 7, 2 p.m.	Constr. gravel road known as L. T. Rush Road.	W. E. Munchenburg, Co. Aud.
Indiana	Logansport	Feb. 7, 10 a.m.	Constr. gravel road in Tipton and Jefferson twps.	J. S. Whitaker, County Auditor.
Indiana	Winamac	Feb. 7, noon	Grading, drain, and gravel. certain highways.	A. Y. Stout, County Auditor.
Indiana	Martinsville	Feb. 7	Constr. road in Adams township.	City Clerk.
Indiana	Marion	Feb. 7, 2 p.m.	Constr. macadam road in Fairmont township.	John T. Goldenbogen, Clk. Co. Comrs.
Virginia	Elizabeth City	Feb. 7, 3 p.m.	Constructing smooth or brick pavement.	Paul Maier, County Auditor.
Ohio	Cleveland	Feb. 8, 11 a.m.	Grading drain, and improve. Fairmont road.	Geo. W. Baxter, County Auditor.
Indiana	Mt. Vernon	Feb. 8, 2 p.m.	Constructing 2 mile road in Robb township.	C. P. Beard, Clk. B. I. of Turnp. Dir.
Indiana	Lafayette	Feb. 8, 10 a.m.	Construct gravel road.	F. Hanlon, City Clerk.
Indiana	Evansville	Feb. 9, 10 a.m.	Broken rock and gravel to repair roads.	Carl A. Anderson, Clerk.
Pennsylvania	Erie	Feb. 13, 8 p.m.	Paving part of W. 20th street.	J. T. Goldenbogen, Clk. Co. Comrs.
Michigan	Menominee	Feb. 14, 2 p.m.	Constr. gravel road on bay shore.	Board of Pub. Works.
Ohio	Cleveland	Feb. 15	Constr. Broad View road.	John Coon, Comr. of Streets.
Alabama	Mobile	Feb. 16, noon	Laying approx. 33,000 sq. yd. wood blk. pave. & 13,426 lin. ft. concrete curb.	County Auditor
West Virginia	Huntington	Feb. 20, 1 p.m.	Paving two alleys.	J. W. Morris, City Engineer.
Ohio	Defiance	Feb. 20	Stoning 1½ mile road, approximate cost, \$5,000.	
Oregon	Portland	Feb. 23	Constructing pavement on Jersey st.	
SEWERAGE				
Ohio	Lorain	Jan. 27, noon	Storm water sewer in Dallas ave.	L. B. Johnston, City Clerk.
Texas	Corpus Christi	Jan. 27	Furn. sewer material, incl. 1,100 sq. ft. of steel sheet piling, 85 c. i. manhole covers, 10 flush tank siphons, 4,000 lin. ft. of c. i. pipe 2 carloads of lumber, 2,000 ft of 15-in vitrified sewer pipe, 7,000 ft. of 12-in vitrified sewer pipe, 3,300 ft. of 10 in. vitrified sewer pipe, 9,660 ft. of 8 in vitrified sewer pipe, 57 "Ys" 6 on 15, 78 "Ys" 6 on 10, 288 "Ys" 6 on 12, 258 "Ys" 6 on 8.	O. O. Wright, City Clerk. County Clk. Urbana, Ill.
Illinois	Champaign	Jan. 27, 2 p.m.	Laying tile in sub. dist. No. 1.	M. Volz, Auditor.
South Dakota	Alexandria	Jan. 28, 1 p.m.	Constr. approx 7½ mi. 5 to 24-in. tile drains.	John Gifford, City Purchas. Agt.
Washington	Spokane	Jan. 29	Furn. 7,000 ft. of 10-in. corrug. drain pipe, corrug. bottom.	M. J. Desmond, City Clerk.
California	Sacramento	Jan. 30	Constr. and reconstr. sewers.	C. R. Heath, Health Engineer.
Manitoba, Can.	Souris	Feb. 1	Furn. 31,000 ft. vit. sewer pipe etc. spring and summer, 1911.	W. J. Campbell, City Clerk.
Georgia	Atlanta	Feb. 6, 3 p.m.	Constr. sewers and furn. vit. pipe, cem. and castings.	F. D. Brooks, City Clerk.
Kansas	Lawrence	Feb. 6	Constr. 8-in. lateral sewer.	G. R. Greary, Chm. Bd. Control.
Ontario, Can.	Toronto	Feb. 7, noon	Constr. several sections low level interceptor.	
Alabama	Mobile	Feb. 16, noon	Constr. approx. 10,350 lin. ft. storm sewer ranging in size from 5x11 ft. canal to 10 in. vit. pipe; also 6,000 ft. 6 in. vit. pipe hose connect.	Board of Pub. Works. John Coon, Comr. of Streets.
West Virginia	Huntington	Feb. 20, 1 p.m.	Laying sewers in various streets.	
WATER SUPPLY

SEWERAGE

Cullman, Ala.—Installation of sewer system is being considered. Address Mayor Robertson.

Pasadena, Cal.—City Engineer Vanum is preparing plans for sewer system to take care of land along east bank of Arroyo Seco, south of Colorado st.

Pomona, Cal.—Committee, Ira Lee, Chairman, has been selected to work out some comprehensive scheme to take care of storm waters north of Orange Grove ave.

Saratoga, Cal.—Sanitary district has been formed to build sewer in the near future.

Boulder, Col.—Council has passed ordinance for construction of sewer in South University addition.

Colorado Springs, Col.—City Attorney Johnson will draw up ordinance authorizing the construction of storm sewer in business section; cost about \$18,000.

Pocatello, Ida.—Hering & Fuller, 170 Broadway, New York City, Engineers, have prepared plans for installation of sewerage system; cost about \$165,000.—W. A. Same, City Engineer.

Freeport, Ill.—Board of Local Improvements is considering construction of sewer in Harlem ave.

La Grange, Ill.—Village Engineer W. B. Wing has prepared plans for construction of outlet sewer.

Princeton, Ill.—Council has passed an ordinance providing for construction of about 2 miles of sewer in the south, southwest and southeastern parts of city; estimated cost \$24,400.

Rockford, Ill.—Council has authorized construction of combined storm and sanitary sewer in territory north of Harrison ave.; cost \$142,000.

Venice, Ill.—City will receive bids about March on 18,580 ft. vit. pipe, 15 to 16-in., to reconerating 4,800 ft. 8-in. inlet pipe, manholes, 180 catch basins, 1 special manhole with valve, etc.; cost about \$118,300.

Goshen, Ind.—Mayor Spohn has recommended that expert be secured to ascertain the possibility of laying main sewer tunnel along bed of Rock Run ditch.

Fort Leavenworth, Kan.—War Department will ask new bids for building sewer outlet from fort into Missouri River.

Easton, Md.—Citizens will vote Feb. 23 on sewer system with disposal plants; plans are being prepared by Clyde Potts, 39 Church st., New York.

Minneapolis, Minn.—Legislature will be asked to allow \$500,000 bond issue for trunk sewers.

Roundup, Mont.—C. T. Sacket, Livingston, has prepared preliminary plans for construction of sewer system.

Omaha, Neb.—Council is considering resolution authorizing plans for storm sewer on Hanscom Park district to Jane st.; cost \$57,000.

Deming, N. M.—Citizens have voted \$35,000 bonds to install sewer system.

Binghamton, N. Y.—City Engineer Giles has estimated cost of constructing trunk sewer along Park Creek at \$75,000.

Dolgeville, N. Y.—Plans are being prepared by Charles E. Collins, Consulting Engineer, Drexel Bldg., Philadelphia, Pa., for extension of sewerage system; bids for work will be asked about March 1.

East Aurora, N. Y.—Fred. K. Wing, Buffalo, has completed plans for a system of sewers and disposal plant; cost about \$100,000.

North Pelham, N. Y.—Because Village of Pelham Manor failed to pass proposition allowing the villages of North Pelham and Pelham to go through village of Pelham Manor with their sewer system the special elections held by villages of North Pelham and Pelham are void, as far as the issuing of bonds are concerned, and both villages will have to hold another special election on Jan. 31; property owners in North Pelham will vote upon three propositions; first asks if North Pelham shall enter into a contract with village of Pelham to build outlet sewer through that village to Pelham Manor; second asks if the villages of North Pelham and Pelham shall enter into contract with Pelham Manor to build an outlet sewer, while the third asks if North Pelham shall expend \$15,000 for construction of outlet sewer through Pelham.

Port Chester, N. Y.—Board of Trustees has engaged Engineer F. D. Odell to draw plans for a \$100,000 sewage disposal plant.

Yorkville, N. Y.—Bids will be received Feb. 6, 4 p. m., for \$22,000 sewer bonds.—Wm. E. Cooper, Village President.

Barberton, O.—City Engineer Alcorn has prepared plans and estimates for sewer system to include every street in West Barberton; length about 10 miles; cost \$50,000.

Ft. Recovery, O.—Specifications and plans have been adopted for the proposed sewer system.

Genoa, O.—Council has decided to con-

struct sewers in subdivision A, District I.—Philip E. Manner, Mayor.

Pleasant Ridge, O.—Village Council has instructed the Riggs-Sherman Construction Co., Toledo, O., to prepare plans and estimates for general sewerage system and disposal plant for the village; cost about \$150,000; work will begin about May 1.

Falls City, Ore.—Installation of sewer system at cost of \$2,000 is being considered.

Ontario, Ore.—Council has decided to install drainage system.

Rock Hill, S. C.—T. W. Cothran, Greenwood, with a force of engineers, including N. G. Walker, city, will at once begin survey of city for sewerage.

Dallas, Tex.—City has asked bids for laying storm sewer on Haskell st., San Jacinto to Live Oak st., estimated cost of \$3,558.48, and on Haskell st., Victor to Gaston st., at a cost of \$1,754.98.—William Doran, Street Commissioner.

Skyland, Va.—Frank E. Stover, Luray, is arranging to construct sewer system.

Moundsville, W. Va.—Citizens have voted \$170,000 of bonds for construction of sanitary sewer system; also surface drainage; work will include about 21 miles of sanitary sewers, varying in size from 6-in. to 36-in. diameter; bids will be received for construction about March 1.—Charles E. Collins, Philadelphia, Pa., Engineer; J. M. Williamson, Mayor.

CONTRACTS AWARDED

Birmingham, Ala.—Building four sections of north side storm sewer, to J. W. Gurley & Co., Mobile, \$96,067.80, \$78,613.70, \$11,231.20 and \$13,401.50; two sections to McCartin Contracting Co., \$39,325 and \$14,561.50.

St. Petersburg, Fla.—To E. B. Cooper, city, to construct sewer system No. 15; 660 ft. of 10-in. pipe, 3,100 ft. of 6-in. pipe and 1,200 ft. of 8-in. pipe will be needed.

Albert Lea, Minn.—To Pastore & Lawrence, Duluth, for constructing lateral sewer No. 14, \$1,600.

Lynchburg, Va.—By Council Committee on Streets and Sewers, to Dinguid Bros. for sewer pipe, and for concrete, to Williams & Barnett; contracts are for ensuing year.

North Vancouver, B. C., Can.—To MacDonald, Czouski & Co. for initial sewer installation, \$206,000.

BIDS RECEIVED

St. Louis, Mo.—Constructing the Dale ave. sewer, lowest bidder John B. Turner, 629 Chestnut st., as follows: 200 cu. yds. excavation, solid rock, \$3.50; 15,450 cu. yds. excavation all other material, 50c.; 692 cu. yds. brick masonry, \$8; 54 cu. yds. vit. brick masonry, \$10; 10,770 lin. ft. 12-in. pipe sewers, 27c.; 934 lin. ft. 15-in., 41c.; \$35 lin. ft. 18-in., 57c.; 605 lin. ft. 21-in., 86c.; 544 lin. ft. 24-in., 96c.; 410 6-in. junctions on 12-in. pipe sewers, 80c.; 6-in. slants in brick sewers, 30c.; 583 sq. ft. inlet stones, 50c.; 37,600 lbs. c.-i., 23c.; 6,600 lbs. wrought iron, 4c.; total, \$21,401; totals of other bids: Althaus Construction Co., \$22,039; Wm. F. Riley Construction Co., \$22,833; G. A. Heman, \$23,729; Harry P. Heman, \$27,082; John F. McMahon, \$27,873; Robert Wycoff, \$28,713.

Elizabeth, N. J.—Construction of sewer in Trenton ave., Franz Josef to Laurel ave., Charles Wade, \$2,477.65; Louis Jacques, \$1,729.39; T. Pester Callahan, \$1,827.47; O'Neil & Viscount, \$2,077.65; Joseph Viscount, \$2,690.75, and Alexander C. Martin, \$1,835.75.

WATER SUPPLY

Talladega, Ala.—Council has appropriated \$10,000 for extension of water and gas mains.

Blytheville, Ark.—Council has granted water works franchise to J. E. Thompson, Nashville, Tenn.

Clarksville, Ark.—Installation of municipal water system is being considered.

Anaheim, Cal.—Citizens will vote Jan. 30 on \$8,500 bonds for water works improvements.

Lordsburg, Cal.—City has sold \$26,000 water works bonds to First National Bank of Lordsburg and La Verne.

Sacramento, Cal.—Board of City Trustees has decided to install steam pump in city pumping plant. G. N. Randle, City Engineer.

Meriden, Conn.—Mayor Thos. L. Reilly has recommended that Legislature be petitioned for permission to issue bonds sufficient to proceed this year with development of Bread Brook as an additional water supply.

Norwich, Conn.—Council has appropriated \$30,000 for pumping station.

Washington, D. C.—Board of Trade will urge installation of high pressure water service in business section.

College Park, Ga.—City has sold \$50,000 bonds for water works and sewers.

Dalton, Ga.—City has selected H. S. Jaudon Engineering Co., Savannah, Ga., to prepare plans for water works; capacity 2,000,000 gals.; construct concrete reservoir; cost \$30,000; bids will be opened about Feb. 16.

Chicago Heights, Ill.—All bids for extending water mains in Chicago road have been rejected.

Auburn, Ia.—City is considering \$10,000 bond issue for construction of water works system.

Lost Nation, Ia.—Installation of water works is being considered.

Lincoln, Me.—Town is considering construction of water works system.

Topsham, Me.—Topsham Water District has decided to extend water system to Topsham Heights; mains will be laid in Winter, Bridge, River, Front, Prospect and three unnamed streets; cost \$15,000. William H. Lincoln is interested.

Rockton, Mass.—City will take immediate steps toward construction of new storage reservoir during year.

West Springfield, Mass.—Need of auto pump is being urged; many hydrants do not show 49-lbs. pressure.

Grand Rapids, Mich.—Council has decided to enlarge water mains in Carrier and Lafayette sts.

Holland, Mich.—Board of Public Works has decided to build pumping station; cost about \$12,000.

Arlington, Minn.—Citizens have petitioned Council to look into the question of constructing municipal water works.

Eveleth, Minn.—Cost of installing 16-in. pipe line from St. Mary Lake to Iron Range track has been estimated by City Engineer at \$14,731.48.

Chaffee, Mo.—M. S. Murray, Likeston, has been selected as engineer for extension of water works, including 27,000 ft. of 6-in. c.-i. pipe.—J. M. Massengill, Mayor.

Hopkins, Mo.—City is considering construction of high duty pumping plant and water distribution system.

Webb City, Mo.—Plans have just been completed for 1,500,000-gal. reinforced concrete reservoir for Webb City and Carterville Water Works Co., Webb City; bids will be received about Feb. 14; plans at water company's office.—A. J. McKenzie, City Engineer.

Chadron, Neb.—City will extend water mains at cost of \$38,000; H. D. Mead, city, will supervise work.

Bayonne, N. J.—Board of Water Commissioners has passed resolution for construction of 7,200 ft. of 24-in. main across river at cost of \$65,000; plans by City Engineer Mason.

Spring Lake, N. J.—Council is considering construction of water plant; cost \$7,000.—J. W. Sweigard, Engineer Water Plant.

Endicott, N. Y.—Endicott Water Co. is contemplating erecting large reservoir on Cornell Hill; capacity 1,500,000 gals.

Whitehall, N. Y.—Village is considering election Feb. 6 on \$80,000 bonds to rebuild water works.

Wooster, O.—Council has decided to purchase and install one 100-h.p. boiler, one 500 cu. ft. free air-capacity air compressor, pipe lines, building, and incidental appliances necessary for operation of the municipal pumping station at Bloomington reservoir.—H. H. Franks, Clerk.

Custer City, Okla.—Scott Stine, President Board of Trustees, desires prices on 4-in. and 6-in. c.-i. pipe, pump for flow of 70 gals. per minute, engine boiler and 50,000-gal. tank; population 1,000.

Monmouth, Ore.—Water system will be enlarged.

Redmond, Ore.—Council is considering installation of gravity water system at cost of \$10,000.

Altoona, Pa.—Water Department is planning extensions to water system.

Honey Brook, Pa.—Honey Brook Water Co. is planning to construct large reservoir in spring.

Schuylkill Haven, Pa.—Town will vote Feb. 14 on \$5,000 loan for construction of water works.

Woonsocket, R. I.—Board of Fire Commissioners has recommended erection of standpipe, capacity 1,000,000 gals., and installation of more mains and gate valves.

Manchester, Tenn.—City is considering establishment of water works and electric light plant. W. P. Hickerson, President First National Bank, is interested.

Memphis, Tenn.—Shelby County is considering drilling artesian well to furnish water in court house; cost about \$5,000.—George B. Coleman, Chairman of Committee.

Nashville, Tenn.—Council will consider following appropriations for Water Works Department: \$8,000 to repair machinery at pumping station, \$13,500 for purchase of sulphate of alumina to clarify water at reservoir, \$8,000 to purchase and install water end for Holly engine, and \$10,098.75

for purchase of water pipe and filling and laying of same.

Aransas Pass, Tex.—Citizens have voted \$25,000 of bonds for construction of water works.

Dallas, Tex.—City Commissioners have rejected bids for purchase of carload of pig lead.

Provo, Utah.—Superintendent of Sewers John M. Holdaway has recommended laying of water mains on all streets where there are none and where sewers have been constructed.

Salt Lake City, Utah.—Mayor John S. Bransford has recommended increased water supply.

Rutland, Vt.—Citizens will vote in March on \$25,000 bonds to acquire land along watershed.—H. O. Carpenter, Mayor.

Portsmouth, Va.—Citizens have voted \$600,000 bonds to establish municipal system of water works.

Skyland, Va.—City is considering extension of water works.

Granger, Wash.—Council has instructed the City Engineer to draw plans and specifications for water system.

Redmond, Wash.—City is considering construction of a gravity water system.

Wenatchee, Wash.—Mayor C. H. Holbert has recommended the construction of water system.—F. E. Powell, City Engineer.

Manitowoc, Wis.—Citizens have decided to own water works plant.

New Libson, Wis.—Citizens have voted to install municipal water works system.

Sault Au Recollet, Que., Can.—Council is considering construction of water system and sewerage; cost \$40,000.

Vancouver, B. C., Can.—Ratepayers have authorized issue of \$400,000 water works extension debentures.

Regina, Sask., Can.—City has decided to overhaul present system of water supply.

CONTRACTS AWARDED

Los Angeles, Cal.—Furnishing all fabricated steel and rivets necessary to construct 1,409 ft. of riveted steel siphon 9 ft. 6 in. in diameter, to Camden Iron Works, Camden, \$9,400.

Newton, Kan.—Furnishing 2,500,000-gal. pumping engine, to Laidlaw-Dunn-Gordon Co., Scarritt Bldg., Kansas City, Mo.

Onaga, Kan.—Constructing water works: general contract to W. W. Cook & Son, Junction City; steel tower and tank, hydrants and valves, to Chicago Bridge and Iron Co. and Edw. J. Merkle.—Burns & McDonnell, Scarritt Bldg., Kansas City, Mo., Engineers.

Stafford, Kan.—To J. A. Bortenlanger, Omaha, Neb., for construction of a system of water works.—J. S. Worley & Co., Reliance Bldg., Kansas City, Mo., Engineers.

Lawrence, Mass.—Furnishing 10 tons of pig lead, to Eastern Metal and Refining Co., \$4.65 per cwt.; lead pipe, to Charles Miller & Son Co., Utica, N. Y., \$5.15.

Detroit, Mich.—Furnishing 547 water gate valves and 130 test boxes, to Roe-Stephens Mfg. Co., city; also 200,000 large special castings, to Great Lakes Eng. Works, city, \$60 per ton.

St. Paul, Minn.—Furnishing brass taps and stops for underground work, to Crane & Ordway, city.

Beatrice, Neb.—Construction of water and lighting system, to the Mathews Construction Co., Kansas City, Mo.; work will be started about Feb. 9.—W. K. Palmer Co., 717-720 Dwight Bldg., Kansas City, Mo., Engineers.

Angola, N. Y.—To Mahoney & Swanson, Jamestown, for construction of water works; cost \$55,000; about 900 tons of c.-i. pipe will be required.

Troy, N. Y.—To Charles Miller & Son Co., Utica, to furnish c.-i. water pipe, \$21 a ton f.o.b. Troy, for water mains in Spring and 7th aves.; total about 105 tons.

Yonkers, N. Y.—To John Fox for 245 lengths of 12-in. c.-i. pipe, each length to weigh 100 lbs.; per ton, \$20.70; other bidders: Camden Manufacturing Co., \$20.85; U. S. Cast Iron Co., \$21.25 and Miller & Son, \$26.

Portland, Ore.—Furnishing 5,792 tons of c.-i. pipe of various dimensions, to United States Cast Iron and Foundry Co., Chicago, \$178,872.

Winnipeg, Man., Can.—Laying water mains, to the Engineer of Construction, \$1,675.

BIDS RECEIVED

Chicago, Ill.—Furnishing the city with 9,700 tons of c.-i. water pipe for construction work, U. S. Cast Iron & Foundry Co., only bidder, \$23.75 per ton.

Ft. Smallwood, Md.—Constructing pump house and installing pumping machinery at Ft. Smallwood, L. B. Jacobs, Newark, Del., lowest bidder, \$1,972.

Perth Amboy, N. J.—Furnishing forced draft apparatus and engine and generator for plant at Runyon; forced draft appar-

atus, J. F. Canady Co., \$116; American Power Co., \$87; B. F. Sturtevant Co., \$150; the Engineer Co., \$1,150; the Green Inlet Economizer Co., \$605; engine and generator, General Electric Co., \$1,312; Westinghouse Electric and Manufacturing Co., \$1,179; Allis-Chalmers Co., \$1,325.

LIGHTING AND POWER

Alameda, Cal.—City will consider construction of a reinforced concrete electric power plant building, to cost about \$50,000.

Greenville, Cal.—Indian Valley Light and Power Co. is considering extension of system to Taylorsville, Crescent and Seneca.—C. G. Zschockelt, city, Engineer.

Orland, Cal.—C. R. Wickes, Wilows, has purchased light and power franchise.

Putnam, Conn.—Putnam Light and Power Co. will spend large amount in improvement additions.—A. Duprez, city, Chief Engineer.

Washington, D. C.—Nearly \$12,000 is planned by Commissioners to be spent for lighting up several miles of prominent thoroughfares except as 16th st. is now lighted.

La Salle, Ill.—City Engineer Edward Byrne is preparing plans for electric light system for city; cost \$10,000.

Streator, Ill.—City is considering installation of electric light system.—F. W. Herbert, City Engineer.

Fort Wayne, Ind.—Chairman Frank T. Benoy and Member Henry Hilgemann, of Board of Works, together with Mayor Jesse Gage and Lighting Superintendent Frank Dix will visit Chicago with view to gathering new ideas as to underground wiring, ornamental lighting, etc.

Gaston, Ind.—R. A. Brown is arranging to install electric light plant.

Ossian, Ind.—Fort Wayne and Wabash Valley Traction Co. has made a proposition to citizens which, if accepted, will enable them to light their streets and also secure electric current for house lighting and power.

Boston, Mass.—All bids recently received by Superintendent of Streets Rourke for lighting the streets of Boston have been rejected and re-advertising under modified specifications will follow; contract with Rising Sun Co., which expires Jan. 31, will be extended for three months.

Huntington, Mass.—Eugene E. Davis, Northampton, has acquired title to Stowell's Flats with water rights and contemplates erection of power plant.

Marquette, Mich.—City will soon let contract for the construction of a concrete dam at Silver Lake, 24 miles north of the city.—Chas. Retaille, Superintendent Electric Light Commission.

Muskegon, Mich.—F. F. Van Tuye, Detroit, Mich., has been selected by city to prepare plans and specifications for municipal electric plant.

Eveleth, Minn.—Cost of installing white way on Grant ave. has been estimated by City Engineer at \$6,688.22.

Bozeman, Mont.—Dr. Carl Schweter has accepted franchise and will at once erect gas plant; plant will also be erected in Billings.—A. M. Brandenburg, City Clerk.

Chester, Mont.—L. D. Pugsley, President First State Bank, has petitioned for a franchise for electric light plant.

Albany, N. Y.—No bids for furnishing city with electric lights were received Jan. 16 by Board of Contract and Supply; new bids will be asked.

Warrenton, N. C.—Warrenton Electric Light Co. has been incorporated to construct lighting system.—W. L. Rogers and J. W. White, Incorporators.

Barberton, O.—Citizens are urging erection of municipal power plant in connection with water plant.

Cincinnati, O.—Service Director Sundmaker has submitted his new electric light specifications to Mayor Schwab, which, unless changes are made later at instance of civic organizations, will be basis for new 10-year light contract.

Defiance, O.—Defiance Gas and Electric Co. has asked Council for franchise to install \$30,000 heating plant.

Eugene, Ore.—Citizens will vote in April on establishment of street lighting system.

Upper Sandusky, O.—Plant of the Citizens' Light and Power Co. has been sold to American Gas and Electric Co., Providence, R. I., for \$19,900.

Klamath Falls, Ore.—Siskiyou Electric Co. will offer to sell city power for lights and other purposes, and allow city to use it as its own municipal lights and power to furnish to people; there is sentiment in favor of municipal ownership.—E. T. Sanderson, Mayor.

Ebensburg, Pa.—Ebensburg Light, Heat and Power Co. will improve plant, including installation of two dynamos.

Etna, Pa.—Borough Council is considering construction of electric light plant.

Hastings, Pa.—Establishment of municipal lighting plant is being considered.

Philadelphia, Pa.—Council is considering erection of 268 additional arc lights on 5th and Market sts.

Pottstown, Pa.—Philadelphia Suburban Gas and Electric Co. will erect power house; substation will be built at Sanatog.

Ward, S. C.—Council has passed ordinance for better lights.—C. L. Jones, Mayor.

Murfreesboro, Tenn.—John Davis and Tom Elam, owners of Murfreesboro light and gas plant, will install new plant in near future.

Nashville, Tenn.—Light department has asked Council for following appropriations \$15,000 to purchase material and complete underground wire system and \$14,280 for arc lamp equipment, wire, cross arms, insulators, etc.

Newport News, Va.—Establishment of municipal electric light plant is being considered; data has been secured by Alderman H. F. Grimes and Councilman E. C. Cox.

Clarkston, Wash.—Council has granted 50-year franchise to the Pacific Light and Power Co., Portland, permitting company to install and maintain gas mains; company will provide service by extending main from Lewiston.

Spokane, Wash.—Spokane Falls Gas Co. will expend large amount in improvements on its plant at Erie and Bradley sts.—A. Cantril, Manager.

Vancouver, Wash.—Cascades Light and Power Co. has been incorporated to develop water power on the north fork of Lewis River, to furnish electric power.—W. W. Arnold and W. P. Conaway, city Incorporators.

Wheeling, W. Va.—Wheeling Electric Co. has secured permission to erect pumping plant on 42d st.; electricity will be furnished.

Rio, Wis.—Lighting plant will be built by Columbia Electric Light and Power Co., Pardeeville; installation includes 150-h.p. boiler, one 125-h.p. Corliss engine, one 100-kw. 3-phase 60-cycle A.C. generator and necessary accessories.—Myron L. Aldrich, Pardeeville, Superintendent.

Viola, Wis.—C. R. Thompson, Richland Center, is planning establishment of municipal electric light plant; dam across Kickapoo River will be built.

Hamilton, Ont., Can.—The Dominion Power and Transmission Co. is planning for extension and improvements to its plant; cost about \$350,000; new substation will be built in city at a cost of about \$100,000.

Ottawa, Ont., Can.—Mayor Hopewell has recommended purchase in near future of a water power for light and power plant.

CONTRACTS AWARDED

Brooksville, Fla.—Furnishing machinery for municipal electric lighting plant, to Hillsborough Hardware Co., Tampa.

Belvidere, Ill.—To Public Service Operating Co. for lighting streets for 10 years.

Stafford, Kan.—Furnishing necessary equipment for electric light plant, to Joseph Bortenlanger, Omaha, Neb.

Dayton, Ky.—Bid of Union Light, Heat and Power Co., Newport, O., has been accepted by Board of Control for 20-year franchise for lighting city; contract will take effect June 1.

Beatrice, Neb.—Constructing lighting and water system, to Mathews Construction Co., Kansas City, Mo.; work will begin about Feb. 9.—W. K. Palmer Co., 717 Dwight Bldg., Kansas City, Mo., Engineers.

Calgary, Alta., Can.—To Chapman & Walter, Toronto, Ont., for supply of one 1,500-h.p. 2,300 volt, 3-phase, 60-cycle, 400 r.p.m. synchronous motor, to be directly connected to a 1,000-kw. d.c. 550-600 volt generator; also one 200-kw. motor generator exciter set; also complete switchboard apparatus—motor generator and exciter set manufactured by Dick, Kerr & Co., Ltd., switchboard by Cowans, Ltd., Manchester, England.

FIRE EQUIPMENT

Mobile, Ala.—Engine house will be erected at Springhall ave. and Ann st. during coming year.—P. J. Lyons, Mayor.

El Dorado, Ark.—Purchase of motor truck, electric engine and apparatus, 1,000 ft. of hose, 300 ft. of chemical hose, ladders, etc., is being considered.

Tempe, Ariz.—Mac Browning, representing Fire Department, has been instructed to secure latest prices on chemical engine.

Modesto, Cal.—Installation of fire alarm system is being considered and bids are being asked on auto chemical engine and hose wagon.

San Anselmo, Cal.—Plans by W. Garin Mitchell have been accepted for erection of combined fire station and town hall.

Hartford, Conn.—Fire Commissioners have asked for \$240,000 appropriation; improvement proposed includes rebuilding of

engines, improvement of one truck, base of motor car for one deputy chief motor hose wagon.

Albany, Fla.—Council will soon consider for erection of fire station No. 1.

Augusta, Ga.—Council has authorized the chairman of the Fire Committee and Chief of the Fire Department to receive proposals for the purchase of a high power mobile for use of the Chief.

Blidgeville, Ga.—Purchase of fire apparatus is being considered.

Chillicothe, Ill.—Fire and Water Committee has recommended purchase of hook and ladder.

Chicago, Ill.—Finance Committee has recommended election in April on \$1,855,000 for erection of fire and police station.

Clark, Ill.—Council will issue \$5,000 bids for fire engine.

Coshburn, Ind.—Mayor Spohn has recommended purchase of site for erection of fire station and city hall.

Baltimore, Md.—Fire Marshal Phil E. Fisher has recommended purchase of automobile.

Weymouth, Mass.—Purchase of automobile is being urged.

Worcester, Mass.—Fire Commissioner has recommended purchase of autos for Chief and Deputy Chief and installation of alarm headquarters in separate building.

Worcester, Mass.—Purchase of auto for fire station and auto chemical for Maple-district has been recommended.

Worcester, Mass.—Purchase of auto combination chemical and hose wagon has been recommended.

Duluth, Minn.—Fire Chief Jos. Randall has recommended erection of house at side and at West Duluth, supplying of side district with hall and apparatus, erection of blacksmith and wood shop, purchase of aerial truck and fire tug and installation of 10-circuit repeater with emergency switchboard.

Minneapolis, Minn.—Council will be asked to advertise for bids for high speed emergency hose and chemical auto; cost about \$10,000.—C. W. Ringer, Chief Fire Department.

St. Louis, Mo.—Purchase of 2,000 ft. of hose and erection of hose-drying tower is being considered.

Dayton, N. J.—Wm. R. Arbuckle, Superintendent Fire and Police Signal Systems, has recommended that number of new sign-boxes be erected and that all city wires be placed underground.

Meriden, Conn.—Architect Robert Morin, New York, has submitted plans for erection of engine houses No. 6 and No. 7, about \$5,000 will be expended.

Worcester, N. J.—Fire company has appointed committee to purchase extinguishers and other necessary apparatus.

Amsterdam, N. Y.—City desires names of manufacturers handling combination hose chemical auto trucks.—Alderman H. A. Cham, 17 E. Main st., Chairman Special Committee on Auto Fire Apparatus.

Waukegan, N. Y.—Erection of fire hall is being considered.

Wurtsdale, N. Y.—Village is contemplating purchase of auto chemical engine; village has no water system, therefore does not need to provide for carrying hose.

Lockport, N. Y.—Council will consider purchase of 1,000 ft. of hose.

St. Vernon, N. Y.—Plans and specifications have been completed for erection of proposed 6th ave. fire house.

Waukegan, N. Y.—Council is considering purchase of site for erection of proposed central fire station.

Warren, O.—Council has decided to purchase auto fire truck.

Weymouth, O.—City has sold \$2,000 bonds; to purchase fire engine and hose wagon with accessories will be purchased.

Waukegan Heights, Pa.—Citizens have petitioned Council to distribute fire alarm boxes and alarm bells or whistles at various points throughout borough; also to purchase apparatus in Williams and Euclid town.

New Castle, Pa.—Purchase of No. 1 motor, two auto combination engines and hose wagons carrying 35-gal. chemical tanks and two 14-ft. ladders, has been recommended.

South Bethlehem, Pa.—Fire Chief Thomas Higgins has recommended purchase of motor as auxiliary to fire alarm system.

Woodlawn, Pa.—Purchase of 1,000 ft. of 50-gal. chemical tank and wagon is being considered.

Waukegan, R. I.—Board of Fire Underwriters has recommended erection of brick fire station at Elm and Social sts. and in market sq. purchase of 75 ft. aerial truck, auto combination hose wagon and 1,000 ft. of hose; also minor equipment, including two turret nozzles.

Nashville, Tenn.—Council will consider following appropriations for fire department: \$2,500 to purchase fire hose, \$1,000 to purchase additional fire alarm boxes and \$1,000 for hose wagon.

Sherman, Tex.—Fifth Ward residents are urging purchase of steam fire engine.

Norfolk, Va.—Finance and Public Improvement Committees have jointly recommended erection of fire station at 11th st. and Williams ave.

Pulaski, Va.—Town is considering installation of fire alarm system in connection with town clock; cost about \$600.—A. T. Bones, Chief.

Puyallup, Wash.—Fire and Light Committee is considering petition for more equipment for fire department.

CONTRACTS AWARDED

Washington, D. C.—Erecting stone fire house at 28th and Pennsylvania ave., to Skinner & Garrett, \$22,427.

Mishawaka, Ind.—Furnishing auto fire truck, to American-La France Fire Engine Co., Elmira, N. Y., \$5,250.

BIDS RECEIVED

Long Beach, Cal.—Furnishing new motor-driven fire engine: Nott Fire Engine Co., Minneapolis, Minn., Nott 600-gal. per min. capacity, 90-h.p., \$10,000; Nott 1,000-gal. capacity, 100-h.p., \$11,000; Robinson Fire Apparatus Mfg. Co., St. Louis, Robinson 600-gal. capacity, 120-h.p., \$8,460; Robinson, 700-gal. capacity, 80-h.p., \$7,975; Webb Fire Engine Co., St. Louis, Webb, 600-gal. capacity, 90-h.p., \$8,500; Knox Automobile Co., Springfield, Mass., Knox 600-gal. capacity, 90-h.p., \$8,800.

Washington, D. C.—Construction of chemical engine house: R. J. Jennings, \$24,779; Thomas H. Melton, \$25,765; Boyle-Robertson Construction Co., \$23,923; Allen T. Howison, \$22,600; Burgess & Parsons, \$23,500; George E. Wyne, \$23,600; Hoge & Luebkert Co., \$23,932; McKay & Morris, \$24,846; Skinker & Garrett, \$22,527.

Moline, Ill.—Furnishing fire apparatus: H. W. Neuman Machine Co., Davenport, Ia., \$4,500; Webb Fire Apparatus Co., St. Louis, \$7,500 and \$8,500; Anderson Fire Supply Co., Kansas City, \$4,000 and \$4,500; Robinson Fire Apparatus Co., St. Louis, \$5,500 and \$9,000; Peter Pirsch, Kenosha, Wis., \$3,500, \$4,800 and \$9,500; Nott Fire Engine Co., Minneapolis, \$10,000; Seagrave Co., Columbus, \$4,200, \$4,700, \$4,400 and \$5,100; Knox Automobile Co., Springfield, Mass., Chief's runabout, \$3,057; this was the only bid submitted for chief's wagon; bids on hose trucks and engines, \$8,228, \$4,415, \$665, \$5,068, \$5,268; Pope-Hartford, Hartford, Conn., \$5,000; International Power Co., Providence, R. I., \$4,900; American-La France Fire Engine Co., Elmira, N. Y., \$4,750; E. D. Fisher & Co., Rock Island, \$3,500.—V. E. Brown, Chairman Fire Committee.

BRIDGES

Bridgeport, Conn.—Council is favorable to \$100,000 bond issue for erection of bridge across Pequonock River at East Washington ave.

Denver, Col.—Board of Public Works and Jefferson County Commissioners have decided to erect bridges over Dry Creek at 12th ave.

Chicago, Ill.—Finance Committee has recommended election in April on \$4,145,000 bond issue for erection of bridges.

New Orleans, La.—City will construct bridge across drainage canal near Lake Pontchartrain; City Commissioner Smith has estimated cost of repairing Hagan ave. bridge at \$4,800.—W. J. Hardee, City Engineer.

Bangor, Me.—Penobscot County is considering reconstruction of Bangor-Brewer bridge.—H. Dunn, Brewer, can be addressed.

Lawrence, Mass.—In special report to Legislature, Essex County Commissioners submitted plans for bridge over the Merrimack River; cost approximately \$363,504.

Pittsfield, Mass.—City is considering construction of a bridge across the Housatonic River at Elm st.; cost \$14,000.

Waltham, Mass.—City is considering construction of bridge to Weston across Charles River.—Bertram Brewer, City Engineer.

Kansas City, Mo.—Plans by County Surveyor J. M. Lindsey have been accepted for extension of north approach to 5th st. bridge over Kaw River; cost about \$8,000.

Rahway, N. J.—Council has passed resolution requesting the Board of Freeholders to place drawbridge across Rahway River from South Montgomery st. to Woodbridge road.

Trenton, N. J.—Bridge Committee of Board of Freeholders has decided to instruct County Engineer Epple to prepare plans for steel and concrete bridge over creek at Stockton st.; also plans for widening the bridge on River road, in Titusville.

Fulton, N. Y.—City is planning to erect bridge on Broadway.

Lockport, N. Y.—Council is considering rebuilding of 51st and Transit st. bridges.

Niagara Falls, N. Y.—Work on the 11th st. bridge over New York Central tracks will begin just as soon as \$15,000 bond issue is sold.

Niagara Falls, N. Y.—Superintendent W. E. Harries, of State Reservation, will ask \$8,000 appropriation for bridge from Goat to Luna Island.

Circleville, O.—Board of Commissioners of Pickaway County has approved plans and specifications for repairing bridge over Deer Creek in Deer Creek Township.

Portland, Ore.—City Engineer Morris has estimated cost of proposed South Portland bridge at \$1,232,000.

Pittsburg, Pa.—Council has passed ordinance providing for construction of the Point bridge, cost \$850,000 and bridge across Atherton ave. over Pittsburg Junction Railroad; cost \$85,000.

Plymouth, Pa.—State Water Supply Commission has approved application of Scofield Engineering Co., representing the County Commissioners of Luzerne County, for construction of a highway bridge across north branch of the Susquehanna River near Plymouth.

Scranton, Pa.—M. Ward Easby, Philadelphia, is preparing plans for a viaduct to be constructed at Mulberry st.; cost about \$250,000.

York, Pa.—Erection of concrete bridge across Furnace Creek in West Manheim Township is being considered by County Commissioners.

Chattanooga, Tenn.—Hamilton County Court has appropriated \$700,000 for bridges over Tennessee River.

Dallas, Tex.—Commissioners' Court has authorized \$23,000 bond issue for repairing 12 bridges.

Danville, Va.—Council will consider recommendation of Finance Committee for \$15,000 appropriation for construction of bridge at Union st.

Spokane, Wash.—Board of Public Works will ask bids for erection of \$40,000 bridge over Hangman Creek in Stafford's addition.

CONTRACTS AWARDED

Suisun, Cal.—Building bridge over Suisun Creek, to C. N. Gildersleeve, Napa, \$5,450.—C. G. Halliday, County Clerk.

Bridgeport, Conn.—To J. H. Doherty & Bros., by Public Works Director Kenney, for filling in approaches to the new Boston ave. bridge, 43c. per cu. yd. for dirt and \$2.65 per cu. yd. for removal of stone.

Marshalltown, Ia.—Building four bridges, to N. M. Stark Co., Des Moines, and to Wheeler Lumber Co., Des Moines, \$1,500 and \$6,268, respectively.

Kearney, Neb.—Furnishing lumber to Buffalo County during year and for bridge work, to W. T. Gibson, Lamp City.

Durham, N. C.—Erecting reinforced concrete bridge, 70 ft. span, across Eno River, to Carter Construction Co., Burlington, \$10,500.

Lockland, O.—Building concrete bridge on Cooper ave., to G. W. Knight, 3037 Woodbury ave., Cincinnati, \$13,971.

BIDS RECEIVED

New York, N. Y.—Constructing elevators, stairs, drainage, ornamental and electrical work for the anchor piers of Queensboro Bridge over the East River, between Manhattan and Queens Boroughs: Z. Wichers, 1135 Broadway, \$70,000; Charles Wille, \$69,724; Snare & Triest Co., 143 Liberty St., \$67,890; Charles Meads Co., 299 Broadway, \$57,300.

MISCELLANEOUS

Berkeley, Cal.—Plans are being considered by Council for erection of municipal incinerator on the site of one which private company has had under construction for past year; P. B. Dundon, Coast agent for the Standard Incinerator, has obtained preliminary data for submission of plans for modern incinerator.

Greeley, Cal.—Plans have been prepared and construction work will soon be begun on erection of jail; the building will be three stories high, of brick and concrete construction; cost about \$40,000.

San Anselmo, Cal.—Plans by W. Garin Mitchell have been accepted for erection of combined town hall and fire station.

Bridgeport, Conn.—Architect Jos. W. Northrop has completed sketches for small addition to city hall.

Jacksonville, Fla.—Board of Health is planning establishment of emergency hospital.

Charleston, Ill.—Coles County is considering election on \$40,000 bonds to erect almshouse.

Chicago, Ill.—Finance Committee has recommended election in April on \$1,855,000 bonds for erection of police and fire station.

Edwardsville, Ill.—Board of Supervisors has approved plans for improving county court house at cost of \$225,000.

Gaston, Ind.—Town Board is preparing to erect town hall and jail.

Goshen, Ind.—Mayor Spohn has recommended purchase of site for erection of city hall and central fire station.

Indianapolis, Ind.—Mayor Shank is urging \$50,000 bond issue for erection of four police substations.

Indianapolis, Ind.—Architect W. H. Gains has submitted to A. W. Butler, Secretary Board of State Charities, plans for county infirmary for Fayette County.

Lexington, Ky.—Park Committee of General Council has recommended appropriation of \$11,000 for Lexington parks and playgrounds.

Lynn, Mass.—Harbor Master P. C. Saunders has submitted plans for new boat, which he asks Council to purchase for his department; cost \$1,200.

New Bedford, Mass.—Park Board has asked for \$5,000 to build pond at Brooklawn Park and \$8,000 to build two shelter houses at Buttonwood and Brooklawn Parks.

Minneapolis, Minn.—Police Committee has been instructed to secure bids for auto ambulance.

Minneapolis, Minn.—Legislature will be asked to allow \$400,000 bond issue for hospital improvements.

Chaffee, Mo.—Lindsay Architectural Co., Sikeston, has prepared plans for erection of \$6,000 city hall.

Kansas City, Mo.—Plans by Fred C. Gunn, 700 Postal Bank Bldg., Kansas City, have been accepted for erection of two-story hospital.

Clifton, N. J.—Acquackanonck Township Committee has authorized Police and Fire Committee to purchase auto for Chief of Police Wm. Coughlan.

Perth Amboy, N. J.—Police Chief P. J. Burke has recommended purchase of fully equipped patrol wagon.

Bronxville, N. Y.—Citizens will soon vote on \$66,000 expenditure for purchase of land on Midland ave. for park purposes.

Buffalo, N. Y.—Board of Aldermen has issued \$200,000 bonds to build hospital for incipient tuberculosis.

Gouverneur, N. Y.—Citizens are considering \$35,000 appropriation for erection of town hall.

Lockport, N. Y.—Council has directed City Clerk Spalding to ask authorities at Washington to appropriate necessary sum for rebuilding piers at Olcott Beach and also for dredging of channel at that place.

New York, N. Y.—Calvin Tomkins, Commissioner of Docks, and Charles B. Stover, Commissioner of Parks, have submitted report to Mayor Gaynor regarding plan and cost of reclaiming land along Hudson River from 81st to 129th st.; plan includes covering tracks of New York Central Railroad with sheds, and constructing rip-rap wall along the water front, about 133 ft. wide at bottom, 76 ft. at top, and set in 10 to 30 ft. of water; also to fill in reclaimed space with about 1,251,515 cu. yds. earth and other material; cost, including rip-rap wall, filling, dredging for foundation, about \$1,007,461.

St. George, S. I., N. Y.—Police Department, New York City, is planning to establish four substations.—J. D. Herlihy, Police Inspector Borough of Richmond.

Akron, O.—Comfort station, cost \$5,000, will be erected at once.—J. W. Gauthier, Director of Public Service.

Cincinnati, O.—Council has appropriated \$6,000 to beautify park at Young and Ringgold sts.

Cincinnati, O.—Park Commissioners L. A. Ault, William Gilbert and George Puchta have decided to adopt the Kessler plan in its entirety for the development of the Cincinnati park system; preliminary work will be commenced at once; this will consist of planning for more playgrounds in congested districts and improvement of those already established.

Toledo, O.—Council has passed ordinance for erection of market house with concrete fronts at Erie and Short sts.; \$110,000 bonds will be issued.

Ontario, Ore.—Council has decided to erect city hall.

Altoona, Pa.—Board of Health has recommended installation of modern garbage crematory.

Washington, Pa.—Committee, Councilman Mevay Chairman, will consider erection of garbage crematory.

Chattanooga, Tenn.—Hamilton County Court has appropriated \$125,000 for erection of court house.

Nashville, Tenn.—Sprinkling department has asked \$1,100 appropriation to purchase additional sprinkling wagons.

Dallas, Tex.—Site at Commerce and Green sts. has been selected for erection of proposed city hall.

Fort Worth, Tex.—Citizens have voted \$120,000 bonds for purchase of sites and erection of police stations; \$20,000 for erection of hospital for poor, and \$15,000 for city warehouse.

Luling, Tex.—Council has passed order granting Civic Club permission to take control of city parks and beautify them as they might see fit.

Salt Lake City, Utah.—Chief of Police S. N. Barlow has recommended establishment of police patrol caiding boxes throughout city.

Nottaway, Va.—Nottaway County Commissioners have asked bids for erection of jail.—E. S. Deane, County Clerk.

Milwaukee, Wis.—Erection of emergency and detention hospital is being urged.

Winnipeg, Man., Can.—City is considering construction of a garbage destructor with daily capacity of 100 tons. Alderman A. Wallace is interested.

CONTRACTS AWARDED

Oakland, Cal.—By Board of Public Works, for dredging on Key Route Basin, on the west water front, to the Standard American Dredging Co., \$297,000; contract calls for removing 2,000,000 cu. yds. of dirt and depositing it behind the bulkhead; this will fill in and reclaim 400 acres of land belonging to the city.

Rockford, Ill.—Collecting garbage for next year, to C. Magnusson, \$4,674; other bidders: A. T. Anderson, \$4,944; A. O. Ferguson, \$4,800; Charles Johnson, \$4,775.

Hammond, Ind.—By Water Board, to Great Lakes Dredge and Dock Co., 38 Washington st., Chicago, Ill., for water tunnel under river at Calumet ave., \$9,200.

Louisville, Ky.—By Board of Public Works, for installation of electric City Hall elevator, to American Machine Company, Louisville.

Portland, Me.—Interior work on new city hall, to Norcross Bros. Co., Worcester, Mass., \$210,600 for masonry, plastering, carpentry work and miscellaneous finish work; for vacuum cleaning system, \$3,850; tower, clock and bell, \$2,275, and mail chute, \$690.

Cumberland, Md.—Removal of garbage, to A. L. Elosser, \$6,500; other bidders: C. E.

Danner, \$9,450, and Sylvester Ousborn, present contractor, \$6,938.

East Youngstown, O.—Building city building, to T. J. Skipp, city, \$9,675.

Martin's Ferry, O.—To John and Charles Rindler for removal of garbage.

Pnoenixville, Pa.—Removing garbage during year, to C. Y. Wilson.

BIDS RECEIVED

Mishawaka, Ind.—Furnishing police alarm system: National Police Signal Co., Buffalo, \$140 per box; Star Electric Co., for system, \$3,200; Gamewell Fire Alarm Co., for system, \$3,000; Dean Electric Co. systems, \$1,620 and \$1,375; Signaphone Alarm Co. system, \$1,840.

Boston, Mass.—Furnishing double and single teams for work in various sections of the city; Roxbury South and Jamaica Plain, 13 bidders: John H. Winsloe Contracting Co., lowest bidder for double teams, \$4.44 a day and for single teams, \$2.99 a day; T. J. Shea Co. submitted the highest bid, \$6 a day for double teams and \$4 a day for single teams; South End and Roxbury North District, ten bidders; John W. Collins, lowest bidder, double teams \$4.75 a day and single teams \$3.10; C. Duncan & Son, submitted highest, \$5.50 a day for double and \$3.50 a day for single teams; On West Roxbury specifications, nine bidders; George H. Noone and John E. Noble for \$4.70 for double and \$3 for single teams; T. J. Shea, highest bidder, \$6 for double and \$4 for single; work in Dorchester and Ashmont, five bidders; John H. Winsloe Co. lowest, \$4.39 a day for double and \$2.90 for single teams; for the Brighton district, Joseph McGreevey and M. F. Gaddis lowest for double teams, \$5 a day each, and McGreevey lowest for single teams, \$2.90 a day; work in East Boston, six bidders; John H. Carter lowest bidder, \$4.48 a day for double and \$3 a day for single teams; John H. Winsloe Co. lowest of six bidders in South Boston district; \$4.49 for double and \$2.99 for single teams; B. E. Grant lowest of three bidders for work in Charlestown; double teams \$4.50 a day and single teams for \$3.20.

Boston, Mass.—Removal of ashes: South Dorchester district, John H. Winsloe Contracting Co., \$17,610; John D. Lyons, \$18,700; D. M. Biggs & Co., \$19,500; John J. Loomie, \$19,950. West Roxbury district, John J. Moore, \$8,100; Thomas J. Shea Co., \$8,520. Dorchester district, John J. Bradley, \$21,500; John H. Winsloe Contracting Co., \$21,879; D. M. Biggs & Co., \$24,721; John J. Loomie, \$29,000. Brighton district, J. McGreevey, \$11,280; Joseph Sprissler, \$11,800; B. E. Grant, \$12,000; John H. Carter, \$14,503; John Kelley, \$15,425.

New York, N. Y.—Resurfacing floors at City Hospital, Blackwell's Island, City of New York: Rubin Solomon & Son, \$7,895; Rapid Floor Surfacing Co., \$6,750; M. L. O'Brien, \$7,500; Charles B. Tice, \$5,973; Andrews Floor Planing and Surfacing Co., \$6,485; the Floor Surfacing Co., \$10,562.

Philadelphia, Pa.—By Acting Director Haaskarl, of Department of Wharves, Docks and Ferries, for work of erecting superstructure of the new city pier now in course of construction, between Vine and Calowhill sts.; lowest bidder, the McCintie-Marshall Construction Co., Pottstown, \$314,000; other bidders: Sax & Abbott Construction Co., \$353,710; W. S. P. Shields, \$339,000; Costello & Co., \$343,648.12; James G. Doak & Co., \$344,482; American Paving and Construction Co., \$357,000.

TOO LATE FOR CLASSIFICATION

STREET IMPROVEMENTS

Birmingham, Ala.—Executive Committee of Jefferson County Good Roads Association has decided to urge \$1,000,000 road bond issue in Jefferson County.

Los Angeles, Cal.—Residents of Huntington Park have petitioned Board of Supervisors to build macadam highway on Slauson ave. from Compton ave. to city limits of Huntington Park; distance, less than one mile.

Freeport, Ill.—Board of Local Improvements has decided that all streets south of South Galena ave. to the city limits shall be paved with brick this year; cost about \$46,000.

Rockville, Md.—State Roads Commission is expected to begin soon work of picking the road from Rockville to Norbeck.

Fremont, Neb.—Paving of H st. is being considered.

Stuebenville, O.—Petition has been filed with the County Commissioners by George W. Morrow et al asking for a State Aid road in Island Creek Top, beginning at

Center Chapel church and running to intersect Richmond and Wintersville pike.

Hugo, Okla.—Council is considering building of two miles of pavement.

Oklahoma City, Okla.—Paving Committee is considering paving of Twenty-third st.

Dallas, Tex.—City Commission has ordered preparation of specifications by City Engineer Preston for grading a number of streets of city.

Dallas, Tex.—Council has received petitions for improving Colonial ave., Carroll and Munger sts.

Luling, Tex.—Election on \$50,000 road bonds is being considered.

Sweetwater, Tex.—Citizens have voted \$100,000 bonds for good roads.

Seattle, Wash.—Council has passed resolutions for planking California ave., grading 23d ave., and 26th ave. North and South.

Walla Walla, Wash.—Several miles of good roads are being planned; quantity of straw will be used.—L. V. Loehr, County Engineer.

Marinette, Wis.—Council has decided to pave six blocks with cement this year.

Saltillo, Mex.—Engineer Abbott has com-

pleted plans for paving 100,000 square meters of Saltillo street; plans are now being studied by Committee appointed by Governor del Valle.—Francisco Arizbe Ramos, Chairman.

CONTRACTS AWARDED

Dallas, Tex.—Street paving, to Texas Bitulithic Co. and D. J. Grisby.

Galveston, Tex.—Paving Ave. P with Coffeyville brick, to Kelso & Vautrin.

Seattle, Wash.—Grading 31st st., to Sloan Bros., 1073 E. John st., \$16,561.60; paving Western ave., to Ferguson-Cort Co., Arcade Annex, \$58,996.60; alley M. block 42, D. S. Maynard's Plot, W. J. Ruthe, 418 Highland drive, \$1,733.60.

Spokane, Wash.—Grading Dist. No. 681, to N. A. Jones, \$7,317; paving in Dist. 449, to Anderson & Liljebeck, \$4,185.

SEWERAGE

Nevada, Ia.—Election on construction of sewer system is being considered.

St. Paul, Minn.—Board of Public Works is planning construction of sewerage sys-

No. 5

LOCATING SUBSURFACE STRUCTURES

Work Done by Division of Substructures of Brooklyn, N. Y.—Method of Making Field Measurements—Value of Existing Records—Method of Mapping and Filing Records—Value of the Work

About 1905, when the Board of Estimate and Apportionment of New York City was considering the matter of municipal conduits for carrying fire, police and other wires, it was proposed to appropriate \$25,000 for the purpose of surveying and mapping the substructures of those portions of the city where it might be desirable to locate the conduits. This idea met with some opposition, the chief argument against it being that, in conformity with the other powers and duties vested in the Borough Presidents, this work also should be in their charge. This left each president to follow practically his own ideas in obtaining such information.

The president of the Borough of Brooklyn determined upon the organization of a Division of Substructures, and on Sept. 14, 1906, the Board of Estimate and Apportionment approved an appropriation of \$10,000 for this purpose, which fund became available for use about October first. During the remaining three months of that year such a bureau was organized by Assistant Engineer (now Engineer) Morton L. Fouquet, who was placed in immediate charge of the work, and who has continued in charge until the present time. An appropriation of \$16,000 was made in the budget for the year 1907 for this work, and \$23,000 for the year 1908. In 1908 the regularly organized force consisted of six in the field and five in the office.

During the four years since the division began actual work the force, which was selected with particular care, has remained practically unchanged, although somewhat reduced during the past year. This is very fortunate, since the work is in many ways more difficult than ordinary surveying, and the present force has developed an aptitude for it which it would be difficult to duplicate in a new or largely new set of men. With this force and with the work confined to the older and more congested section of the borough, approximately seventy-five miles of streets have been covered and the record maps for this area practically completed. In addition a mass of information has been accumulated covering other sections of the borough for future utilization.

So far the expenses of the division have been met entirely by appropriations. Ever since 1907 the board of aldermen has been requested to authorize the borough president to establish a schedule of fees to be paid by applicants for information, and an ordinance approved by the corporation counsel has been in the hands of the aldermen since early in 1909; but so far permission to make these charges has not been granted. The rates provided for in the ordinance are 8 cents per linear foot where a survey is necessary, and 5 cents where the information can be obtained from the office records alone, where the permit is for a structure 300 ft. in length; the minimum charge being \$5 where there is no field work and

\$10 where field work is required. Where there is a continuous run of substructure of between 300 and 2,500 ft. the fee would be 5 cents a linear foot; and where more than 2500 ft. 3 cents for the first 2500 and 3 cents per foot beyond that length. These charges are believed to be very moderate and very much less than it would cost the corporations to obtain less exact information in any other way. They are based on the charges made for similar information by the corresponding department in the city of Philadelphia, which for 25 years has been accumulating information and performing services similar to those undertaken by the Brooklyn Division of Substructures.

As in the great majority of cities there were, previous to the organization of this division, no complete official records of the location of the various water and gas mains, sewers, wire conduits, steam heating pipes, pneumatic tubes and other continuous structures, nor even of the vaults and tunnels constructed by abutting property owners. Those owned by private corporations were supposed to have been placed under a license issued by the city and to have brought more or less revenue to its treasury; but the city had no record of where such structures were located, or even of what structures might have been placed in any given street. Perhaps the greatest service rendered by this division is the possibility which its records offer of locating in advance the exact position which water mains or other structure can take in a street already crowded with similar structures. The previous practice had been for the city department or private corporation which intended placing a pipe or conduit in a given street to dig test pits at intervals of about a block or two throughout the proposed route in order to learn where it would be possible to locate such structure. Prior to the laying of the new high-pressure water mains in Brooklyn over 300 test pits were dug in the most congested part of the city, where they occasioned the greatest interference with traffic and deterioration of pavements, etc. Moreover, the information thus obtained by one corporation was seldom available for another and a duplicate series of test pits might be dug in the same street a few years later. This was not only very expensive, frequently costing thousands of dollars in connection with a single line of conduit, but was very detrimental to the pavement, which had to be broken in the digging of these test pits.

Not only was it true that the city was not acquainted with the location of private structures, but a great many of those built and operated by itself were but indefinitely or incorrectly located on the official plans. In a great many cases it was found that there was no reliable information as to where was located the pipe connecting a catch basin with the sewer, and the Division of Substructures sent men into the sewers and at the same time discharged water from fire hose into a catch

basin in order to determine where the point of discharge from this might be. With the information now made available, the president of the borough is enabled to regulate intelligently the granting of revocable consents and permits and exercise the authority vested with him of regulating and controlling all street openings in which definite locations for new work about to be undertaken can be so determined as not to conflict with existing substructures; and further space can be reserved in the streets for any contemplated municipal work.

A careful study was made of methods pursued in other cities in accumulating and mapping subsurface data, and the system adopted is in part the Philadelphia system, where a bureau of this character has been in existence for some twenty odd years and the information accumulated has proved of great value to the municipality.

Concisely put, the duties of the division are as follows:

DUTIES OF DIVISION OF SUBSTRUCTURES.

Accumulating all information obtainable by surveys and investigations as to the size, location and character of structures under the streets and avenues in the borough, and recording the same on durable maps.

Assigning definite locations for new substructures.

Reducing pavement mutilations to a minimum.

Conserving, as far as possible, for future utilization, subsurface spaces which are rapidly becoming one of the city's most valuable assets, and from which substantial revenues will be derived through future franchise grants.

Furnishing to applicants seeking subsurface space for tunnels, pipe lines etc., information as to the location and size

of existing substructures. Such information is required by the Board of Estimate and Apportionment when applications are filed for franchises.

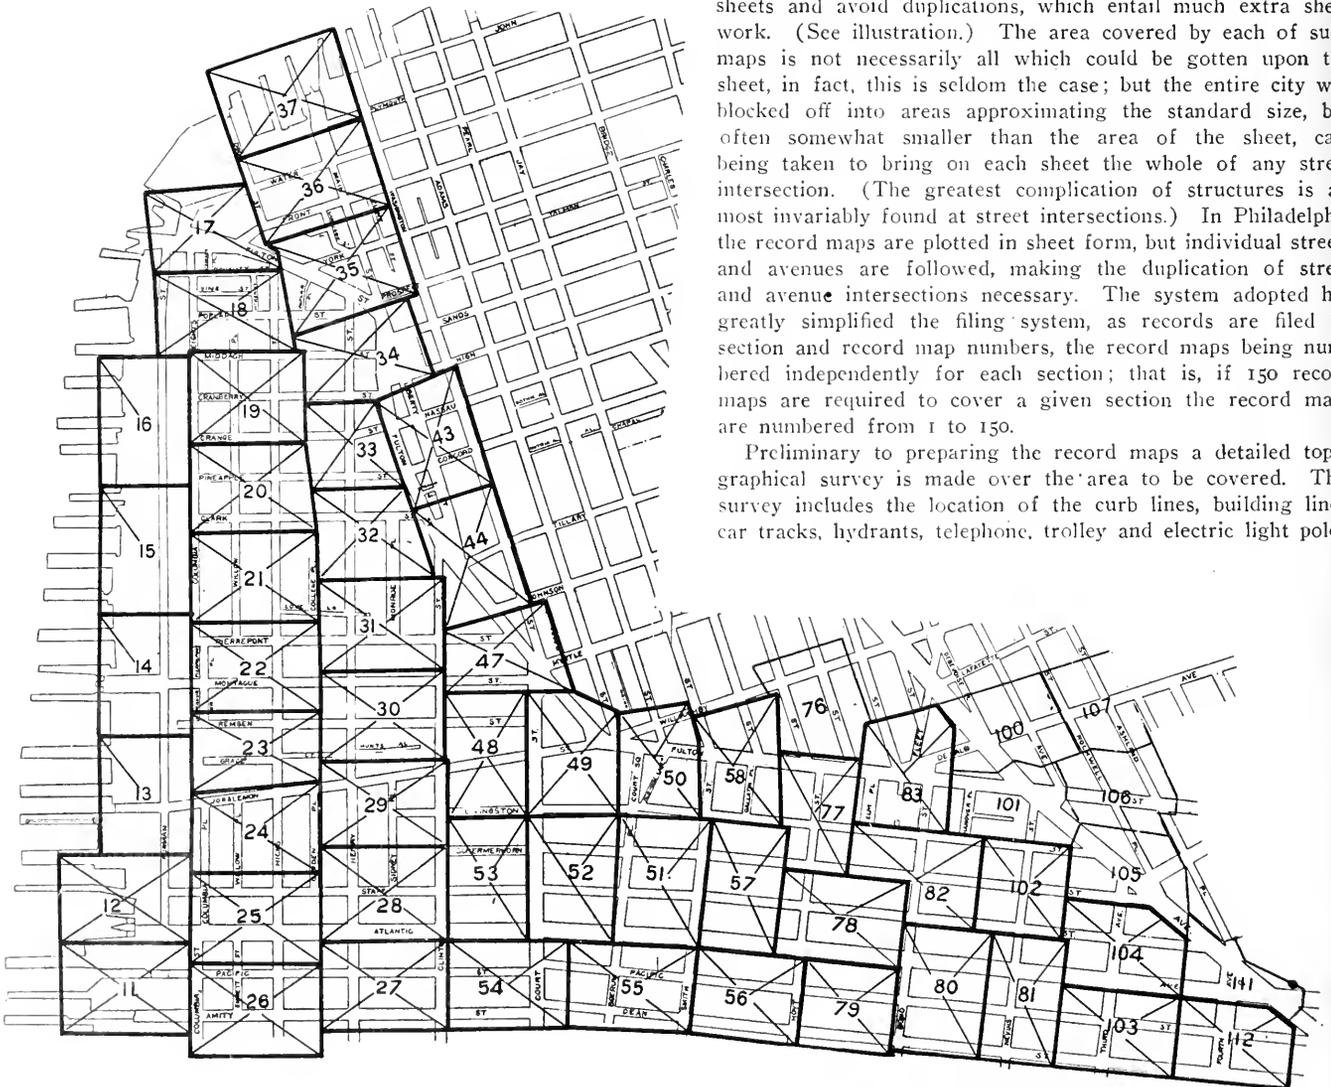

Furnishing other city departments with information to be used in connection with the location and construction of subways, sewers, water mains, etc.

The exaction of a moderate fee for information furnished to private individuals and corporations, the authority for which is to be covered by an amendment to Section 92, Code of Ordinances, now in the hands of the board of aldermen for adoption, thereby placing the division on a revenue earning basis similar to departments of like character in other cities.

METHOD OF PROCEDURE.

Record maps are in sheet form and plotted on durable cloth-mounted paper 32 in. wide by 42 in. long, to a scale of 20 ft. to the inch. To facilitate the carrying on of the work in any part of this large borough, which has an area of over 77 sq. miles, a highway system of over 1200 miles and a sewer system of approximately 900 miles, without confusion and possible repetitions, the borough was divided into twenty sections, and in treatment each section is kept separate and distinct. The sections are again subdivided into smaller sections approximately the size of the record maps. By the use of tracing cloth templates, representing the shape and size of the record maps, but drawn to a scale adaptable to the city atlas (which in this borough is 100 ft. to the inch), a record map layout is determined for any section or any part of a section in which it is desired to carry on subsurface work. By the use of this method most satisfactory results have been obtained, as it has been possible to represent a section on a minimum number of sheets and avoid duplications, which entail much extra sheet work. (See illustration.) The area covered by each of such maps is not necessarily all which could be gotten upon the sheet, in fact, this is seldom the case; but the entire city was blocked off into areas approximating the standard size, but often somewhat smaller than the area of the sheet, care being taken to bring on each sheet the whole of any street intersection. (The greatest complication of structures is almost invariably found at street intersections.) In Philadelphia the record maps are plotted in sheet form, but individual streets and avenues are followed, making the duplication of street and avenue intersections necessary. The system adopted has greatly simplified the filing system, as records are filed by section and record map numbers, the record maps being numbered independently for each section; that is, if 150 record maps are required to cover a given section the record maps are numbered from 1 to 150.

Preliminary to preparing the record maps a detailed topographical survey is made over the area to be covered. This survey includes the location of the curb lines, building lines, car tracks, hydrants, telephone, trolley and electric light poles,

MAP OF PART OF A SECTION, SHOWING RECORD MAP LAYOUT

elevated columns, manhole covers, gas drips, and, in fact, any object on the surface of the streets that will in any way serve as a guide in determining the location of substructures. Upon completion of this survey the notes are plotted in the office, and part of the field or outside force is assigned to the work of surveying the manholes or junction boxes.

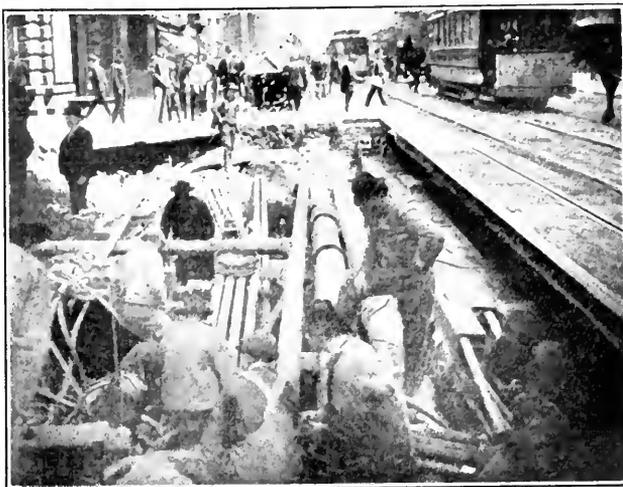

Prior to starting this subsurface work the engineer in charge of the division interviewed the heads of the various public service corporations, explaining the object and work of the division, and was uniformly successful in obtaining their co-operation, and they have responded promptly when requested to open manholes and junction boxes, by removing the heavy iron covers to facilitate the work of surveying the same. These surveys consist of taking full measurements to obtain the size, depth, number of conduits entering and leaving, and the location of the conduits with reference to the surface of the street and the nearest curb; also the location of any foreign pipe line passing through the boxes or manholes. After these surveys have been completed the information is plotted, and a representative is sent to the offices of the different public service corporations for all information obtainable relative to their conduit or pipe lines. Similar information is obtained relative to the location of the sewers, gas mains, water mains, etc. The measurement of the manholes is the most troublesome and time-consuming part of the work, from fifteen minutes to two hours being required to measure each one; but it is the most valuable, giving the exact locations of structures not otherwise obtainable.

One member of the force obtains each morning a list of street opening permits granted for that day and visits the openings within the district under investigation. It would undoubtedly be desirable to visit all the openings made in the borough, but as this frequently runs into the hundreds each day this would require a force out of all proportion to the number available for the work of the division. To partially offset this, however, it is proposed to require all corporations and others receiving permits for opening the streets and highways to deliver to the bureau, upon the completion of the work, a plan showing clearly and definitely the final location of the structure placed in said opening, with all dimensions given thereon, and also of any other structures encountered in making the cavation.

As far as possible the effort has been made to utilize all days when the weather conditions are good by having as large a force in the field as the funds available will permit; then during inclement weather the entire force is put on office work plotting and finishing maps.

In the past it was common practice, prior to the installation of substructures of any extent, to dig test pits to determine in a general way the route to be followed. This method always resulted in serious pavement mutilation, which in the future it is hoped to reduce to a minimum. But the test pits were necessary in the past and the division is ferreting out these old test pit records and through the co-operation of the department of Water Supply, Gas & Electricity alone has compiled over 3000 test pit records. Most of these pits were dug prior to the installation of the hydrants of the high pressure water system recently installed; and these, with test pit records from the other departments, have furnished many valuable data absolutely necessary in determining the location of substructures in the spaces intervening between manholes or junction boxes. In fact, not a stone is left unturned in the effort to obtain accurate information relative to substructures in the streets of the borough.

Upon accumulating such information the record maps are plotted and colored, black being used for the curb and building lines and trolley tracks, and distinctive colors for each one of conduits or pipes; water pipes being shown in blue, electric light and power conduits in red, gas pipes in green, telephone conduits in brown, etc. By using these distinctive colors the record maps are more easily read, and it is not a difficult matter to trace out a run of any particular pipe or

A GROUP OF SUBSTRUCTURES

conduit line. The maps are drawn very accurately to scale, so that all dimensions can be scaled from them. The location of each structure in a vertical plane is designated by the distance in feet and inches from its top surface to the surface of the roadway above. In most cases the dimensions also of the structure are given, thus indicating the depth of its under surface. The accompanying map, which shows a section of one of the standard sheets, gives an idea of the general appearance of the plotted data. The letter *c* following a dimension stands for the word "cover," and indicates the depth of the top surface of the structure below the street surface. Unfortunately, the colors cannot be reproduced here, but these tend to present much more clearly to the eye the relative location of the several structures.

In case more detailed information is required than is shown on the record maps it is readily obtainable through a systematic filing system. All the work of preparing these record maps is carefully checked before they are finally colored. Of course no one of these record maps is ever actually finished, as it is necessary from time to time to make corrections to accord with the installation of new substructures and changes in present substructures, which are constantly taking place; but a scheme of recording these corrections is used so that there is little difficulty in keeping the record maps correct to date.

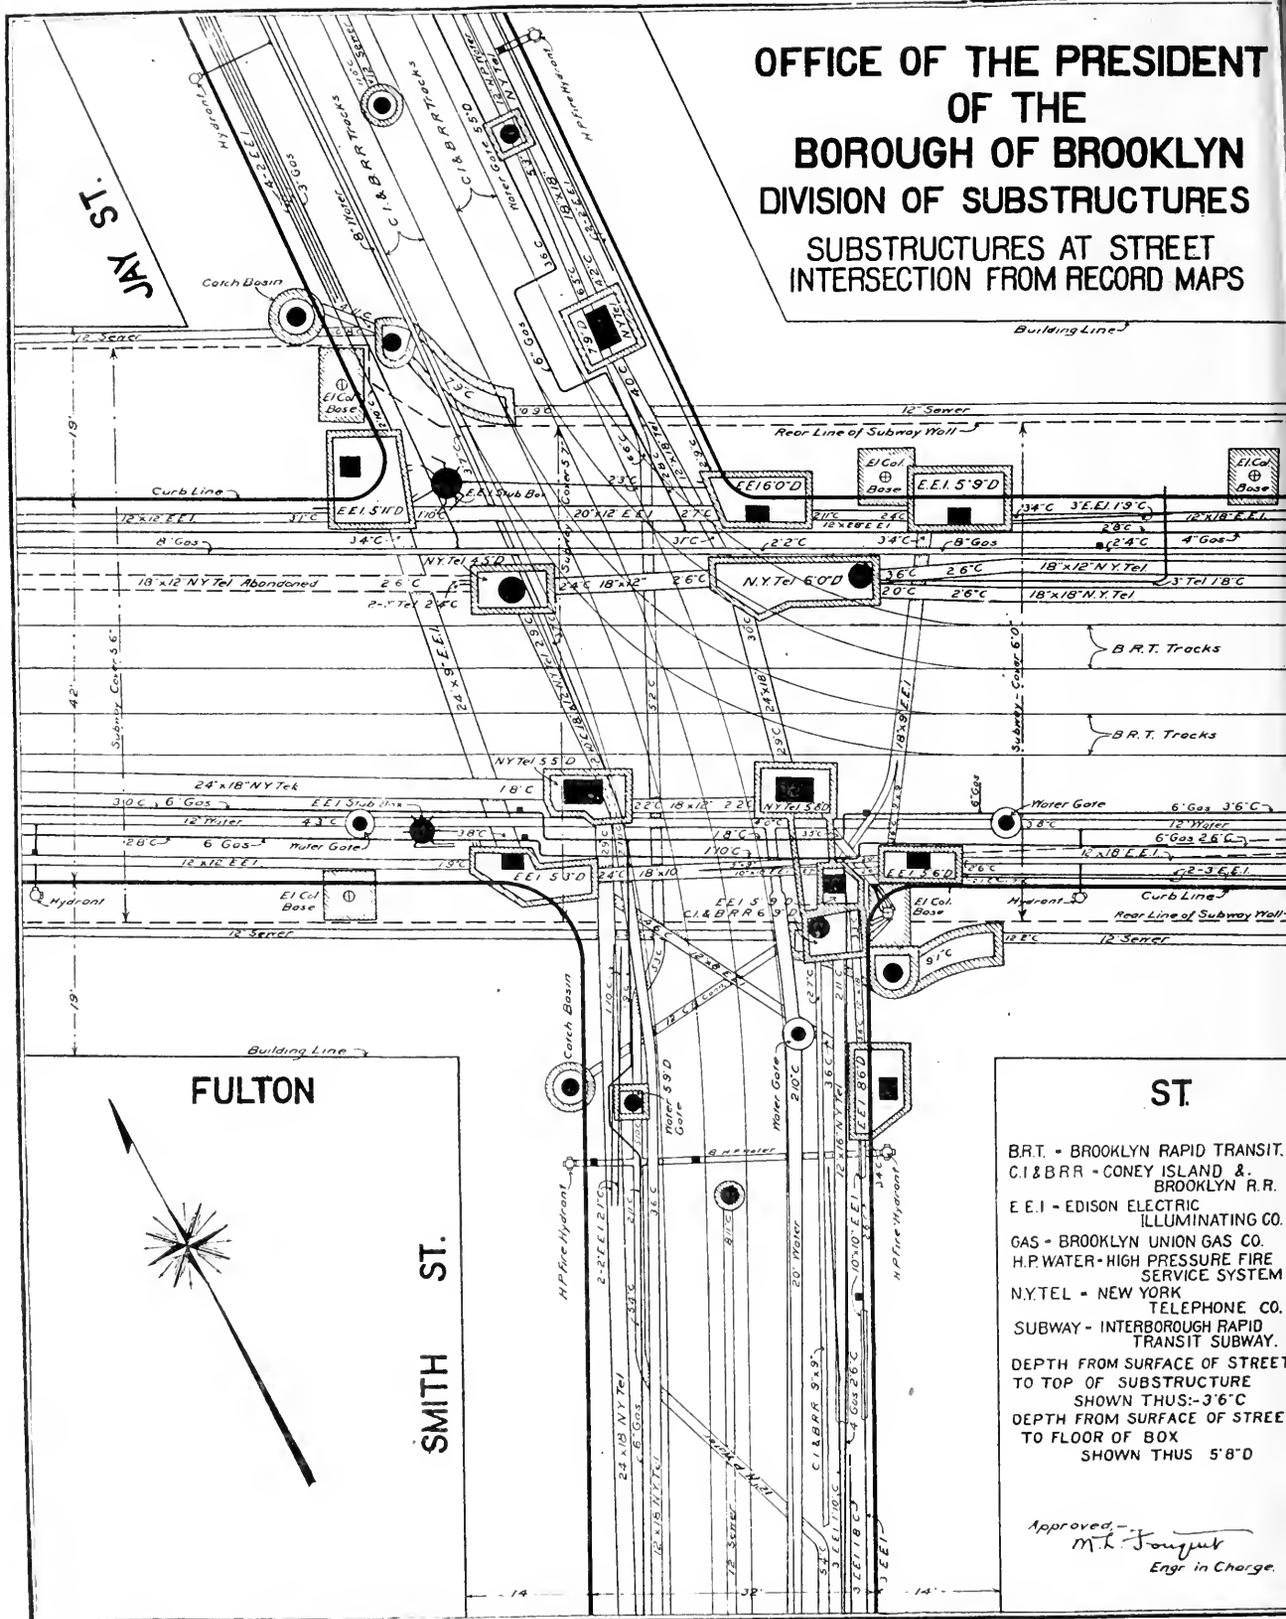

A great element of danger in the streets of New York is the explosions which occasionally occur in conduit manholes or junction boxes covering electric wires and cables, undoubtedly caused by an accumulation of gas being ignited by a spark from a short circuit or blowout. The employees of the division note in detail the condition of such manholes and boxes when they are being surveyed, especially as to the prevalence of gas and the presence in the manholes or in the walls of the same of gas, water and other pipes. In a number of cases gas pipes have been found running through manholes, and as these are, in the majority of cases, by no means tight at the joints, this may account for considerable of the gas which finds its way into the conduits. Information of such conditions is communicated to the corporations concerned as soon as it is obtained.

An idea of the amount of work required in making these surveys may be obtained from a statement of the work done during the year 1908. During this year 95,240 lin. ft. of curbs were located, 52,410 ft. of trolley tracks, and 85,700 ft. of building lines; also 318 hydrants, 174 catch basins, 1215 poles, etc., on sidewalks; 619 sewer manholes, 524 water supply gates and boxes, 10 fire department boxes, 385 boxes of wire conduits, together with a number of miscellaneous boxes, tubes, etc., including 181 gas drips; also 357 street openings and test-pits were visited and data obtained from them. During the year boxes, manholes, etc., were opened and measured, as described above, as follows: 1062 sewer manholes, 484 water-

supply boxes, 16 fire department boxes, 520 wire conduit boxes and 22 miscellaneous. The number of manholes, etc., opened and measured exceeded those located because of the fact that a considerable number of those located the year before had not been surveyed. Up to the present time about 80 miles of streets have been completed.

In making the locations and surveys several appliances especially adapted to this work have been developed or the use of

standard ones found especially applicable. Among the latter is the optical square. This is used for turning right at offsets from a transit line or from a curb in locating manholes, box covers and the like. In running the transit there is so much interference with transit work by the traffic both foot and wheel, that the line is chalked on the sidewalk between transit points and measurements taken from a chalk line to curb, building line, etc. Mr. Fouquet has

PART OF A RECORD MAP, SHOWING METHOD OF REPRESENTING DATA

used for making offset measurements a steel tape, the special features of which are that the graduations, which are similar to those on the ordinary ribbon tape, are placed on the left hand and the tape, passing in front of the body, will have the figures in reading position. For a handle on the reel a leather strap is provided on one side, so that the reel may be held much like a currycomb. When held in this position the notebook can be rested open on top of the reel and the measurements entered. It is the idea that the reel should always be held in the left hand, whether in use or not. Another appliance is a 16-foot pole used for surveying sewer manholes. This pole is hinged at the middle so it can be folded into an eight-foot length, a piece of slotted steel on one half the joint and a thumb nut on the other making it easy to tighten the two halves into a rigid 16-ft. rod. Graduations on the top and the foot numbers are burnt into the rod, as the rod is used, including the wash of sewage, would remove the figures and graduations in a short time. At the bottom of the rod are two pieces of iron, one six inches long in line of the rod, the other 12 in. long at right angles to the line. The latter is allowed to rest on the invert of any sewer which may be above the bottom of the manhole and the distance from the surface read on the rod; and the rod is then turned until the iron projection is in contact with the top of the sewer and the depth of this also read. This gives the vertical diameter of the sewer. If the horizontal diameter is less than two feet it can be determined approximately by turning the rod until the iron foot is at about the axis of the sewer and then revolving the rod until the foot comes in contact with the sides of the sewer. The 6-in. iron rod at the bottom of the main rod is to enable the depth of the manhole to be determined when there is a deposit in the bottom through which the iron foot might prevent the pushing of the rod proper.

The value of subsurface maps preliminary to the construction of public works of magnitude is well illustrated in the case of the construction of one of the most important substructures in New York, the rapid transit subway system. The engineers, in preparing the contract drawings and estimates for the construction of this vast system of tunnels, found it absolutely necessary to determine the subsurface conditions throughout the entire route, and, in fact, made subsurface maps as part of the contract drawings, giving the prospective contractor much valuable information as to the type and character of the substructure to be cared for during construction. This, without a doubt, resulted in a material saving in the cost of the work.

Another class of information of value to the city is the discovery of the existence of vaults and private tunnels. Several such have been found for which no legal authority has ever been granted, and the city is now able to collect fees for the use of several of whose existence it previously had no knowledge. In one instance there was a disposition on the part of the users of a large tunnel to combat the city's authority. This case is now in the hands of the corporation counsel, and will be fought in the courts.

The value of work of this character is now generally understood and the commendation of this division of the borough president's office by the commissioners of accounts in their recent investigation of the affairs of the borough evidenced the fact. The commissioners stated in part:

The desirability of such a bureau of information, whether the office of the Borough President or elsewhere, would appear to be unquestionable and the plan inaugurated in Brooklyn might well be followed elsewhere to advantage.

A similar department has recently been organized in the Borough of the Bronx. Prior to organizing, representatives of that borough were given every opportunity to study the Brooklyn system and have adopted it throughout. The Borough of Richmond also is about to start a subsurface department, and is profiting by the experience of the Brooklyn division.

LIFE OF WATER WORKS CONSTRUCTION

In a paper on "Depreciation in Water Works Operation and Accounting," which has just been published in the Proceedings of the New England Water Works Association, Mr. Leonard Metcalf, incidental to a discussion of the principles of depreciation, has introduced a number of data and opinions concerning the life of the various structures going to make up the ordinary water works plant. In a table he gives the maximum and minimum limits of the possible life of these several structures as follows:

	General limits of useful life. Years.
Water-works structures.	
Reservoirs	50-100
Steel standpipes	25-40
Masonry buildings	30-50
Wooden buildings	20-40
Filter plants, permanent construction	25-50
Pumping machinery, high duty in large units	30-50
Ordinary pumping machinery	20-30
Steam engines	15-25
Boilers	12-20
Electric generators and motors	20-30
Masonry conduits	50-100
Cast-iron pipe, large diameter:	
In non-tuberculating waters	60-100
In tuberculating waters	50-75
Cast-iron pipe, small diameter	30-50
Steel pipe	25-40
Wood stave pipe	20-30
Wrought-iron service pipes	15-30
Hydrants	35-50
Valves	40-50
Meters	15-25

Considering the plant as a whole he states: "The average length of life of water works plants depends upon many factors. Broadly speaking, from 40 to 60 years probably represents the usual range of life of the structures, except in the case of very rapidly growing towns or cities.

"The Wisconsin Public Service Commission, in a recent opinion upon the value of the Fond du Lac, Wis., water works, gives the average life of the different water works plants examined by it to date as 65 1/4 years.

"The U. S. Commerce and Labor Bureau, in its special report upon statistics of cities having a population of over 30,000, in which was included some valuable water works statistics, assumes a fifty-year period of life."

The Knoxville Water Company in a period of seventeen years showed an annual average rate of depreciation, exclusive of proper allowance for repairs and renewals, of 2.12 per cent.

Owing to the variation in the amount of gross income in water works, as compared with their cost or value, the depreciation thereon expressed in percentage of the gross income is correspondingly variable. Broadly speaking, however, it may be said that the depreciation is likely to amount to 10 per cent, more or less, of the gross annual income of the works. This is roughly calculated on the basis of a depreciation of one per cent per annum and a gross annual income of 10 per cent of the value of the plant. (One per cent annually contributed to a sinking fund would produce 100 per cent in 41 years, with interest at 4 per cent, or 47 years with interest at 3 per cent.)

In discussing the paper Mr. T. H. MacKenzie called attention to the effect which the nature of the plant would have upon the average life of the same. For instance, in a considerable part of New England the plants are gravity plants, and the reservoir would cost fully 40 per cent as much as the entire plant. The water is impounded by earthen dams, and if these are originally so located as to impound sufficient water no extensions of them are required, and they will remain for a century or possibly several centuries fully as effective as when first constructed. Mr. Metcalf replied that, while this was true in many cases, there would be others in which the functional depreciation—that is, the failure of the reservoir to continue to render adequate service, because of incapacity—may become a very important factor.

Concerning this matter of estimated life of structures Mr. Emil Knuchling stated: "Most of our data are of compara-

tively ancient origin and not based upon apparatus and materials used at the present time. On searching the literature of the subject it will be found that many of the figures are based on mere opinions, expressed many years ago before some commission or tribunal, and have been carried along by a variety of authors without any alterations founded on later experiences." It was considered by several of the speakers as fortunate that a committee of that association was endeavoring to collect accurate data on just this point.

As more or less intimately connected with this matter of depreciation of water works structures is that of depreciation in plants used by the department. In reference to this Mr. Metcalf referred to the allowances made by MacArthur Brothers Company for depreciation upon their plant used in the construction of the Cross River Dam for the Aqueduct Commission of New York City, the stated depreciations being monthly allowances. These allowances were as follows:

Plant items.	Monthly Depreciation. Rate allowed by Contractors.
Locomotives, cars, tracks, excavators, machinery, etc....	1.1 %
Scrapers, wagons, etc.; horses, mules, etc.....	2 %
Camp equipment.....	2 %
Small tools.....	5 %
Boats, scows, etc.....	4 %
Office furniture.....	1.1 %
Real estate.....	1/2 %

OVERCROWDING STREET CARS

A recent issue of the U. S. Consular and Trade Reports contains brief statements concerning the prevention of overcrowding street cars in nine European cities from which we abstract the following information: In Liverpool the regulation street car carries passengers on the upper deck, the lower deck seating 22 people and the upper deck 38. No passengers are allowed to stand on the upper deck, and there is an almost entire absence of crowding on the lower. During rush hours the number of cars is increased by 68 per cent. Passengers board the cars at the rear, the doors being wide enough to admit only one person at a time. When the car has been filled an iron gate is closed. The only statement of the number of passengers carried is that of the elevated railroad running the entire length of the city, 6½ miles, which carries an average of 24,000 passengers a day. Several New York lines carry ten times this number.

In Birmingham standing in the cars is prohibited by law, and the police have the authority to regulate the loading and unloading of passengers. This is systematized, the passengers being required to form on the street in two lines, one line for the lower and the other for the upper deck. The forming of these two lines is called the "queue," and is found in most cities in Great Britain. It is stated that the people take naturally to this through the habit of forming similar lines at the entrance to theaters. When all the seats are occupied the motorman draws a chain across the entrance, which is invariably at the front of the car, and the conductor across the exit at the rear. The consul making this report naively remarks that no inconvenience is caused by the enforcement of the law against crowding except to those at the rear of the queue. The quota of 76 cars running at five in the morning is increased to 273 at 7:30, after which the number fluctuates, being 226 from 6 to 8 p. m.

In Manchester four persons are allowed to stand inside a small car and six persons inside a large car. Here also the queue system is employed in the business centers or whenever there is a rush of passengers. The small cars carry 52 persons seated and the large cars 74 persons.

In Leeds the cars have a seating capacity of 58, and eight persons are allowed to stand. During the three rush hour periods the number of cars is increased about 30 per cent. It is estimated that two-thirds of those who use the cars live within two miles of the center of the city.

In Belfast overcrowding is prevented by the conductor closing the gate of the platform as soon as the car is full. Under certain circumstances eight persons are allowed to stand on the lower deck and the same number on the upper deck.

In Marseilles most of the cars accommodate 21 persons inside and 28 standing on a large platform. There are no double-deck cars. During rush hours the service is doubled and tripled on certain lines by means of trailers 25 ft. long.

In Brussels the majority of the workmen walk to their work and there is no trouble from overcrowding. The number of passengers which can ride upon the street cars is strictly limited and overcrowding is prevented by the conductors and the police. This regulation is said to delay passengers in getting about the city to a certain extent, although additional cars are added during the rush hours.

In Berlin police regulations provide that no more than seven shall stand in a car, and the number which may be carried is posted in a conspicuous place in each car. There are exceptional occasions, however, when a greater number may be carried, these being after 11 p. m. on week days, during sudden showers or snow storms, when traffic is interrupted, on occasions of parades, large funerals or public festivities and on Sundays and holidays after 3 p. m.

In Moscow, Russia, the cars seat 26 persons, and eight are allowed to stand on the rear platform of the trailer, but no one is permitted to stand inside the car nor on the front platform. Cars are compelled to stop on the rear side of each street crossing, whether any one desires to enter or leave or not. There are several peculiarities in the cars themselves, one being that no open cars are used in summer and that in all cars the windows on one side are fixed, while those on the other can be opened in warm weather; the object being to avoid cross drafts of air. Instead of bearing the name of the street or district to which it is going, each car bears a large number which indicates its route, small vest pocket books, sold at five cents each, giving a list of all the routes and their numbers.

GOOD ROADS TRAIN IN PENNSYLVANIA

A good roads train is to visit the cities and towns of the State of Pennsylvania, along the line of the Pennsylvania railroad, being operated by that road. The tour of education began Jan. 25, at Harrisburg.

This train will be in charge of the Pennsylvania State College, co-operating with the Roads Department of the National Government and the State Highway Department of Pennsylvania. The train, consisting of four cars, will be used for lecture purposes in villages and small towns along the lines of the Pennsylvania Railroad. One car will be fitted up with a lantern for the illustration of the lectures. Another car will be used for exhibits, showing models of several types of roads, such as earth, sand-clay, gravel, macadam, and telford. This car will also contain a series of photographs and drawings for illustrating the different methods of drainage and kinds of construction required for special conditions. Two flat cars will contain samples of the most important machinery required for service in road building, also a home made roller, drag, and sprinkling wagon. The exact cost and methods of construction of the roller and drag will be shown in detail.

The train will stop in each township along the railroad, where good roads meetings will have been previously advertised. Evening meetings will be held in theaters or court houses of the larger cities, while the exhibits will be open day and evening, with experts in attendance to give explanations and answer questions.

The Pennsylvania State College will have two experts on the train during the entire trip; the United States Government will send at least one of its best trained men, and the State Department of Highways of Pennsylvania will also be represented. Representing the Pennsylvania Railroad Company will be officers of the divisions over which the train will pass.

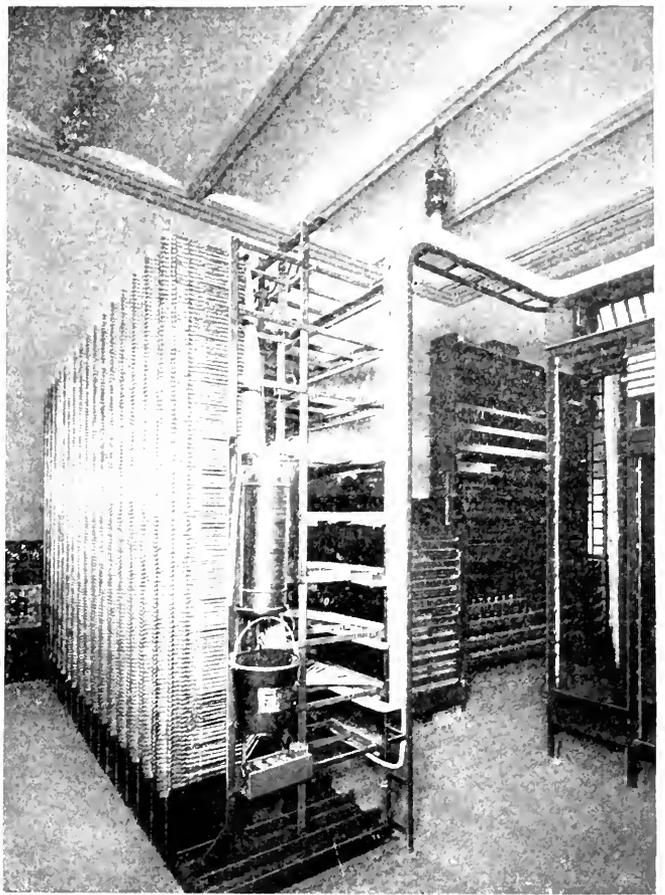

PHILADELPHIA MUNICIPAL TELEPHONES

Operates Six Hundred Local Stations—Special Service for Police Department—All Police Messages Recorded—Patrol Boxes

The city of Philadelphia has had in service since July, 1908, telephone system owned and operated by the city for the use of its several departments. This system is used for all telephone service in connection with hospitals, fire department stations, police stations and the several offices of the departments and bureaus throughout the city. The exchange for this municipal system is located in the city building, and is a thoroughly equipped central exchange, consisting of two four-position standard switchboard sections, accommodating seven regular operators and one testing operator. There is a capacity of 700 local lines and 200 trunk lines, although only about 600 local stations and about 100 trunk lines have yet been connected with the switchboard. All of the trunk lines are equipped with the visual "busy" signal; that is, there is connected with each multiple jack of the trunk line, in front of the operators, a green light which remains lighted while its respective trunk line is in use.

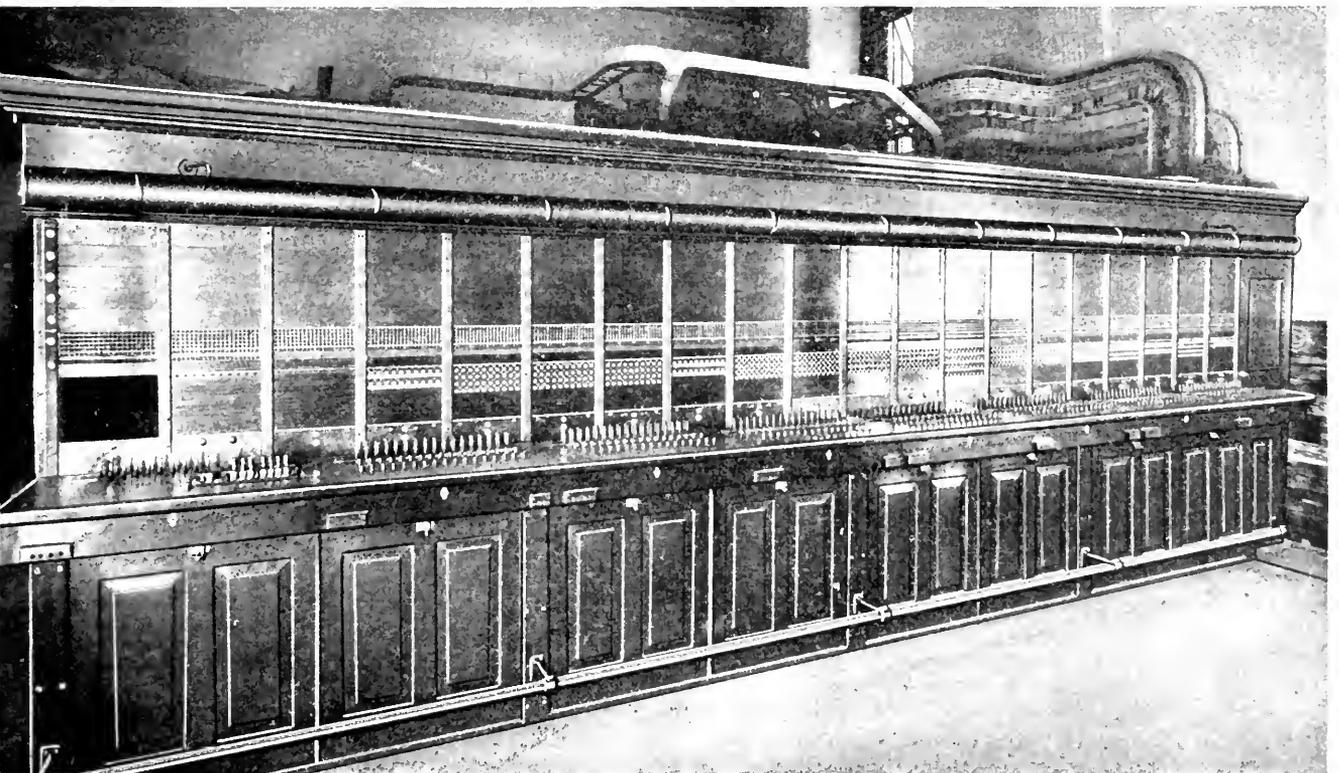

The police department is served by what may be termed a private police telephone system, which has an exchange switchboard located at police headquarters. At present there are something less than 100 local stations connected to this switchboard and 20 trunk lines, 10 of the latter being connected to the main municipal exchange switchboard. All of the police stations throughout the city are connected with this police exchange.

The wires and cables of this system are carried in underground conduits, of which the city owns an extensive system outright, and it also reserves the privilege of using one duct in every street conduit constructed or owned by private corporations. The smallest conductor used is number 18 B and S. The longest continuous connection is from the Holmesburg police station to the Chestnut Hill police station, through the city building, this requiring approximately 40 miles of underground cable.

MAIN DISTRIBUTING FRAME

The cables enter the city building through manholes or vaults and are there spliced, without fuses or other protective devices, to cables which hang in a vertical shaft. At the upper end these cables are connected to a distributing frame similar to the standard equipment found in large commercial telephone exchanges. This frame contains more than 100,000 soldered

SWITCHBOARD IN CITY HALL EXCHANGE

connections. The switchboard and general central office equipment were furnished by the Western Electric Company, and are similar to the type used by them for operating telephone companies generally.

At each of the police stations the terminal equipment consists of a standard telephone set equipped with a chest type transmitter and double-head receiver. The house sergeant is in charge of this and receives and sends all telephone messages. This set is attached to a standard typewriter desk in such a way that the sergeant can operate the typewriter while receiving and transmitting messages. An arrangement of jack, cord and plug is used, similar to that used at small switchboards.

The house sergeant receives all messages, both routine and special, and takes them down at once upon the typewriter, making three copies, one of which is for the lieutenant, captain or officer in charge of the station house; the second copies are turned in at stated intervals to the City Hall for filing, and the third copies are filed at the station house where received.

Patrol boxes are located in all precincts or districts, and each patrolman is required to communicate with his house sergeant at least once each hour, thus making it impossible for any of them to be off the beat for any length of time without detection. Chief J. T. McLaughlin designed a patrol box by which, should the calling patrolman desire, he may connect himself with the main police board at the city hall, "cutting past" the house sergeant. This is especially desirable when a patrolman wishes to give an alarm of fire, as all fire alarms are turned into the city hall before any of the signals in the fire house are struck. This box would also permit an inspector or detective to communicate with headquarters without the knowledge of the officer in a local station. Another feature of this box is that the patrolmen must pull the box, thus indicating its number, before he can telephone, and therefore cannot deceive headquarters as to the point from which he is telephoning.

A RUSSIAN TRICKLING FILTER PLANT

The city of Kharkov, of 250,000 population, has no public sewers, and the various hospitals and public and private institutions have individual purification plants. One of the largest of these is that of the municipal hospital, which takes care of the waste of 3,000 persons. In constructing this plant the amount of sewage was estimated at 10,500 cubic feet of water, or a daily capacity of 26 gallons per capita. At present the sewage varies between 3,900 and 4,025 cubic feet, or an actual amount of water used in the institution of from 13 to 14 gallons per capita.

The plant consists of a septic tank and three filter beds, one primary and two secondary. The primary bed has a filtering surface of 3,000 square feet, composed of several layers of coke; the bottom coke layer consists of pieces from 3 to 8 inches in diameter, the upper layers being each 4 inches deep and consisting of pieces varying from 2.4 inches to 0.3 inch in diameter. As originally designed, two additional layers of very fine sand were provided for, but this idea has been abandoned, as larger sized coke was found to give better aeration. The primary filter is divided by partitions into four beds, to each of which the sewage is discharged by siphon tanks. Each of these tanks holds 200 gallons, fills in 10 or 15 minutes and empties through the siphon in about three-fourths of a minute. The sewage is distributed onto the filter beds by seven iron channels placed 20 inches apart and equipped with 0.3-inch openings spaced 8 inches apart along each side. This primary bed, when filling at the rate of 1.8 cubic feet of sewage for each square foot of area, did not at first give very good results. The effluents showed an efficiency of only 40 to 50 per cent by the oxygen test, whereas it was considered that 60 per cent should be secured. This low efficiency was attributed to lack of uniformity in distributing the sewage on the beds and improper grading of the coke particles. After the bed had been covered with a layer of fine coke of 0.4 to 0.12 inch diameter, the filters gave satisfactory results.

The effluent from the primary bed passes to a septic tank, to pass through which requires from two to three hours, and then to the two secondary filters. These filters are built as percolators, each containing 400 square feet and being 3.3 feet deep. The top layer is of very fine coke 4 inches thick. The bottom layer is of coke in one filter and of slag in the other. To secure the maximum aeration the bottoms of the filters are covered with semi-circular pipes of 16-inch diameter. After two and one-half months operation these secondary beds were giving good results and producing a non-putrescible effluent, the efficiency by oxygen test being from 60 to 70 per cent. These filters were operated at the rate of 10 to 12.5 cubic feet per square foot of area (3,250,000 to 4,000,000 gallons per acre) per 24 hours. At times the water stood two feet above the top of the filter, when the surface became clogged. The surfaces of beds were cleaned once a month.

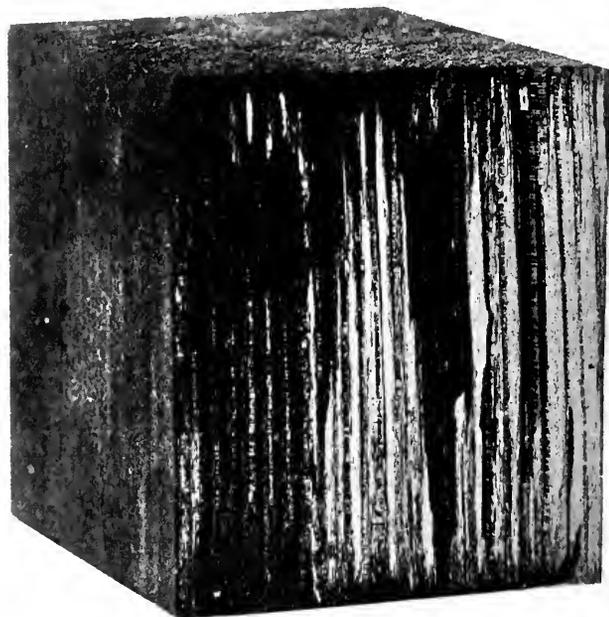

Experiments with this plant appeared to show that the two sets of filters gave better results than could be obtained with one set of filters only. In this particular case the use of three of the four primary filter beds gave as good results as when all four were in use, apparently showing that the capacity of this filter has not been reached. For this information we are indebted to an article in the *Gesundheits Ingenieur* by Mr. N. C. Malischewsky.

WOOD PRESERVING WITH ASPHALT OILS

A paper was presented before the Wood Preservers' Association at its meeting on January 19 of this year by Mr. Frank W. Cherrington, of the Indian Refining Company, in which he described experiments made and results obtained in the treatment of wood with asphaltic oils for the purpose of preserving it. No claim appears to have been made of any antiseptic quality in the asphalt or the oils accompanying the same, but the benefit claimed appeared to be entirely that of exclusion of moisture.

He stated that in 1885 a committee on wood preserving of the American Railway Engineering and Maintenance of Way Association reported that crude petroleum would prove a preservative so long as it continued to saturate the wood by exclusion of water, but that the evaporation of the volatile oils rendered it useless for this purpose. Concerning this, Mr. Cherrington stated that this was based upon experiments with eastern paraffine oils, which are not stable in their composition.

About 1901 the Santa Fe Railroad injected California asphaltic crude oil into pine ties and "laid them in a section of track in Southern Texas, where the climatic condition is one of the most

WOOD BLOCK IMPREGNATED WITH ASPHALT OIL

were for ties to be found in North America. A maximum quantity of oil was forced into these pine ties, the absorption per tie being, of course, dependent upon the amount of heart and sap wood in each tie." Oils from other sections of the country than California or Mexico were reported by the author to be too volatile and highly inflammable for this purpose in their natural state, but they can be refined to a desirable consistency.

Other experiments made on cross-ties were described. It was concluded from these that fairly good penetration could be secured in the various oaks, beech, gum, etc., when injecting all the preservative that the ties would absorb, this maximum amount being found to be about seven pounds per cubic foot. Short leaf pine ties were found to readily absorb straight asphaltic oil in larger quantities and with thorough penetration.

One test was made at Columbus, in which a paving block of standard size was treated with residual asphaltic oil to the amount of 16 pounds per cubic foot. It was then dried in an oven of a temperature of 120 degrees F. for a period of 24 hours, weighed and then immersed in clear water for a period of 24 hours. The gain in weight was found to be 0.02 of one per cent. "The same block, if treated with 20 pounds per cubic foot of creosote, would have been allowed to have absorbed as high as three or four per cent of water, by weight."

Other experiments were made with mixtures of 25 per cent creosote and 75 per cent of asphaltic oil, and these appeared to demonstrate that the two substances remained mixed while penetrating the wood, and that a very satisfactory penetration was secured by the mixture.

"It is readily admitted that the only value of asphaltic oil obtained from the central United States as a wood preservative would be by the injection of a maximum quantity of oil into the wood." It is stated that in the test of ties so treated by the Santa Fe Railroad, nine years' test has indicated that where maximum saturation had been obtained the ties had been well preserved during this time. Nothing is stated by the author to indicate that any actual test has ever been made of the use of this material as a preservative for wood paving blocks, but we believe it is the intention of the asphalt companies to demonstrate its value for this purpose.

CONCRETE WATER TOWER IN HOLLAND

A reinforced concrete water tower has been built in Leyden, Holland, which is described by the *Journal für Gasbeleuchtung*, from which we abstract the following:

In designing a water tank of about 300,000 gallons capacity, elevated on a tower about 65 feet high, it was first intended to make the tower of brick and the tank of iron. On receiving bids on this design and one for reinforced concrete, however, the latter was found to be much cheaper, the bid being \$22,500 against \$28,000 for the brick and iron construction. The reinforced concrete construction was therefore adopted.

The tower consists of 12 reinforced concrete pillars connected by two sets of horizontal braces. The spaces between the columns and the horizontal braces are filled with a brick wall, one brick thick, covered on the inside with a plaster coat. The twelve columns stand on a twelve-sided foundation formed by a complete duodecagon, having a cross-section similar to an inverted T. This foundation is supported by 240 piles 39 feet in length. It is $8\frac{1}{4}$ feet wide and 6 feet high, and was constructed of great strength in order to distribute uniformly along the piles the load contributed by the twelve columns. The columns are 4.95 by 1.98 feet at the bottom, reduced to 2.31 by 1.98 at an elevation of 23 ft., above which they continue at this size to the top.

At the height of about 30 ft. a series of concrete semi-circular arches are sprung from each column to its diametrically opposite one. These are in reality not complete arches, but are rather girders with an arched under surface which do not meet in the center but abut against a ring of concrete under the center of the tank. On the outer side of each column is constructed a bracket 1.3 ft. thick, and these brackets

and the arched girders before mentioned serve to support the tank. The tank is cylindrical, 46 ft. in diameter and 26 ft. high. The bottom of the tank has a thickness of 0.95 ft., and the walls are 0.99 ft. thick near the bottom and 0.33 ft. at the top. Both sides and bottom are reinforced. In order to protect the tank from temperature contraction and expansion it is inclosed by an outer wall or tank which is constructed of 12 reinforced concrete columns, each standing on the outer end of one of the brackets, which columns are connected at top and bottom by concrete beams, the rest of the space between being filled with brick work. The top is covered with a flat roof, in which is placed wire glass which serves to admit light into the tank. The balance of the roof is covered with a waterproof mastic and gravel and a low wall is carried entirely around the outer edge. Three lightning rods are provided on the roof.

A vertical concrete box is carried up in the center of the tower from the ground to the under side of the tank, which contains and protects the supply, drain and overflow pipes. This is rectangular in form and rests on 21 piles. Just outside of this are four columns extending from the ground to the under side of the tank, which serve as supports for a reinforced concrete stairway. These posts are connected at various heights by strong tie-beams. Near the top the stairway ends in a platform and is continued by supplementary stairs leading to the space between the shells of the tank and the enclosing structure. From this point access is had to the top of the tank by means of an iron ladder, which is suspended in this annular space from an iron rail carried around the top of the inner tank, which rail also carries a ladder inside of the tank. These ladders travel on this rail and can be pushed entirely around the tank, thus giving access to any portion of the inner or outer surface. A float with connection from the same to a valve at the top of the inlet pipe automatically shuts off the water when the tank has been filled to the desired level.

The concrete foundation ring is strongly reinforced, both longitudinally and in cross-section. The main columns have vertical reinforcements which are tied together with round iron hoops.

An effort was made to give a pleasing appearance to the tower. The concrete surfaces are finished with a coat imitating sandstone, and the brick work, while flat, is varied in coloring, the bottom being dark, the panels at mid-height being red, and the top brown.

COMMISSION GOVERNMENT IN NEW JERSEY

THE commission government idea has reached New Jersey, and a number of the cities of the State, including Trenton, the capital, are working for the passage of a bill by the present Legislature providing for the adoption of the commission form of government by any cities of the State which may so desire. On January 24 there was a State convention addressed by Mr. John MacVicar, of Des Moines, at which about 20 cities were represented, six of them by their mayors in person, and a State committee, composed of one representative from each city in the State which is interested in the problem, will meet shortly and prepare a draft of a bill which the Legislature will be asked to pass. As Governor Wilson is president of the Short Ballot Association, and the short ballot idea and the commission government idea have many features in common, it is believed that the movement will receive the support of the Governor. The movement, so far as Trenton is concerned at least, is being actively supported by the Chamber of Commerce of that city and the *Trenton Evening Times*.

As was shown by the list of cities which had adopted commission government, which was presented in these columns a short time ago, most of the cities which have adopted it are in the Mississippi Valley, Texas and Oklahoma; but present indications are that the movement will spread more or less rapidly and generally into the other sections of the country.

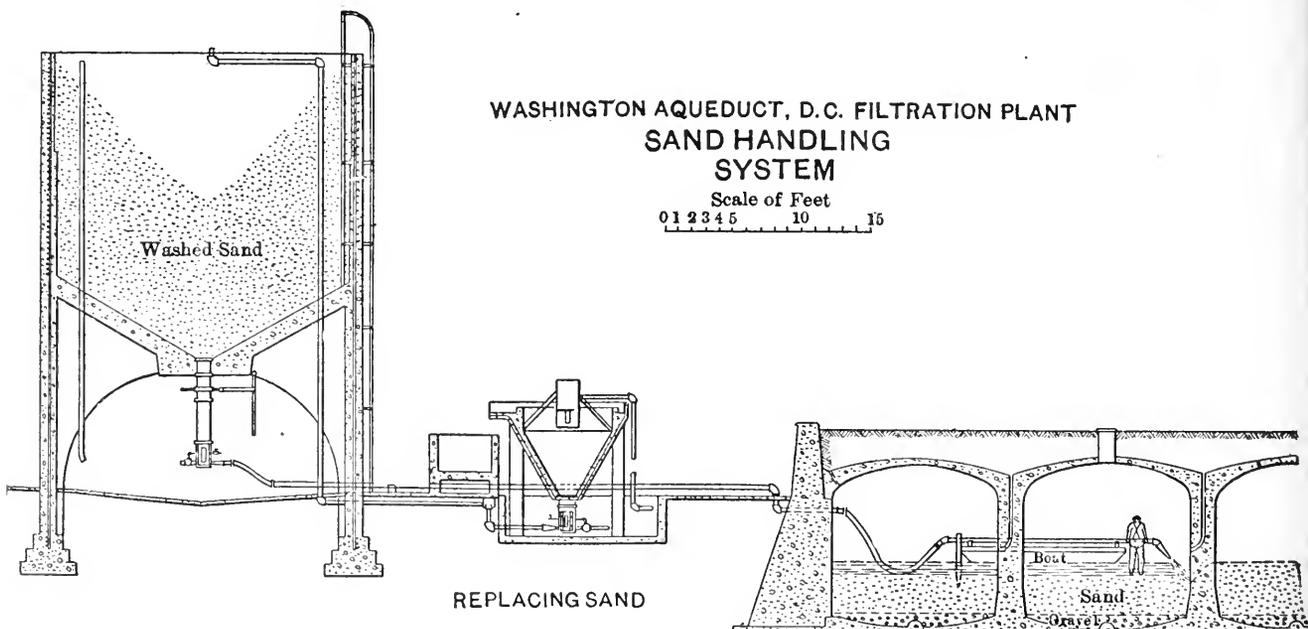

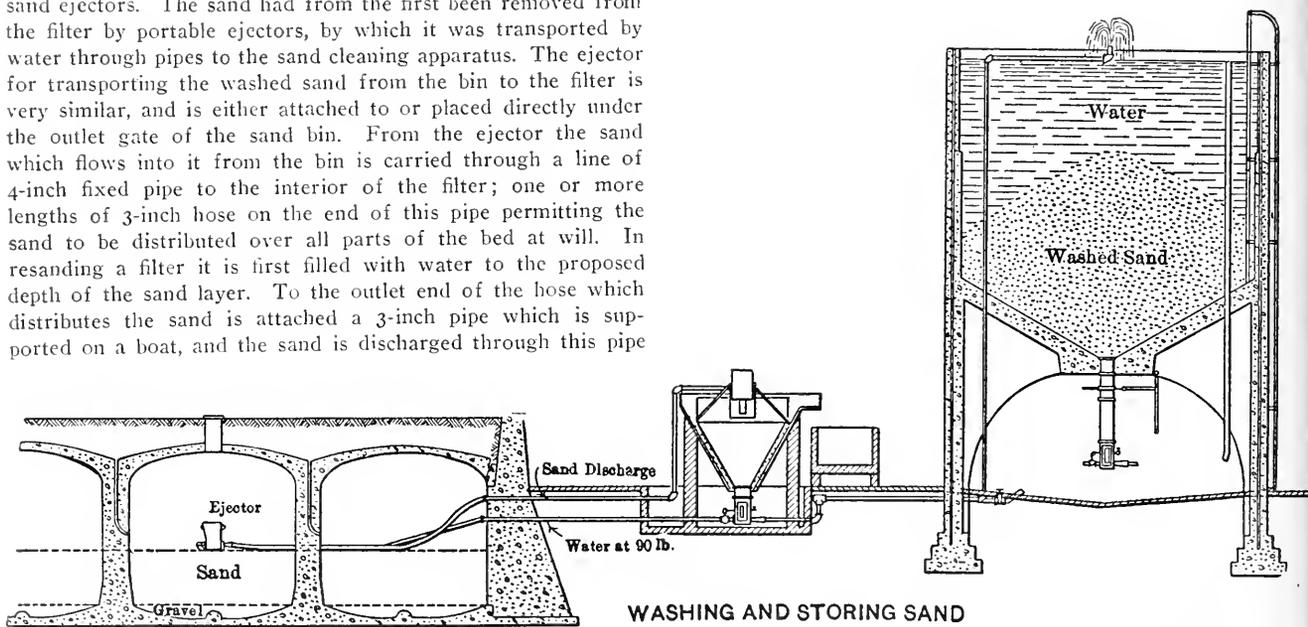

OPERATION OF WASHINGTON FILTRATION PLANT

Replacing Washed Sand by Ejectors—Amount of Sand Removed by Scraping—Cost of All Items of Maintenance—Experiments in Preliminary Filtration, Sedimentation and Rapid Filtration

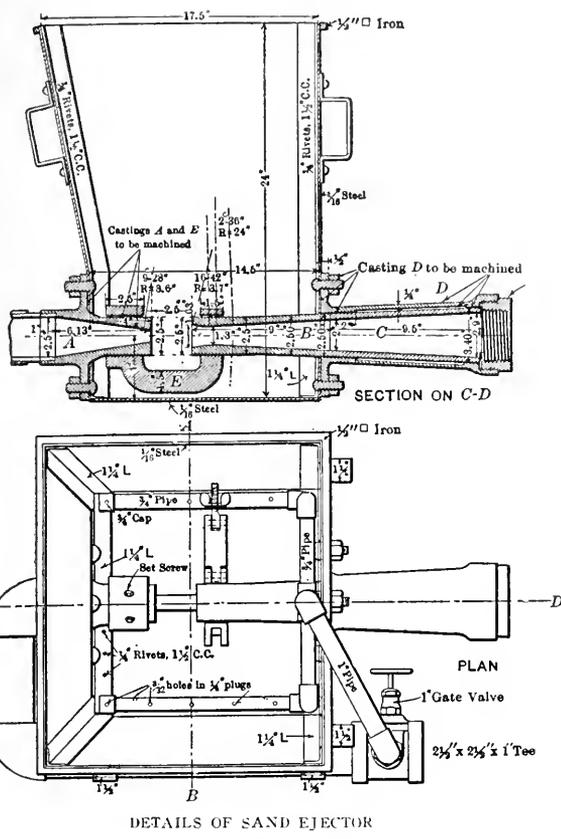

In a paper before the American Society of Civil Engineers, to be presented on February 15, and published in the Proceedings of that Society for December, 1910, Mr. E. D. Hardy, superintendent of the Washington, D. C., water purification plant, gives a description of some of the methods employed and results obtained during five years' operation of the plant. One of the most interesting of these is the manner of handling and washing the sand. His description of this we abstract as follows:

For the first three years of operation the sand was carried from the sand bins in carts and dumped through the numerous manholes of the filters into chutes, the lower ends of which could be pointed in any direction so as to facilitate the spreading of the sand evenly over the surface of the filter. About the middle of 1909 this method was abandoned for the use of sand ejectors. The sand had from the first been removed from the filter by portable ejectors, by which it was transported by water through pipes to the sand cleaning apparatus. The ejector for transporting the washed sand from the bin to the filter is very similar, and is either attached to or placed directly under the outlet gate of the sand bin. From the ejector the sand which flows into it from the bin is carried through a line of 4-inch fixed pipe to the interior of the filter; one or more lengths of 3-inch hose on the end of this pipe permitting the sand to be distributed over all parts of the bed at will. In resanding a filter it is first filled with water to the proposed depth of the sand layer. To the outlet end of the hose which distributes the sand is attached a 3-inch pipe which is supported on a boat, and the sand is discharged through this pipe

to the point required. Work is first begun at the far end of the filter, and the boat is gradually swung from side to side of the filter and at the same time backed toward the front end. At first it was feared that during the filling a small quantity of mud would be deposited on the surface of the old sand, and covered by the new layer, and that this mud would ultimately cause subsurface clogging. For this reason, when the process was first adopted, the sand was raked thoroughly just ahead of the discharge of the fresh sand. Later, however, it was found that by giving the end of the discharge pipe a slope of about 45 degrees from the horizontal the force of the current of sand and water would itself stir up the old sand sufficiently to prevent such a deposit forming. This latter method had been used almost exclusively for fifteen months

DIAGRAMMATIC SECTIONS SHOWING METHODS OF REMOVING, WASHING AND STORING SAND, AND RETURNING AND PLACING THE CLEANED SAND

DETAILS OF SAND EJECTOR

prior to the writing of the paper, during which time eleven filters had been resanded and 24,531 cubic yards of sand replaced without any indication having been observed of a loss of head due to subsurface clogging. The filters resanded in this way have been considered more efficient than those in which sand was replaced with carts.

During the year 1909-'10 the average depth of sand removed per month by scraping was 1.314 inches, there having been three months in which no sand was removed and one month (March, following a month when there had been no scraping) in which 3.64 inches were removed. In removing the sand from the filter the average monthly rates in cubic yards per hour during 1909-'10 varied from 6.2 to 11.8, the mean of the monthly rates being 9.2. In replacing the sand by ejector the average rate per cubic yard per hour varied from 7 to 17.7, the mean being 10.0. The cost of handling the sand, not including any charge for the quantity of water used, during the fiscal year 1909-'10 was as follows, the items being per million gallons pumped to the filter: Scraping averaged 5 cts., ranging from 3 cts. to 10 cts. Ejecting averaged 10 cts., ranging from 3 cts. to 21 cts. Washing averaged 1 ct., ranging from 0 to 4 cts. Smoothing averaged 1 ct., ranging from 0 to 2 cts. Raking averaged 1 ct., ranging from 0 to 2 cts. Resanding averaged 3 cts., ranging from 1 ct. to 27 cts. The total cost averaged 16 cts., ranging from 9 cts. to 57 cts. Stated in cost per cubic yard of sand handled, the monthly averages were as follows: Scraping, average 7 cts., ranging from 6 cts. to 12 cts. Ejecting, 14 cts., ranging from 9 cts. to 25 cts. Washing, average 2 cts., ranging from 0 to 4 cts. Smoothing, 1 ct., ranging from 0 to 2 cts. Resanding, 10 cts., ranging from 5 cts. to 17 cts. Total cost per cubic yard of sand, general average 34 cts., the monthly averages ranging from 25 cts. to 51 cts.

The cost of pumping water for removing and washing sand, including all labor, materials and repairs, was 6 cts. per cubic yard of sand ejected and washed; and 3 cts. per cubic yard was the cost of water for replacing the sand. The latter should be increased by one or two cents on account of the fact that while sand is being replaced a slight upward flow is maintained through the filter. This upward flow is not believed to be absolutely necessary but is always used as an additional safeguard against the formation of a layer of mud on the old sand.

The cost of operating the plant is given by Mr. Hardy in considerable detail, to permit the superintendents in other cities to compare it with figures for their own plants. The statement of expenses accounts for the entire appropriation for the care and maintenance of the filtration plant, including pumping water to the filters, parking and caring for the grounds, buildings, roads, sidewalks, etc. All of this is shown in two tables, one giving the itemized salaries and wages of employees, the other the cost per million gallons filtered for the several subdivisions of the expense account.

List of Employees, Rates of Pay, and Approximate Cost for Supplies

1 Superintendent	\$3,000.00
1 Chief Chemist and Assistant Superintendent	2,100.00
1 First Assistant Chemist	1,500.00
1 Second Assistant Chemist	1,000.00
1 Stenographer and Clerk	1,200.00
1 Surveyor	1,200.00
1 Laboratory Helper	720.00
1 Janitor	600.00
1 Chief Steam Engineer	1,800.00
1 First Assistant Steam Engineer	1,440.00
1 Second Assistant Steam Engineer	1,080.00
3 Oilers, at \$900 each	2,700.00
3 Firemen, at \$900 each	2,700.00
3 Laborers, at \$540 each	1,620.00
1 Filter Foreman	1,200.00
2 Foremen, at \$900 each	1,800.00
1 Timekeeper	900.00
3 Watchmen and Gauge Tenders, at \$900 each	2,700.00
1 Machinist	1,140.00
1 Blacksmith	900.00
1 Storekeeper	900.00
1 Painter	900.00
1 Mechanic	900.00
1 Electrician	900.00
4 Skilled Laborers, at \$600 each	2,400.00
1 Watchman and Special Officer	900.00
1 Recorder	720.00
27 Laborers at \$1.50 per day, for 300 days	12,150.00
3 Teams at \$2.00 per day, for 200 days	1,200.00
Laboratory and office supplies	2,700.00
Filter supplies, tools, hose, repair of roads, parks, shrubs, etc.	8,820.00
Pumping station supplies, oil, waste packing, repairs, etc.	3,570.00
3,000 tons of coal, at \$3.15 per ton	11,340.00
Charges in U. S. Engineer Office, labor	2,900.00
Charges in U. S. Engineer Office, materials	400.00
Total	\$82,000.00

EXPERIMENTS IN PRELIMINARY TREATMENT.

Another subject to which a considerable part of Mr. Hardy's paper was devoted was a description of the several experiments in preliminary treatment which have been conducted by the department during the past few years. It had been anticipated in designing the present filter plant that preliminary treatment—sedimentation or something similar—would be desirable in connection with slow sand filtration, Messrs. Hering, Fuller and Hazen having suggested sedimentation, assisted by coagulation. There was, however, considerable prejudice against the use of a coagulant, and the bill providing for the construction of the filter plant made no appropriation for any such preliminary treatment. As stated in these columns a week or so ago, experience with the plant has indicated the necessity of some preliminary treatment if acceptable results are to be obtained. Those in charge of the filtration have realized this, and about four years ago began operating an experimental plant to determine the most effective method of preliminary treatment. The experimental plant consisted of three cylindrical concrete filter tanks, each 10 feet in diameter; these tanks being filled with the same gravel and sand which was used in the operating filters in order to duplicate as exactly as possible the large slow sand filters of the existing plant. In addition, appliances were provided for experimenting with various kinds of preliminary treatment. Two

of these consisted of rapid filtration through different media, and a third consisted of sedimentation combined with coagulation. The size of the sedimentation tank bore the same ratio to that of the experimental filter tanks that the Georgetown and McMillan Park reservoirs do the large filters of the plant.

The first preliminary filter was very similar in construction and operation to a mechanical filter, but the sand was the same as that used for the main filters and consequently finer than that generally used in mechanical filters. The second preliminary filter was a Maignen "scrubber," consisting of a cylindrical concrete tank four feet in diameter and eight feet deep, which contained as a bottom layer 12 inches of cobblestones, on which were successive layers of 12 inches of egg-size coke, 12 inches of stove-size coke, 24 inches of nut-size coke, and 24 inches of sponge clippings.

These preliminary filters were operated at the rate of about 50 million gallons per acre per day, and the three slow sand filters treated the effluent from these at rates of from three to four million gallons per day.

These several tanks were connected together in pairs and designated by numbers for convenience in reference; the rapid sand filter with its slow sand filter being designated as No. 1, the Maignen scrubber and its slow sand filter as No. 2, and the coagulating sedimentation basin and its slow sand filter as No. 3.

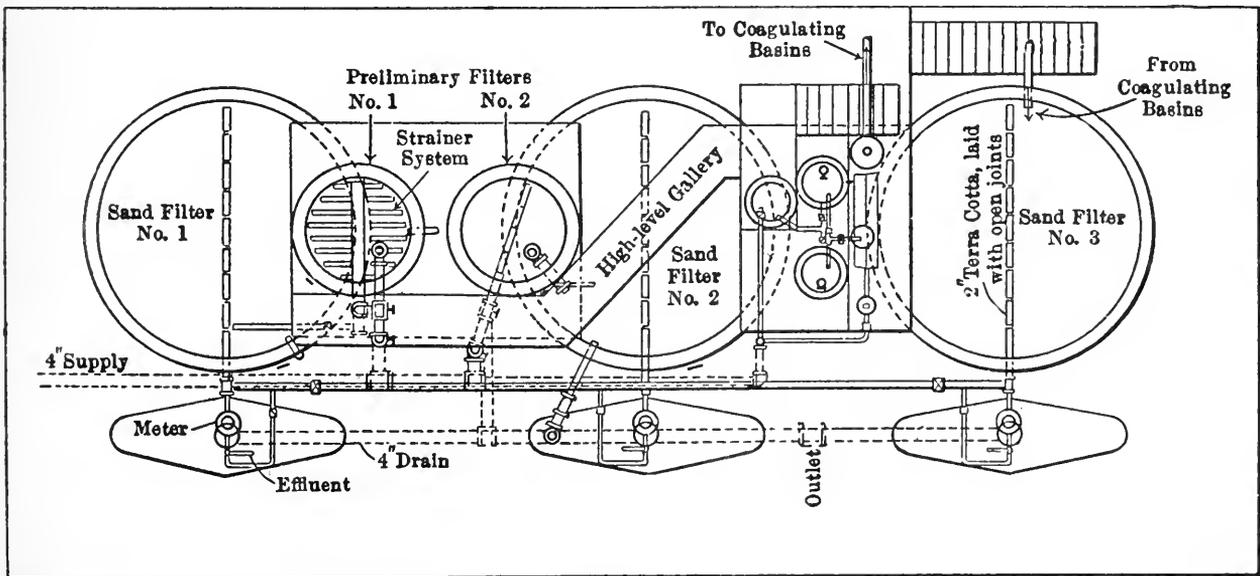

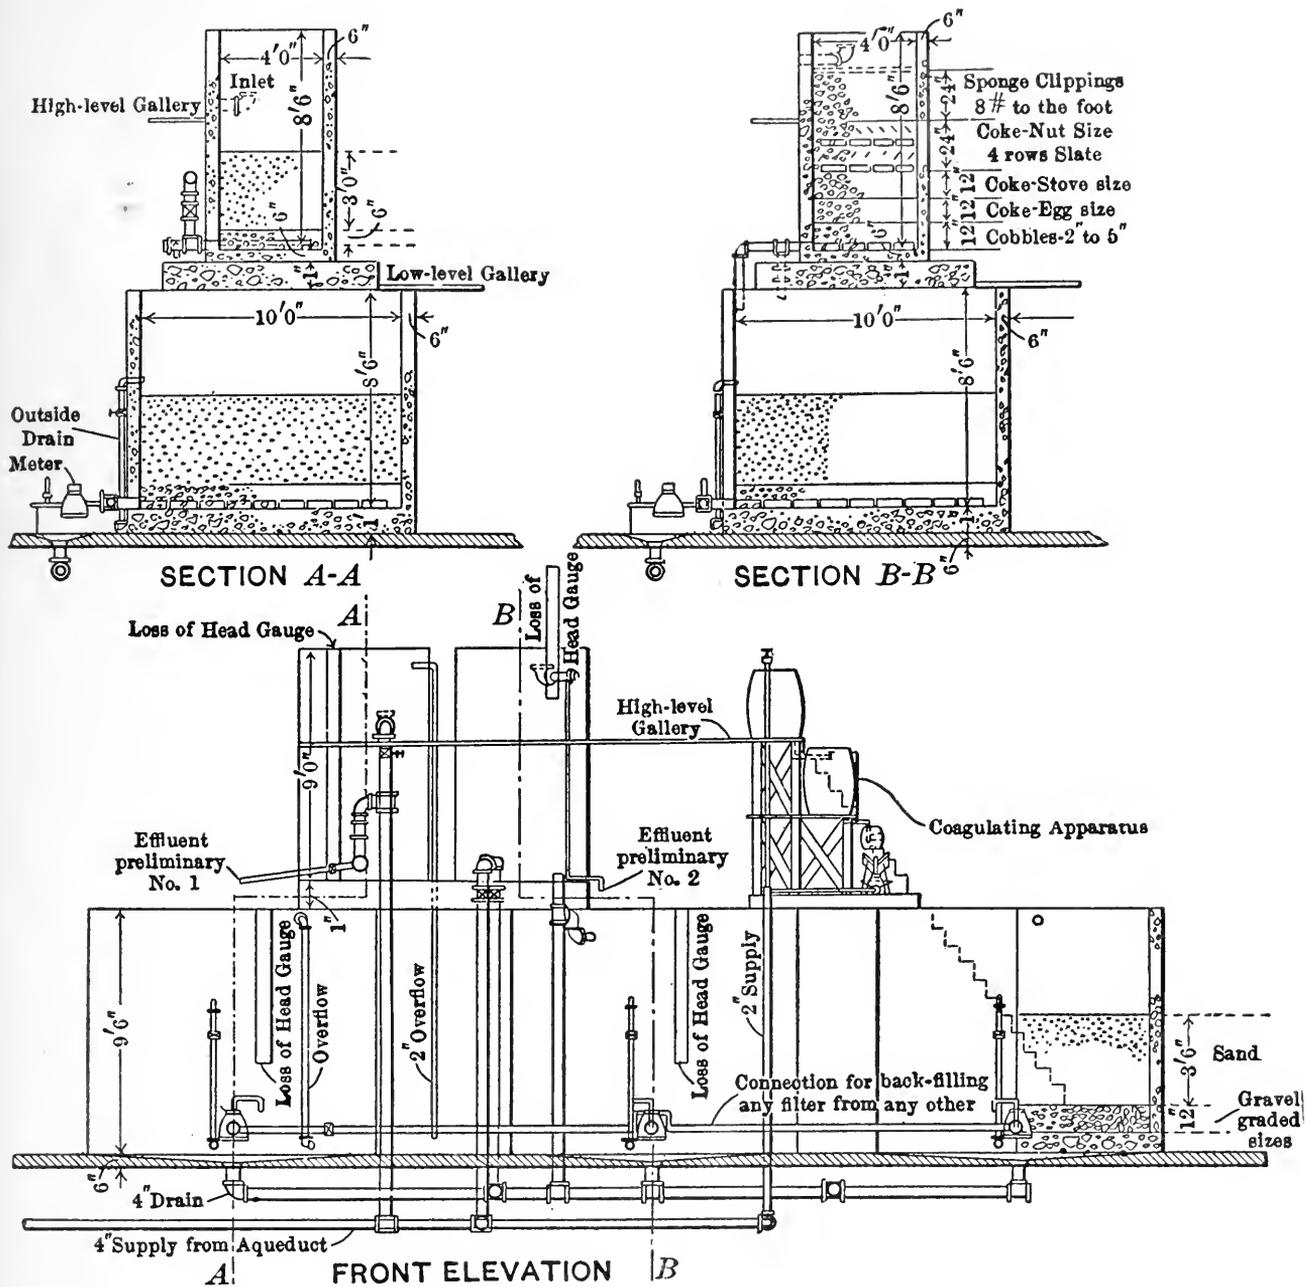

Plant No. 1 ran for from ten days to two weeks between washings at first, but this rapid rate carried the clay to a considerable depth into the preliminary filter, so that the runs gradually decreased in length until they were reduced to about three days. This, together with the necessity for using unfiltered water for washing, made it necessary to at length remove all the filtering materials and clean them. When it was possible to operate this preliminary filter at all it gave excellent results except at times of high turbidity, when the exceedingly fine mud passed through both preliminary and slow sand filters.

Plant No. 2 proved more economical and convenient in operation, but somewhat less efficient than No. 1. In operating this plant sulphate of alumina was used as a coagulant when the applied water contained too much turbidity to be treated satisfactorily by the slow sand filter. Plant No. 3, however, could be depended upon to produce good results under all conditions of turbidity. As an illustration of the operation of these three experimental couples with very turbid water, the figures of Jan. 16 may be given. On this date the turbidity of the raw water was 360, that of the effluent from preliminary filter No. 1 was 210, that from preliminary filter No. 2 was 247, and that of the effluent from the coagulating basin was 5. With these effluents applied to the corresponding slow sand filters final effluents were obtained from plant No. 1 with a turbidity of 37; from plant No. 2 with a turbidity of 42 and from plant No. 3 with zero turbidity.

Plants Nos. 2 and 3 were operated for about 18 months. After being operated about a year plant No. 1 was replaced with a Puech system of five filter units in series, which was no more effective than the simpler preliminary filters.

EXPERIMENTS IN RAPID FILTRATION

Another series of experimental tests was conducted for about 18 months, the object of which was to study relative efficiencies and costs of operating slow sand filters at different rates. For these tests cylindrical galvanized iron tanks four feet in diameter and nine feet high were used. The same sand was used for these as was used in the actual filter plant. These filters were operated at rates of one million, three million, six million, ten million, and, for a short time, thirty million gallons per acre per day; the last being reduced, after running for two months, to about seventeen million gallons. A sixth filter was started at the rate of one hundred million gallons, but it was found practicable to maintain this for only a few days at a time, after which the rate was kept as high as possible for the remainder of the run. The results obtained by this experimental plant were tabulated by Mr. Hardy in his paper, but no synopsis or discussion of the same is given by him: The table is presented herewith.

PLAN, ELEVATION AND SECTIONS OF EXPERIMENTAL FILTERS

Filter number.	1	2	3	4	5	6

Coli tests presumptive.

From this table it will be noticed that, though the average rates for filters 5 and 6 were greater than that for 4, the average amount filtered per acre per run was less, filter No. 4 showing the maximum. Comparing the amount of sand used per million gallons filtered, we find that filter No. 2, with a rate of $3\frac{1}{4}$ million gallons per acre per day, showed the minimum amount. It is noticed in the figures for initial loss of head that in the case of the first four filters this loss is roughly proportional to the rate of filtration. In reduction of turbidity it is seen that filter No. 4 was even more efficient than No. 3, although the rate was about fifty per cent higher. In reduction of bacteria there was remarkable similarity between all the filters, those with the highest rates showing even better results than No. 1 with its very low rate. The tests for *B. coli*, how-

ever, showed much more favorable results by the low rates than by the high ones. Finally, the cost for handling sand was the minimum for filter No. 2 with its rate of $3\frac{1}{4}$ million gallons; but if the interest charges on the cost of construction, taken at 3 per cent, be added, the total cost was in favor of the higher rates. Judging from these figures alone it would therefore appear that where turbidity was an important item filter No. 2 with its rate of $3\frac{1}{4}$ million gallons per acre per day would be desirable, and the total cost would be a little more than one-third of that where the rate is only one million gallons. If, however, turbidity is not an important item, rates as high as ten million gallons would seem to be practicable, the total cost at this rate being a little less than one-half that when the rate was $3\frac{1}{4}$ million gallons.

Furnishing Data on Request

ATTENTION is called on page 155 of this issue to the paucity of data concerning the length of useful life of water works structures, and the same remarks apply to most other municipal utilities, pavements being possibly the least open to this criticism, although concerning even these the data are not sufficiently numerous or intelligently classified. As is stated in the article referred to, it is fortunate that a committee of the New England Water Works Association is endeavoring to collect accurate data concerning the life of water works structures. This is a matter which no individual of however wide experience can adequately work out from observations made by himself, nor have many individuals the time to collect such data from all available sources and compile them. And yet it is very desirable that this information should be made available; this being illustrated by the fact that, in the absence of definite information on the subject, it has been necessary to estimate it—in some cases to merely guess at it—in order to make calculations required by law or by prudent financing. Even a committee supported by the prestige of a society of

high standing and devoting much valuable time to the research can not, however, secure the data if the necessary figures have not already been recorded by the various water works superintendents and engineers throughout the country. This is one of the many cases where the general good of the profession is dependent upon the efforts of the many individuals in collecting and recording data which may not be of immediate value to the individuals themselves but which require only the slight personal sacrifice necessary to record the information asked for by such committees and furnish it to them when required.

To a large extent the collecting and compiling of data of this kind are in the nature of a labor of love, and we bespeak for all individuals or organizations which are carrying on such investigations for the general benefit of the profession prompt and full replies to questions asked. The probability is that those who are asking for the data are making a much greater sacrifice of time and energy than those who furnish them.

The City Transportation Problem

WE have previously referred to the efforts made by certain cities to limit or entirely prevent by law the crowding of street cars and the difficulty, if not impossibility, of accomplishing much in this way. As stated on another page, crowding is actually prevented in England and on the Continent by simply preventing the entrance of any more passengers after the cars are reasonably well filled. It might at first thought appear that the same methods could be adopted to produce similar results in this country. We believe, however, that a more careful study of the dissimilarity of conditions in the two countries would indicate that this does not necessarily follow. In the first place the crowds to be transported in the larger cities of this country are in most cases much greater than in any of the English or German cities. In the second place in this country a smaller percentage of those who make up the passengers prefer walking to riding for the sake of economy or other reasons. And in the third place the American riding public is not, we believe, as easily constrained to substitute the will of a corporation for their own desires as is that of European countries. There are other obstacles to the success of this plan in the United States, but we believe that those mentioned will be found practically insuperable.

Liability for Water Supply

IN a recent decision of the Supreme Court of New York State (Oakes Manufacturing Company vs. City of New York), it was held that "Where a municipality maintains a public water system it is acting as a governmental agency and is therefore not liable for negligence in maintaining the water supply." Also that the selection of the source of supply is "the exercise of a discretion judicial in its nature and imposed no liability on the consolidated city for damages." We understand this to mean that neither the city nor individual commissioners can be held responsible for an error in judgment in selecting the supply. It has also been held that there is no liability on the part of the city for sickness or death occasioned by impurities in the supply, even though it should have been for many years aware of the existence of such impurity and have made no effort to remedy conditions; although a contrary view was taken by the Minnesota supreme court, according to a news item in our January 11 issue.

It seems to us that in taking this view of the responsibility of municipal officials the courts have been undesirably lenient. Much the same view has been held concerning the responsibilities of a director of a corporation or bank, but there seems to be a tendency at present to hold such officials to a more strict accounting. We believe that there are many arguments in favor of a similar change in opinion concerning the duties and obligations of city officials such as water commissioners, and that the fact that quality is more important than quantity, which has become generally realized during the past decade or so, should be an important consideration in ruling on the duties of commissioners in providing the supply.

HYPOCHLORITE AT HARRISBURG

THE attention of Superintendent George G. Kennedy, of the Harrisburg, Pa., Water and Lighting Department, having been called to the comparatively poor results obtained in the use of hypochlorite in connection with the water supply of Niagara Falls, he has sent us the records of the bacterial reduction effected by the Harrisburg department during 1910 in treating two water supplies obtained from sources near that city. In one case the treatment was continued during March and April and tests taken on an average every two days. In this test .08 grains of hypochlorite per gallon were used. The number of bacteria per c.c. in the raw water averaged 8,833, the minimum being 900 and the maximum 29,750. In the treated water the bacteria ranged from 16 to 760, the average being 73. Tests for *B. coli* resulted as follows: Of 95 tests of raw water, 89 were positive; of a similar number of tests of treated water but four were positive.

A test made of another water between August 8 and December 14, in which the amount of hypochlorite used was .075 grains per gallon, showed the following results: Bacteria in the raw water averaged 1,117, ranging from 600 to 5,740. Those in the treated water averaged 37, ranging from 16 to 95. Of 133 tests for *B. coli* the raw water showed positive results in 132 cases, but the treated water in only four cases. The hypochlorite varied considerably in available chlorine, the average of this being about 26, but ranging from 15.8 to 41.76. These two tests show reduction in bacteria of 99.2 per cent and 96.9 per cent respectively.

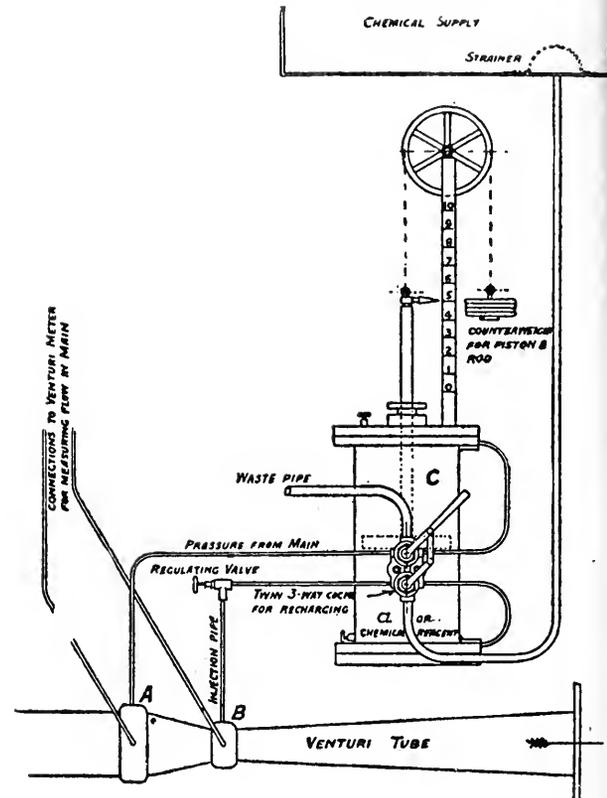

In regular use at the plant, the hypochlorite is passed through an orifice box, where the supply is regulated; and from this through galvanized iron pipes to a grid in front of the 42-inch intake pipe.

PLANT FOR APPLYING HYPOCHLORITE

A new method of applying hypochlorite to water supplies at rates proportional to the flow of water has been introduced in Canada and is described by the *Canadian Engineer*, from which we abstract the following:

As the illustration shows, the principle employed by the Venturi meter is used to regulate the flow, this principle being that, when water is flowing, the pressure at the large section *A* is always greater than that at the smaller section *B*, the latter becoming even a negative pressure under high velocities. The apparatus consists of a cylinder *C*, the top of which is connected to the larger end of the Venturi tube by a small pipe which thus transmits the pressure to the top of the piston which works in the cylinder *C*. Another pipe connects the lower part of the cylinder with the contracted section or throat of the Venturi tube. The piston is provided with a counter weight, and the piston accordingly rises or falls in the cylinder as the relative pressures in *A* and *B* change. The chemical solution is brought from the tank by a pipe which connects by a three-way valve to the pressure pipe from the throat of the Venturi tube; and a similar three-way valve connects a waste pipe with the other pressure pipe. By turning both the three-way valves so that the pressure from the Venturi tube is shut off and the waste pipe and chemical supply pipe are opened, the hypochlorite solution, because of the head due to the elevation of the tank, enters the cylinder below the piston, raising this to its highest point, the water above the piston being discharged through the waste pipe. The three-way valves are then closed to the supply and waste pipes and opened to the pressure pipes, when the greater pressure above the piston forces the chemical solution through the small pipe connecting with the throat. The pressure forcing this out, and as a result the amount of solution applied, are proportional to the excess of pressure at *A* over that at *B*, and consequently to the amount of flow in the main. Theoretically, the amount of solution supplied will vary directly as the amount of flow through the Venturi tube; although the friction in the apparatus will probably introduce a slight variation in this.

When the charge in the cylinder has been exhausted it must be recharged in the manner above described. The apparatus shown in the diagram is intended for a treatment of 1,000 gallons per hour and at this rate will need recharging but once

APPARATUS FOR APPLYING HYPOCHLORITE

in 24 hours. Although apparently not provided for in this diagram, it would be extremely simple to have the indicator automatically ring a bell when the piston is approaching the bottom of the cylinder, thus calling attention to the necessity of recharging.

COAGULATING NON-ALKALINE WATER

THE operation of the mechanical filter plant at Augusta, Ga. was described in the report of Superintendent John H. Ferguson for the year ending November 30, 1910, including the method adopted for overcoming a trouble more or less commonly experienced in several cities, that of the water becoming low in alkalinity and the resulting failure of the alum to properly coagulate. At several times during the past year the water at Augusta became very turbid and low in alkalinity, at times as low as four parts per million. As it requires eight parts to properly decompose one grain of alum, and $1\frac{1}{2}$ grains per gallon were being used at that plant, it was necessary to add about ten parts per million of alkalinity, which was done by the addition of lime.

It had been customary to apply lime at the filter intake from a small and very crude tank, and the lime thus had very little time in which to work on the water and reached the filters in a caustic state. This seemed to prevent the formation of the coagulant cover on the filters for some time after the beds were washed, causing the filters to run muddy water long enough to stain the water in the basin. Mr. Ferguson thereupon determined to introduce the lime into the force main at the point of discharge into the basin, and a preliminary test of this proved so successful that he built a lime house at this point and installed two 700-gal. tanks, properly connected with the mains. This made it possible to control the alkalinity at all times, and the water reached the filter plant in the proper condition to take the alum. The attendant at the filters is furnished with the necessary apparatus for determining, by titration, the proper amount of lime required from time to time.

NEWS OF THE MUNICIPALITIES

Current Subjects of General Interest, Under Consideration by City Councils and Department Heads—Streets, Water Works, Lighting and Sanitary Matters—Fire and Police Items—Government and Finance

ROADS AND PAVEMENTS

Greater Appropriations for Michigan Highways

Lansing, Mich.—State Highway Commissioner T. A. Ely will ask the Legislature for an appropriation of \$250,000 annually for the ensuing two years to conduct the highway department and provide for State rewards on good roads. The last appropriation was for \$150,000 annually, and the work of the department consumed the entire amount and the unexpired balance remaining in the treasury when Commissioner Ely was appointed was but \$57,000. About 300 miles of State award road was built during the last fiscal year, and already applications are on file for 250 miles for the coming year, and it is estimated that the full amount of the appropriation asked for will be necessary to provide for the natural growth of the business of the department for the next two years.

Valuation of Turnpike Made

Milford, O.—A value of \$10,937.50 was placed on the nine miles of the Cincinnati, Columbus and Wooster turnpike, in Clermont County, by a special jury that spent two weeks hearing the condemnation proceedings at Batavia. The section of the pike condemned extends from the Hamilton County line in Milford to Goshen on the northern boundary of Clermont County. A verdict returned in Hamilton County a few days ago fixed a value exceeding \$5,000 per mile for the portion of the pike in the latter county. The Clermont verdict fixes the price at slightly more than \$1,200 per mile. The estimates of the value of the road given by the various witnesses varied from \$1,000 to \$10,000 per mile.

Plan for Paying for Repaving of Thoroughfares

Newark, N. Y.—Chief Engineer Sherrerd has submitted to the Board of Public Works a draft of a bill designed to apply to the method of meeting the city's portion of the expense of repaving main thoroughfares. The commissioners of assessment are given the power to decide what part of the expense shall be assessed against the property owners and what part shall be paid by the city. The idea is that where traffic is greater the property owners' share should be less. The city would, according to the bill, be authorized to issue 20-year bonds to pay for its share of the expense—the idea being that the pavement will last that length of time.

To Resume Paving Repairs

Philadelphia, Pa.—Having recovered from the shock of the admissions of favoring contractors on paving repair measurements made by Highway Commissioner Brooks, in the Bullitt suit to annul the paving repair contract with the Filbert Paving & Construction Company, the officials got together in Mayor Reyburn's office and discussed the future pitfalls and how to avoid them. If there are any more queer contracts executed at a choice of prices either at 20 or 75 cents a yard, the measurements of the contractor's work and the voucher for the same will be computed by a district surveyor and not by anyone connected with the Bureau of Highways. The Mayor conferred with Director Stearns, Chief Benson and Commissioner Brooks. It was decided to have the Filbert Company resume the asphalt repair work under its contract which was halted when the Bullitt suit was begun. The company will be directed to resume operations at once. The Mayor suspects some contracting interests are seeking to discredit his municipal street repair corps and his municipal asphalt "mixer," which is reported to him, would not "mix." The Mayor said the machine is to cost \$2,000, and was being tested, but is not paid for. He told Thomas T. Haines, in charge of the repair corps, that the mixer will have to work properly or it won't be paid for. The Mayor advised Haines to engage an expert to operate the mixer. The Mayor says all small repairs and small jobs on streets will be done by the municipal repair corps during 1911.

Thirty Miles of Cement Walks

Crowley, La.—Contractor de Jersey, who has the contract for laying the cement sidewalks for the city, has completed about 8 miles of cement sidewalks for the city, and will, on the completion of the original contract, immediately begin on the second contract, the completion of which will bring the total amount of sidewalks up to 15 miles. There are about 40 miles of sidewalks in Crowley, and it is probable that 30 miles of cement sidewalks will be laid by the City Council before the work is discontinued. There has been no complaint against the laying of the walks by the city.

To Raise Great Fund for Roads

Denver, Col.—An attempt is being made in Colorado to raise \$1,500,000 for good roads, the Legislature to give one-third of the amount and the counties to give two-thirds, and the proposition seems to have a chance of becoming a reality. In Washington the counties are only asked to duplicate the amount pledged by the State.

Will Ask Lower Rate on Hydrants

Everett, Wash.—The Council Committee on Light and Water proposes to wait upon the Everett Railway, Light & Water Company and ascertain if it will not be possible to secure a reduction in the charge made by the company for supplying water for the street hydrants. This plan was discussed and decided upon by the committee, though no date was set when the conference should be held with Manager W. I. Sturtevant. There are 163 hydrants scattered about the city. The monthly cost for water to serve these hydrants is \$668, or about \$8,000 yearly.

Bridge Stood Test

Federalsburg, Md.—The new reinforced concrete bridge over the Nanticoke River here was tested last week by the State Roads Commission. Two 12-ton rollers passed over it safely, and the structure was pronounced perfect in every way. A lot of residents unfamiliar with concrete gathered to see the bridge fall and, of course, are agreeably disappointed now.

Too Many Duplicate Names

Houston, Tex.—In order to end the confusion resulting from having many duplicated street names, and a few instances of the same name being used for three streets, a committee is now at work selecting new designations for some of the streets of the city.

Cinnamon Trees for New Orleans Streets

New Orleans, La.—At a recent meeting of the Parking Commission, Dr. Joseph Holt showed a specimen of the cinnamon tree of Ceylon, which he discovered in an old nursery uptown. It attracted his attention because after the sharp freezes that have even nipped the leaves of the live oak its foliage remained as bright and fresh as if there hadn't been a frost. It grows 25 to 40 feet high, and the commission is going to try to get stock to begin its planting, as it will make a very important addition to the evergreen foliage of the city.

Tarring Shell Roads

St. Augustine, Fla.—An experiment is being made by Street Commissioner Cray with a tar binder on the shell paving on South St. George street. The results of the test prove to be entirely satisfactory and it may solve the problem of making the shell pavement more lasting at a slight expense. Six hundred square yards was treated at a cost of four and one-half cents a yard. The surface was first scarified and then graded to a crown. While the shell was in this loose condition gas tar was applied and the street was then rolled with the steam roller. There is every indication that the street will now shed the water better in rains and that the gas tar will act as a binder, preventing the shell from grinding up and blowing away.

Chert as a Material for Paving Condemned

Chattanooga, Tenn.—Chert as a material for paving local streets is just now arousing so much condemnation from Chattanoogaans that an organization has been formed in the hope that certain contracts that have already been let can be changed so that chert may be eliminated and some better material substituted. The new organization was temporarily formed last week at the Manufacturers' Association, where a number of representative citizens gathered to discuss the matter. The name Chattanooga Streets Improvement League was selected, and two committees were appointed. The committee on paving bonds and streets is composed of Samuel Bosworth Smith, Edwin W. Stuart and H. B. Moseley. It will be the duty of these gentlemen to see what can be done about substituting a better material instead of chert for the paving of a number of streets for which legislation has already been initiated, and also to see if additional bonds cannot be issued for the increased cost of a more permanent material.

Aerial Bridge Is Decided Success

Duluth, Minn.—The report of the Board of Public Works for 1910 comments upon the success of the aerial bridge, which cost \$6,338.80 to maintain during the year. The traffic has increased greatly since it was installed, but it has been a decided success, little trouble being experienced.

Erie Paving Record in 1910

Erie, Pa.—The paving done last year reached a total of 50,214.27 square yards of asphalt and 38,147.65 square yards of brick, with 33,771 feet of curbing, the entire cost being \$163,003.97. The city has 51.7 miles of paved streets.

Cost of Oiling Streets in Hartford

Hartford, Conn.—City Engineer Frederic L. Ford, in response to a request from President John E. Moore of the New Britain Board of Public Works, regarding the cost of oiling streets, says that his department has found that the cost for the season for oiling streets with light road oil similar to dustoline or valvoline is approximately 3 cents per square yard. With asphaltic oil containing 65 per cent asphalt it costs from 5 to 6 cents per square yard. No method of assessment for such oiling has as yet been devised for the city of Hartford.

More for Repairs Than New Roads

Rochester, N. Y.—A statement from the State Highway Commission on the amount of work done on good roads in Monroe County in 1910 by the Commission has been received by County Superintendent J. Y. McClintock, and this shows that more than twice as much was spent on repairs and maintenance in this county as was spent on construction of good, new roads. The total amount for maintenance and repair was \$251,524.79, and of this sum \$39,418.21 was expended in the town of Chili, this being the largest sum spent in any town. The smallest amount was spent in Ogdon, \$356.05.

Eisagree Over Apportionment of Fund

Sacramento, Cal.—When the State Highway Commission is appointed and organized, one of its difficult tasks will be the apportionment of the \$18,000,000 road fund to the satisfaction of the north and south, which sections are clearly opposed in their demands for shares of the highway bond issues. Four northern counties seek an allotment of from \$500,000 to \$1,000,000 for the rebuilding of the old El Camino Real, from San Francisco around the bay, nearly 400 miles to Sausalito. The plan received the official approval of the northern California delegation, and when it became known among the southern legislators that the north sought the first fruits of the big fund there was much talk of Los Angeles County making pressing demands for immediate reimbursement for the \$3,000,000 which that county already has spent on its roads.

All Graded Streets Have Sidewalks

Waterloo, Ia.—During 1910 54,026 square yards of asphalt paving were laid, about three miles of thirty-foot roadway. The cost was \$105,806. Of curbing 37,112 feet were laid at a cost of \$22,504. Of cement sidewalks 21,916 linear feet were laid at a cost of \$9,266. Practically every graded street in the city is now provided with a cement walk.

SEWERAGE AND SANITATION

New Bedford's Sewage Problem

Boston, Mass.—In its annual report to the Legislature, the State Board of Health made reference to the sewerage conditions existing at present in New Bedford and of the progress that is being made to remedy them. The board characterizes the present conditions in the river and in Clarks Cove as "serious nuisances." As to the plan proposed for emptying the sewage in the bay southeast of Clarks Point, the board states that there is no doubt that it will be effectually disposed of.

Collingswood Sues Sewerage Company

Collingswood, N. J.—The Collingswood Board of Health has directed the Borough Solicitor, Ralph Kellum, to apply to the Court of Chancery for a rule to show cause why an injunction should not issue restraining the Collingswood Sewerage Company from continuing the operation of its plant, it being contended that as now operated the plant is a public nuisance. It will be alleged in the bill that residents in the immediate vicinity of the plant have been nauseated and made sick by offensive odors and compelled to keep their windows closed.

Pasadena to Have Big Storm Drain

Pasadena, Cal.—This city is now constructing an immense storm drain to carry off flood waters and prevent further washing out of streets. At its largest section the drain is nine feet eight inches wide on the inside and seven feet seven inches high. It is three miles long and will cost, when completed, \$163,000. The initial order of cement called for 10,000 barrels, and this will be but a starter on the work. It is expected that the drain will be completed by next July.

Paterson to Sign Sewer Contract

Paterson, N. J.—Mayor McBride has been authorized to sign, on certain conditions, the contract submitted by the Passaic Valley Sewerage Commission, binding the city to become a party to the trunk sewer. The instructions given the Mayor contain a very important provision, which was inserted to protect the taxpayers of this city from being placed in the position where they will have to go down into their pockets for unlimited amounts of money to pay their proportion of the cost of the big drain. The instructions are embodied in the following resolution: Resolved, That the Mayor be authorized and directed, on behalf of the city, to sign the sewer contract submitted by him at this meeting and as proposed by the Passaic Valley Sewerage Commission, with the addition of the following clause: "And it is further provided that the actual work contemplated in this contract shall not be commenced, nor shall the Commission become obligated to any contractor for any part of the said work until such time as the Commission shall have received actual, bona fide offers from a reputable and responsible contractor or contractors to complete said work within the sum of \$12,250,000, including the costs of rights of way and other necessary property and equipment."

Sanitary Drinking Fountains

Louisville, Ky.—Drinking cups in Louisville's public schools have been unanimously condemned at a joint meeting of the Board of Health and the Board of Education. It is proposed to supplant the cups with hygienic drinking fountains.

City's Largest Sewer Finished

Schenectady, N. Y.—The largest piece of surface sewer work ever undertaken by the city of Schenectady, that of laying the five-foot concrete drain along the Plaza, in the Eleventh Ward, from West alley to Waverly place, crossing Glenwood and Park boulevards, is about completed. The total length is about 1,000 feet. All that Contractor W. D. Goodale has to do now, so far as the city's work is concerned, is to repave the Plaza and trim up the edges of the thoroughfare. The total cost to the city will be about \$26,000. Besides being the largest single surface sewer ever constructed by the city, the big drain also has, as part of it, the largest concrete arch ever built here for sewer purposes. The arch is necessary to carry the sewer over one of the depressions in its course.

WATER SUPPLY

Lake Ashburton Opened

Baltimore, Md.—With a twist of a wheel and the opening of the flood gates, Mayor Mahool January 18 sent the water of Lake Ashburton, the new high-service reservoir at Forest Park, coursing through the pipes into the homes of nearly 150,000 people. The dedication took place in the presence of a crowd of people after the reservoir had been turned over to the city by United States Senator Thomas S. Martin, of Virginia, Vice-President of the Lane Bros. Company & Jones, the contractors who built it. The water reaches the reservoir from Lake Clifton through the Mount Royal Pumping Station, and on January 11 the lake was filled. The neighborhood supplied by the reservoir is known as the western high-service district, and includes a section of the city about a mile and a half wide, running from Dolphin street to Druid Hill Park, diagonally southwest from Jones' falls to the western and southern limits of the city.

Cleveland to Try Free Water System

Cleveland, O.—The free water system is to be tried in Cleveland. It was suggested some time ago by Mayor Baehr, and since then Water Works Superintendent Smith has been working out the details of putting the system to a practical test. Under the free water system expenses of the department will be met with money raised by taxation. It shifts the payment for water from the individual consumer to the taxpayer. Information gathered by Superintendent Smith from many cities which now have free water shows the system to be successful. The charge that the water consumption would be more than doubled by the free water system is not sustained by information Smith has gathered.

Faucets of Free Hydrants Stolen

Louisville, Ky.—The small boy has brought the Louisville Water Company and the Board of Public Works face to face with a serious problem. As quickly as practicable the Health Department is condemning public pumps, the Board of Public Works is ordering them removed and the water company is substituting them with hydrants. The brass faucets of the public hydrants have caught the fancy of the small boy of Louisville, and he has been playfully and gleefully removing them about as fast as they were installed. Each theft of a faucet results in a neighborhood being deprived of free water until a new one can be substituted. The removal of a faucet often makes it necessary for the persons of a neighborhood dependent upon free water to walk several blocks to secure it.

Seeking New Water Supply

Newark, N. J.—That the East Orange Board of Water Commissioners is by no means confident that its present source of supply will in the end be sufficient for the city's needs is demonstrated by the fact that, according to the annual report of that body, application has been made to the State Board of Water Commissioners for a proportionate interest in the Wanake watershed, with Newark, which has made a similar application. The situation is expressed in these significant words: "It is probable that we shall, in the end, be compelled to rely on surface water from the streams of the northern part of the State for any considerable addition to our supply." The report goes into the situation which became acute last summer, when wells in the neighborhood of the pumping plant at White Oak Ridge began to go dry and the suits against the city, which had already begun, rapidly multiplied. The decision of the Supreme Court, which was to the effect that sufferers from the loss of water on the land they occupied might continue to recover for damages by diversion, forced the city to take prompt steps to protect itself, and the proceedings already under way to acquire adjacent lands were the result.

Use of Hypochlorite of Lime Discontinued

Niagara Falls, N. Y.—The Board of Water Commissioners voted to discontinue the use of hypochlorite of lime in the city water. The process met with fair success until cold weather set in, when the taste of chlorine could be discerned in the water and it led to considerable complaint.

Water Company Given Chance to Increase Supply

Schuylkill Haven, Pa.—The quo warranto proceedings brought by the Attorney-General of the State to forfeit the charter of the Schuylkill Haven Gas & Water Company for failure of the company to furnish sufficient water to Schuylkill Haven will probably be discontinued. As a result of consultation of attorneys the case, scheduled for trial in court, will not go on, but instead the water company will be given the opportunity to get the additional water facilities, which the borough was about to buy for \$50,000.

Seattle Water Rate Fight

Delaware, O.—After litigation of nearly two years the City Council and the Delaware Water Company have finally gotten together on a contract, upon which there were compromises by both sides. The contract is for hydrants and a rate of 7 cents per thousand gallons for water for street sprinkling and sewer flushing.

Canal Work May Injure Seneca Falls Water

Seneca Falls, N. Y.—One of the most difficult propositions encountered by barge canal builders when they reach the foot of Cayuga Lake will be to find a way to avoid injuring the water supply of this village. Hermon A. Carmer, Superintendent of the Seneca Falls Water Works Company, says that he has taken the matter up with the barge canal engineers and they have advised him that within a short time they will know what method will be pursued. The Crowell-Sherman-Stalter Company, of Cleveland, will begin work in a few days on its contract to dredge 17 miles from the main canal northwest of Montezuma to deep water in Cayuga Lake. The water company's new intake pipe, recently laid on the lake bottom, extends nearly half way across the lake and ends at just about the point in the lake where the barge canal plans call for dredging. Mr. Carmer thinks that a mechanical filtration plant might be installed to remove any roil from the water while the dredging was in progress.

Health Board Condemns City Water Supply

Shreveport, La.—At a recent open meeting the City Board of Health adopted a resolution condemning as unhealthful and unsanitary the present source of the city water supply, and served notice on the city administration to make efforts within 30 days to remedy the trouble. If the Commissioners fail to act the Board of Health will then call citizens together and urge them to correct the evil.

Los Angeles Aqueduct Construction

Los Angeles, Cal.—Chief Engineer William Mulholland has made a verbal report of the work accomplished in 1910 on the aqueduct. If the work continues in the future at the same rate as that which was maintained during 1910, it will require 18 months more to finish. The construction work for the year amounted to 55 miles, but there was a considerable period during which work was practically at a standstill, and for several months it was retarded by shortage of funds. In spite of this, the progress of 55 miles stands as the record year of the project. The big Elizabeth Lake tunnel, 5 miles long through solid rock, is so nearly completed that the miners who are working toward each other from each end sometimes fancy they can hear the opposing crew through the thin wall of rock. Miles and miles of tunnels, long and short, have been bored and lined in the Jawbone Mountains, and now stand idle, only awaiting the water. Practically all that remains to be done is straight-away ditch digging, which can be accomplished by the battery of steam shovels. It is simply a question of time. A steam shovel can move so many feet a month. There are so many steam shovels and so many miles. The greater part of the work still remaining to be done is at the north end of the aqueduct. The Haiwee dam, which will create the immense Haiwee reservoir, is nearly completed. Work is progressing rapidly on the intake, where the water will be transferred from the Owens River to the huge canal which will carry it into the Haiwee regulating reservoir at the lower end of which the conduit proper begins. The aqueduct, when completed, will be 215 miles long. Of this distance 129 miles has been covered. In building 55 miles last year the aqueduct forces removed 2,500,000 cubic yards of rock and earth, used 300,000 barrels of cement and spent about \$4,000,000.

Impure Water Cause of Typhoid at Niles

Niles, Ohio.—In view of the prevalence of typhoid fever in Niles Dr. H. V. Ormeroid, Health Officer, was asked to make an advisory statement as to the best precautionary measures against the contraction of this dread disease. He said that the simplest and best preventive is the old one—to boil all drinking water and water used in cooking and for similar domestic purposes, unless one is absolutely sure that it is pure. The city water and that from open wells or cisterns into which surface water empties should positively not be used without its first having been sterilized by boiling. Sixty cases of typhoid fever are reported here at the present time, and it would seem that it would pay to use every precaution to avoid an increase of the epidemic.

Wants City to Buy Pumping Plant

Pittsburg, Pa.—The city is to be asked to purchase the pumping station of the Monongahela Water Company, in the West End. The water company expects to show that Councils should appropriate money for this purpose in consequence of an agreement made between them and the city some time ago, when a Councilmanic bond issue of about \$5,000 was voted, the proceeds of which was to be used to buy the lines of the company in Esplen and Elliott. It was made necessary to buy these lines when Elliott and Esplen were annexed. At the time of the agreement the water company expected to sell their pumping station to one of the three railroad lines near which it is situated. For some reason this deal was not consummated. The water company now claims that its pumping station is of no value, since the city has bought its lines and no one else wants to buy the plant. An ordinance will soon be introduced asking that the city purchase this plant.

Majority Favor Municipal Water Plant

Plainfield, N. J.—The question of the advisability of establishing a municipal water plant in this city, or purchasing the plant of the Plainfield-Union Water Company, was fully discussed at a meeting held for the purpose in the Council chambers under the direction of the special Water Committee, of which Councilman F. E. Mygatt is the chairman. The weight of the argument was in favor of a municipal plant, and a majority of those present, either by applause or by word of mouth, indicated that they were in favor of the city controlling the local water supply.

Would Reduce Cost of Pumping Water

Fort Worth, Tex.—A new type of air pump which the inventor declares will reduce the cost of pumping artesian water to one-half of what it is at present was tested last week on one of the big wells in the city artesian system. The pump is the invention of Bryan Obeare, of St. Louis, and the test was made under his direction and in the presence of a number of city officials and officers of several companies owning artesian wells. The pump works on the principle of air expansion, the air being supplied from a compressor. It will operate on low pressure, and this is expected to result in the saving. In the test it lifted water from a depth of 270 feet at the rate of 220 gallons per minute, while the ordinary air compressor pump will raise but 150 gallons per minute from the same depth. It required but 350 cubic feet of free air each minute to raise the water, while an ordinary compressor required 550 cubic feet of free air at a pressure of 90 pounds against a pressure of 61 pounds for the new type. Perry Pennington, a prominent engineer who viewed the test, estimates that the new pump would save the city the sum of \$127,000 annually if attached to the various wells making up the city artesian system.

Helena Will Buy Water Works or Build

Helena, Mont.—The City Council has decided to give the Helena Water Works Company until March 6 to submit a proposition to sell its plant to the city at a reasonable figure. If such offer is not received within that time a resolution adopted provides that thereafter the company is to be considered a nonentity and the Council is to proceed to construct a plant for the city, \$650,000 worth of bonds to be offered on April 1 and contracts to be awarded on April 24.

Meters Decrease Consumption of Water

Elkhart, Ind.—Reports compiled by the Elkhart Water Company indicate that a total of 1,163,215,196 gallons of water were pumped by it for consumption in Elkhart during 1910. The daily average was 3,186,891 gallons, or about 165 gallons per inhabitant. The greatest amount any one month was in July, 142,115,314, or a daily average of 4,584,365. The next highest month was August, 124,457,586. Superintendent Crull stated that there has been a slight decrease in consumption due to a big increase in the number of water meters now in use in the city. There is now a total of about 1,000 meters in operation in Elkhart, 400 of which were installed during the past year. The company provides water for about 4,000 taps in Elkhart.

Purer Water for Des Moines

Des Moines, Iowa.—The new ordinance fixing the standard of the city water supply, drafted by Mayor Hanna and City Bacteriologist W. A. Guild, and which is modeled after the Omaha ordinance of the same nature, seems likely to pass. The water company will be given three months in which to raise its supply to the standard set by the ordinance. The water must be free from gas-producing bacteria, colon bacilli or other pathogenic bacteria. The number of bacilli must never exceed 50 per cubic centimeter. The chemical factors must never exceed the following proportions: Parts per million, total solids, 450.00; free ammonia, .04.

Filter Plant Needs Bacteriologist

Escanaba, Mich.—At a recent meeting of the Common Council Dr. H. W. Long, City Health Officer, read a letter from Dr. F. W. Shumway, Secretary of the State Board of Health, in which the writer stated that he had written W. J. Hatton, Superintendent of the Escanaba Water Company, requesting him to secure a competent bacteriologist to take charge of the filtration plant and retain his services until the plant can be properly operated by a person not versed in bacteriology. With his letter Dr. Shumway enclosed a report made to him by Prof. Thomas S. Ainge, giving the results of the latter's recent inspection of the filtration plant and investigation of general health conditions here.

STREET LIGHTING AND POWER

To Put Lighting Brackets on Trolley Poles

Baltimore, Md.—In keeping with the "City Beautiful" idea, as advocated by the civic center plan, Superintendent of Lamps and Lighting McCuen announces that he has made arrangements with the Gas Company and the United Railways to use their poles for the lamps on Light street, between Pratt and Lee streets. To avoid the duplications of poles when the new tracks are laid down the middle of Light street, Mr. McCuen will place his lamps on the same poles used by the trolley. Artistic fixtures will be used and a new style pole will be necessary.

Fine Showing of Columbus Light Plant

Columbus, O.—Nearly \$10,000 was received from the sale of current from the municipal electric light plant, according to the annual report of Superintendent Gamper to the Mayor. In his report the electric light plant superintendent states that during the year the plant received for expenditures \$81,518, and that the expense of operating the plant and lighting the city was \$52,243, while the expenses of extending the plant were \$24,643. The net expenditures of the plant were \$63,611.42, leaving a balance unexpended of \$7,907. The average number of arc lights in service was 2,340, the number of tungsten lights equal to arc lights, 60, and the number of arches burning equivalent to arc lights, 200, or a total of lamps, 2,600. The net cost of each arc lamp was \$16.28, according to Mr. Gamper.

Buys Lighting Plant

Frederick, Md.—A further step in the direction of municipal ownership has been taken by the purchase by the Town Commissioners of the Citizens' Electric Light & Power Company. The price was \$19,846.72. Already Frederick owns its water works and an electric plant for the city lighting.

Lumber Company Furnishes City Lights Free

Marked Tree, Ark.—By the withdrawal of the \$5,000 license derived from the four saloons which are now allowed to run without license, it was thought by many people that all the necessary adjuncts to run an incorporated town would have to be dispensed with here in Marked Tree, and that the streets would be in utter darkness. While it is true, perhaps, that the town is badly crippled in a financial way, yet the street arc lights will continue to shine as heretofore, as the Chapman & Dewey Lumber Company has sent a letter to the City Council offering to give lights free.

Municipal Electric Plant Wrecked

Nelsonville, O.—One of the engines of the municipal electric lighting plant "ran wild" on January 21, following the breaking of an eccentric rod, and massive pieces of machinery were hurled in every direction, badly wrecking the plant and building and killing the night engineer. The spokes of the two-ton flywheel flew out, and all of the machinery connected with the engine was ruined, but a double engine system enabled the plant to resume partial service.

Bond Election Illegal

Trenton, Tenn.—The city of Trenton some months ago bought from Keenan & Wade the electric light plant and issued bonds for the payment of the same. It turns out that the election at which the question of issuing the bonds was voted on was not legally held, and the bonds have therefore been declared invalid. The city had been running the plant for three months and collecting the money for the lights. When the city found that the bonds were illegal and not binding, it tendered back the plant to Keenan & Wade, who refused to accept it, and so the city is in darkness, with no prospect of a settlement of this question at any future time without long and costly litigation.

Electric Lighting Installed in Place of Gas

Plainville, Conn.—The system of street illumination was changed January 15 from Welsbach gas to Mazda electric lights. Ninety lights were installed at a cost of \$20 a year to the town, the same price, \$1,800, as formerly paid for 67 gas mantle lamps. Lincoln S. Risley, local representative, recently secured a five-year contract for the Housatonic Power Company.

Light Plant Brings Substantial Profit

Tacoma, Wash.—The receipts in the Light Department for 1910 were \$455,944, and the expenditures \$425,496, leaving a margin of \$30,447. The sum of \$122,837 was spent for construction work, all of which was taken from the receipts of the plant.

To Have White Way

Centreville, Ia.—This city is to have a "white way" similar to Des Moines and other cities. Large cluster lights will be placed around the square.

New Use for Electric Power

Schenectady, N. Y.—At a meeting of electrical engineers Henry L. Doherty, New York City, made the prediction that the time is not far distant when electricity will be used during the summer months to produce refrigeration in our homes, places of business and elsewhere, just as coal is now burned to keep them warm in winter, surprising his hearers. While the speaker did not go into details of this plan he said that this cooling process would be accomplished by companies operating a small motor-driven refrigerating apparatus, a small ammonia gas compressor and a brine circulating pump.

City Meter Tester Being Installed

Scranton, Pa.—Under the direction of Meter Inspector Fred Ward, a meter testing apparatus is now being installed on the fourth floor of City Hall. The machine, which is now being connected, will be used for ascertaining the accuracy of water meters. Machines for testing gas and electric meters will be installed later. Since the creation of the office of meter inspector there has been no official testing machine. It has been necessary to use the testing machinery of the Scranton Gas & Water Company. In his last annual message Mayor John Von Bergen urged upon Councils the advisability of having an official testing machine for water meters.

FIRE AND POLICE

Gasoline Fire Engine in Commission

Cohoes, N. Y.—Chief Collin states that the reports that the gasoline fire engine stationed at the McCreeary Steamer Company's quarters was out of commission was untrue. He says that the engine has been used 15 times since January 5 and is in good condition. The engine has been run every day for the instruction of the men who are to operate it and has not balked once. The Chief stated that the engine will be run every other day for a week or so and then only when necessary, as the men are becoming well versed in the work of running the engine.

Law Book for Policemen

Chicago, Ill.—LeRoy T. Steward, Superintendent of Police, has had compiled and published a book for circulation among members of the Chicago Police Department, which explains the points which a policeman should know. The book includes definitions of such words as burglary, arson, kidnapping, etc. Legal procedure, rules of evidence and similar matters are also explained.

Marshal Discusses Arson and Carelessness with Matches

Columbus, O.—State Fire Marshal John W. Zuber in his annual report to Governor Harmon says that as a result of investigations by his force there have been 30 convictions during the year for arson and that 38 cases are pending. During the existence of the department the annual loss from incendiarism had been reduced from \$350,000 to \$110,000. Regarding fires originating through carelessness with matches, the Fire Marshal says: "During the year 1909 538 fires in Ohio were caused through carelessness with matches, and 182 of such fires were directly traceable to children playing with matches. The total fire loss from such fires was \$191,543. We believe the General Assembly should enact a law making it unlawful to sell, give away or have in your possession in the State of Ohio the match known as the friction match. We are also impressed with the increase of accidents caused by thoughtless and careless parents locking their children in their home and leaving them alone, and during the absence of the parent the child plays with fire or matches, fires its clothes and the home, and is incinerated and the home destroyed. We believe the General Assembly should make it a felony for any parent or custodian of children to go away from the home leaving their children alone and locked or shut up in the house."

Inspect Police Alarm System

Mishawaka, Ind.—Mayor John A. Herzog and a party of city officials visited Fort Wayne last week to inspect the alarm system installed there by the Signal Phone Police Alarm Company, of Milwaukee, Wis. All were favorably impressed with the system, and enjoyed the trip and the hospitality of the Fort Wayne city officials. They were met by Mayor Grice and members of the administration and taken about the city in automobiles, looking particularly into the workings of the police alarm system, whereby the patrolmen make hourly reports to headquarters. Among the party from Mishawaka were Mayor John A. Herzog, City Clerk James L. Kennedy, City Engineer James Haverly, Street Commissioner Otto Muinch, Councilmen at Large D. J. Campbell and Frank I. Bickel and Councilmen Nelson Christianson, David Burkhardt, Richard Rogeman, Fire Chief Albert J. Buysse and Deputy City Clerk George Raab.

Want Paid Fire Fighters

Wilmington, Del.—A movement is on foot to abolish the volunteer fire department and to present a bill to the present Legislature to authorize a paid department for Wilmington. At least one company has offered to dispose of its buildings and equipment at a nominal figure to the city, and another company has offered to give to the city its buildings and all equipment. The proposed bill provides for eight companies of eight firemen each, to cost for maintenance about \$72,000 annually, whereas the present department represents an expenditure to the city of \$67,000 a year.

Town Wants Police Call System

Westfield, Mass.—A representative of the New England Telephone & Telegraph Company has conferred with Chairman Lewis C. Parker, of the Board of Selectmen, and Chief William A. Flouton relative to the installation of a police system. Cost will be estimated on a proposed plan to install five alarm boxes. These boxes are to be connected with the Central Police Station, and every half hour each officer will report. In addition it is suggested that a light be added to each box so that it may be lighted from the police station and attract the attention of the officer on the beat, who will call up and learn what is wanted. But five boxes would be necessary at first and the annual cost would be a small item. In Peabody, where there are 17 boxes, the annual cost is but \$450. In order to have the new system work successfully, it will be necessary to have a night man in the station and this will be the greatest item of expense. At present the night arrangement is a hit or miss affair, and there is no way that an officer may be summoned except by telephoning to some one in the business section to go out and look one up.

Would Consolidate Police and Fire Alarm Systems

Milwaukee, Wis.—Consolidation of fire and police alarm systems was recommended by the Mayor in a special communication to the Council last week. The consolidation, he suggests, should be quite complete, but the operators will be left in control of each department, although a general superintendent may be appointed. The Mayor stated that after investigation he found it feasible to consolidate the systems for the sake of economy, and that it could be done without crippling either. The cost of installation, repairs, maintenance and extensions he wants paid by one department and larger cables used. Last year 1,172,682 police calls came in, while the Fire Department received 2,000 alarms over its system.

Leggings for Traffic Squad

New York, N. Y.—The regulations of the Police Department have been amended so as to require traffic squad patrolmen and sergeants to wear leggings with winter uniforms. These are to be of black grained oak tanned leather, puttie pattern, to fasten at the bottom with concealed metal catch and at the top with buckle and strap.

Cause of Some False Alarms Explained

Racine, Wis.—Chief Cape appeared before the Fire and Water Committee and submitted a report on the A. D. T. telegraph system. He proved to the committee that during the past two years seven alarms had been sent in over the A. D. T. and that six of them were false alarms. The Chief said that most of the false alarms were caused by watchmen in factories setting the wrong indicator, not having been properly instructed on how to operate the boxes and he would recommend that the company either see that the watchmen are properly instructed or else have the fire alarms cut out altogether. Mr. Baker, a general agent for the A. D. T. system, was in the city recently, and stated that he would see that the system was put in first-class condition, and that there would be no more trouble with false alarms coming in.

High-Pressure Installation to Reduce Insurance

Spokane, Wash.—Lee McKenzie, Chief Surveyor of Washington of the Fire Underwriters, has submitted to the Board of Public Works in writing his proposition to reduce insurance premiums in the business district 10 per cent, providing the proposed high-pressure fire-fighting water system is put in. Mr. McKenzie made the offer to the Board after going over the plans for the improvement, which is to cost about \$150,000. He demands, however, that the high-pressure service be extended to Second avenue, originally left out by Water Engineer Alexander Lindsay's plans. Water Commissioner Armstrong says this will be done. The high-pressure plan involves the laying of 12-inch mains on Main avenue, Sprague avenue and Second avenue, connecting with the high-pressure 30-inch main direct from the pumps on Division street. Cross mains 10 inches in size are to connect the 12-inch mains at every other cross street. Fire Chief Myers says the system will give Spokane the best fire-fighting facilities in the business district of any city in the West. It will make fire engines downtown unnecessary.

Council Votes to Disband Volunteer Department

Jamestown, N. Y.—In response to the vote of the taxpayers of the city the Common Council has voted to disband the local volunteer fire department on March 1 and substitute a paid department of eight companies, with five men each. It is estimated that the cost of maintaining the department for the first year, including salaries and other expenses, will be \$40,000. The volunteer department is one of the oldest in Western New York, having been organized on its present basis about 1838. It consists of eight companies, with an average membership of about 30 men. The companies are already equipped with good apparatus and teams.

Police-Woman Makes Good

Los Angeles, Cal.—So helpful has Mrs. Stebbens Wells, Los Angeles' police-woman, been to the Police Department that Chief of Police Sebastian is to ask the City Council for a squad of five additional women for patrol duty. Sebastian declares that Mrs. Wells has been a potent factor in the administration of police affairs since her appointment four months ago. In his opinion, police-women can do a great deal of good in preventing crime and aiding delinquents to keep out of the meshes of the law. Sebastian will also ask for 100 extra patrolmen.

Fire Chief Reports Work of Department

Elkhart, Ind.—The report of Fire Chief John Ulrich for 1910 shows that the total expenditures for the year were \$29,606.61, divided as follows: Salaries, \$18,295.33; equipment, \$8,500, and miscellaneous expenditures, \$2,811.28. The inventory of the different stations shows the value of the Central station house, lot and contents, \$35,070.30; Station No. 2, \$9,527; No. 3, \$8,512.70; No. 4, \$8,367.60; total \$61,477.60. The total number of gallons of chemicals used was 813 and the number of feet of ladders used, 700. Number of miles traveled by the companies, 534, and number of feet of hose laid, 50,550. The estimated loss on buildings and contents was \$303,034 and the insurance collected was \$86,971.

GOVERNMENT AND FINANCE

Good Financiering by Commission

Columbia, S. C.—For the first time in years the city of Columbia will have a surplus available for permanent improvements under the income estimated by the City Council for the year 1911. Except for its floating bond issue, the city will be free from debt. According to the calculations, a "reserve fund" of \$118,705 can be used for permanent improvements in 1911. When the present City Council took charge of Columbia under the commission form of government, it faced a deficit of approximately \$65,000. At the end of 1911 Columbia will be out of debt, having spent a large sum for permanent improvements. The total income of 1911 is estimated at \$449,455.

New York Bonds Sold on 4.20 Basis

New York, N. Y.—The sale of \$60,000,000 4¼ per cent bonds at an average price of \$100,904 was considered very satisfactory by Controller Prendergast. The total number of bids submitted was 568, and the issue was oversubscribed five times. J. P. Morgan & Co.'s bid of all or none at 100.897 barely failed. The largest successful bid was Kuhn, Loeb & Co., who will get \$11,000,000. At a sale of \$50,000,000 bonds about a year ago the average income yielded at the selling price was 4.14.

Commission Government Elections

Ottawa, Ill.—By a vote of 1,227 to 445 commission government was adopted January 17.

Decatur, Ill.—By a majority of 878 commission government was adopted January 17.

Dixon, Ill.—By a plurality of 159 commission government was adopted January 17. Every precinct but one voted to adopt the plan. The total vote cast was about 60 per cent of the usual municipal vote.

Elgin, Ill.—By a majority of 840 votes commission government was adopted January 21. Two-thirds of the total vote of the city was polled. The change will become effective May 1 and 50 candidates will seek nominations for commissionerships at the primary next month.

Claim Much for Municipal Ownership

Monroe, La.—Friends of municipal ownership who are advocating the re-election of Mayor A. A. Forsythe point to the wonderful growth of the city during the 12 years Mr. Forsythe has served. Twelve years ago there were less than 4,000 inhabitants, and the city was refused credit for a barrel of lime. It owed property valued at less than \$20,000, with no utilities or conveniences. After an experience covering a decade under the municipal ownership plan Monroe to-day, paying 10 mills less taxes than other Louisiana cities, owns property valued at more than \$750,000, has a population exceeding 10,000, a radium-salt water natorium, 9 miles of electric car lines, electric lighting system, water works, park of 100 acres, gas well, artesian well, public school building, \$100,000 City Hall, fire station and jail, traffic bridge across the Ouachita River, 12 miles of sewerage, paved and graveled streets, 80 acres of gravel deposit valued at \$25,000 and a city hospital. The people are the owners of all their public service corporations.

City Adopts New Form of Voucher

Corning, N. Y.—A new form of voucher has been adopted at the direction of Mayor Ellison for the use of the city in the future. The feature of the voucher is that the check which is drawn to pay the bill appears on the reverse side of the bill so that the two cannot become separated. By this arrangement in the future both will be on file with the City Chamberlain instead of having the bill on file with the City Clerk, as had been the case heretofore, and the check as returned from the bank on file with the City Chamberlain. The new voucher was designed by Mayor Ellison personally after he had given the subject much attention. Hereafter all bills against the city will have to be presented on a standard form in order to be audited by the Audit Committee.

Meeting Called for Uniform Municipal Government

Lansing, Mich.—M. F. Gray, of the subcommittee appointed from the Citizens' Council and City Committee some time ago, is busy compiling a list of the principal cities of the State and arranging preliminaries for calling a meeting of delegates from such cities for the purpose of getting some measure through the Legislature relative to uniform municipal government. It is proposed to present a measure to the Legislature that will permit cities to embody in city charters the recall and referendum clauses. The matter of commission form of government and those parts of it in which the State has to deal will also be discussed and taken up with the Legislature by committees to be appointed from the delegates attending the gathering. Considerable detail surrounds the work of getting the delegates together and presenting questions to be discussed.

Mayors May Be Recalled

Seattle, Wash.—A special election will be held February 7 for the recall of Mayor Hiram C. Gill.

Tacoma, Wash.—An application has been made to City Clerk W. H. Cushman for recall petition blanks and charges against Mayor A. V. Faucett have been filed by M. B. Stambaugh, former Councilman under the old form of government. The Mayor is charged with building up a personal political machine and other offenses.

Spokane Adopts Commission Rule

Spokane, Wash.—By a majority of 2,237 out of a total of 10,463 votes, the commission plan charter, drawn by a committee of 15 freeholders, has been accepted. The following will be the immediate effects of the new charter:

"Any official filling an elective office may be recalled. Any new ordinance may be introduced by initiative petition and election. Referendum may be applied to any ordinance except emergency ordinances, ordinances ordering local improvements and those ordering the annual tax levy and appropriations. Any provision of the new charter may be amended by petition and election. Succeeding elections of city officials will be under the new commission system, the next general election to be on March 7."

The other powers of the charter—those which directly affect the administration by the commission—will go into effect when the first commission has been elected and has qualified.

Discuss Commission Form of Government

Trenton, N. J.—Mayors and others, delegates from cities in all parts of the State, assembled January 24 to discuss the commission form of government as a means of relief from partisan abuses and other municipal ills. It was Civic Day of Trenton's "Know Your City Week," and the Trenton Chamber of Commerce and Mayor Madden's non-partisan civics commission were in charge. In the afternoon there was a mass meeting with an address by Commissioner MacVicar, of Des Moines, who has served his city officially under the old and the new form of government. Mr. MacVicar enthusiastically advocated commission rule as carried out in many of the cities of the West. This evening J. Horace MacFarland, president of the American Civics Association, delivered an address on "The City Beautiful."

Lynn City Engineer Makes Report

Lynn, Mass.—Eleven thousand, three hundred and sixty-seven feet of sewer, 17,330 square yards of Hassam paving, 9,202 square yards of granolithic, 6,266 square yards of tar concrete and 18,395 feet of curbstones were laid in this city in 1910, according to the report of City Engineer George I. Leland, which is just issued. The aggregate expenses of the City Engineering Department were \$8,806.81. An unexpended balance of \$664.36 was transferred by the Committee on Finance to other departments at the close of the fiscal year. The salaries of the assistants to the City Engineer amounted to \$5,311.17. His own salary is \$2,500.

STREET CLEANING AND REFUSE DISPOSAL

City Wins Garbage Suit

Syracuse, N. Y.—At his second trial on the charge of violating a city ordinance by collecting garbage, George Checksfield, of Onondaga, was convicted by a jury in the Court of Special Session. Justice B. J. Shove suspended a sentence of \$50 fine, provided an appeal is not taken. The case against Mr. Checksfield is one of about 15 which the city has started to prevent the practice of farmers gathering garbage from boarding houses, hotels and residences. The prosecutions are the result of complaints of the Syracuse Reduction Company for violation of its contract with the city and the commencement of a suit against the municipality for \$20,000 damages. The company claimed that its profits on the contract were partly in the by-products of the reduction plant, and that the most valuable part of the garbage was being taken by the private collectors. The ordinances prohibit the collection of garbage by individuals without a permit. The only authority to grant permits is vested in the Common Council and the Commissioner of Public Safety. It was claimed at the Checksfield trial that he has about 90 hogs to which he feeds the garbage. The same practice is charged against other collectors. It is also claimed that they use the same wagons for drawing garbage and milk which is sold in the city. By living outside the city's jurisdiction, the only method of regulation is by the ordinances prohibiting the collection.

Garbage Problem in Salt Lake City

Salt Lake City, Utah.—Salt Lakers will be forced to pay \$1250 per carload to have their garbage carted out of the city limits by the Salt Lake & Los Angeles Railroad, if a contract measure introduced at the City Council meeting is approved. The document was submitted by the City Health Commissioner, Dr. Samuel G. Paul, and had been prepared at a conference of Councilmen in the Mayor's office. It provides that the city turn all garbage and refuse of any nature over to the railroad at the old city dumping grounds west of the Jordan, on North Temple street. The railroad intends to dump it on a barren tract of land between the city and Saltair. Owing to objections arising over the fact that the contract appears to bind the city to deliver all its garbage, thereby doing away with the need of the city crematory and other present sources of getting rid of it, the matter was referred to the city attorney and the Municipal Laws Committee.

Garbage Collection in Manila

Manila, P. I.—Garbage from houses, markets and shops is deposited in barrels and cleared away by the municipal garbage carts at night to be used, where available, for filling in reclaimed land or burned in the city crematories. On the whole, the natives took kindly to the use of the barrels instead of as formerly throwing their kitchen refuse out into the streets, but the first attempt to introduce metal garbage receptacles of an official pattern was a failure, the material of which the tins were made being so useful for roofing or building purposes that the number of thefts became prohibitive. Experiment is soon to be made with a new type of tin, the material of which will be of a conspicuous and easily identifiable pattern.

RAPID TRANSIT

Subway for Buenos Ayres

Buenos Ayres, Argentine.—After many years of discussion and suggestions by the different authorities in power in the Argentine Republic, permission has just been granted to construct two underground railways within the municipal area of Buenos Ayres, which had become absolutely necessary to relieve the congested traffic conditions in the narrow streets of the city. Platforms at the stations are to be very wide and long, allowing for a train of eight cars to be drawn alongside. The access to the stations is to be by two wide stairs, the entrance and exit being distinct. The depth of the underground railway is to be 22.38 feet from the level of the street, thus necessitating only 30 to 35 steps of the stair to ascend from or descend to the carriages. The tunnel will be made of solid wall of cement and brick, with an arched roof amply high, as the current is to be from above. The way is to be formed of heavy rails to avoid vibration, resting upon sleepers of hardwood, these being laid upon a bed of small stones.

Ask Statute for City Ownership

Des Moines, Iowa.—Mayor Hanna's bill for municipal control of the street car system has been approved by the committee of 25 Polk County delegates in the Legislature and the city legal department, and will be placed on the calendar of the Legislature immediately. The bill provides for the acquiring, leasing and operating of street railway systems by municipalities of over 60,000 population. It legalizes condemnation proceedings and the election of officials to be put in control of the company. Bonds may be issued upon the property without any taxation of general city property or pledging of municipal revenues.

Offer Triborough Bid

New York, N. Y.—The Bradley Contracting Company has written to the Public Service Commission through Frank Bradley, President, offering to build the entire triborough subway route for \$85,437,567. The company also offers to equip the route, together with the Fourth avenue line and loop in Brooklyn, at its own expense, and to operate the lines or turn them over to the city on payment of the cost of equipment plus 10 per cent of such cost. The following statements are made in the formal offer:

"We hereby offer to construct the triborough route, for which bids were submitted October 27, 1910, in accordance with the plans, specifications and terms which accompanied said bills, for the sum of \$85,437,567, or in accordance with such modifications for the triborough route as you may decide upon at a cost proportionate to the above figure.

"We hereby agree to equip at our own expense the said triborough route, the Fourth avenue route and the Brooklyn loop line route and to operate them all in such manner and upon such terms as you in your judgment shall determine to be reasonable to us and to the city of New York, giving proper security for such equipment and operation."

Chairman Willcox, of the Public Service Commission, commenting on the offer, said: "Mr. Bradley has informed me that his offer is made absolutely in good faith, and that his company is willing to construct the road upon the specifications and conditions prepared by the commission."

After the withdrawal of the McAdoo offer in December it seemed for a time probable that there would be no competition for the Interborough.

Will Build Trolley Lines

Charlotte, N. C.—That the Duke interests contemplate a net-work of interurban trolley lines connecting Charlotte and the cities of Piedmont South Carolina, and utilizing the vast water power developed by the properties of the Southern Power Company, in which they are heavily interested, was made known last week, when Messrs. J. B. and B. N. Duke and W. S. Lee unfolded their plans to business men of Greenville, Anderson and Spartanburg, S. C.

Ten-Car Expresses in Subway

New York, N. Y.—Ten-car express trains were run for the first time in the subway January 23. While the work of extending the platforms to accommodate the extra cars will not be completed for a few weeks yet, the subway management decided to begin running 10-car trains at once. Until the new platforms are finished it will be possible to board or leave the last two cars of a train at a few stations only by passing through the other cars.

Street Cleaning Rendered Ineffective

Portland, Ore.—Superintendent A. Donaldson, of the Street Cleaning and Sprinkling Department, in his annual report describes the process of street cleaning and succeeding events as follows: "The principal streets of the city are cleaned and flushed off every night and present a fine appearance in the early morning, but unfortunately for the credit of the department the streets are never allowed to remain clean until the public can see them. Early each morning paper, rubbish and other dirt is swept into the streets by storekeepers and others, spittoons and other receptacles are washed into the gutters, vegetable vendors and others throw refuse into the streets, and soon they look as though they had never been cleaned. All this is in violation of a city ordinance, but it is not enforced by the police, whose duty it is to enforce it."

Wants Enabling Act for Municipal Ownership

Detroit, Mich.—In his inaugural address Mayor William B. Thompson advocated the introduction of a bill into the Legislature to provide for an enabling act in case the people decide for municipal ownership and wish to acquire the street car lines.

MISCELLANEOUS

Teaching Drivers the Law

Beaumont, Tex.—Small pamphlets containing the new traffic ordinance with illustrations how to drive have been freely circulated, and every driver of a vehicle has had an opportunity to get one. Next week there will be a police officer stationed in the middle of intersecting streets in the business section of the city. They will point out to drivers their mistakes and will require obedience to the rules. This will be continued for one week, and the officers will be shifted around to different corners. After that one week of teaching and directing the officers will begin enforcing the law.

Cost of Smokeless City

Minneapolis, Minn.—J. W. Allan, Smoke Inspector, has prepared a statement showing that the elimination of the smoke nuisance in Minneapolis would cost property owners \$7,200,000. This amount would have to be invested in new boilers and smoke consuming devices. Allan says there are 26,000 plants in Minneapolis that should be regularly inspected by the Smoke Inspector. But it is a physical impossibility for one man to do the work, Allan says, and he suggests several assistants be appointed.

May Change Location of City Hall

Pittsburg, Pa.—Frederick L. Olmsted, the city planning expert of Boston, Mass., has made a comprehensive report to the Pittsburg Civic Improvement Commission for a City Hall site, beautiful breathing spots and also outlet to the South Hills, across the Monongahela River, in the now unsightly Hardscrabble district. So impressed with the plans are some of the members of the Commission that they believe the new idea should be given long and serious consideration before the erection of the new City Hall on the market site is started.

Municipal Cold Storage Plant

Cleveland, O.—To reduce the cost of living, the city is planning to rent space to individuals in the municipal cold storage plant being installed in the new West Side market house. Individuals, restaurant keepers and grocery keepers will be encouraged to buy butter, eggs, poultry and other farm products direct from the farmer in summer, when the goods are comparatively cheap, and place them in the cold storage plant for winter use. If the plan succeeds in this case, it is the intention of the city to establish cold storage plants in different parts of Cleveland, in which space will be rented to individuals at a rate which will merely cover the cost of operation. Power to operate the plant is to be supplied by the municipal light and power system. It is thought that by this method high prices which prevail in winter can be broken. Farmers will receive better rates for their products, but the people will not be compelled to pay exorbitant prices now asked for food products by those who store goods in summer to sell in winter. It is believed by Public Service Director Lea that other cities will adopt the plan, if it succeeds here. The city owns a large farm in Warrensville, products from which will be stored for use in the Department of Charities.

Plan to Require Autos to Stop at Near Side

Indianapolis, Ind.—Passage of an ordinance requiring automobiles to make brief stops at the near side of particularly dangerous street crossings as a means of preventing accidents probably will be asked of the City Council by the Board of Public Safety. At a recent meeting the board decided it was time something was done to prevent automobile accidents at certain north side street crossings. With Superintendent of Police Hyland, the Board made a trip to several dangerous crossings and decided to place immediately in the center of the street intersections at Sixteenth and Thirtieth streets, in Meridian street, circles of stone curb $4\frac{1}{2}$ feet in diameter. In the center of these circles ornamental iron poles bearing red electric lights will be placed. This will require automobiles to slow down in order to drive around the obstructions.

Wilmington Park Department Annual Report

Wilmington, Del.—The Board of Park Commissioners in their annual report state that although their work has been hampered by lack of funds, the increased use of the parks by the public shows that the improvements that they have been able to make were much appreciated. The annual expenses were \$23,520. Acknowledgment is made to the J. du Pont de Nemous Powder Company for the gift of two tracts of land, one of 106 acres the other of 18 acres.

Want Food Supply Inspected

Chattanooga, Tenn.—Licensing of the milk dealers, special places for butchering cattle and several other such reforms in the matter of handling the city's food supply are pointed out by Dr. J. C. Brooks, City Food Inspector, as some of things most needed now in Chattanooga. He says that it is now impossible for him to thoroughly inspect the milk which is sold to the consumers on account of the fact that he has no way of distinguishing the dealers. With the license system in vogue, he would have the list of dealers always at command and could more easily keep watch over them. As to the matter of butchering cattle, Dr. Brooks says that there is no way of telling whether the meat which is sold here comes from a good, healthy animal or from one that has died of some sickness. He says that it is sometimes the case that a man who has a cow die on his hands will butcher it and sell the meat in the city. With a regular slaughter house where an inspector could be always on hand this menace to health could be eliminated.

Street Signs and Posts to Go

Evansville, Ind.—A campaign to clear Main street of the hundreds of useless and ugly posts, poles and signs which are to be seen from Eighth to Water streets may be started shortly by the E. B. A. and the Civic Improvement Society. With the appearances on Main street of the ornamental lights, the many posts are more in evidence than ever before.

Ready to Begin Municipal Bathhouse

Brooklyn, N. Y.—Work is to begin at once on the new municipal bathhouse and pavilion at Coney Island. The contract for its construction at a cost of \$176,000 has been signed by the Northeastern Construction Company, of 225 Fifth avenue. The company immediately arranged to start work on the heavy cement foundation for the building. It is the aim of the contractors to have the bathing establishment ready for use early next summer, when thousands of people may daily enjoy a free dip in the surf, regardless of the bathhouse owners, whose monopoly of the ocean front until now has continued unabated for years.

Suggest Municipal Shade Tree Nursery

East Orange, N. J.—A municipal nursery for the rearing of young trees is a novel recommendation contained in the annual report of the East Orange Shade Tree Commission. The difficulty of getting the right kind of trees for planting and the long period required between getting them from the nurseries and setting them out are the reasons for establishing such an institution.

White Way Impossible for Street with Awnings

Forth Worth, Tex.—At a recent meeting of the City Commission Corporation Counsel Slay was instructed to frame an ordinance condemning all permanent awnings along Main and Houston streets. Commissioner Powell, who made the motion to instruct the counsel to take this action, declared that it was useless to construct a Great White Way for these two thoroughfares when awnings on the buildings which line the streets would cut off practically all of the light and mar the beauty of the lights. The motion as adopted provides for a penalty for retaining the permanent awnings along the streets without the permission of the City Commission. Sun shades and awnings that can be raised and lowered will be permitted.

Cities May Operate Coal Mines

Salt Lake City, Utah.—As a result of action taken by the City Council Committee on Municipal Laws at its last regular meeting, it is likely that the resolution introduced by Councilman L. E. Hall several weeks ago authorizing cities to become indebted to the extent of an additional 4 per cent of the value of their taxable property for the purchase and operation of coal lands will be recommended to the State Legislature for enactment into law.

To Abolish Contract Work to Protect Local Labor

Spokane, Wash.—The abolition of all city contract work is urged by Mayor N. S. Pratt as the result of a decision rendered by Superior Judge J. D. Hinkle declaring the city's anti-alien labor ordinance invalid. "Since the anti-alien labor ordinance has been knocked out by the court, the city must find some other way of protecting its resident laborers who have families against the foreign 'floating' element. This means that the city must do its own work in the future, eliminating entirely the contractor and employing its own citizens," said Mayor Pratt. The Mayor believes that the failure of the anti-alien ordinance to hold is the first step toward the sweeping change in the city's policy which he has always more or less persistently urged since he took office—the abolition of all city contract work.

Floor of Concrete Bridge Falls

Youngstown, O.—Part of the concrete flooring of the Spring Common viaduct fell recently and the whole of it will have to be relaid. Several causes are mentioned as contributing to the failure—the concrete was frozen, the sand was loamy, the mixture was 1:2:6, the lay bars were found to be laid on one-foot instead of six-inch centers as required by the specifications.

Pumping Plant Cost \$14,998

Orange, N. J.—Henry H. Berg, Chief Engineer of the Orange Pumping Station, has filed his annual report with City Clerk Willet B. Gano. It shows that during 1910 a total of 1,169,141,287 gallons of water and sewage passed through the municipal pumps. Of this quantity there were 950,580,000 gallons of water and 218,561,287 of sewage. The total cost of maintenance was \$14,998.03.

LEGAL NEWS

A Summary and Notes of Recent Decisions—Rulings of Interest to Municipalities

Water Courses—Adverse Uses

S. O. & C. Company vs. Ansonia Water Company.—In 1884 defendant water supply company obtained from a manufacturing company, a riparian owner below defendant's dam, by a recorded deed, the right to use and divert the water above the dam in consideration of supplying the factory with water required during the working hours during 220 working days in the year. No water was actually taken from the stream under such arrangement, but water was withheld to supply the manufacturing company's wheel, being held substantially two-thirds of the time for the first 15 years, and the effect of withholding it in reducing the waters of the stream was at times serious and perceptible. Held, that other riparian owners could not now claim that defendant was not entitled to so withhold the water for the use of the manufacturing company in view of defendant's open and continued use of the water for that purpose for so long a period.—Supreme Court of Errors of Connecticut, 78 A. R., 432.

Sidewalk Improvement—Lien on Property

Morris et al. vs. City of Gainesville.—Where there is a substantial compliance with lawful requirements in the construction of sidewalks and street improvements in a municipality, and it is not made to appear that the improvements as made are unsuited to the purposes designed, or that such improvements are of no practical value, a lien under the statute on the adjacent property for such improvements may be enforced for the real value thereof under a lawful contract.—Supreme Court of Florida, 53 S. R., 739.

Street Openings—Damages

In re East 172d Street in City of New York.—In proceedings by a city for the opening of a street the damages should have been fixed as of the date when the first street bounding the block was actually opened for public use and not as of the date when the title to such street vested in the city.—Supreme Court of New York, 126 N. Y. S., 284.

Obstructing Street—Rights of Owner

Ogden et al. vs. City of New York et al.—A city constructed docks for use by others for compensation. The contractor doing the work excavated a street so that an abutting owner lost for two years all access to his property and was thereby deprived of its use for that period. A large part of his land fell into the excavation. Held, that the damages inflicted on the abutting owner resulting from depriving him of the use of the street and from his land falling into the excavation were direct and not consequential, and he could recover substantial damages.—Supreme Court of New York, 126 N. Y. S., 189.

Special Legislation—Free Schools

Turner et al. vs. City of Hattiesburg.—Constitution 1890 requiring provision to be made by general laws to prevent the abuse by municipal corporations of the powers of taxation and contracting debts is not self-executing, but requires legislation to put it into effect; and the Legislature may say what is an abuse of such powers by a municipal corporation and provide checks thereon, and it does not invalidate laws 1910, creating the Mississippi Normal College and authorizing municipalities to make donations to secure the location thereof.—Supreme Court of Mississippi, 53 S. R., 682.

Paving Assessment—Bill to Enforce

City of Fairmont vs. Bishop.—A bill by a city, brought under Code 1906, to enforce the lien of a special street paving tax, assessed under section 34 of said chapter, upon the lots abutting on the paved street, is demurrable if it does not allege, in effect, that the owners of the greater amount of the frontage of lots abutting on such street and lying between the same cross streets nearest together, or lying between a cross street and alley, within the same city block, with the lots against which the lien is asserted, signed a written petition asking that the street be paved.—Supreme Court of Appeals of West Virginia, 69 S. E. R., 802.

Water Supply Contract—Cancellation

City of Columbus, Appellant, vs. Mercantile Trust & Deposit Company, of Baltimore, Trustees, and the Columbus Water Works Company and W. S. Greene, as Receiver thereof.—The continuing character of a water works company's contract obligation to furnish an adequate supply of wholesome water is not met by showing that such a supply has been furnished at times, or that, at the time of completion of the works, the company was able to carry out its contract, nor is non-performance excused by the occurrence of conditions which are likely to happen in a climate of long, dry summers. The acceptance by a municipality and its people of improved conditions in a water works system, resulting from complaints, does not estop the municipality to rescind the contract with the water works company for a breach of its contract obligation to furnish an adequate supply of wholesome water, unless such improved conditions result in the continuous maintenance thereafter of such a supply. The maxim that "he who seeks equity must do equity" does not justify a court in denying to a municipality rescission under its cross bill of a contract with a water works company which the latter has broken by failing to maintain a continuous and adequate supply of wholesome water, and in affirmatively restraining the municipality from establishing its own system unless it shall do equity to the bondholders of the water works company by purchasing the usable parts of the water works system. A municipality has the right to treat a contract with a water works company as terminated by the latter's breach of its contract obligation to furnish a continuous adequate supply of wholesome water and to invoke the aid of a court of equity to enforce its rescission, since the remedy at law by an action for damage is wholly inadequate.—United States Supreme Court, 31 S. C. R., 105.

City Attorney's Fees

City of Cartersville vs. Cardwell.—Revised Statute 1900 Section 9339, found in the charter of fourth class cities, provides that, if defendant plead or be found guilty, the Mayor or police judge shall assess the punishment prescribed by ordinance, and render judgment accordingly and for costs of suit. Section 9312, after providing that the Mayor shall have power to remit fines or forfeitures, declares that "this section shall not be so construed as to authorize the Mayor to remit any costs which may be accrued to any officer of said city by reason of any prosecution under the laws or ordinances of such city." Section 9324 provides: "That the Aldermen shall have power to fix the compensation of all officers and employees of the city by ordinance." Held, that an ordinance allowing a fee to the city attorney on appeal from the police court to the circuit court was within the power granted and valid.—Springfield Court of Appeals, 132 S. W. R., 745.

Contracts—Power of Particular Officer

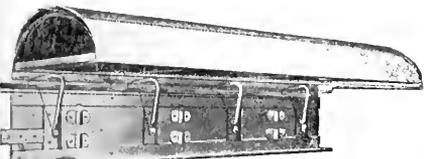

Graff vs. City of Tacoma et al.—Tacoma City charter provides that, subject to the control of the city council etc., the commissioner shall have charge of and superintend the public works, etc., but shall make no purchases in excess of \$500, except upon written contract, and after advertising for bids. Section 130 provides that he shall have special charge and control, subject to the municipal council and ordinances of the city, etc., of the streets, roads and bridges and of improvements and repair thereof, etc. Section 160, which is part of article 12 of the charter, relating to the improvement of streets and kindred improvements, to be made at the expense of the property benefited, provides that the commissioner shall compare bids with the record made by the clerk and award the contract to the lowest legal bidder, etc. Plaintiff in this case made a bid to construct a bridge, which was accepted by the commissioner. Later by ordinance another bid was accepted and the bridge constructed by that contractor. Held, that under the several provisions of the city charter set out above the commissioner could not, by accepting a bid for the construction of the bridge, preclude an award of the contract therefor to another bidder by the city council because Section 160 refers particularly to street improvements, etc., and the others specifically place the matter under the control of the city council.—Supreme Court of Washington, 112 P. R., 251.

MUNICIPAL APPLIANCES

Collapsible Steel Forms

The collapsible steel forms hitherto made by the Collapsible Steel Form Company, Detroit and Carson City, Mich., will hereafter be manufactured by the Concrete Form and Engine Company, Detroit, Mich., who have also taken over the business of the New Belle Isle Motor Company. The new company will make collapsible steel forms, concrete machinery and general utility engines.

The forms are constructed in three pieces, the top (which is semi-circular) and two side-plates. The top and one

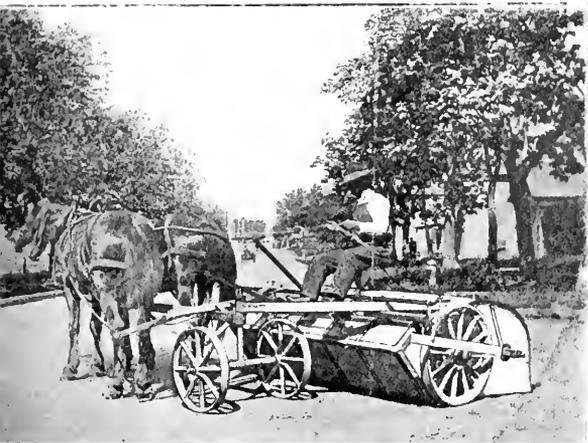

COLLAPSIBLE FORMS FOR SEWERS, CULVERTS AND BRIDGES

The side-plate are shown in the illustration. The working parts of the form are simple and easy to operate. The top, fitting between the two side-plates, is held in position by arms attached to the side-plates by bolts, which allow them to be lowered by pulling the draw-ropes which are attached to the arms. By pulling the draw-rods the arms are lowered and the support of the top is removed, allowing the top to be lowered. The side-plates are held in position by swinging braces so that when locked the sides are immovable. End plates are made which fasten on the top and side-plates by keys so that they may be easily removed. By the use of two side-plates and extra standard size tops it is possible to construct any size culvert ordinarily used.

Sanitary Street Sweeper

The Winters Manufacturing Company, 819 Spring street, Coffeyville, Mo., manufactures a horse-drawn sweeper in which the rotary brush is completely closed in by canvas that very little dust escapes from it. As a result, it is claimed that a street may be swept in the daytime without creating a nuisance. The first illustration gives an idea of the rear construction, showing the brush, also the skeleton steel frame that carries the rear hood.

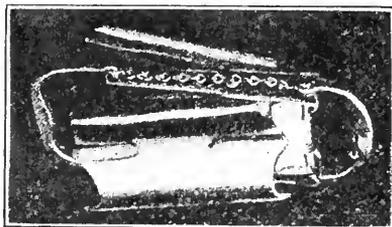

WINTERS SANITARY STREET SWEEPER—EMPTYING DUST BIN

The brush is side-curtained, preventing the dust from leaving the end of the broom. The view also shows the gear drive, which is connected direct with the broom shaft. The construction is simple and there is nothing to give trouble in operating the sweeper. The second illustration shows the dust receptacle lifted, delivering dirt to the pavement. The dust box is strongly reinforced with angle-iron. The box will hold the dirt from about ten blocks of street.

Sewer Cleaning Machine

The Kuhlman sewer cleaning machine, manufactured by the Northern Manufacturing Company, Hammond, Ind., differs from other sewer cleaning machines in that the scoop which does the cleaning is pulled directly against the clogged portion of the sewer. When the scoop is filled, doors provided in the front part of the scoop close and it, with the load, is pulled back easily through the cleaned section and drawn up through the manhole and dumped into a wagon by means of a windlass and cable. This work is accomplished without the necessity of sending men down the manhole. A pulley over which the bucket cable passes is attached at the bottom of the

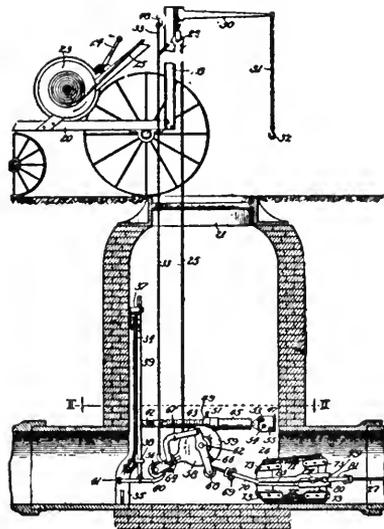

SCOOP OF SEWER CLEANING MACHINE

manhole. This guides the bucket, making the draft direct during the operation of the scoop. When the scoop has been loaded and drawn back to the manhole, a line operated from the surface of the street releases the cable and trolley so that the scoop can be raised.

A light line with a float is first passed from one manhole to another. A windlass and cable is stationed at each manhole. A cable is attached to the line and drawn from one manhole to the other. The scoop or bucket is then

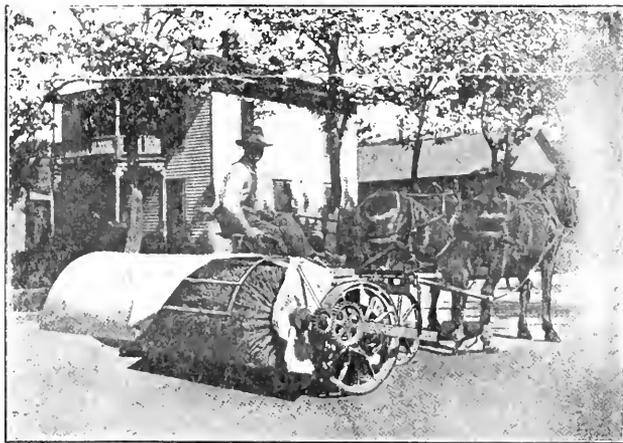

attached and pulled by the cable against the clogged section of the sewer. A lighter cable from the second manhole pulls the bucket with its load back and elevates it through that manhole.

SEWER CLEANING MACHINE

The complete outfit consists of five expansion buckets, one low and one high windlass, two cables and a trolley with pulleys to guide the cables. The trolley system is anchored in the manhole through which the bucket is to be elevated, and keeps the cable from cutting the sewer. After the cable is passed from one manhole to the other the men do all the work from the street. They need not wear rubber boots and oilcloth clothes, hence they can work freely. The bucket allows water to run out so that only comparatively dry sand and mud is drawn out. The company uses a 12-inch bucket for a 16-inch sewer, a 15-inch bucket for an 18-inch sewer, and so on, the bucket being not much less in diameter than the sewer.

Illustrating the efficiency of the machine, the manufacturers state that in operating the machine in Hammond on one occasion the bucket brought out a roll of fine roots. The next pull brought out a root 38 feet long ranging from 5 to 12 inches in diameter. At another time they cleaned a 4-foot sewer in Hammond which had been giving trouble ever since it was built. Complaint of the flooding of cellars during storms had been frequent, although the sewer was large enough theoretically to carry off the rainfall.

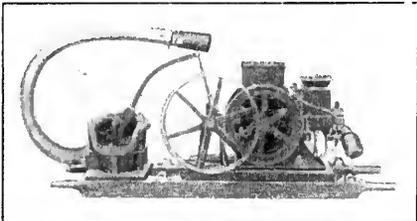

WINTERS SANITARY STREET SWEEPER—REAR VIEW

However, for 12 years no effort was made to clean it except by flushing. In fact, a large centrifugal pump was installed at the mouth of the sewer and operated at every rain with a view to accelerating the flow and removing the sand with which the sewer appeared to be half-filled. Finally the proposition was turned over to the Northern Manufacturing Company to solve. The Kuhlman machine developed the fact that during the construction the contractor had dammed the sewer at intervals with brick walls regularly constructed with mortar joints. These he had never removed. Sand had settled in and filled the sewer to the height of the dams. The Kuhlman machine removed both dams and sand. The sewer, which it was thought would have to be replaced by a larger one, is now doing its work satisfactorily.

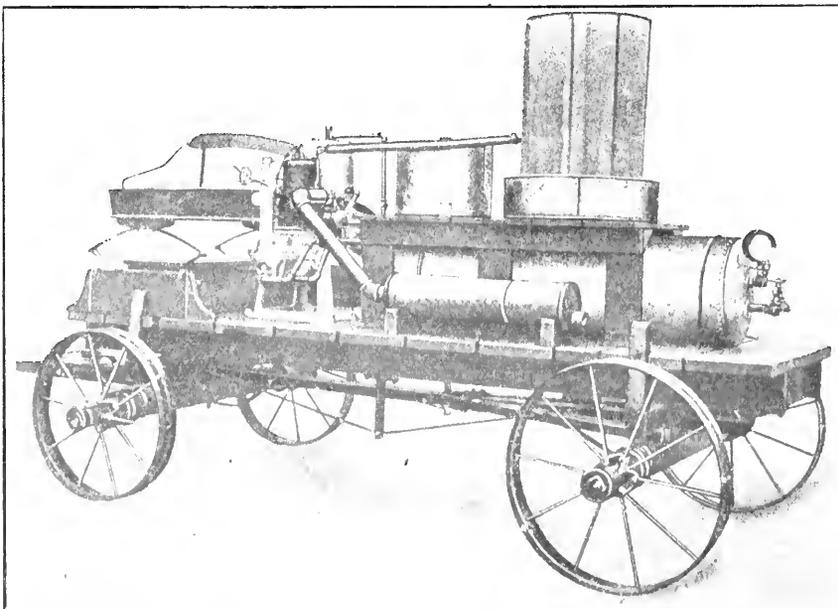

The Douglas Contractors' Diaphragm Pump.

W. & B. DOUGLAS, Middletown, Conn., has designed a self-contained pumping outfit for the use of contractors. It is also used by public service corporations for drainage and sewage work and where pumps of large capacity are operated by unskilled labor. The special

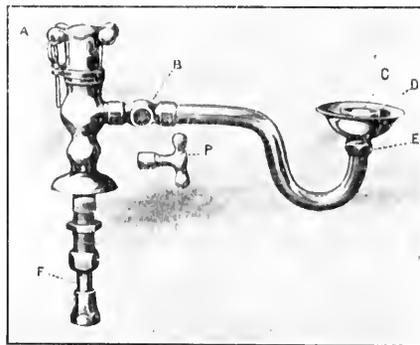

CONTRACTORS' DIAPHRAGM PUMP

feature of the pump is its ability to move large quantities of gritty water at a low price, and to make the unit easily movable from place to place it is mounted on a frame that can be easily handled by four men. The pump is of the diaphragm type and is driven by a gasoline engine. Its capacity is 3000 gallons per hour and it is said to operate on a gallon of fuel per day. All the parts of the engine are inclosed, and the gasoline tank, water jacket, carbureter,

PORTABLE AIR COMPRESSOR WITH GAS ENGINE

UNIVERSAL SANITARY DRINKING FOUNTAIN

muffler, batteries, spark coil and switch are all grouped around the engine. The weight of the pump and engine when crated for shipment is 650 pounds.

Sanitary Drinking Fountain.

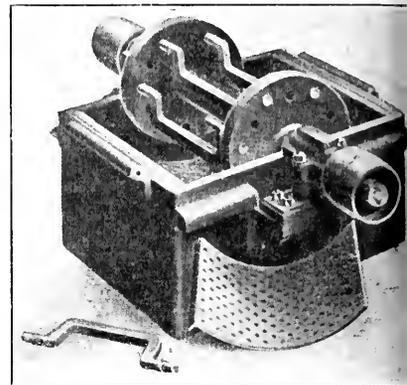

THE Universal Drinking Fountain, shown in the illustration, is made by J. L. Hammett Co., 250 Devonshire street, Boston, Mass. The faucet is ordinarily closed by a spring, except when held open by the hand. By inserting the pin A, however, it is converted into a continuously flowing fountain. The height of the stream is regulated by turning the valve B with a wrench. Drinking water is supplied through the hole C. In the sides of this nozzle are four holes through which the water is forced against the inside of the ring D. Alternating with these four holes are four more holes in the lower edge of the ring D, through which the water is forced against the inside walls of the cup. All the inside parts of the cup are thus being continually flushed. The direction of the stream of water may be changed by turning the regulator E.

Sheet Packing for High Temperatures and Pressures

J-M. Permanite is the trade name of the sheet packing made by the H. W. Johns-Manville Co. for use in connection with superheated steam and high pressures. Permanite packing is made of asbestos and rubber. Hence it will stand a temperature that would destroy ordinary packings.

Fine Crusher

The Gardner Crusher 'Distintegrator and Pulverizer is a suitable machine for obtaining fine crushed rock when needed, as in the construction of bituminous concrete pavements, or for other purposes. It is claimed to give a maximum yield with the lowest possible power and maintenance expense. For example, the No. 1 machine, which weighs 1,700 pounds and has a speed of 1,000 revolutions per minute, requires from 7 to 12 horse-power and will crush 3 tons per hour with 20 per cent of product passing a 20-mesh screen and 50 per cent of it through the 100-mesh screen. The wear is confined to only a single piece of the machine, the hammers, which can be changed without loss of time. The crusher requires no special foundations. The machine is

GARDNER CRUSHER AND PULVERIZER

made by the Gardner Crusher Company, 556 West Thirty-fourth street, New York, N. Y.

Portable Air Compressor

A portable air compressor suitable for contractors' use is made by the Roberts Motor Company, Sandusky, Ohio. The machine illustrated was originally made for contractors laying water pipe. The compressor is capable of supplying two ordinary calking hammers. The heavy galvanized steel tank has a capacity of eight cubic feet and can be filled with air at 100 pound pressure within three minutes from the time the motor is started. A piece of burlap is wrapped around the radiator and kept wet to absorb the heat. The gasoline tank has a capacity of six gallons, sufficient for a run of ten hours. The truck has an open platform with trussed sills. The weight of the outfit is 1,540 pounds.

The special features of the compressor are a gear-driven mechanical oiler, which starts and stops simultaneously with the operation of the motor, a rigid timer which it is said will not get loose, and a noiseless carbureter. The following table gives the principal dimensions and specifications of the compressor:

Diameter of engine cylinder, inches...	4 1/2
Length of engine stroke, inches.....	5
Speed, revolutions per minute.....	600
Horse-power	6
Area low pressure cylinder, square inches	17.5
Area high pressure cylinder, square inches	6.2
Length of stroke, inches.....	5
Air consumption, cubic feet per minute	30
Length, inches	27 1/2
Width, inches	19
Height, inches	34 1/2
Weight with iron base, pounds.....	400
Weight with aluminum base, pounds.	350

NEWS OF THE SOCIETIES

New Jersey Association of County Engineers.—The association met in the office of State Road Commissioner Frederick Gilkyson, January 24, and elected the following officers: President, W. E. King, of Morris county; vice-president, E. D. Rightmire, Atlantic; secretary, Assistant State Surveyor of Roads Edward E. Reed, Mercer, and treasurer, Joshua Doughty, of Somerset. Retiring President Frank J. Epperle expressed regret that the courts in upholding patents for certain paving processes had left to engineers the choice of specifying the high-priced patented materials, laying inferior pavements or infringing patented processes. He hoped that an understanding could be reached with the owners of patents for a uniform specification, under which the various materials could compete. The papers read by the members of the association were as follows: E. D. Rightmire, "Lead Roads"; Earl Thomson, "Some Notes on Mattressing"; J. J. Robertson, "Penetration vs. Mixing Method"; James Owen, "Why I Have Changed My Mind"; William C. Catell, "Comparison of the Mixing Methods"; Grant Davis, "Extras on Roads"; William E. King, "Repairs"; Joshua Doughty, Jr., "Width of Roads"; Jacob Bauer, "Railroad Grade Crossings"; Frank J. Hubbard, "Reinforced Concrete Bridges."

Maine Society of Civil Engineers.—The society was organized in the rooms of the State Highway Commission, Augusta, with a strong list of charter members, on January 17. The meeting was called by Cyrus C. Babb, engineer of the State Water Storage Commission, who had sent out letters of invitation for the purpose. A temporary organization was effected by the election of Mr. Babb as chairman and Frank Messey, of Bangor, secretary. The association effected its permanent organization with the election of the following officers: President, Cyrus C. Babb, Augusta; vice-president, Walter H. Sawyer, Lewiston; secretary, Frank E. Messey, Bangor; treasurer, H. S. Cardman, Orono; directors, Paul D. Argent, of Michias; E. C. Jordan, of Portland; P. H. Coombs, of Bangor; E. Greenwood, of Skowhegan; Moses Burpee, of Houlton; executive committee, the officers and directors.

Stephenson County Good Roads Association.—The annual meeting was held in Freeport, Ill., on January 14, and opened with an address of welcome by President Jacob Weiss, of the Citizens' Commercial Association of Freeport. President Brickner, of the association, called attention to the need of such a body in every county in the state. Part of a letter from Moses Sawyer, a retiring commissioner, read: "I am tired of the business. The last year I worked hard for better roads and got nothing but rebuffs, the roads were good enough for them. You know we have no money to work with. Our town has about \$1,300 to work 51 miles of road and 51 bridges, and nothing about culverts. We set aside one-half for bridges, that leaves \$12.75 per mile for road work and \$2.75 per bridge, and then they wonder why we do not have better roads and bridges. I wish your road society could explain it so they can see why they do not have better roads." Election of officers will be held on the third Thursday in April.

Ohio State Stone Club.—At the meeting at Toledo January 10 among the papers presented were the following: Present Highway Laws of Ohio and Proposed New Laws, by State Highway Commissioner J. C. Wonders; Roads, Yesterday, To-day and Tomorrow, by H. F. Earl, formerly State Highway Commissioner of Michigan; County Roads in 1920, by J. W. Weldon.

Kansas State Good Roads Convention.—One of the main points urged at the good roads meeting at Wichita on January 17 was that the Kansas constitution should be revised so it will be possible to get State aid for road improvements in the townships and counties. Governor Stubbs' place as speaker was taken by H. J. Waters, head of the Kansas Agricultural College. About five hundred delegates had registered. The creation of an official or board of control, either in State or county, with power arbitrarily to locate more extensive road improvements and the need of a State road engineer were discussed.

Carolina Municipal Association.—The annual convention of the association was held on January 18 and 19 in the rooms of the Chamber of Commerce, Raleigh, N. C. On account of slow arrival of the members, no forenoon session was held. The Mayors present failed to endorse the Battle bill, which is a general measure designed to permit cities of over 5,000 inhabitants to adopt the commission form of government if the voters may so decide. There were many grounds of objection to the bill, and these were urged by those who in many cases favor such government. It was urged that the needs of various cities were different and that separate provision must necessarily be made for each, just as various forms of charters are now found necessary. Among other subjects discussed were the division of the road fund, by which towns and cities might get some returns in work on their streets for their payment toward the support of public highways. "Municipal Taxation" was the subject of a paper by Mayor J. D. McNeill, of Fayetteville, who protested against the discriminatory provision of the laws which prohibit cities from taxing telephone, telegraph and express companies doing business within their limits. The old officers were unanimously re-elected, as follows: President, Fred. N. Tate, High Point; first vice-president, James D. McNeill, Fayetteville; second vice-president, T. W. Hawkins, Charlotte; third vice-president, O. B. Eaton, Winston; fourth vice-president, J. S. Wynne, Raleigh; fifth vice-president, W. D. LaRoque, Jr., Kinston; sixth vice-president, W. G. McRae, Wilmington; secretary and treasurer, Thomas D. Meares, Wilmington.

Indiana Gas Association.—At the convention of the association, which ended at Fort Wayne on January 19, the following officers were elected: President, S. E. Mulholland, Fort Wayne; vice-president, Howard Olds, Newcastle; secretary-treasurer, Philmer Eves, Indianapolis; directors for three years, Samuel T. Murdock, Lafayette; James Moncrie, Bloomington. The growth of the association is the most notable fact brought out in the convention. It now has 150 members. The tenor of the principal addresses has been the question of rates and the relations of gas companies to the public.

Colorado Goods Roads Conference.—More than three hundred delegates attended the conference in Denver, beginning January 13, to devise a plan for the betterment of the highways of the State. Among the speakers were Dr. F. L. Bartlett, president of the Denver Chamber of Commerce, whose topic was "The Commercial Club and its Relation to Good Roads." C. P. Allen, chairman of the Colorado State Highway Commission, followed Dr. Bartlett, discoursing at some length on what the Commission had accomplished since its organization. L. C. Paddock, of Boulder, spoke on "How to Finance Road Building," and State Engineer C. W. Comstock, on the "Internal Revenue Fund." "What State Highways Will Do for Colorado" was the subject of Isaac N. Stevens, of Pueblo. He stated that the good roads in the small country of Switzerland were paying an annual income through the tourist traffic of over \$100,000,000 a year to the hotels alone, and that it is possible that the total income in Switzerland on account of good roads is \$250,000,000 annually. He stated that Paris is receiving \$800,000,000 annually on account of the splendid good roads of France. Mr. Stevens stated that if Colorado had roads equal to those in the Alps or the Pyrenees or the roads of Norway the State would have an annual income of \$250,000,000 greater than it now has. He stated that it was time to quiet the discussion of the matter of a few thousand dollars to be expended in roads and to begin a discussion of a matter of millions. He called attention to the fact that California has just voted \$18,000,000 for good roads, \$9,000,000 of which is to be used in constructing a splendid State road north and south, to be used as an automobile road.

Michigan Engineers' Society.—The session ended at Lansing on January 12, with the election of the following officers: President, Byron E. Parks, Grand Rapids; vice-president, J. R. Allen, Ann Arbor; secretary, A. L. Holmes, Grand Rapids; treasurer, Dorr Skeels, Grand Rapids; directors, Herman K. Vedder, East Lansing; Frank F. Rogers, Lansing, and John J. Hubbell, Manistee. Where the next convention will be held has not yet been decided, the matter being left in the hands of the directors. Because of its central location, it is probable that Lansing will again be selected. One of the principal speakers at the meeting was F. F. Rogers, the State Road Commissioner, who spoke at some length on preserving macadam roads by means of different tar preparations, and in that connection said that the college road could have been kept in far better condition if the center of the road had been covered with one-half inch of coarse sand. This layer of sand would protect it from the auto traffic. He also stated that while some roads were injured by autos traveling over them, that was the case with a very small number. A discussion followed this talk, in which it was brought out that the life of all macadam roads could be prolonged by the use of tar preparations as a binder, different preparations being used for different kinds of material. And contrary to what some have supposed, the harder the stone the better the road. During the last year there have been 790 miles of road built, for which State awards have been paid to the amount of 22 per cent of the total cost of the roads.

Wisconsin Electrical Association.

At the convention of the association, held at the Hotel Foster, Milwaukee, January 19, C. M. Anford, of Chicago, strongly urged the adoption of a better system of street lighting in many American cities because of its value for police protection. He also referred to the value of electric lighting as an advertising medium. Other speakers were: A. D. Goedjen, Milwaukee, on "Electric Meter Testing"; John I. Beggs, of the Milwaukee Electric Railway & Light Company; C. N. Duffy, the Milwaukee Electric Railway & Light Company, who spoke on "Insurance," and W. J. Kelsh, master mechanic and chief engineer of the Eastern Wisconsin Railway and Light Company and the Wisconsin Electric Railway Company, who told of the work in an "Electric Railway Repair Shop." The following officers were elected: G. B. Wheeler, Eau Claire, president; Irving P. Lord, Waupaca, first vice president; W. H. Winslow, Superior, second vice-president; R. M. Kimball, Kenosha, third vice-president; George Allison, Milwaukee, secretary and treasurer.

PERSONALS

BRACKETT, WINSLOW M., Newark, N. J., formerly Superintendent for the Barber Asphalt Co., Trenton, N. J., has been appointed sales agent for the State of New Jersey for the Texas Company.

BREWER, ALEXANDER, former Mayor of Ogden, Utah, has been chosen President of the Weber Club, a civic organization.

BURRELL, FRANK E., Quincy, Mass., has been appointed Chief of Police, and Randolph Bainbridge will be Commissioner of Public Works.

CANON, W. H., was re-elected Mayor of Medford, Ore.

CASSELL, R. L., Morristown, Tenn., has been appointed Chief of Police.

DROWNE, HENRY B., has given up his position as Assistant Engineer in the Rhode Island State Board of Public Roads, and accepted a position as Assistant Engineer with Arthur H. Blanchard, Consulting Highway Engineer, Providence.

EDWARDS, WILLIAM H., New York's Commissioner of Street Cleaning, is one of twenty-six who recently received medals from the Carnegie Hero Fund Commission. This award is made in connection with the shooting of Mayor Gaynor last summer, when Edwards disarmed the assailant.

FROST, HARRY D., for three years connected with the Detroit Water Company, has been engaged by the Akron (Ohio) Waterworks Company.

FULLERTON, T. M., Gadsden, Ala., has been chosen Chief of the Fire Department.

GETZ, ALEXANDER, former Mayor of Hamilton, O., is dead.

GOODRICH, W. FRANCIS, London, England, Consulting Engineer on Refuse Disposal, is making a trip of inspection to a number of American cities having incinerating or other refuse disposal plants.

GRAY, HARVEY, has been appointed Chief of Police for Pasco, Wash., and Alf. Buchanan, of Portland, Ore., Street Commissioner.

HALL, C. T., Malden Mass., has been reappointed Street and Water Commissioner; Henry W. Estay, City Engineer; T. J. Foley, Acting Chief of Police, and T. W. Hough, Fire Commissioner.

HILL, WILBUR, has resigned the position of City Engineer for Gadsden, Ala., and it is expected that H. P. Ford, the Assistant Engineer, will take his place.

LUTSON, WILLIAM, has been re-elected Borough Engineer by the Doylestown, Pa., Council.

INGALLS, FRED, is the new Chief of Police at Centralia, Wash.

JERVAIS, WILLIAM J., has been appointed by Mayor James a member of the Buffalo Board of Health.

JONES, FRED A., Houston, Tex., has been engaged by city of Patterson, La., as Engineer in charge of construction of \$30,000 water works.

KELLER, DR. ARTHUR, Paris, Ky., has been made Health Officer.

MAUPIN, S. T., becomes Superintendent of the water plant at Knoxville, Tenn., succeeding E. N. Chisholm, Jr., who recently resigned.

MEAD, GILES W., Mayor of Glen Ridge, N. J., has been elected President of the joint councils of Bloomfield and Glen Ridge, succeeding William P. Sutphen, resigned.

MILLSPAUGH, W. E., Port Jervis, N. Y., has been elected Chief of the Fire Police.

MORLEY, ALFRED J., is entering upon his third term as Mayor of Victoria, B. C.

MOTT, FRANK K., Mayor of Oakland, has married Mrs. Gertrude Bennett, of Berkeley, Cal.

MUNGLE, WILLIAM, Newark, N. J., has been elected President of the Board of Street and Water Commissioners.

NEUBLOCK, NEWMAN F., has been appointed Chief of Police, Tulsa, Okla., to fill vacancy caused by the resignation of Charles W. Connelly.

PERRY, L. E., Philadelphia, Pa., until recently connected with the design and construction of the Pennypack Creek sewage disposal works of the city of Philadelphia, Pa., has been appointed Secretary and Engineer of Houston, Perry & Co., Seaford, Del.

RAWLS, H. C., the new Mayor of Columbia, Miss., is only twenty-five years of age.

ROURKE, LOUIS, Boston, Mass., has been approved by the Civil Service Commission as Commissioner of the Department of Public Works. Before taking up his work in Boston he was for seven years engaged on the Panama Canal.

SARGENT, PAUL D., has resigned as State Highway Commissioner of Maine to accept the position of Assistant Director of the United States Office of Public Roads.

SKIRM, BENJ. C., Trenton, N. J., has resigned from the Board of Water Commissioners.

STEWART, SAMUEL M., Rochester, N. Y., founder of the firm of A. F. & S. C. Stewart Co., manufacturers of fire apparatus, died January 7.

TAYLOR, L. B., a native of Michigan, has been re-elected Mayor of Vancouver, B. C. He is a naturalized British subject.

THORNBURG, JOHN A., has been elected Mayor of Forest Grove, Ore.

VEDVINE, REMY, has been named for Mayor of the newly organized municipality of Oakdale, La.

WALCOTT, E. L., Chicago, Ill., formerly Secretary of the Modern Iron Works, Quincy, Ill., has been appointed Manager of the Pacific Flush Tank Co., succeeding the late Sidney W. Miller.

WARREN, FRED T., Tampa, Fla., is the new City Engineer.

WEBER, FRANK S., for seven years City Clerk of Watertown, Wis., will leave early in February for three months in the South for his health.

WIDMER, JOHN, Lackawanna, N. Y., has been re-elected President of the Council. John J. Monahan was reappointed City Clerk and Maxwell Briggs given another term as Commissioner of Public Works.

TRADE NOTES

Cast Iron Pipe, Chicago.—It is estimated that the lettings thus far this year are just about equal to the total for the same period of last year. Quotations: 4-inch, \$25; 6 to 12-inch, \$24 10-inch and up, \$23.50. Birmingham The aggregate of small orders placed within the week is quite satisfactory. Prices are believed to be on a firm basis and an advance at an early date probable. Quotations: 4 to 6-inch, \$20 to \$20.50; 8 to 12-inch, \$19.50 to \$20; over 12-inch, average \$18. New York: A number of good orders from private companies have been placed in the last week. Quotations: 6-inch, car loads, \$22.

Lead.—The demand is light, but market is said to be firmer. Quotations: New York, 4.50c; St. Louis, 4.35c.

New Paving.—City Engineer Frank Newton and Councilman George Miller, Carthage, Mo., are said to have invented a pavement which it is expected will be laid in Carthage. The ingredients are said to be Carthage limestone and cement. The cost, it is expected, will not much exceed \$1.

Chicago Cement Show.—The outlook for the success of the fourth annual cement show in Chicago, February 16-23, is very bright. The show will again be held in the big Coliseum. A new and very beautiful scheme of ceiling and wall decorations has been designed and the next cement show will undoubtedly surpass in beauty any that have thus far been held. The same general equipment for booths will be installed as was used at the New York cement show in December last. The corner posts and railings will all be made of cement and the show will be truly a cement show. There will be about two hundred exhibitors. Inquiries from all parts of the United States, particularly from the territory in the Middle West, indicate that the out-of-town attendance will be very heavy. The show comes just at the right time for the contractors who are in the market for machinery for the opening building season. Two important conventions will be held in connection with the Chicago Show. The annual meeting of the National Builders' Supply Association will be held at the Auditorium, February 21-22, and the Sixth Annual Convention of the Interstate Cement Tile Manufacturers' Association will be held at the New Southern Hotel, February 21-23.

Turbo-Generators.—The City Council's Water Committee and the Commissioner of Public Works, Buffalo, N. Y., have approved the purchase by the city of three steam-turbo-electric generators for the equipment of the new water works from the Westinghouse Machine Company, the lowest bidder, at \$248,180. In addition to providing power for pumping service, the new generators will supply current for lighting the streets and public buildings, for which Niagara power is now used.

Corrugated Culverts.—The Ohio Corrugated Culvert Company, Middletown, Ohio, announces the increase of its capital stock from \$65,000 to \$100,000. The capacity of its plant will be greatly increased, and one of the new proposed buildings will be used for manufacturing portable houses made from American ingot iron, rolled by the American Rolling Mill Company, Middletown.

Fire Extinguishers.—The General Fire Extinguisher Company will enlarge its plant at Warren, Ohio, by the erection of a brick and steel factory building, 150 by 350 feet, the contractor which has been placed with the Woods Construction Company, Detroit, Mich. A portion of the building will be used for pipe storage purposes and the remainder for a machine shop. An electric crane will be installed as well as other machinery.

Wood Preserving Plant.—A new and that is regarded by many as an important development in the industrial growth of the Pittsburg district is the erection of the Pittsburg Wood Preserving Company, Pittsburg, which has taken measures for the erection of a lumber-treating plant between Pittsburg and Connellsville, on a site recently secured for the purpose. The resident and general manager is Assistant B. Shipley, who designed the best tie, pile and pole preserving plants in the country. Contracts insuring the success of the enterprise have been made with railroad companies, but the plant will be operated on a general commercial proposition on orders from steam or electric railroads, telegraph and telephone companies, mining companies, municipal boards or companies controlling docks, harbor improvements, etc. With the rapidly increasing use of treated timber, to preserve it from decay, there will be demand in the United States for many such plants, and their equipment of machinery is very considerable. It includes enormous steel pressure cylinders, pressure pumps, vacuum pumps, general service pumps, air compressors, boilers, feed pumps, heaters, engine or other prime mover, electric generator, motors, storage tanks, cranes, yard locomotives, special cars, canalizing reservoirs, underground discharge reservoirs, piping, steam receivers, traps, separators and a mass of auxiliary apparatus such as is commonly used with the above.

Creosoting Plant.—The creosoting plant of the International Creosoting Construction Company, at Beaumont, Tex. was burned January 12. The loss is estimated at \$80,000. The insurance is reported to be ample. The head office of the company is at Galveston.

Voting Machines.—B. A. Myers, Ashen, Ind., is erecting a factory at Middlebury, Ind., for the manufacture of a voting machine. Later on it is the intention of Mr. Myers to establish a factory in either Michigan or Wisconsin. Additional equipment will be purchased later.

Steam Shovels.—The Bucyrus Vulcan Steam Shovel Company, Evansville, Ind., has elected the following officers: President, H. P. Eels, Cleveland, Ohio; vice-president, G. F. Steedman, St. Louis, Mo.; secretary-treasurer, C. L. Schweigart, Milwaukee, Wis.

Crushers.—Plans are reported to be in progress for a further extensive addition to the works of the Power & Mining Machinery Company, Cudahy, Wis., which is now operated as a branch of the International Steam Pump Company.

Somers System of Assessment.—A meeting of the Allied Civic Bodies, Philadelphia, Pa., unanimously recommended that Council appropriate \$12,000 to make a systematic equalization of municipal tax valuations in accordance with the Somers system adopted in Cleveland, O.

Municipal Automobiles.—The large number of automobiles owned by some of the various municipalities is surprising; thus the city of New York owns and operates no less than 130 cars. When the present administration came in there were 110 automobiles, which had cost an average of \$2,328 apiece, or \$277,000 total. Eighteen more have been bought for \$34,000, an average of \$1,900 apiece, while some seven old machines have been sold for \$14,220, a very high average for second-hand cars of \$2,033. There are 16 or 17 departments having machines used solely by them, while other departments divide the use of the cars. Of the departments having more than one car for their exclusive use, the water supply with 16, the health with 11, fire with 9 and charities with 7 lead. Wages and repairs vary widely, thus the water department's 16 cars cost \$17,368.68 in the six months of 1909, from January 1 to June 30. During this same period the health department's 11 cars cost \$3,856 and the fire department's 9 \$17,106.89. The first averages \$1,085.54 per car, the second \$896 and the third \$1,900.76. It thus costs the fire department twice as much per car as it does the health department.

Paving Brick.—A new industry may be started in Binghamton, N. Y., as is expected, some of the State roads in the vicinity will be built with brick. A paving brick plant may be built at East End, Moeller Hill. Most of the property on the hill which contains deposits of material suitable for the manufacture of paving brick, belongs to Charles P. Stevens, Colonel George W. Dunn and a former resident of this city named Stone. The old plant of the Ogden Brick Company, abandoned for a number of years, could be utilized for the new industry.

Lighting Standards.—The Elmer P. Morris Company, Elizabeth, N. J., and the Frederick Iron Works, Frederick, Md., were consolidated January 21 under the name of the Morris Iron Company, which is capitalized at \$175,000. Operations will hereafter be carried on at the Frederick foundry, and work will be commenced at once on an addition there comprising 61,000 feet of floor space. John Mitchell, Jr., is president; E. P. Morris, vice-president and general manager; C. C. Biser, treasurer, and W. T. S. Diven, superintendent.

Road Oiling Machine.—The Good Roads Machinery Company, Kennett Square, Pa., has the road oiling machinery and business of the G. F. W. Company, Saratoga Springs, N. Y. This machinery will hereafter be manufactured at Groton, N. Y., and will be marketed by the Good Roads Machinery Company, through its various branch offices and selling agencies. The machine called the Perfection Oil and Asphalt Distributor handles either light oil or heavy oil that requires heating. The fuel cost per day for heating is claimed not to exceed one dollar.

Asphalt Plant Burned.—The plant of the Barber Asphalt Company, Portland, Ore., was burned January 10. The fire started in a bank of asphalt. The damage is estimated at \$20,000. Officers of the company state that the plant can be rebuilt in time so as not to delay the paving work in the spring.

Meter Boxes.—Manufacturers and dealers in Detroit will figure on the equipment of a new plant for the H. W. Clark Company at Mattoon, Ill., for the manufacture of various appli-

cations used in water distributing systems, including meter boxes. Brass-working tools are among the requirements.

Contractor Fails.—The Elmore and Hamilton Construction Company of Albany, which has construction work under way on the Catskill Water Supply, near Ardsley, Westchester County, and Gardiner, Ulster County, has gone into the hands of receivers, with liabilities of \$270,271 and nominal assets of \$496,206. Judge Holt in the United States Circuit Court appointed the Albany Trust Company and James M. Hamilton receivers, with a bond of \$35,000, on the application of Louis Mizell, a creditor for \$1,224, and authorized them to continue the business for not more than four months without further order of the court. A petition in bankruptcy was subsequently filed here against the company by these creditors: Finger & Lewis, Schenectady, \$630; Frederick W. Schaefer, \$70, and R. U. Detyville Walsh, \$50, both of Albany. Amos Van Etten, of Kingston, was appointed special master. The principal items in the assets are: Plant, \$260,482; quarries, \$29,071; steel forms, \$43,791, and due from the City of New York, \$84,469. Of the liabilities \$70,000 is due to the Albany Trust Company and \$11,614 is due on payroll. The most valuable assets of the company are two contracts with the City of New York on the Catskill aqueduct, one for \$1,485,000 and the other for \$933,000. About \$587,000 work has been done on the two contracts. The city has retained about \$57,000 until the completion of the work. It is said that one of the causes of the trouble is the company's large investment in plant and quarries, which used up the working capital. The work is now closed down for the winter. The company was incorporated on December 9, 1907 with capital stock of \$250,000.

Buys Lighting Franchise.—It has been announced that the Long Acre Electric Light and Power Company, New York, N. Y., whose plan for starting an opposition to the New York Edison Company has been before the public for several years and which involved it, four or five years ago, in a controversy with the Public Service Commission with regard to the issue of securities, has been bought by a syndicate of New England capitalists identified with electric interests. At a recent meeting of the company, James F. Shaw of Massachusetts was elected President. He declined to state what individuals formed the syndicate or the price that had been paid for the concern. He said, however, that the company intended to proceed immediately with the development of electric light and power under its franchise and that it contemplates the expenditure of at least \$10,000,000 on its initial plant.

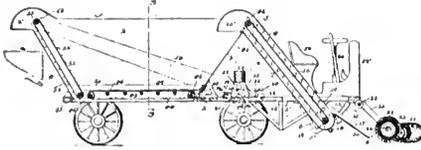

Trinidad Asphalt.—The quantity of asphalt taken from Pitch Lake, Trinidad, B. W. I., which covers an area of 100 acres, during 1910 exceeded that of any previous year. At the present rate of operation, the surface level is lowered about 6 inches a year. The depth of the deposit of asphalt over the center of the lake is unknown, as it cannot be sounded by rods, but the supply is supposed to equal the demand for many years; possibly it is inexhaustible.

Fire Protection for Wagon Works.—Fire has started on a large reservoir at the Studebaker Bros. Manufacturing Company works at South Bend, Ind. The tank, which will have a capacity of 150,000 gallons, will be at the top of a steel tower 206 feet in height.

PATENT CLAIMS

981,652. STREET-CLEANING MACHINE. John B. d'Homergue, Pittsburg, Pa. Serial No. 489,208.

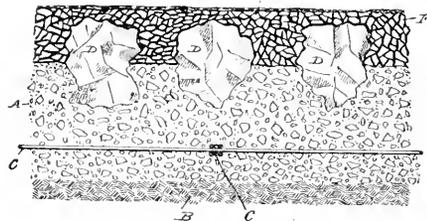

In a street cleaning machine, the combination of a vehicle having a body thereon, means for gathering the material from the street, a power-driven inclined conveyor

for delivering the material to said body, and power-driven means within said body for moving the delivered material along said body.

982,247. CONCRETE ROADWAY. Edward M. Chadbourne, San Francisco, Cal. Serial No. 572,728.

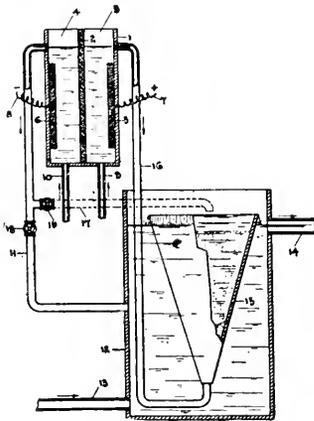

The method of pavement construction which consists in laying a foundation substantially impervious to heavy oils and with oil retaining receptacles on its upper face; in spreading thereon a heated cementitious binder in liquid condition and which is

substantially non-fluid at normal temperatures, and in applying and pressing into the layer of cementitious binder a layer of heated screenings whereby the screenings are forced down and the binder rendered limp and displaced upwardly to fill the voids in and bond the screenings together.

982,704. METHOD OF PURIFYING WATER. William B. Bull, Chicago, Ill., assignor to Chloride Process Company, Chicago, Ill., a Corporation of Illinois. Serial No. 564,245.

The method of purifying water, which consists in producing by electrolysis a solution which is a solvent of iron, subjecting iron in a separate chamber to the action of such solution to form a solution

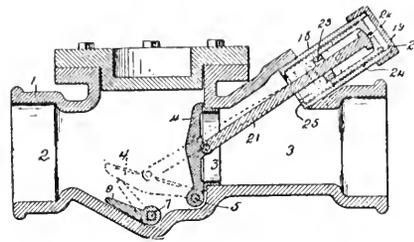

of an iron compound, precipitating the iron solution in the form of an hydroxid coagulant, and coagulating the impurities in the water to be purified with such coagulant.

982,705. APPARATUS FOR PURIFYING WATER. William B. Bull, Chicago, Ill., assignor to Chloride Process Company, Chicago, Ill., a Corporation of Illinois. Serial No. 565,314.

An apparatus for purifying water, comprising electrolytic means, including a chemically inert anode, for producing a reagent adapted to act upon a suitable metal to form a soluble salt thereof capable of being precipitated to form a coagulant, a container separate from the anode chamber adapted to contain such metal, a receptacle for the water to be treated, and means for conducting the reagent to the metal and for introducing the unagglomerated coagulant produced therefrom into the water receptacle.

982,400. AUTOMATIC VALVE. Thomas H. Walker, Kansas City, Mo. Serial No. 448,518.

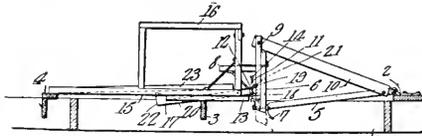

The combination with a valve casing having an inlet and an outlet for fluid, of a valve movable in said casing by incoming fluid to close said outlet when the fluid has reached a certain predetermined pressure, a cylinder closed at its outer end and

having its inner end communicating with said outlet, a hollow piston reciprocative in said cylinder and having openings one at each end for the passage of fluid, a bypass provided for the passage of fluid in said cylinder past said piston, and a rod connected to said valve and adapted to engage and force outwardly said piston when the valve in closing has moved to a certain position.

982,309. ROAD SCRAPER AND GRADER. George K. Smith and Ralph Russell, Albany, and John Anderson, Jr., and Howard Grimes, Newcomb, N. Y. Serial No. 592,107.

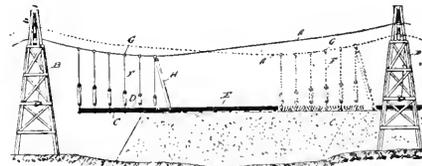

In a machine of the character described, the combination with a traveling frame, of

longitudinally movable beams carried thereby, scrapers supported by said beams and having pivotal connection with the frame and means for moving said beams longitudinally in reverse directions to adjust the angularity of said scrapers.

981,649. CABLEWAY. William Hewitt, Trenton, N. J., assignor to The Trenton Iron Company, Trenton, N. J., a Corporation of New Jersey. Serial No. 560,579.

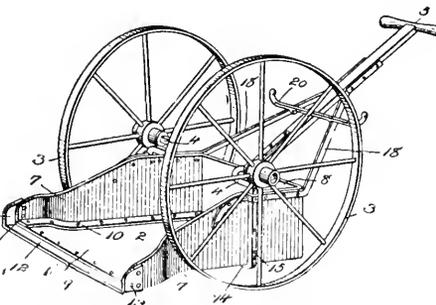

An apparatus of the character described,

including in combination cables, a cradle supported thereby and adjustable along said cables and means for effecting a vertical adjustment of one end of a span relatively to the other.

981,883. STREET-CLEANING PAN. William Henry Roife and Charles Henderson Baker, Wabash, Ind. Serial No. 538,327.

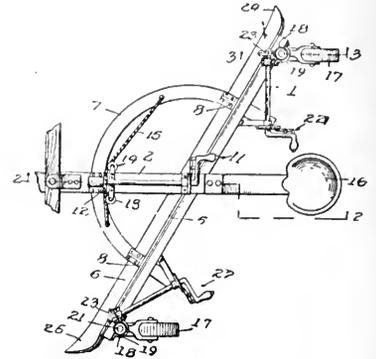

A device of the character described comprising a pan having a flaring mouth, an axle upon which the bottom of said pan rests, the said axle being bent upwardly to

conform to the sides and depth of the pan, the said axle being bent inwardly over the sides of the pan and then outwardly, wheels on said axle, the hub of said wheels extending over the sides of the pan in such manner that the distance between the two wheels is less than the width of the mouth of the pan.

982,427. ROAD-GRADER. David P. Henninger, Redondo Beach, Cal. Serial No. 575,398.

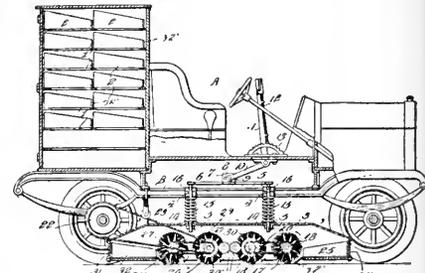

In a dirt road grader, a cross bar, a tongue pivotally connected at its rear end to the center of the cross bar; a semi-circular tongue brace connected at its ends to the cross bar and slidingly connected to

the tongue; a chain connected at its ends to the tongue brace, said ends being upon opposite sides of the tongue; a controller shaft mounted upon the tongue; a sprocket wheel fixed upon the controller shaft and engaging the chain and a controller mechanism for operating the controller shaft; so that by manipulating the controller mechanism the angle of the cross bar relative to the tongue may be adjusted.

982,570. STREET-SWEEPER. Carmen C. Brooks, Haxtum, Col. Serial No. 570,447.

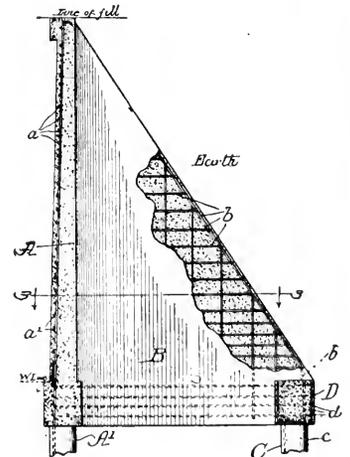

In a street sweeper, a vehicle, a yieldingly supported casing movably mounted between the front and rear axles of the vehicle, pans removably supported by the casing at the ends thereof, a plurality of

pairs of brushes revolubly supported by the casing, driving mechanism for the brushes, the said driving mechanism including means for revolving the respective pairs of brushes in opposite directions and in the direction of the pans at the ends of the casing, and means for moving the casing vertically beneath the vehicle.

982,698. RETAINING WALL. Maxwell M. Upson, New York, N. Y., assignor to Raymond Concrete Pile Company, New York, N. Y., a Corporation of New Jersey. Serial No. 583,124.

A retaining wall comprising a vertical wall, wing walls connected therewith, piles

to which the wing walls are secured, and means associated with said wing walls for resisting the tendency of the vertical wall to overturn or travel horizontally.

Porterville, Cal.—To Worswick Street Paving Co., to pave Mill st. with class B paving, concrete gutters, 27c.; paving, 5c. per sq. in.; sheet iron culverts, 26c. per lin. ft.

Augusta, Ga.—Laying curbing, to Wm. F. Bowe, city, 34c. per lin. ft. for straight curb and 45c. for round; cement paving, to A. A. Heit & Co., 9 1/2c. per sq. ft. for sidewalks and 5 1/2c. for cement driveways; both contracts to last during year; laying necessary sewer piping, all sizes, to T. G. Brittingham, city.

Mattoon, Ill.—To Thornton & Michaels, city, for 6,000 sq. yds. vit. brick paving on concrete foundation, \$13,000.

Boston, Mass.—Mayor Fitzgerald approved contract made without advertising with Buffalo Steam Roller Co. for furnishing six-ton tandem steam roller for \$2,150.

Boston, Mass.—Repairing asphalt pavement on streets having no guarantee, as ordered, from Feb. 1, 1911, to Jan. 31, 1912, to Warren Bros. Co., 59 Temple pl., \$37,150.

Detroit, Mich.—By Department of Public Works, all contracts to run until Jan. 31, 1912: Iron castings, sewer grates, etc., to Co-operative Foundry Co.; furnishing receiving basin stone, to F. C. Ortman, \$28.24 for blue stone; furnishing vit. sewer pipe of following sizes, 33-in., 30-in., 21-in., 12-in., 15-in. and 6-in., to J. Calvert's Sons, 145 Griswold st.; furnishing cinders for the east side of Detroit, to Garner Bros., 499 Chene st.; furnishing cinders for the west side of Detroit, to Wayne County Cinder and Supply Co., both at 55c. per cu. ft.; furnishing No. 1 and 2 cedar block, to W. E. Currie, 20 McGraw Bldg., to furnish No. 1, 40c. per sq. yd. and No. 2, 30c.; Medina stone in circles, to Orleans County Quarry Co., 5-in. stone, 38c. per lin. ft. and 6-in. stone at 41c.; for furnishing paving brick of different kinds to the following, for furnishing 1,000,000 bricks each more or less: Wassall Brick Co., Nelsonville Brick Co., Deckman Duty Brick Co., the Bessemer Limestone Co., the Wooster Shale Brick Co., the Detroit Vitrified Brick Co., the T. B. Townsend Brick and Contracting Co., the Novelty Brick and Coal Co., the Massillon S. & F. B. Co., and the Alliance Clay Product Co.; furnishing gravel, to the A. P. Weideman Co., 73 Home Bank Bldg., 1.035c. per cu. yd. on cars.

Columbia, Mo.—Paving 6th st., about 10-22 1/2 sq. yds. brick paving, to J. A. Stewart, city, \$20,948.

Mt. Holly, N. J.—Graveling road from Gardner's Corners through Atison, to Howard Mathis, New Gretna, \$10,430.

Salem, N. J.—Grading, placing gravel oyster shell surface on the Mannington, Filksgrove and Woodstown road, to Benj. L. Tuft and Frank H. Kely, city, \$26,442.

New York, N. Y.—Improving various streets, Bronx: Contract No. 2, to L. J. Moran, 562 Burnside ave., \$5,240; No. 5, to Barber Asphalt Paving Co., 30 Church st., \$4,718; No. 6, to Amanna & Lyons, 8 Van Cortlandt ave., \$3,078; No. 7, to the Alamo Construction Co., 215 W. 125th st., \$12,739.

Niagara Falls, N. Y.—Cosy Dell section Niagara Falls-Fort Erie road, to Power

Table with 5 columns: Bidder, and trade name of block bid upon, Delivered on Sidewalk, Delivered on Street without Guaranty, Delivered on Street with Three Year Guaranty, Guaranteed Number of Brick Per Sq. Yd.

City Stone Company, to Menzie & Cook, for two sections, from shipyards to Black Creek, to be completed in July, to Champlain & Co., for two sections, extending from Slaters Point to Black Creek, to be completed in July.

Akron, O.—Construction of section 6 of the Akron-Lancaster road, to Leters & Palmer, Mansfield, \$69,600.33.

Lakewood, O.—Laying 2,500 sq. yds. of brick paving, to W. S. Rice, 11,297 Chilton Blvd., 15c per ft.

Urbana, O.—Building one mile of stone road in Champaign County, to H. B. Stevens, Mechanicsburg, \$1,363; other bidders were: E. P. Patrick, Mechanicsburg, \$1,109; T. W. Hill, Bellefontaine, \$1,675; H. T. Wilson, Zena, \$4,617.

Youngstown, O.—Furnishing 50 tons of asphalt cement, to the Texas Co., \$21.90 per ton.

Everett, Wash.—Grading Dist. No. 237, to Atlas Construction Co., \$22,974.

Seattle, Wash.—Grading 15th ave., to Peacock Bros., 855 W. 48th st., \$5,947.75; planing 40,000 ft. of sidewalks on 31th ave., to J. G. Engstrom, \$16.50 per 1,000 ft.

BIDS RECEIVED

Chicago, Ill.—Sectional wood pavement, G. P. Culien, 78 La Salle st., lowest bidder, 2,000 sq. yds. 2 1/2-in. pavement, \$2.35; 2,000 sq. yds., 3 1/2-in., \$2.70.

Ann Arbor, Mich.—Furnishing 15,000 lbs. Portland cement, to Peerless Portland Cement Co., of Union City, Mich., \$1.00 net.

New York, N. Y.—Regrading, grading, setting curb, flagging sidewalks, laying crosswalks, building approaches and placing fences in Bronxwood ave., Gunn Hill road to Burke ave., J. B. Malatesta, lowest bidder; 3,500 cu. yds. earth excavation, 10c.; 9,300 cu. yds. rock excavation, \$1.30; 29,100 cu. yds. filling, 20c.; 2,950 lin. ft. new curbs, 70c.; 11,550 sq. ft. new flag, 24c.; 2,700 sq. ft. new bridgestone for crosswalks, furnished and laid, 18c.; 110 cu. yds. dry rubble masonry, in retaining walls, culverts and gutters, \$1; 50 cu. yds. rubble masonry in mortar, \$2; 160 lin. ft. vit. stoneware pipe, 12 ins. in diameter, \$1; 25 lin. ft. vit. stoneware pipe, 15 ins. diameter, \$1; 1 M ft. lumber, furnished and laid, \$25; 1,900 lin. ft. new guard rail, 20c.; 100 cu. yds. concrete, \$10; 4,200 lbs. steel bars, furnished and in place, 5c.; total, \$26,403; totals of other bids: Perillo & Shiel, \$36,880; F. Pistone, \$34,396; L. C. Rose, \$24,963; J. M. Rogers & Co., \$36,801; C. Romwell ave., Jerome ave. to Macomb's road, M. F. Maher, lowest bidder; 5,200 cu. yds. earth excavation, 39c.; 500 cu. yds. rock excavation, \$1.19; 24,000 cu. yds. fill, 9c.; 4,770 lin. ft. new curb, 72c.; 19,445 sq. ft. new flag, 23c.; 760 sq. ft. new bridgestone for crosswalk, 65c.; 470 cu. yds. dry rubble masonry, in retaining walls, culverts and gutters, \$1.20; 1 M ft. lumber, \$1; 2,450 lin. ft. new guard rail, 19c.; total, \$14,264; totals of other bids: W. McPherson, \$14,816; J. C. Voorhies, \$15,624; A. Cebrelli, \$14,461; Seneca ave., Hunt's Point ave. to Whittier st., L. J. Moran, lowest bidder, \$5,240; paving with asphalt block on a concrete foundation Grant ave., 165th st. to 166th st., Barber Asphalt Paving Co., lowest bidder; 1,604 sq. yds. completed asphalt block pavement, and keeping same in repair for five years, \$1.70; 260 cu. yds. concrete, including mortar bed, \$6; 180 lin. ft. new curbs, 90c.; 750 lin. ft. old curbs reset, 36c.; total, \$4,719; repairing sheet asphalt pavement in Manhattan Borough as follows: (a) 270,000 sq. yds. asphalt pavement, including binder course, (b) 500 cu. yds. Portland cement concrete, (c) 1,000 sq. yds. of old stone pavement relaid, (d) totals; Barber Asphalt Co., (a) 99c., (b) \$7.70, (c) 90c., (d) \$272.050; Uvalde Asphalt Co., (a) 97c., (b) \$7.80, (c) \$1, (d) \$266.800.

SEWERAGE

Attala, Ala.—City will open bids within 30 days for construction of sewer system.

Calixico, Cal.—L. B. Funk, Imperial, has completed plans for the proposed sewer system, consisting of 14,200 ft. 6, 8, 10, 12 and 15-in. pipe sewers, 72 manholes, 10 lamp-holes, 10 flush tanks and 2 concrete settling tanks.

Hanford, Cal.—Town Council has adopted plans for enlargement of the sewer system, including extension of 3 miles of sewers, a settling tank with 2 chambers and extension of 1 mile of water mains for fire purposes.

Los Angeles, Cal.—Council has ordered vit. pipe sewers constructed in portions of Savannah, 1th, Saratoga, 2d, 2d, Evergreen, Fresno, Dacotah, Emmet, New Jersey, Mott, Cincinnati, Eagle and 5th sts. and Pennsylvania, Michigan, Brooklyn and Euclid aves. and East Lake Blvd.

Ft. Morgan, Col.—Bids will be received about March 15 for the construction of pipe sewers, concrete for manholes and flush tanks; cost about \$6,500.—H. R. Oliver, City Engineer.

Easton, Ga.—Plans are being prepared by Clyde Potts, 30 Church st., New York City, for construction of sewerage system and disposal plant.

Waycross, Ga.—Council has adopted plans for extension of sewer and water system throughout Gilchrist Park; cost about \$7,000.

Fairfield, Ill.—Citizens are considering installation of sewer system.—H. D. Daulton, Aurora, Engineer.

Upper Arion, Ill.—Village Engineer B. B. Stakeholder has prepared plans for proposed sewerage system.

Clinton, Ia.—City is considering construction of sanitary and storm water sewers in spring; cost \$200,000.—Reuben Hart, City Engineer.

Indianola, Ia.—Council has voted to install between four and five miles of sewers at cost of \$10,000.

Dodge City, Kan.—Citizens will vote Feb. 9 on \$1,000 bonds to install sewer system.

Covington, Ky.—City Engineer Weimers has recommended construction of 6 trunk sewers in various parts of city.

Cicquet, Minn.—Plans are being prepared by City Engineer E. S. Spencer for sewers to be built this season.

Meirose, Minn.—S. S. Clute, St. Cloud, is preparing plans for a sewer system to cost about \$9,000; contract will be let about Feb. 15.—F. J. Weisser, City Clerk.

Gordon, Neb.—Citizens have voted bonds for construction of sewers.

Hastings, Neb.—Council has decided to construct sewerage extension in Deitz addition; length one-half mile.

Omaha, Neb.—Plans have been prepared by J. E. Bruce, Acting City Engineer, for construction of sewer system; cost about \$1,051,000.

Bound Brook, N. J.—Plans are being prepared by Consulting Engineer Clyde Potts, 30 Church St., New York City, for sewage disposal works for borough.

Collingswood, N. J.—Sewerage Co. has applied to courts to have piece of land in West Collingswood condemned for site for a pumping station and electric lift, which is required to force the sewerage from low section of Collingswood to disposal plant.

Hasbrouck Heights, N. J.—Preliminary survey has been made with approximate estimate of cost for the proposed sewer system.

Trenton, N. J.—Council has decided to install sewer on Homan ave.—H. B. Salter, City Clerk.

Frankfort, N. Y.—Village has voted to issue bonds for establishment of system of sewers.

Niagara Falls, N. Y.—Residents of Ontario ave. are urging extension of sewer at cost of about \$1,500.—F. S. Parkhurst, Jr., City Engineer.

Charlotte, N. C.—City is considering election on \$250,000 of sewer bonds.—W. Hawkins, Mayor.

Durham, N. C.—City has asked for authority to issue \$300,000 bonds for sewer construction, erection of disposal plant and improvements to streets and sidewalks.

Columbus, O.—Council has passed ordinance authorizing Service Department to make contract with Grandview Heights for furnishing of sewerage and water service to that village.

Millersburg, O.—Council has decided to construct sewers in three streets.

New Concord, O.—City is considering construction of sewer system and disposal plant in Lincoln addition.—Jas. E. Campbell, Mayor.

Pleasant Ridge, O.—Riggs-Sherman Co., The Nasby, Toledo, has been selected to prepare plans for complete sanitary sewer system, with sewage disposal plant.

Ravenna, O.—Council has passed resolutions for construction of sewers in Chestnut and Diamond sts.

Ripley, O.—Surveys have been made by City Engineer for sewer to be constructed at cost of about \$5,300.—L. V. Williams, Mayor.

Sebring, O.—City is considering construction of 12 miles of sewers during year.

Struthers, O.—Council is considering advisability of constructing sewers to be one-half mile in length in Poland, Stewart and Hawthorne sts.

West Lafayette, O.—Council has decided to construct sewers to cost about \$20,000.

Brownsville, Ore.—Sewer system will be constructed this year.

Portland, Ore.—Plans for installation of the Killingsworth ave. and Union ave. sewer have been completed; cost about \$250,000.—J. W. Morris, City Engineer.

Portland, Ore.—Residents of Vernon District have asked Council for installation of sewer system.

Springfield, Ore.—Council has passed ordinances for construction of four sewers.

Connellsville, Pa.—Plans have been prepared by J. B. Hogg, city, for comprehensive sewerage system to cost \$150,000.

Danville, Pa.—Dr. Samuel Dixon, St. Board of Health, has refused to approve proposed sewerage plans; Council will take action soon.

Tarentum, Pa.—Complying with order State Board of Health that all borough along Allegheny River erect sewerage disposal plants, Tarentum, Brackenridge, Harrison and East Deer Townships are preparing to build joint plant near Tarentum Health and Sewer Committees of Council represent Tarentum and W. R. Almes, A. Kern and T. J. Crawford compose Brackenridge committee in charge of plans; committees representing the two townships will be chosen by Supervisors; similar joint plant is being planned by Ramassus, New Kensington and Arnold, across river from Tarentum; Springdale and Cheswick will join in building tunnel.

Houston, Tex.—Consulting Engineer Frank L. Dormant has prepared plans and bids will soon be asked for construction of three sewers.

Seattle, Wash.—Cost of building sewer on W. 65th st. has been estimated at \$14,000.

Wausau, Wis.—Bids will soon be received for construction of 60 and 72-in. pipe sewers in Sixth Ward.—B. C. Gowan, City Clerk.

New Westminster, B. C., Can.—Plans have been prepared for proposed 8th st. sewer system consisting of over 14 miles of vit. sewer pipe.

CONTRACTS AWARDED

Brawley, Cal.—To California Ornament Brick Co., Los Angeles, for construction system of sewers, \$13,616.—A. L. Sonderegger, Central Bldg., Los Angeles, Consulting Engineer.

Monrovia, Cal.—By Board of Trustees, R. C. Lowell, 613 South Grand ave., Los Angeles, for construction of municipal sewer system, \$85,741 for sewer complete; vit. pipe will be used for all, except 24-in. which will be of reinforced concrete; quantities required, 118,600 ft. 6-in., 3,250 yds. 10,000 ft. 8-in., 160 yds.; 65,000 ft. 10-in., 186 yds.; 3,160 ft. 12-in., 50 yds.; 1,200 ft. 14-in., 16 yds.; 4,000 ft. 16-in., 60 yds.; 9,700 ft. 24-in., 22 brick manholes; 67 flush tanks.—Olmstead & Gillilan, Wright & Callender Bldg., Los Angeles, Engineers.

Aledo, Ill.—Building sewer, to Lany Clifford, 235 North Genessee st., Waukegan, Ill., \$9,806.

Syracuse, N. Y.—Building Harbor Branch intercepting sewer; northern section John Young Contracting Co., \$88,122; southern section to Chas. T. Hookway, \$101,014.

Cnecotah, Okla.—Construction of sewer to C. R. Nichols, Caney, Kan., \$29,601; work includes 56,150 ft. 12, 10 and 8-in. vit. pipe sewers laid with cement joints, 1,320 branches, 90 manholes, 50 lampholes, 8 flush tanks, 40,180 cu. yds. excavation; other bidders: Midland Construction Co., Ft. Scott, Kan., \$31,814; Bash & Grey, Joplin, Mo., \$32,637; F. R. Stone, Oklahoma City, \$32,663; Hinson Bros. & Price, Cnecotah, \$33,333; Healy Construction Co., McAlester, \$33,277; Heman Construction Co., St. Louis, Mo., \$34,722; W. W. Williams, Joplin, Mo., \$34,130; E. M. Eby, Wichita, Kan., \$34,344; General Construction Co., Bartlesville, Okla., \$34,956; C. E. Philpot, Pine Bluff, Ark., \$35,267; and H. W. Cardwell, Memphis, Ark., \$35,404.

BIDS RECEIVED

Syracuse, N. Y.—Building intercepting sewer, three alternatives, that is, the work is to be done in two divisions; one is north of Erie Canal and other on the south side thereof, the third alternative being for both divisions in one bid; Alternative No. 1, John Young Contracting Co., city, \$88,122; C. T. Hookway, city, \$92,216.50; Gaffey & Byrnes, city, \$99,594; Ryan & Reilly, Philadelphia, Pa., \$112,928.15; alternative No. 2, C. T. Hookway, \$101,014; John Young Contracting Co., \$103,238.25; Samuel Bonn, city, \$109,147; Ryan & Reilly, \$141,282; alternative No. 3, John Young Contracting Co., \$189,487.75.

Toledo, O.—Building sewer No. 1104, sidewalk bed of Huron st., Albert Gorzybowski, lowest bidder, 630 ft. 8-in. pipe, \$9c. earth excavation; work also includes 2 manholes 1 flush hole, 500 extra brick, etc.; total, \$541.93; estimated cost, \$880; only other bidder, Wm. Mahon, \$761.59 1/2.

Oklahoma City, Okla.—Sanitary laterals sewers, job, Engineer's estimate, lowest bidder and low estimate: Blocks 23, sub 14 Dittmer Heights, \$1,706.72; Swazer-McCreedy, \$956.81; block 7-14 Shillings' add, \$5,251.25; Reinhardt Donovan, \$3,910.44; blocks 6-14-7-15, original plat Capitol Hill, \$3,633.60; Reinhardt-Donovan, \$2,501.55; part College Hill add., and St. Mary's Academy ground, \$1,707.01; Reinhardt-Donovan, \$3,553.75; block 8 original plat Capitol Hill, \$944.59; Swazer-McCreedy, \$644.88.

WATER SUPPLY

Lytleville, Ark.—J. E. Thompson, 241 1/2th ave., Nashville, Tenn., will construct water works, 500,000 gals. capacity, to include pumping station to cost \$2,900; also steel towers 125 ft., with 75,000-gal. tanks, and one 40 ft., with 40,000-gal. tank; all electric and coal oil engine; whole \$60,000.—Rollan & Westover, Kansas City, Mo., Engineers.

Merced, Cal.—Citizens have voted \$35,000 for the construction of water works.

San Diego, Cal.—City Trustees have decided to build fire cisterns in warehouse district.

Corris, Cal.—Citizens will vote Feb. 14 on installation of municipal water system.

Yreka, Cal.—Mutual Water Co. has appropriated \$15,000 to develop a new water supply; number of wells will be sunk.

Huntington Beach, Cal.—Huntington Beach Water Co. has decided to construct reservoir.—A. L. Reed, Manager.

Long Beach, Cal.—Purchase of municipal water plant is being urged.

Redlands, Cal.—Bear Valley Mutual Water Co. has decided to construct a pipe to cost about \$25,000.

Redlands, Cal.—City Trustees have asked Municipal Water Co. to submit to the city proposition for the building of a high-pressure water system for business section of city.

Redondo Beach, Cal.—Redondo Water Works will expend about \$25,000 during present year in extension of mains within city.

San Jose, Cal.—Citizens will soon vote on plan to extend salt water mains.

Washington, D. C.—An engineer in city of Western Europe advises an American consul that in case a loan which the local government has under consideration is effected a large part of the money will be devoted to public improvements; part of program of improvements will be the sinking of artesian wells; gentleman desires to be placed in communication with manufacturers of well boring machinery with view securing agency for such lines. Address 6178, Bureau of Manufactures.

Warnerburn, Ga.—Citizens have voted \$20,000 to be used for construction of water works.—W. B. Green, City Clerk.

Salmon City, Ida.—Citizens will vote Feb. 21 on \$50,000 bonds for purpose of purchasing plant and franchise of Salmon City Water Works Co.

Decatur, Ill.—Plans have been prepared by City Engineer Elmer Fossum for water mains on Jackson st.

Merriam, Ill.—Bids will be received about Feb. 1 for construction of a reservoir, to cost about \$75,000.—R. L. Adams, Engineer; J. Woods, City Clerk.

Constant, Ill.—Citizens have voted \$3,200 for construction of water works.

Bedford, Ind.—Council has decided to install electric pumps at water works pumping station; plans and specifications prepared by W. L. Hurd, Chief Engineer of the Indianapolis water works, have been accepted; cost will be about \$8,000.

Bedford, Ind.—Bids will soon be received by Bedford City Water Works for improvements to water works system; also considering constructing settling basin and reservoir.—J. W. Malott, Superintendent.

Newcastle, Ind.—Council has decided to purchase site for installation of auxiliary water plant.

Shelburn, Ind.—Installation of a modern water works system is being considered.

Canton, Kan.—Water and Light Commission is investigating the matter of constructing water works and electric light plant; cost about \$30,000.

Goodland, Kan.—Commissioners have voted \$10,000 for artesian well.

Many, La.—Water works and electric light system will be installed.

Patterson, La.—City has selected Fred. A. Jones Co., Houston, Tex., as Engineers in charge of construction of water works system; cost \$30,000.

Dedham, Mass.—Water Co. will install \$25,000 engine and a pump with capacity of 2,500,000 gals. per 24 hours and will lay a double line of main pipes on Fuller and Ames st. to High st.; cost \$7,600.

Hyde Park, Mass.—Engineer Wm. S. Johnson, Board of Water Commissioners, has recommended construction of proposed filter bed addition to present water system at cost of \$30,000.

Lawrence, Mass.—Water Board will consider advisability of covering old filter at cost of \$55,000.

South Hadley Falls, Mass.—Board of Water Commissioners is considering \$12,000 loan to provide fire protection for residents of Granby road.

Algonac, Mich.—Bids will be received until Feb. 6 by John H. Ihnken, Village Clerk, for \$10,000 water works and \$10,000 electric light bonds.

North Branch, Mich.—Construction of water works is being considered.

Easton, Minn.—Citizens have voted bonds for erection of steel tower and tank.

Hills, Minn.—Council has decided to install well.

Aurora, Mo.—City will make improvements and extensions to water system.

Columbia, Mo.—Council has authorized H. B. Shaw to prepare specifications for boring two deep wells for water and light plant.

Kansas City, Mo.—Fire and Water Board is considering construction of reinforced concrete reservoir of 400,000-gal. capacity, 120x20 ft. area, 12 ft. deep.—J. P. Tilghof, President.

Marionville, Mo.—Aurora Electric Light

and Water Co. has secured franchise to construct water works; cost about \$25,000.

St. Louis, Mo.—City will issue \$100,000 bonds for improvements to water system outside of city limits.—Maxine Reber, City Engineer.

Gordon, Neb.—Citizens have voted water bond issue.

Grand Island, Neb.—W. K. Palmer Co., Dwight Bldg., Kansas City, Mo., has prepared plans for improvement of water and lighting system.

Louisville, Neb.—Bids will be received about March 1 for the construction of water works; cost about \$16,000.—D. K. Larr, City Clerk.

Norfolk, Neb.—Preliminary plans and specifications have been prepared by W. K. Palmer Co., Kansas City, Mo., for water and lighting improvements.

Wymore, Neb.—Plans are being prepared for installation of water works.

New York, N. Y.—Commissioner Thompson, of Department of Water Supply, has asked Board of Estimate for \$6,500,000 appropriation to complete easterly portion of Jerome Park reservoir of Croton Aqueduct system, construction of filtration plant being necessary to carry out plans.

Charlotte, N. C.—City is considering election of \$25,000 of water works bonds.—T. W. Hawkins, Mayor.

Fargo, N. D.—Plans for new filtration plant for city have almost been completed by City Engineer Anders.

Andover, O.—Plans are being prepared for construction of brick and concrete pumping station.—L. E. Chapin, Frick Bldg., Pittsburgh, Pa., Engineer in Charge.

Cincinnati, O.—City has awarded \$125,000 water works improvement bonds to Seasongood & Mayer.

East Liverpool, O.—Council has recommended election of \$175,000 bonds to system wells in bed of river for better water supply.

Niles, O.—Preliminary sketch of proposed \$40,000 filtration plant has been prepared.

Troy, O.—Bids will soon be received by Board of Commissioners, Miami County, for extension of the city water mains to county infirmary; estimated cost \$12,000.

Monmouth, Ore.—City has levied special tax for installation of water system.

Rock Hill, S. C.—City has retained Thos. W. Cothan, Greenwood, to prepare plans and make surveys for water works and sewerage plants; cost \$250,000.—B. Parks Rucker, Charlotte, N. C., Consulting Engineer.

Clarksville, Tenn.—City has retained James Nisbet Hazlehurst, Candler Bldg., Atlanta, Ga., to supervise reconstruction of water system; estimated cost \$50,000.

Austin, Tex.—Council has forfeited contract that had been entered into with J. C. Dumont for rebuilding of dam.

GRAND RAPIDS, MICH.

Gainesville, Tex.—City has sold \$150,000 water works bonds to E. B. Blanton, city; work will begin at once.

Brewster, Wash.—Council will consider installation of water system.—W. M. Allen, Mayor.

Sushonah, Wash.—Council has adopted plans by Consulting Engineer C. H. Green, Spokane, for proposed gravity water system.

White Salmon, Wash.—Installation of water works system and construction of reservoir is being considered.

Watertown, Wis.—Bids will soon be asked for drilling well on west side of river.

CONTRACTS AWARDED

Brawley, Cal.—To Geo. A. Rodgers, Los Angeles, Cal., for construction of system of water works, \$28,201. A. L. Sonderegger, Central Bldg., Los Angeles, Consulting Engineer.

Vallejo, Cal.—Furnishing 800 short tons of 14-in. c.-i. pipe, to U. S. Pipe Co., \$30.25; total, \$24,587.02; only other bidder, C. Froelich, \$25,779.93.

Daytona, Fla.—Erecting water softening reservoir, to A. Vaude Verde, \$1,035.

La Salle, Ill.—To Charley Bros., city, for construction of water supply well.—Joseph Burkart, Jr., City Clerk.

New Bedford, Mass.—Supplies for Water Board: 40 tons various sizes lead pipe, to Chadwick-Boston Lead Co., \$5.02 per 100 lbs.; other bidders: Bedford Boiler and Machine Co., city, \$5.35; National Lead Co., Boston, \$5.62½; furnishing 25 tons of best quality pig lead, to Fitz-Dana & Co., Boston, \$94.42 per ton of 2,000 lbs.; other bidders: Bruce & Cook, New York, \$92.80; National Lead Co., Boston, \$85; Chadwick-Boston Lead Co., Boston, \$93; supplying c.-i. castings, to Fairhaven Iron Foundry Co., Fairhaven, 50,000 lbs. service stop boxes and covers, 3.5c. per lb.; 30,000 lbs. gate boxes and other castings, 2.5c. per lb.; other bidder: Fuller Iron Works, Providence, R. I., 3.6c. and 2.7c. per lb.

Homer, Mich.—To T. C. Brooks & Son, Jackson, for constructing a complete system of water works; \$25,000 available for this purpose.

Perth Amboy, N. J.—Furnishing engine and generator at Runyon, to Westinghouse Electric Manufacturing Co., \$1,179.

Cherry Creek, N. Y.—Building water system, to E. Swanson, Jamestown; cost \$30,000.

Boyetown, Pa.—To Wilhauer & Co., Pottstown, to dig tunnel in which pipes will be laid to carry water from well to borough reservoir.

Spokane, Wash.—Furnishing unit for up-river pumping plant, to Allis-Chalmers Co., \$12,000.

BIDS RECEIVED

Newburg, O.—Water Works Sewer, Pavement and Construction Co., Citizens Building, Cleveland, lowest bidder for following works: 6-in. c.-i. pipe laid, 88c. per lin. ft.; 4-in. c.-i. pipe laid, 88c.; 6-in. valve and box in place, \$20 each; 4-in., \$14; six 4-in. "T" in place, \$6 each; six 6-in., \$7; 4-in. hydrant in place, \$32 each; 6-in. plug in place, \$1 each; extra excavation, 30c. per cu. yd.

Pittsburg, Pa.—Furnishing and erecting two pumping engines, 1,000,000-gal. pumping engine and appurtenances in Lincoln pumping station, Carpenter Co., \$4,985; Snow Pump Co., \$6,500; Wilson-Snyder Co., \$4,650, and Hall Steam Pump Co., \$5,110; 6,000,000-gal. pumping engine and appurtenances for Herron Hill pumping station, Halley Mfg. Co., \$56,000; Wilson-Snyder Co., \$36,580; Todd Co., \$48,500; Chalmers Co., \$44,967, and Bethlehem Steel Co., \$47,769.

LIGHTING AND POWER

Helena, Ark.—Council has passed an ordinance granting 50-year franchise to Scofield Engr. Co., of Philadelphia, Pa., prospective purchaser of the plant of Herena Gas Co.

Jackson, Cal.—John L. Henry has been granted 50-year franchise by the Board of Supervisors to erect and operate electric system.

Live Oak, Cal.—Sutter County Supervisors will call meeting for purpose of deciding on formation of lighting district.

San Bernardino, Cal.—Street lighting contract for city, which expires on March 1, cannot be continued under private contract with company which holds it now, according to opinion rendered to Council.

Utah, Cal.—Snow Mountain Water and Power Co. is arranging for extensive improvements and extensions to its system.—W. S. Graham, General Superintendent.

Willows, Cal.—Northern California Power Co. is considering establishment of high pressure gas plant.

Carbondale, Col.—Board of Trustees has granted to Aspen Light Co. franchise to supply electricity for lamps and motors for 20 years; company agrees to supply electricity at 20c. per kw. hour, with minimum charge of \$2.

Erie, Col.—Plans are being considered for enlarging municipal electric light plant; equipment will consist of a new boiler, larger generator and installation of heating plant.

Fowler, Col.—Council has granted to Pueblo and Suburban Traction and Lighting Co., Pueblo, 10-year franchise to supply electricity for lamps and motors; transmission lines will be extended to this city at once.

Greenwich, Conn.—Housatonic Electric Lighting Co. has appropriated \$100,000 for construction of gas producing and distributing plant.

Milton, Del.—N. W. White, of Georgetown, is interested in construction of plant to furnish electric light and power.

Washington, D. C.—American Consular officer in South America has reported that extensive land owner in his district intends to install a small water power electric lighting plant on one of his plantations and desires from American manufacturers estimates on dynamo and pelton wheel, coupled together, of sufficient size and strength to supply 40 16-c.p. incandescent lamps; also desires in addition to this estimates to include cost of wiring and fixtures and lamps, Mazda preferred; person has within 100 yards of his home waterfall of 150 ft., stream being large enough to fill 5-in. pipe, and two miles distant another waterfall of 250 ft. of sufficient volume to fill an 8-in. pipe. Address No. 6170, Bureau of Manufactures.

Glen Ellyn, Ill.—Spalding Electric Co. will install 150-h.p. boiler and two generators in the near future.—Carl S. Spalding, Manager.

Mt. Olive, Ill.—Extensive additions and improvements are considered for municipal electric plant, including installation of additional water tube boiler with rating of from 200 to 300 h.p. generator and engine.—O. A. Voepel, Manager.

Saybrook, Ill.—R. C. Cooper is considering installation of plant to supply electricity in Saybrook, Arrowsmith and Gibson City.

Virginia, Ill.—Virginia Light, Heat and Power Co. will make improvements to plant, including installation of 150-h.p. Frost boiler and a 200-h.p. engine.—Roy Ray, Manager.

Knightsville, Ind.—Town Board is considering plans for installation of electric light system; electricity to operate the system will probably be supplied by the Terre Haute, Indianapolis and Eastern Traction Co.—Joseph A. McGowan, Secretary.

Dodge City, Kan.—Citizens will vote Feb. 9 on \$25,000 bonds for installation of electric light plant.

McPherson, Kan.—Council is negotiating with the city of Inman on project of running a line from McPherson to Inman to carry current for city lighting purposes there, connecting with new electric plant; similar negotiations are also being made with Canton and Galva.—A. J. Shaw, Superintendent.

Spring Hill, Kan.—Citizens have voted \$6,000 bonds to build electric light plant.

Nicholasville, Ky.—Plans are being considered for installation of a 150-h.p. boiler and a 75-h.p. steam engine in municipal electric light plant.—E. J. Glass, Manager.

Many, La.—Electric light system and water works will be installed.

Ellicott City, Md.—Patapco Electric and Mfg. Co. is considering installation of a gas producer and gas engines.—Otto Wunder, Superintendent.

Franklin, Mass.—W. H. Fritchman, Boston, has petitioned Board of Selectmen for gas franchise.

Grand Rapids, Mich.—Grand Rapids Gas Light Co. is planning to expend \$40,000 on extension of mains.

Tower, Minn.—Council is considering changing of power at municipal lighting plant from steam to water power.

Biloxi, Miss.—C. H. Evans Engineering Co., 145 Van Buren st., Chicago, has prepared plans for 7-mile wrought iron pipe extension of gas main for Gulf Coast Gas Co.

Pascagoula, Miss.—F. Lynn Brown, Chicago, has asked franchise for installation of gas plant, mains, etc.

Marionville, Mo.—Aurora Electric Light and Water Co. is planning construction of electric plant.

Gordon, Neb.—Citizens have voted bonds for electric lights.

Grand Island, Neb.—Plans and specifications have been prepared by the W. K. Palmer Co., 717-720 Dwight Bldg., Kansas City, Mo., for improvement of lighting

and water system and construction of new power plant.

Norfolk, Neb.—W. K. Palmer Co., Dwight Bldg., Kansas City, Mo., has prepared preliminary plan for lighting and water improvements.

Wymore, Neb.—Plans are being prepared for installation of light plant.

Salem, N. J.—Salem Electric Co. will soon extend service to Lower Penn's Neck, Mannington and Quinton Townships.

Columbus, O.—Council is considering resolution asking City Engineer to prepare estimate of cost of placing overhead wires underground in territory bounded by Livingston ave., Front st., Fifth ave. and Fifth st.

Madisonville, O.—Installation of 100-kw., 2,200-volt, direct-connected unit in the municipal electric light plant in the near future is being considered.—D. H. Fisher, General Manager.

Arington, Ore.—City is considering installation of electric light plant.

Homer City, Pa.—Installation of electric light plant is being considered; company has already been formed by J. A. Stokes, C. A. Simons and W. P. Graff.

Wilkes Barre, Pa.—Wilkes Barre Light Co. will soon commence construction of plant.—J. A. Murray, 54 Public Square, Consulting Engineer.

Willow Grove, Pa.—Newly organized Improvement Association will take up matter of street lighting.

Gettysburg, S. D.—Council has granted franchise to John McMaster and D. J. O'Keefe to install gas lighting system.

Germtown, Tenn.—Town will ask permission to issue \$3,000 bonds to install system of electric lights and extend pavements.

Celina, Tex.—Celina Electric Light and Power Co. has been granted franchise for construction of electric light plant.

Madisonville, Tex.—C. C. Murray & Sons have been granted franchise for construction of electric light plant; will organize Madisonville Light and Power Co.

Nacogdoches, Tex.—Installation of municipal light plant is being considered.

Plainview, Tex.—H. E. Powell, of Springfield, Ill., will install gas plant; Council has been asked for a franchise for proposed distributing system.

Sherman, Tex.—Chairman Hopson of Fire Committee has recommended purchase of 1,500 ft. of more fire hose.

Fredericksburg, Va.—C. P. Burkwyn, President Rappahannock Power and Light Co., Richmond, has applied to Council for electric light franchise.

Spokane, Wash.—Washington Water Power Co. is planning to supply town of Creston and Wilbur with light through 35-mile extension from Davenport.

Tacoma, Wash.—Metropolitan Park Board has decided to call for bids immediately for equipment to light Wright Park, including installation of the necessary ornamental poles, wiring, lamps, etc.

Baraboo, Wis.—Jas. Dickie, Geo. McArthur, Sr., and Geo. McArthur, Jr., have organized Merchants' Power & Light Co. to install water power for purpose of generating dry current.

Wausau, Wis.—Board of Public Works has been authorized to secure plans for municipal electric light plant.

CONTRACTS AWARDED

Willows, Cal.—To North California Power Co., two-year contract for installing and maintaining 20 arc lights at \$6 per light.

Marion, Ind.—Furnishing current for street lights, to Marion Light and Heating Co.

Morristown, N. J.—Five-year contract for street lighting of Morris Township, to Morris and Somerset Electric Light Company; contract stipulates that electric company shall furnish seventy or more lights at rate of \$18 a lamp per annum, lamps to be at least 25 candle power; company further agrees to extend its lines without charge to township.

FIRE EQUIPMENT

Los Angeles, Cal.—Fire Commission has asked \$1,800 appropriation for purchase of hose from New Jersey Car Spring and Rubber Co., Jersey City, N. J.

Stockton, Cal.—Citizens have defeated proposition to issue \$507,609 bonds for fire department and other purposes.

Georgetown, Del.—Council has ordered purchase of several hundred ft. of hose for Fire Department.

Jacksonville, Fla.—Mayor Wm. S. Jordan is urging need of fire boat.

Fort Wayne, Ind.—Board of Safety will purchase 1,000 ft. of hose this year and same amount each succeeding year.

Newcastle, Ind.—Council has decided to purchase site for erection of fire department headquarters.

Lexington, Ky.—Special Committee on Fire Apparatus will recommend purchase of new auto machines.

New Orleans, La.—City will establish hose company at Upperline and Laurel sts., steam engine company at Upperline and Ferret sts., steam engine and hook and ladder truck company on Louisiana ave.

Boston, Mass.—Mayor Fitzgerald has announced that auto chemical will soon be installed at foot of Price Hill.

New Bedford, Mass.—Fire Department committee has rejected all bids received for furnishing 5,000 ft. of cotton rubber lined hose; new bids will be received Feb. 8, 7.15 p. m.—E. F. Dahill, Chief.

Southbridge, Mass.—Firemen will ask for establishment of fire alarm service; purchase of auto truck is also being considered.

Detroit, Mich.—Erection of engine house in vicinity of Gratiot and Harper aves. is being considered.

Saginaw, Mich.—Board of Water Commissioners will recommend to Council purchase of two auto fire engines for emergency cases; at present time east side water works are inadequate and situated several miles from the center of distribution.

Eveleth, Minn.—City Property Committee is considering erection of fire hall.

Kansas City, Mo.—City is considering purchase of two two-way fire autos to hold chemical tanks and 1,000 ft. of hose.—J. L. Porter, Mayor.

Butte, Mont.—Council is considering erection of fire station on Harrison ave.

Grenloch, N. J.—Fire department has been formed.—Jos. W. Bright, Chief.

Lorraine, N. J.—Installation of fire alarm system is being considered.—Geo. H. Hornung, Mayor.

Nutley, N. J.—Purchase of 1,000 ft. of hose and auto fire engine and installation of six fire alarm boxes is being considered.

Hudson, N. Y.—Council is considering need of better equipment for fire department.

Larchmont, N. Y.—Town is considering election on \$5,000 bonds for installation of modern fire alarm system.

Port Jervis, N. Y.—Mayor C. N. Knapp has recommended installation of fire alarm system.

Streeter, N. D.—Installation of chemical engine is being considered.

Elyria, O.—Council has voted in favor of auto combination engine and hose truck, new fire station and fire and police fire alarm system.

Astoria, Ore.—Fire Chief Foster has recommended purchase of automobile combination chemical engine and hose wagon; installation of storage battery system on fire alarm, purchase of a 600-gal.-per-minute pump to be placed on steamboat to protect water front.

Lebanon, Pa.—Perseverance Hose Co. is considering purchase of combination chemical and hose wagon.

Wilkes Barre, Pa.—Fire Chief Schuler has recommended erection of fire house, overhauling of hook and ladder truck, purchase of triple combination auto engine, hose, combination auto hose and chemical truck.

Pawtucket, R. I.—Erection of fire station at Sayles and West aves. is being considered.

Howard, S. D.—Howard Fire Co. is considering erection of fire house.

Memphis, Tenn.—Fire Chief John E. Mcadden will ask for \$75,000 expenditure for improvements, including erection of three engine houses and purchase of hook and ladder truck, 16 horses and other minor equipment.

Manchester Center, Vt.—Purchase of auto engine is being considered.

Seattle, Wash.—Board of Public Works has adopted plans for erection of fire station at 10th ave. S. and Southern st., South ark.

Sheridan, Wyo.—Plans have been prepared for erection of fire station.

Port Arthur, Ont., Can.—Council is considering the purchase of motor trucks for fire department. J. J. Carick can be addressed.

CONTRACTS AWARDED

Battle Creek, Mich.—Furnishing 70-h.p. auto chemical and hose wagon, to Seagrave Co., Columbus, O., \$5,500.

Akron, O.—Furnishing combination fire truck and chemical automobile, to L. J. Ritch, \$22,724.95; other bidders: Webb Motor Co., \$2,950; Kanawah Chemical Co., Pittsburg, \$3,200; Speedwell Motor Co., of Dayton, \$3,250; the car ordered will be constructed by the Cadillac Motor Car Co., Detroit.

Hazleton, Pa.—Mayor F. L. Smith will sign contract awarded by Councils to Robson Fire Apparatus Co. for auto-chemical and hose wagon.

BRIDGES

Los Angeles, Cal.—Revised plans and specifications for Arroyo Seco bridge between Garvanza and the ostrich farm have been presented to Board of Supervisors by County Surveyor Noble and bids advertised for building structure.

Wilmington, Del.—Levy Court is planning to erect \$150,000 bridge across Christiana River.—Jas. Wilson, County Engineer.

Fernandina, Fla.—Board of County Commissioners is considering construction of bridge across Nassau River.—W. T. Waas, Chairman.

Rockford, Ill.—City Engineer Hand has completed plans for reinforced concrete bridge; cost \$65,000.

Bedford, Ind.—Lawrence County will ask for bids in spring for construction of two bridges; cost \$4,000 and \$1,200, respectively.—W. H. Field, Mitchell, Engineer.

Michigan City, Ind.—Council has passed ordinance appropriating \$16,500 for repairing and reconstructing Franklin st. bridge.

Rockville, Ind.—Spencer County will soon ask bids for erection of bridge over Big Raccoon River at Arnesburg.

Washington, Ind.—Daviness County is considering construction of bridges near Washington; cost \$8,000.—George Faith, 307½ E. Main st., Engineer; Thomas Nugent, County Auditor.

Atchison, Kan.—Construction of a bridge over Missouri River at Commercial st. is being considered; cost about \$300,000.

South Portland, Me.—Rebuilding of present bridge across Portland Harbor is being considered.

New Augusta, Miss.—Perry County Board of Supervisors has asked bids for repair of Wingate bridge on Leaf River damaged by flood.

Independence, Mo.—County Highway Engineer R. T. Proctor will prepare plans for erection of viaduct of stone or concrete over Chicago and Alton Railroad tracks on 15th st. road.

Joplin City, Mo.—Council has instructed Engineer J. E. Hodgdon to prepare estimates on construction of concrete culverts over Willow Branch on Jackson ave., on Moffet ave. and on Joplin st.

Niagara Falls, N. Y.—Bids will soon be asked for the construction of ornamental bridges over Fisher's Creek, Black Creek, Miller's Creek and Fisherman's Creek; supervision of all work is under Superintendent John H. Jackson, of Queen Victoria Park.

Schenectady, N. Y.—Erection of bridge over Cotton Factory Hollow at Craig st. is being urged.

Cincinnati, O.—Council is considering ordinance for \$250,000 bond issue for construction of Gilbert ave. viaduct.

Wilson, Pa.—Residents of this borough are urging erection of bridge across Monongahela.

Memphis, Tenn.—City is planning construction of steel and reinforced bridge, by railway companies, on McLemore ave.—J. H. Weatherford, City Engineer.

Lampasas, Tex.—Commissioners' Court will consider election on bonds for erection of bridge.

Spokane, Wash.—Complete plans for grade separation at 1st ave. and Sheridan st. have been furnished by City Engineer Morton Macartney; plans involve a concrete trestle over Milwaukee, Spokane and Inland and Great Northern-Northern Pacific transfer tracks and new steel or concrete bridge over Spokane River on Olive ave. just west of Dakota st.; entire improvement is to cost \$318,000 or \$363,000.

Mayville, Wis.—Town will let contract next month for construction of concrete or single deck girder bridge across Rock River; cost \$10,000. H. S. Mann, Town Clerk.

Milwaukee, Wis.—Plans for new Oneida st. bridge have been submitted to Maj. Bromwell, Resident Government Engineer, city.

Superior, Wis.—County Board has decided to construct bridge over Middle River.

St. Catharines, Ont., Can.—The Mayor has recommended construction of high-level bridge.

CONTRACTS AWARDED

Indianapolis, Ind.—Building concrete bridge over canal at College ave., to Volpp & Fritz, \$6,417.

Natchitoches, La.—By Police Jury for building two bridges across Flat River near Powhatan, to Boydston & O'Quin, \$1,100.

New York, N. Y.—To Charles Meades & Co., 299 Broadway, New York, for constructing elevators, stairs, drainage, ornamental and electric work for anchor piers of the Queensboro Bridge over East River, \$57,300.

Portland, Ore.—Constructing substructure

of bridge over Willamette River from plans of Ralph Modjeski, Consulting Engineer, 1750 Monadnock Bldg., Chicago, Ill., to the Union Bridge Co., of Kansas City, Mo., \$557,646; other bidders were: Missouri Valley Bridge and Iron Co., Leavenworth, Kan., \$565,923; Bates & Rogers Contracting Co., Chicago, Ill., \$648,284; Porter Bros., city, \$689,561; Pacific Bridge Co., city, \$47,180.

MISCELLANEOUS

Birmingham, Ala.—Jefferson County is considering election on \$50,000 bond issue to erect wing to Hillman hospital.

Gadsden, Ala.—Plans will be received at once by L. L. Herzberg, Judge of Probate Court, for erection of \$25,000 jail for Etowah County.

Mobile, Ala.—In yearly budget sum of \$50,000 has been set aside for construction of steel warehouse.

Union Springs, Ala.—Erection of \$10,000 Carnegie hospital is being considered.

Los Angeles, Cal.—Willour D. Cook, Jr., Wright & Callender Bldg., is preparing plans for landscaping and improving Agricultural Park; work will include sunken gardens, fountains, walks, pergolas, colonnades, etc.; cost will be over \$100,000.

Dover, Del.—Establishment of uniformed police force is being considered.

Douglas, Ga.—Coffee County is considering erection of three-story addition to jail.—D. Yaskin, County Commissioner.

Jonesboro, Ga.—Frank M. Manson desires names and addresses of manufacturers of dump body or dump wagon; Everett preferred.

Macon, Ga.—Council will consider resolution providing for establishment of a public playground on Tattnell Square Park, in connection with other improvements contemplated for square; playground will be equipped with outdoor gymnasium devices.

Bloomington, Ill.—Citizens of Bloomington and Normal Townships will vote on creation of Park Board which is to have charge of construction of inter-city parkway drive and water system along course of Sugar Creek.—Wm. R. Bach, Park Commissioner.

Vincennes, Ind.—Mayor Jas. D. McDowell has recommended purchase of auto patrol.

Cedar Rapids, Ia.—Council has decided to erect jail and town hall.

Clinton, Kan.—Purchase of city park and erection of auditorium is being urged.

New Orleans, La.—System of lakes and lagoons for St. Charles ave. end of Audubon Park, and made in accordance with the plans of Landscape Engineer Omstead, Boston, is being considered for near future; rough estimates on the excavation work alone place cost at figures ranging between \$50,000 and \$80,000.

Cambridge, Mass.—Board of Aldermen has voted to establish police station.

Holyoke, Mass.—Plans have been prepared by Architects Ellsworth & Howes for erection of \$10,000 tuberculosis hospital.

Lawrence, Mass.—Board of Aldermen has adopted order authorizing Mayor Cahill to appoint committee of six to consider erection of city hall.

Lawrence, Mass.—Mayor Cahill is favorable to establishment of garbage incinerator.

Saginaw, Mich.—Board of Police Commissioners has asked committee from Council, composed of Aldermen Buetschen, Button and Trier, to instruct City Engineer to prepare outline plans and estimated cost for modern jail.

St. Joseph, Mo.—Council has appropriated \$4,000 for purchase of combination auto patrol and ambulance.—A. P. Clayton, Mayor.

Merrill, Wis.—Plans by Foeller & Schober, Green Bay, have been accepted for erection of \$38,000 jail.

CONTRACTS AWARDED

Ft. Wayne, Ind.—Hauling city garbage, to D. C. Wilburne.

Dexter, Me.—Building \$7,000 town hall, to Fred M. Young, city.

Fall River, Mass.—Collecting garbage for five years, to J. T. Regan, \$14,400; other bidders: Benjamin W. Brown, \$47,350; Arthur M. Reed, \$47,815; Christopher B. Hicks and James H. Gildard, \$55,706.40; Willard C. Gardiner, \$50,000; A. H. Barney, \$53,000; Isaac E. Willets, \$56,000; Frank Riley, as manager of the Eastern Sanitary Product Co., \$47,000, and Charles N. Menard, \$50,000.

Watertown, N. Y.—To O. B. Colwell for the collection of the city's garbage.

Marlin, Tex.—Erection of brick crematory, to R. S. Winn, Hobart, Okla., \$1,250.

Norfolk, Va.—Building police headquarters at Avon and Cove sts., to S. M. Richardson & Son, Houghton, \$44,273.

Whitehall, Wis.—Building jail, to Van Dorn Iron Works Co., Cleveland, O., \$3,300.

STATE	CITY	RECEIVED UNTIL	NATURE OF WORK	ADDRESS INQUIRIES TO
STREET IMPROVEMENTS				
Virginia	Norfolk	Feb. 6, noon	Construct macadam roadway	County Clk. Norfolk Co.
Minnesota	St. Paul	Feb. 6, 2 p.m.	Grading and macadamizing various streets	Board of Pub. Works.
New York	Albany	Feb. 6, 3 p.m.	Removal of street dirt	Isidore Wachsmann, Secy. Bd. C.&S.
California	Huntington Bch.	Feb. 6	Constr. one mile petroolithic pave, curb and sidewalk	J. C. Fountain, Engr.
California	Chico	Feb. 7, 7:30 p.m.	Construct 50 street crossings	B. F. Hudspeth, City Clerk.
Washington	Waterville	Feb. 7, 9 a.m.	Constr. approx. 8 1/2 miles impro. highway	County Auditor.
California	Santa Ana	Feb. 8, 11 a.m.	Furn. 1,000 bbis. road oil and 1,000 lbs. residuum	W. B. Williams, County Clerk.
Maryland	Baltimore	Feb. 8, 11 a.m.	Furn. cement, stone (crushed), sand, gravel, brick, lumber.	Bd. of Awards, c.o J. S. Thomas.
Ohio	Cincinnati	Feb. 24, noon	Resurf. Independence st., also culvert and fill on Mt. Alverno rd	Fred Dreihls, Clk. Co. Comrs.
Ohio	Cincinnati	Feb. 8, noon	Imp. McAlpin ave. with grade, curb and gutter., also furn. 400 tons refined asphalt.	John J. Wenner, Clk. Pub. Serv.
New Jersey	Elizabeth	Feb. 15, 8:30 p.m.	Excav. 5,440 cu. yds. earth and construct curb, flag, etc.	John F. Kenah, City Clerk.
Michigan	Ludington	Feb. 20, 4 p.m.	Pave various streets.	Dean Thompson, City Clerk.
Minnesota	Worthington	March 13, 2 p.m.	Grade approx. 10,066 yards.	E. C. Fannell, Co. Aud.
SEWERAGE				
Minnesota	St. Paul	Feb. 6, 2 p.m.	Constr. sewers on various streets	Board of Pub. Works.
Minnesota	St. Cloud	Feb. 6, 4 p.m.	Constr. concrete wall at sewer outlet	Earl C. Scott, City Clerk.
Washington	Toppenish	Feb. 6, 8 p.m.	Construct 15,000 ft. of 7 to 16 in. pipe sewer	W. H. Hassig, City Clerk.
Alabama	Uniontown	Feb. 13, 8:15 p.m.	Constr. sewage disp. plant and sewer, incl. approx. 1,840 lin. ft. 15 in., 3,000 ft. 12 in., 7,500 ft. 10 in., 15,200 ft. 8 in. pipe.	J. L. Pope, Town Clerk.
Iowa	Signourey	Feb. 14	Constr. sewerage system, 8, 10, 12 and 15-in. pipe, approx. 9 miles, also disposal works.	J. H. Wyllie, Mayor.
South Dakota	Dell Rapids	Feb. 15, 7:30 p.m.	Constr. main an l lateral and connect. sewers.	Oluf Hegge, City Auditor.
Iowa	Mt. Vernon	Feb. 21, 4 p.m.	Constr. 7 1/2 mile sanitary sewer, 6 to 15 in., pipe, with septic tank and filter beds.	Wm. E. Gamble, Town Clerk.
WATER SUPPLY				
North Dakota	Fargo	Feb. 6	Constr. water purif. plant, and furn. one vertical and one horizontal pump, engine and gas producer pump, plant.	F. L. Anders, City Engr.
Wyoming	Sheridan	March 6, 7:30 p.m.	Constr. 14 and 10 in. water pipe line	J. J. Withrow, City Clerk.
LIGHTING AND POWER				
New York	Albany	Feb. 6, 3 p.m.	Lighting street lamps five years from June 21	Isidore Wachsmann, Secy. Bd. C.&S.
FIRE EQUIPMENT				
Minnesota	Duluth	Feb. 3, 3 p.m.	Furn. auto, comb. chem. and hose wagon, 70 to 80 h.p. with ladders and hooks	John Connelly, Secy. Bd. of F. Comrs.
MISCELLANEOUS				
Maryland	Baltimore	Feb. 8, 11 a.m.	Furn. Linden trees for parks, and various park dept. supplies.	Board of Awards.
Oklahoma	Mangum	Feb. 14, 7 p.m.	Erect city hall and fire station.	City Clerk.
Washington	Spokane	Feb. 17, 2 p.m.	Furn. 1 five pass'gr. elec. auto.	John Gifford, City Purch. Agt.

STREET IMPROVEMENTS

Oak Park, Ill.—Village is considering paying of Erie st.
 Woodstock, Ill.—Town is considering paving of the Square.—H. M. Price, 140 Dearborn st., Chicago, Engineer. Lynn Richard, Town Clerk.
 Delphi, Ind.—City is considering paving of four streets.—E. E. Kirkpatrick, City Engineer.
 Evansville, Ind.—Residents of East Blackford av. are urging paving of that thoroughfare with asphalt; City Engineer Pfafflin will prepare estimate.
 Fairfield, Ia.—City is planning to pave six to ten blocks with brick.—J. P. Starr, Mayor.
 Lowellville, O.—Mayor Robert Erskin has recommended paving of number of streets.
 Point Gray, B. C., Can.—Ratepayers have authorized \$350,000 expenditure on road improvements.

CONTRACT AWARDED

Dustin, Okla.—Laying concrete sidewalks to Ardmore Concrete Co., Ardmore.

SEWERAGE

Alameda, Cal.—Council has decided on plan of building proposed big Alameda st. storm drain system.
 Sawtelle, Cal.—City Trustees have decided to defer action on bond issue proposed for storm and sanitary sewer system.
 Stockton, Cal.—Citizens have defeated proposition to issue \$507,609 bonds for sewers, street work and fire department purposes.
 Nevada, Ia.—Engineer Samuel Steigerwart, Boone, will prepare plans for installation of sewer system.
 Preston, Minn.—Village is considering construction of tile pipe, gravity sewer system at cost of \$5,000.—O. H. Case, Fountain, Engineer; G. A. Love, Mayor.
 Red Wing, Minn.—City is considering extension of sewer at cost of \$9,000.—A. E. Rhome, City Engineer; A. P. Pierce, Mayor.
 Lowellville, O.—Mayor Robert Erskin has recommended immediate construction of proposed sanitary sewer system.

WATER SUPPLY

Preston, Minn.—Village is considering extension of water main at cost of \$1,500.—G. A. Love, Mayor.
 Red Wing, Minn.—City is considering extension of water mains at cost of \$4,000; bids on c. i. pipe, gate valves, etc., will be received about Mar. 1.—A. E. Rhome, City Engineer; A. P. Pierce, Mayor.
 Point Pleasant, N. J.—Establishment of municipal water plant is being considered; present plant is owned by Martin Maloney, of Philadelphia.—Councilman G. H. McCloskey is interested.
 Muskogee, Okla.—Citizens will vote Feb. 16 on \$650,000 bonds to improve water and sewerage systems and construct garbage incinerator.
 Lynchburg, Va.—Fire Chief W. L. Sandidge has recommended extension of 12-in. water main on Jefferson st. and also 16-in. main.
 Snohomish, Wash.—Citizens have voted \$110,000 bonds to build gravity water system for Pilchuck River.
 Porcupine City, Ont., Can.—Plans are being considered for installation of water system.
 Toronto, Ont., Can.—Construction of water mains at cost of \$161,544 has been recommended.

LIGHTING AND POWER

Mammoth Springs, Ark.—The Mammoth Springs Electric Co. is considering installation of a 100-kw. generator and constructing 28 miles of high-tension transmission lines, carrying 33,000 volts; preparations are being made by the company to furnish electricity for lamps and motors in five towns.—E. C. Bellamy, Mgr.
 Lincoln, Ill.—Lincoln Water and Light Co. is considering a change to 60-cycle, 3-phase and increasing capacity within the next six months.—E. MacDonald, Manager.
 Palestine, Ill.—City proposes to install new generator at municipal light plant in the spring; also install about six miles of new wire.—H. T. Loughrey, Chairman Light Committee.
 Belvidere, Ill.—Council has granted Public Service Operating Co., Belvidere, 10-year franchise for street lighting.

FIRE EQUIPMENT

Bridgeport, Conn.—Erection and equipment of fire house in Ninth District is being considered.
 South Bend, Ind.—Board of Safety is preparing to ask Council to pay \$7,000 to \$8,000 for an automobile chemical wagon for Fire Department.
 Valparaiso, Ind.—City is considering installation of auto apparatus.—Aldermen Zea, Alexander and Gast are interested.
 Sioux City, Ia.—Fire Chief Geo. M. Kellogg and Superintendent of Public Safety R. S. Whiteley will recommend purchase of motor-propelled engine.
 Baltimore, Md.—Fire Chief Horan is visiting various cities on lookout for auto supply wagon and auto hose wagon desired for department.
 Everett, Mass.—City will build station for a horse company.
 Escanaba, Mich.—Citizens will vote Feb. 6 on \$15,000 bonds for erection of fire house in Seventh Ward.
 Manchester, N. H.—Board of Aldermen will consider \$5,500 order for establishment of flying squadron.
 West Orange, N. J.—Necessity of auto apparatus is urged in annual report of Fire Chief.

BRIDGES

Louisville, Ky.—City Engineer D. R. Lyman has recommended erection of \$15,000 bridge over Beargrass Creek at Logan st.
 Brownsville, Pa.—Board of Viewers of Fayette and Washington counties have selected site for joint county bridge over Monongahela River.
 Johnstown, Pa.—Council has decided on \$40,000 loan to build bridge and approaches from Iron st. to 5th ave.
 Houston, Tex.—Bids will be asked at once for construction of proposed Main st. viaduct.—H. B. Rice, Mayor.
 Spokane, Wash.—City is considering issuance of bonds to build concrete bridges over Latah creek.
 Marinette, Wis.—Plans have been prepared by Thos. R. Hasley, Grand Rapids, for erection of concrete bridge across Menominee River.

Proposal Advertising Municipal officials will serve

their constituents well by seeing that PROPOSALS FOR MUNICIPAL IMPROVEMENTS of all kinds are inserted in

Municipal Journal and Engineer

It is the only WEEKLY municipal paper. It reaches contractors and manufacturers properly equipped to do municipal work well and at the right prices. Issued every Wednesday.

Filtered Water Basin, Coagulation Basin and Filter House, Viewed from Reservoir

COLUMBIA WATER WORKS

umping by Hydraulic Power Plant—Turbines and Centrifugal and Plunger Pumps—Auxiliary Steam Plant—Purification by Mechanical Filters of the Gravity Type—City Under Commission Government

By JOHN McNEAL, M. AM. SOC. C. E., CITY ENGINEER.
COLUMBIA, the capital city of South Carolina, with a population of about 35,000, enjoys the distinction of being the only city in the State governed by a commission. The commission form of government, sanctioned by the State Legislature during the session of January, 1910, was adopted by the electors of the city in May of that year, and the commission, consisting of Mayor W. H. Gibbes and four councilmen, Messrs. R. J. Mallock, R. C. Keenan, R. W. Shand and W. F. Stieglitz, at once took charge of the affairs of the city.

Each commissioner, or member of the City Council, has been assigned to a department of the city government; one department embracing licenses, sanitation and health, and insurance and building permits; another the fire and street departments and markets and lighting; a third law and finance,

schools and parks and trees, and the fourth water works and sewerage, public buildings and charities and the city jail. Each commissioner has direct control over his department, the council as a body exercising general supervision over the affairs of all departments.

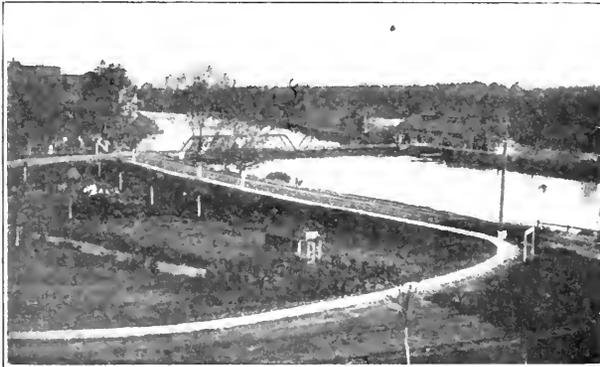

The city owns and operates its own water works. The water works department is under the direct charge of Commissioner W. F. Stieglitz as council superintendent, and Mr. F. C. Wyse as city superintendent of water works. Water works for the city of Columbia were first authorized by the State Legislature in 1818, but a more modern plant was constructed in 1855, and the city replaced this with the present plant in 1907.

Columbia is at approximately the geographical center of the State. It occupies an area about two miles square and is quite uneven in topography, the highest point being approximately

150 feet above the Congaree river, which flows near its western boundary. At a point about opposite the northern boundary of the city the Broad river unites with the Saluda river to form the Congaree. The latter river has a fall of about 36 feet in two miles, and a portion of this fall is utilized for power purposes by several industries along its banks, a canal having been constructed for that purpose. Power from this canal is used by the city as one source of power for the water works pumping plant.

The water supply is taken from the Saluda river, the watershed of which has an estimated area of about 2,475 square miles and contained in 1900 a population of 127,000, making the average population of the shed about 51 per square mile, most of which is consequently rural. The largest town on this water-shed has a population of about 5,000 and is distant about 50 miles from Columbia.

The power canal previously referred to parallels the Congaree river on its eastern shore. The water works plant is located on the bank of the river, the hydraulic power station lying between the canal and the river, while the balance of the plant lies on the other side of the canal. A bridge across the canal at this point gives access to the power plant and also carries the water mains between it and the remainder of the plant.

HYDRAULIC POWER STATION, CANAL AND BRIDGE ACROSS SAME, VIEWED FROM RESERVOIR

The hydraulic power plant comprises two turbine water wheels of 300 horsepower, which operate two centrifugal pumps, each having a capacity of 12,000,000 gallons per day, and two power pumps having a capacity of 3,500,000 gallons per day against the maximum pressure head contributed by the standpipe and friction in the distribution system. In addition to the hydraulic power plant there is an auxiliary steam power plant equipped with two pumping engines, each having a capacity of 5,000,000 gallons per day, the boiler plant for operating these being contained in the same building. This building also contains electrical generators which furnish power to operate the auxiliary machinery in the filter plant and for lighting the works. In addition to these pumping plants there are, immediately adjacent to them, a sedimentation reservoir, mechanical filter plant and filtered water basin; and at another portion of the city a standpipe.

As previously stated, the supply is taken from the Saluda river, the intake being near the junction of this and the Broad to form the Congaree. The intake crib is constructed of concrete and is supplied with two 30 x 30-inch sluice gates, the openings being provided with screens constructed at the outer face of the wall. From the intake crib a 36-inch suction main is laid in the bed of the Congaree river for a distance of about 1,000 feet, which ends at the pumping station in a suction chamber, which also is constructed of concrete.

The water power station, on the bank between the river and the canal, is a brick structure 20 ft. 8 in. by 97 ft. 2 in. Here are two horizontal turbines, each capable of developing 300 horsepower when operating with full gate under a head of 18 ft. and at a normal speed of 150 to 160 revolutions per minute. These turbines are duplicates and work independently of each other,

having separate draft tubes discharging into separate tail-water chambers. Each of these turbines operates one centrifugal pump of the two-stage type and having a capacity of 12,000,000 gallons per 24 hours against a total head of 75 feet (including 21 feet of suction) when running at a speed of approximately 500 revolutions per minute. These pumps lift the water from the suction chamber into a raw water reservoir constructed on a knoll at one side of the plant.

The high duty pumps are two in number, of the horizontal, duplex, double-acting, plunger type, each with a capacity of 3,500,000 gallons per 24 hours against a head of 300 feet. These pumps are connected by gear wheels to the shaft of an independent turbine water wheel. They pump the filtered water into the distribution mains and standpipe, taking it from the clear water basin. The reservoir, which serves as a sedimentation basin, has an approximate capacity of 60 million gallons when filled to within 3 feet of the tops of the banks. It is built partly in excavation and partly in embankment, the banks having a top width of 10 feet and side slopes of two to one. At its highest part the main embankment has a concrete core wall ranging in thickness from 2 to 6 feet. At one side is constructed a concrete gate chamber 5 feet square inside and 36½ feet high, equipped with four 20 x 20-inch sluice gates. A 60-inch cast-iron drain pipe is laid for the entire length of the reservoir and to this are connected a 24-inch outlet pipe and a 24-inch waste pipe.

From the reservoir the water flows by gravity to a coagulation basin which is 52 feet wide, 100 feet long and 18 feet deep. Alum is used as a coagulant, and this and lime are applied to the raw water where it enters the coagulating basin, the amount of coagulant being accurately regulated by an automatic appliance. Close to the coagulation basin is the filter house, in which are two chemical tanks 6 feet in diameter and 6 feet high, provided with crates for holding the alum to be dissolved and an indicator gauge to show the amount of solution used per hour.

The filter house is a brick structure 128 feet long by 54 feet wide, with concrete floors. Here, in addition to the chemical tanks, are located the filters, which are six in number, of the mechanical gravity type, each having 400 square feet filtering area and designed for a capacity of 650,000 gallons per unit per 24 hours. The supply to the filters is controlled by automatic regulators which are designed to permit of variation of not more than one per cent. The filtering material consists of 30 inches of sand on a 6-inch bed of gravel. The filtered water from these is discharged into the filtered water reservoir, and from this is drawn the wash water, which is pumped to and through the filters by means of two 50-horsepower centrifugal pumps, each direct connected to a direct-current variable speed electric motor.

The filtered water reaches the filtered water reservoir through a conduit beneath the center line of the building and a 24-inch pipe. The filtered water reservoir is oval in shape, with inside diameters of 211 and 171 feet, and a total depth of 14 feet, with a capacity of approximately 2,500,000 gallons. The walls and bottom of this reservoir are constructed of concrete.

The auxiliary steam pumping station is a brick structure divided into two sections, a pump room 44 feet by 60 feet and a boiler room 41 feet by 60 feet. The stack is of brick, 5 feet in diameter and 120 feet high. There are four horizontal tubular boilers 72 inches in diameter. The pumping machinery consists of two Worthington horizontal, duplex, compound, condensing, direct acting pumping engines, each with a net capacity of 15,000,000 gallons per 24 hours against a pressure head of 288 feet, the suction lift being 12 feet. In this station is installed a direct-connected generating set having a capacity of 500 kilowatts at 250 volts, the engine being of the vertical type.

From the high-duty pumping plants the water is forced through a 24-inch rising main to the standpipe, which is located about one mile from the plant. This standpipe is of steel, 25 feet in diameter and 100 feet in height. A cut-off valve is located near the standpipe to provide for direct pumping to the distribution system around a by-pass, should this be necessary.

The distribution system consists of about 40 miles of cast-iron pipe ranging in size from 6 to 20 inches.

Frequent analyses of the filtered water are made by the city chemist, Mr. W. H. Beers, a complete laboratory for this purpose being located at the filter station. The following is a typical analysis of the filtered water:

SAMPLE OF WATER, COLUMBIA CITY WATER WORKS

Color	None
Chlorine	2.00
Free ammonia	0.04
Albuminoid ammonia	0.03
Nitrogen in nitrates	0.00
Nitrogen in nitrites	0.00
Hardness (as parts of Ca Co ₃) soap test	25.00
Total solids	90.00

Bacterial Analysis

Coll-group organisms	None
Free from indications of contamination	

The entire plant was designed and constructed under the supervision of Mr. J. L. Ludlow, of Winston-Salem, to whom, as well as to Messrs. Stieglitz and Wyse, the writer is indebted for the information given herewith.

DOUBLE FILTRATION OF WATER

In a paper with the above title which he read before the New England Water Works Association, Mr. H. W. Clark, chemist of the Massachusetts State Board of Health, described some experiments made and results obtained by that board in passing water to be purified through two filters in succession. At the outset he refers to the fact that the board, as long ago as 1894, suggested the double filtration of water.

Experiments conducted by the board all showed that as long as there is any impurity in a water, passing it through a fine sand filter will remove a greater or less percentage of such impurity. In one case water which had been filtered and stored for six weeks, during which a very great reduction in the bacterial content had been effected, was passed through a filter containing but ten inches of sand, which resulted in diminishing the number of bacteria remaining by from 65 to 85 per cent.

During the past five years the board has been endeavoring to answer the question: "Can an equally good result be obtained by double filtration with the two filters operating at such rates that a greater value of purified water per acre of combined filter surface can be secured?" During this time five double filter systems have been operated experimentally at the station, and Mr. Clark describes the results obtained from three of them as follows:

All of these filters were ordinary sand filters containing about 40 inches in depth of sand. In the first system the rates of operation were 10,000,000 and 20,000,000 gallons per acre daily, respectively, the rate of the primary filter being smaller than that of the secondary filter; in the second system the rates were 23,000,000 and 7,500,000 gallons per acre daily, respectively, the rate of the primary filter being greater than that of the secondary filter; and in the third system both filters were operated at equal rates, namely, 6,000,000 gallons per acre daily. The net rate of each system was 6,000,000 and 3,000,000 gallons, respectively; that is, the volume of water filtered per acre of filter surface used.

It seemed during the first few months of this work that greater efficiencies could be obtained by double filtration than by single and with the production of a greater volume of purified water per acre of filter. Taken as a whole, however, the results were as follows: Neither the first nor the second system gave results quite equal to the single filters shown on the previous table operating at a rate of 5,000,000 gallons per acre daily; neither did either system give results in coli efficiency equal to the single filter operating at the rate of 7,500,000 gallons per acre daily. With the system, however, operating at a net rate of 3,000,000 gallons per acre daily, the results were practically the same as with the single filter operating at a rate of 3,000,000 gallons per acre daily.

It is difficult to state just why this double filtration through much greater depths of sand than in use with the single filter does not always give better results than single filtration. One important reason seems to be, however, that the rate of the primary filter has generally been too great for good bacterial efficiency to occur; yet by this primary filtration the organic matter necessary to cause the secondary filter to be an efficient water purification plant has been removed. While we have some results differing from those presented here, still it does not

seem reasonable to assume from all the results of Lawrence work that water of the character of that flowing in the Merrimac River can be purified more advantageously or more economically, as far as net product of filtered water is concerned, by double filtration systems than by a single filter operating at a reasonable average rate.

There is, of course, another reason that has been prominently mentioned for the operation of primary filters, and that is to lessen the area upon which the matter in suspension in the raw water is collected. This is a very prominent feature in the beginning of operation of such systems, especially when the primary filters are operated at rates approximating 100,000,000 gallons per acre daily. It always seems at first that much can be gained in this way; yet as these systems of double filtration are kept in operation at Lawrence, although the water passing to the secondary filter may remain free from matters in suspension, this secondary filter becomes an efficient biological machine, the sand grains throughout its depths become coated with the gelatinous matter necessary for this efficiency, and eventually these secondary filters at Lawrence require scraping almost as frequently and as deeply as if they were receiving raw water without primary filtration.

This, then, must be the conclusion from our Lawrence work: There is little to gain either in economy in sand removal or sand washing, or in bacterial efficiency, in double over single filtration of polluted water such as flows in the Merrimac River; that is, with an equal or nearly equal production of filtered water per acre of filter surface. We realize, of course, that each water presents a separate problem, and Lawrence results are not universally applicable.

We judge from experience elsewhere as well as from the fact that the main object at Lawrence appeared to be bacterial reduction, that these conclusions do not apply to waters high in clay and other suspended matter; although the experiments at Washington (described in our February 1 issue) apparently indicate that sedimentation is more effective than preliminary filtration in treating such waters.

ELECTROLYTIC PURIFICATION

In a recent paper on water purification Mr. H. W. Clark, chemist of the Massachusetts State Board of Health, said: "There are so-called electrolytic methods of water purification in which the electric current is stated to act as a bactericide, but which, in the devices I have examined, simply causes the taking of aluminum from aluminum or composition electrodes and the formation of aluminum hydrate, really an expensive method of coagulation."

We have two or three times referred to a plant at Los Angeles, Cal., for treating sewage by an electrolytic process. It is unfortunate that there is not a State Board of Health or other unprejudiced scientific authority to investigate and report upon this plant. However, it has been operating for over two years and appears to be satisfactory to the officials of the city. In this plant the sewage first passes through sedimentation basins, and the cleaning of these is quite an item of expense in operating the plant. From a letter recently written by the city engineer and made public it appears that the cost of running the plant is in the neighborhood of \$25 per 1,000,000 gallons purified; this including removing the sludge from the sedimentation basins, cost of current for operating the electrolytic plant and labor of attention to the latter, which occupies an hour or more every day. According to the tests made by a representative of the company which constructed the plant, the total residue was reduced from 103.3 parts in the raw sewage to 75.0 in the final effluent; the organic matter from an average of 2.24 to an average of 1.30, a reduction of 42 per cent, and the chlorine was reduced about 30 per cent. Nitrates were reduced from 7.4 parts to 4.4 and nitrites increased from zero to 3.0. Lime, magnesia and iron were reduced to from one-half to one-tenth of the contents of the raw sewage. The change in the nitrites and nitrates indicates a deoxidizing of the sewage, and it is stated that the nitrogen is finally converted by the process into ammonia salts. These results are obtained by the combined action of the sedimentation tank and the electrolytic treatment, we understand, and how much is due to each is not stated. These reports of the chemist and engineer apparently indicate a rather low degree of purification and a high cost of operation.

PAVING AND LIGHTING A SMALL CITY

Brick Pavement With Concrete Base—Concrete vs. Rolled Stone Foundations—Cement vs. Bituminous Filler—Rattler Tests—Cost in Detail

BY P. E. GREEN, Associate M. Am. Soc. C. E.

ROCHELLE, ILL., is a typical small city of the Middle West of about 3,000 population, most of which consists of retired farmers and local business men, and as a community is decidedly wealthy. Although about one hundred years old, it was not until about twenty years ago that much thought was given to the installing of municipal improvements. Since then the town has been well supplied with a water system and sanitary sewer system, and more recently with about 30,000 yards of brick paving and electric street lighting. Although the water works was built twenty years ago and the sewers five years ago, the streets were allowed to remain in the usual frightful condition of the small Western town until about two years ago, when there was a decided demand for modern pavements.

At first there was considerable hesitancy about adopting a paving proposition because of the small size of the town and because in the construction of the sewer system there had been considerable trouble owing to the business failure of the contractor. The citizens finally decided in favor of the improvement, however, and the Board of Local Improvements, which Illinois law provides shall take charge of special assessment work, was composed of the Mayor and three members of the Council. This board desired that a first-class pavement be constructed, and, in spite of bitter opposition of many property owners to the expenditure which this would involve, it was decided, after consultation with the writer as engineer, to lay a brick pavement on five inches of concrete, filling the joints with asphaltic cement, and to make the curb and gutter of concrete, except that at points where a large amount of teaming had to pass over the sidewalk it was decided that a sandstone header sunk to the level of the pavement would be more suitable.

Before a decision was reached as to the character of the foundation, many points were considered by the authorities and the engineer. A rolled stone base was contemplated, and in part of the system of paving it would have been decidedly advantageous on account of the lesser cost. Also, from the writer's experience, he feels justified in recommending the rolled stone base where there is not any great probability that the foundation will be disturbed to any large extent. However, in the city in question there was the possibility of the construction of a street car line within a comparatively short time, and also a probability that before many years an adequate storm water system of sewers would have to be put in. For this reason, on account of the much greater adaptability in making repairs, it was decided to use a concrete base, and the next point to be taken up was the thickness of this base. It is probable that concrete foundations having a depth of six inches are more common than any other kind, but there is little likelihood of such a depth being necessary in a town in which the traffic is of such a character as that at Rochelle. On the other hand, a foundation of four inches of concrete has been advocated by some engineers, but this is believed by the writer to be too small in any situation where loads of as much as four tons may be drawn over them, although in many locations in cities where the topographical conditions are such that only comparatively small loads are used four inches is adequate on many residence streets. As the strength of the foundation increases directly as the square of the depth, a foundation of five inches of concrete is over 50 per cent stronger than one of four inches, while it is at least 15 per cent cheaper than one of six inches. It was decided to use a mixture of one part of cement, three parts of sand and six parts of crushed stone or gravel.

The question of filler is also a very live one in pavement work. The National Paving Brick Manufacturers' Association strenuously advocates a cement grout filler. After having had the supervision of several hundred thousand yards of pavements

in which the filler was a cement grout, a tar filler, or an asphaltic filler, the writer believes that the asphalt filler if properly and carefully applied is the best. The grout filler makes a smooth pavement at first, and, according to its advocates, holds and protects the edges of the brick. It is not believed that this contention is sound. In the course of three or four years, if there is any traffic to speak of on a grout filled street, the filler near the top of the brick becomes all broken out and the edges are then as badly battered as any bituminous filled pavement. On the other hand, in the bituminous filled pavement, the noise is always lessened, and, in the writer's opinion, the edges are as well protected as those having a cement grout filler. Also a bituminous filled brick pavement may be refilled much easier than a grout filled one.

In regard to tar and asphaltic fillers, it has been claimed that the asphaltic filler pulls entirely out of the joints in strips, and this is more or less true when the filler is applied cold or on wet brick. Where sufficient care is taken, however, it is not true, and the asphalt has the further advantage that it is not nearly so much affected by the heat or cold; and since such filler is now scarcely any more expensive than a tar filler, the writer prefers the asphalt. It is believed also on account of the fact that asphalt does not soften up so much under heat that it may very properly be "squeegeed" instead of poured, with a considerable advantage to the noiselessness and appearance of the pavement.

Sandstone headers were put at the ends of all streets and alley intersections, and at points crossing the railroad yards where a large amount of teaming is done. These are more expensive than the wooden headers so often found in use in paving, but there can be no question of their much greater usefulness, not only in protecting the pavement from wear, but from the fact that they will never rot out and thus tend to lessen the life of the pavement.

After the usual formalities required in the State of Illinois, the work was laid out and construction started in the spring of 1910. One of the problems confronting the engineer on this work was the establishment of the grade, for, as in most cities where no pavements have ever been put in, very little attention had been paid to the question of grade. A good deal of curb had been built on the various streets, but the grades consisted mostly in running from John Smith's walk to Tom Brown's corner with the resultant steps and jogs in the sidewalks. After talking the question over with the authorities, it was decided to take the bull by the horns and establish the grades somewhere near where they should be and let the property owners build their sidewalks to meet them. This is what the writer has advocated for years in this character of work, but he has generally been restrained by the authorities, who fear results from a political standpoint. Subsequent events proved this to be the wisest course that could have been taken, though at the start of construction a great deal of complaint was heard.

The concrete base for the pavement consisted of 5 inches of 1:3:6 concrete, upon which was spread a sand bed of 2 inches, and on this sand bed the brick wearing surface was laid and the joints filled with asphaltic cement. Tests were made of all material that entered into the construction, that is of the cement, the asphaltic filler and the brick. These tests were made according to the standard methods, and, as regards the cement and the asphaltic filler, were not remarkable in any way. The same thing might also be said of the brick. There was nothing remarkable in any way about the test, except that, to the writer's mind, it confirmed the opinion he had for several years that the rattler test as now conducted is of very little benefit to anybody. The rattler tests were made with the greatest care and with the idea that, since such bitter objections had been made to the improvement, every possible precaution should be taken to see that no defective material be used, and there can be no question but that every effort was made to have the rattler as near standard as it is possible to get one and meet the requirements of the description. Yet, in spite of this fact, brick from the same pile showed the most remarkable variation in results. As far as could be seen by close examination they were identi-

cal in every way in the evenness of texture, in color and in size and weight. Dozens of them were broken with a hammer and examined closely. It is the writer's opinion that, taken as a whole, they were well burned brick. They were tested under the specifications advocated by the National Paving Brick Manufacturers' Association, and also under the Chicago City Specifications. It might be explained that the Chicago City Specifications provide that the test shall be made in a standard 20 x 28-inch rattler, but that the test is made by grinding brick on brick in the rattler instead of brick on shot as required by the National Paving Brick Manufacturers' Association test. This test has been objected to for many years by the manufacturers, who insisted that it is a much more severe test than the one that their association advocates, although in the Chicago city tests a 20 per cent loss is allowed instead of 18 per cent as in the other test. It is rather curious to note, however, that, though both of these tests were used on precisely similar samples of brick, just as often as not the loss in the National Paving Brick Manufacturers' Association test was as great or greater than the loss in the Chicago city test. The loss in the rattler was anywhere from 14 to 24 per cent, and great variation would occur in two tests made on the same day from a batch of brick from the same pile. Some thirty different tests of brick were made, and at no time did they give consistent results. It is the writer's belief, based not only on this series of tests, but on many other tests of the same character made by him on other work, that the rattler test as now used is absolutely unreliable.

A careful force account was kept by the resident engineer on this work, of which the following is a copy:

WAGES.

Finishers, \$4.80 per day of 8 hours (union scale of C. & G. gang).
Laborers, \$3.00 per day of 8 hours (union scale C. & G. gang).
Laborers, \$2.00 per day of 10 hours.
Teams, \$5.00 per day with teamster.
Helpers, \$2.00 per day.
Foreman, \$5.00 per day.
Superintendent, \$6.00 per day.
Brick mason, \$10.00 per day.

In connection with above table, it is to be noted that the foundation consisted of approximately 4,000 cubic yards of concrete. The cement ran about eight-tenths of a barrel of cement to a cubic yard or one barrel of cement to each nine square yards of concrete foundation five inches in depth. This small amount of cement is explained by the fact that the gravel used in making the concrete was a very clean product, practically bank run, the size varying from two inches down to

WASHINGTON STREET, ROCHELLE, ILL.

coarse torpedo sand. A great many experiments were made to find out what the proper amount of cement should be in a 1 : 3 : 6 mixture with this gravel, and it was invariably noted that the cement ran one barrel to each ten square yards. However, it was insisted that this amount of cement be increased because while, theoretically, less cement is required when the amount of the voids in the stone is small than when the percentage of voids is large, still it is an actual fact founded on experience that a fine stone aggregate requires more thorough mixing to get the cement evenly distributed and that with the ordinary machine mixer more care is required in mixing fine material than in mixing more carefully graded stone. The asphalt filler averaged 1.65 gallons per square yard. The bricks were stand-

ard paving blocks averaging between 42 and 43 blocks per square yard. The curb and gutter consisted of 1 : 2 : 4 concrete with one-half inch of 1 : 1 finishing coat and the cement ran 1.3 barrels per cubic yard.

From the above table it will be seen that the contractor netted about \$8,600 on his work, or an equivalent or about 29 cents per yard of finished pavement, as near as could be told by keeping close account of the work; and while, of course, it is not known what prices he paid for his material, still current prices were assumed, and the figures are believed to be nearly correct. That part covering labor is from daily force account. From this profit also should be deducted the cost of carrying a certain part of the contractor's organization during the winter and other office expenses, so that a probable net profit of between \$6,000 and \$7,000 was realized.

One of the most interesting features in connection with the installation of this pavement was the indirect result in the appearance of the town. The pavement itself, of course, did much to improve this, but in addition new sidewalks were put in by practically all property owners where old sidewalks were not at the adopted grade, and this added fully as much to the appearance of the street. Moreover, after the pavement had been partially completed the business men of the town decided to

install ornamental electric lights and some seventy of these were located within two or three blocks of the center. These lights consisted of groups of three 60-watt tungsten lamps on top of cast-iron posts some 13 feet high, the lamp being enclosed in a white ground-glass globe. The cost of this lighting system was about \$4,400, and besides making the business part of the town very attractive after dark it is an ornament during the daytime as well.

It is probable that the paving will be extended into other streets, and agitation for establishing a complete system of grades for the entire town is increasing. The reputation of the improvement made has drawn to the town delegations from towns nearby and even one or two several hundred miles away. Property values have appreciated, rents have been advanced in many cases, and altogether the business men consider it one of the best investments they ever made.

The Mayor of Rochelle, Mr. W. B. McHenry, was active during construction and personally saw to it that poles, hydrants and other obstructions were promptly removed from the roadway. In every way the Board of Local Improvements and the City Council co-operated with the engineer and the contractor. Mr. Kendrick Harger was resident engineer for the engineers, the Aetna Engineering Bureau, of Chicago, who prepared the plans and supervised the construction.

CHICAGO STREET LIGHTING

THE city council of Chicago in 1909 created a commission on city expenditures to regulate the various departments of the city. This commission has recently published a preliminary report on the affairs of the Department of Electricity, covering the street lighting of the city by gas and gasoline as well as by electricity, and the fire alarm and police telegraph systems. Less criticism has been directed by the commission against this department than against some of the others investigated, although recommendations were made for a number of changes, especially in the arrangement made with the Park Department for lighting park roads at the expense of the city rather than of the Park Board. There were, however, some criticisms of the conduct of the department itself, and it was recommended that a more systematic and rigid inspection be made of the gas and gasoline lamps; also that the position of chief gas inspector be placed under the merit system and that some economy be effected by reducing the payroll.

With reference to the use of gas lamps, the commission stated that for the past few years the number of these used for street lighting has steadily decreased, as electric arc lamps are adopted more and more generally; and it is probable that before long no gas lamps will be used except in the outlying districts. The gas lamps are lighted and extinguished according to a regular schedule by men who are paid one cent per lamp per night, their duties including also the cleaning of the glass-ware once a week and of the burners once a month. For the care of mantle lamps an additional ten cents a month is paid to cover the extra labor of replacing mantles and adjusting burners.

In the outlying districts of the city, where gas mains and service pipes have not been laid, and also in some of the residence districts, the street lighting is done by gasoline lamps. These are owned, installed and operated by a private corporation which receives \$26.40 per year per lamp. The contract provides for a proportionate rebate in case a lamp is reported out any number of hours or days, or if the actual effective candlepower delivered is not up to the required standard. Deductions are made, "in proportion to the rate charged, for each lamp that does not furnish continuously a full 60-c.p. effective light. The tests will be made by means of a portable photometer using a standard incandescent lamp for comparison." The outages are reported by policemen and citizens, but up to the present time no candlepower tests with a portable photometer have been made; but laboratory tests of burners taken from the company's shops have shown the lamps capable of furnishing this candlepower.

The gas lamps also are rated at 60 c.p., and while it is not to be expected that they will not vary more or less from this in actual service, some of the conditions discovered by the commission certainly called for the criticism which they received. The commission inspected 956 mantle gas lamps in one district and of these found about 20 per cent in good condition, 41 per cent were called fair, 26 per cent bad, 10 per cent very bad, 3 per cent out. Seven per cent had no chimney and 4 per cent were found with broken glass. Lamps were assumed to be in good condition when the glass was clear, the mantle in good condition and the burner well regulated. Those classed as fair could have been much improved by cleaning the glass and regulating the burner. The bad and very bad included lamps which were very dirty, with mantles broken, chimneys smoked, and in such a condition that the "very bad" might as well have been out entirely. Consequently, but 61 per cent of the lamps inspected could be considered as passable. "The reason for this condition is lack of proper care on the part of lamp-lighters and poor inspection."

In addition to this inspection, photometric field tests were made to determine the actual candlepower of both styles of lamps under service conditions. Of the mantle lamps which could be classed as passable the candlepower ranged from 10.6 to 41.6, the average being 24.8. Tests made of flat flame lamps gave results varying from 6.3 candlepower to 16.7, the average being 11.0. The commission stated that while varying gas pressure has much to do with the intensity of the light, this could probably be increased fully 50 per cent in the case of both flat flame and mantle lamps by proper care on the part of those paid by the city for this service.

A large part of this failure of the lamp-lighters to perform their duty is attributed to the lack of systematic inspection of the lamps and oversight of the work done by the lamp-lighters; combined with the fact that too many lamps are assigned to one man, this number ranging from 200 to 400, to look after which the lamp-lighters hire boys at a lower rate than that paid by the city, and much of the care of the lamps is consequently done by boys without any adequate inspection or supervision.

The need of more detailed and careful supervision by the department is also shown by the unreliability of the figures of the department as to the number of lamps in service. There is an old map in the gas office showing the location of each lamp in the city, but this has been altered so often that it is unreliable and no effort is made to keep an accurate location of all gas lamps in operation. An actual count of the lamps in one district showed a variation of 3.5 per cent from the official records. In paying for these lamps the city pays the lamp-lighters, as stated above, one cent per lamp, and it pays for the gas by assuming a rate of flow of three feet per lamp per hour for the flat flame burners and three and one-half feet for the mantle burners. Consequently, any error in the number of lamps in service and also in the rate of consumption of gas has its direct effect upon the bills. According to the report there is less criticism to be made of the gas company than of the city, as the commission found from testing a number of burners at random that there was no doubt that the city was getting more gas than it was paying for; the average capacity of the mantle burners tested showing a consumption of 4.1 cubic feet per hour, and of the flat flame burners 5.2 cubic feet per hour.

As a result of the inaccuracy of the record of lamps, it is estimated that, should the same percentage of error be found in the whole city as was found in one district, the city is paying for gas and labor which it does not receive about \$7,000 a year.

Another way in which the city is more remiss than the private corporations is in the matter of placing wires under ground. "It is often the case in districts where by ordinance all wires should be under ground that the city's circuits are still aerial and two or three wires necessitate the presence of ungainly poles along the curb where companies' wires are under ground."

Value of City Records

WHILE we have several times before referred to the great desirability that cities should make and keep up-to-date, complete and accurate records not only of their finances but of the physical structures and all their details which are in charge of or utilized by the various departments, we offer no apology for again referring to the subject, for we think this is warranted by its importance. An illustration of this importance is offered in the article on page 196, in which it is stated that an investigating commission in Chicago found that, owing to the fact that there was no correct record of the street lamps in the city, the city was paying about \$7,000 a year for lamps which had no existence. It is easy to imagine other losses or inconveniences occasioned by this same lack of accuracy of the records. For instance, if it were decided to change from one style of lamp to another it is conceivable that the number of new lamps to be ordered would be taken from these same records.

This illustration in Chicago could undoubtedly be dupli-

cated in some one or more departments in most of our large cities and many small ones. For instance, we published some months ago abstracts from a report of an investigating committee in Boston, in which report it was stated that the city was paying for cleaning many catch basins which have no existence, the apparent cause being that the records of catch basins were not correct.

In a sewer department similar over-payments might well be occasioned by inaccurate records of the number of automatic flush tanks in use.

In many instances inaccuracy of amounts and measurements of these physical structures may seem to be of no special importance and not worth the labor involved in correcting them; but it is impossible to tell just what error or confusion may at some future time result from the use of inaccurate figures which are allowed to stay upon the records through this failure to appreciate the importance of completeness and exactness in such records.

Motion in Brick Pavements

THAT brick pavements, and in fact pavements made of all kinds of material, expand with the heat and contract with the cold is of course well known; such expansion having in some instances resulted in the arching of a pavement, the center lifting in some cases several inches from the foundation. We do not recall, however, having seen any figures as to the actual amount of expansion and contraction caused in pavements by temperature changes. An investigation of the amount of such movement is being undertaken by the Bureau of Standards, which has sent from Washington two of its engineers to study the brick speedway at Indianapolis, which is considered perhaps the most perfect specimen of brick paving in the country. From the results of these tests it should be possible to estimate with more exactness the size of expansion joints which it is necessary to provide in constructing brick pavements of various widths and in various climates.

At the same time these engineers propose to test the rigidity of the pavement—that is, the deflection occasioned by the passing of a load over it. For this purpose a sensitive spirit level will be used which will indicate a change in level at one end of one ten-thousandth of an inch. This would not seem to have as much immediate value to the engineer, although it may serve to indicate the value of certain coefficients of elasticity and other properties of brick pavements.

Brick Pavement Details

On another page there are given, by an engineer, reasons for preferring bituminous to cement filler, contrary to the opinions and urgent teachings of the National Paving Brick Manufacturers Association; and also the conditions under which, in his opinion, a rolled stone foundation is preferable to a concrete one.

Standardizing, whether of specifications or of machinery, has been of great service in the development of engineering arts; but standard methods are best fitted for standard conditions only, and there is danger that an engineer may be so mentally indolent or so cautious as to fail to depart from standard methods when conditions would better be met by an independent decision on details or possibly on vital principles. Such independence has in the past been one of the most striking and commendable features of American engineering, and it is to be hoped that it will never be smothered by standardization.

Canadian Public Health Exhibit

THE Provincial Board of Health of the Province of Ontario is arranging to hold a public health exhibit this year in connection with the Canadian National Fair which is held annually in the city of Toronto, beginning about the end of August. In addition to this exhibit the board will arrange for daily 15-minute lectures, illustrated by lantern slides, upon various subjects relating to public health and prevention of disease. It is proposed that this exhibit shall contain appa-

ratus, appliances, materials, etc., which would be serviceable to health boards, and firms are invited to send any such materials to the exhibit. The space is limited, however, and any who desire an allotment are requested to communicate as soon as possible with the chief health officer, Mr. John W. S. McCullough, M.D., Parliament Bldg., Toronto, Ont., Canada.

SMALL DREDGE FOR SEWAGE CHANNELS

By E. S. RANKIN, Engineer of Sewers and Drainage,
Newark, N. J.

For several years past the Engineering Department of the City of Newark, N. J., has advocated the purchase of a small dredge to be used in deepening and widening a number of narrow creeks or ditches flowing through the salt meadows in the southeasterly part of the city. The surface of these meadows lies about one foot or less above high water level and is composed of a soft mud of varying depth. The streams are used as the outlets for storm water sewers, but are not of sufficient depth and are more or less obstructed with vegetation and with the sediment washed down by the sewers.

When authority was obtained to purchase a dredge great difficulties were experienced in finding one small enough to meet the requirements. The nature of the work was such that the machine would have to be operated from a scow, the ground not being solid enough to support a land machine, and ten feet was considered as about the outside width desired. It would also be necessary to transport the dredge from one point to another and carry it across a number of railroad tracks. It was therefore essential to find the lightest machine that could be operated practically. After many interviews and much correspondence with makers and operators of dredging machinery a contract was finally made with the Lambert Hoisting Engine Company, of Newark, N. J., to build a dredge to be mounted on a scow 10 feet by 30 feet. The bucket is of one-third cubic yard capacity and the boom 14 feet in length.

During the first five weeks of operation a ditch about 2 feet deep by 4 feet wide was enlarged to 4 feet deep by 10 feet wide for a distance of 2200 feet at a total cost of \$339.35, including engineer, labor, coal, oil, etc., or approximately 10½ cents per cubic yard of excavation.

At this point it was necessary to cross a number of railroad tracks, and as the season was so far advanced arrangements were made with the railroad company to pick up the dredge with a wrecking crane, load it on a platform car and ship it to another point, where work will be resumed in the spring.

So much difficulty was experienced in securing a dredge suitable for the work required and its operation when finally secured has proved so satisfactory that this article is written in

DREDGE AT WORK

DREDGE LOADED ON CAR READY FOR TRANSPORTATION

the hope that it, may prove of value to some other municipality similarly situated.

The accompanying photographs show the dredge in operation and ready for transportation.

MILWAUKEE INCINERATOR

MUNICIPAL JOURNAL AND ENGINEER,
231 West Thirty-ninth Street, New York City.

Gentlemen: Our attention has been called to a clipping from your publication under date of January 25, in which it is stated that the city of Milwaukee is about to abandon its incinerator plant and substitute therefor a piggery system for the disposal of garbage. Said article goes on to discuss, with considerable detail, alleged plans for accomplishing the above-mentioned purpose.

We wish to state that the city of Milwaukee is not considering any such proposition for the reason that none such has been made to the city. This department has just assumed the responsibility of the collection and disposal of the city's garbage. We propose to operate the incineration plant constructed recently for the city of Milwaukee by Power Specialty Company, of New York, and are installing a new system of record keeping and accounting in order to give us data as to the exact operation of the plant. We as yet have nothing to base any conclusion upon in regard to the operation of said plant and therefore are not in position to make a comparative study of the various methods of disposal of garbage.

From our records it will be possible for us to secure accurate information as to the cost of collecting, hauling and a detailed statement of the costs of the various processes to which the refuse material is subjected in the incinerator. We will also be enabled by these records to credit the plant with the production of a certain amount of clinker which may be used in various ways and the production of a certain amount of steam which we propose to use as advantageously as possible.

After we have had one year's time in which to thoroughly organize the work of collection and disposal of the garbage we will be in much better shape to discuss the incineration method of disposal of garbage and refuse in Milwaukee.

Trusting that you will correct the statements made in the above-mentioned number of your periodical, I am,
January 30, 1911.

Yours respectfully,
H. E. BRIGGS,

Commissioner of Public Works.

We are glad, indeed, to learn that the incinerator is not to be abandoned at once, but will be given a test of another year. It would be very unfortunate if this plant, which was carefully planned by such a prominent engineer, should be abandoned without the utmost effort having been made to secure satisfactory operation. We are informed by those conversant with affairs that there was some foundation for both the item referred to by Mr. Briggs and for another a few weeks earlier, and that the present administration is not satisfied with the plant. But we hope that the test of this incinerator and of the general system to be made this year will result in the ultimate approval of it.

NEWS OF THE MUNICIPALITIES

Current Subjects of General Interest, Under Consideration by City Councils and Department Heads—Streets, Water Works, Lighting and Sanitary Matters—Fire and Police Items—Government and Finance

ROADS AND PAVEMENTS

To End New York Highway Commission

Albany, N. Y.—A bill to carry out the recommendation of Governor Dix in his annual message to the Legislature to abolish the State Highway Commission, which was established originally with a view to bringing about important reforms in State road administration, has been introduced in the Legislature. The present State Highway Commission of three members and a large force of office employees are to be eliminated and a new State Highway Commission is to be established to be composed of a business man at the head in the person of State Superintendent of Public Works Charles E. Trenan., of Ithaca, a personal friend of Governor Dix, who as Superintendent of Public Works will award the good roads construction contracts hereafter.

Stone Road, New York-Montreal

Albany, N. Y.—A complete stone road all the way from New York to Montreal is now practically assured. The Senate finance committee has reported favorably Senator Sherman's bill appropriating \$2,500,000 for highway improvements, to connect incomplete highways from New York to Rouse's Point. These improvements are to be made along the east side of the Hudson to Albany, and then north to Rouses Point, filling in the bad spots here and there. The Canadian authorities have already arranged to build a complete stone road from Montreal to connect with this State's highway work at Rouse's Point.

Highways Cost \$6,000,000

Albany, N. Y.—County highway superintendents at the semi-annual conference with the State Highway Commission reported the expenditure during 1910 under their supervision on maintenance and repair of roads and bridges to be about \$6,000,000. This is apart from the expenditure on roads improved as State or county roads by State aid. Of the total amount expended, the State contributed about \$1,500,000, and the balance was provided by the town highway tax. It was claimed that more than \$250,000 had been saved during the year in construction and repairs of town bridges, owing to the adoption of the permanent type of bridges and culverts, built of concrete whenever possible.

Repaving Baltimore Streets

Baltimore, Md.—City Engineer B. T. Fendall has completed an exhaustive study of Baltimore's paving problem in view of the election on the question of floating a \$5,000,000 paving loan. At present there are 250 miles of cobble stone streets and about 108 miles of alleys. If the whole work were done with first-class granite block the cost would be \$18,600,000; if vitrified brick and asphalt were used the cost would be \$10,000,000; if bituminous macadam was used, the plan being to lay it to a depth of three or four inches immediately on top of the stone, the cost would be 4,000,000. Mr. Fendall favors using all of these materials, selecting the kind most suitable for each street. He figures that an expenditure of \$2,000,000 a year for six years would be the best arrangement.

Will Require Pavement Guarantees Again

Binghamton, N. Y.—The Board of Contract and Supply has recommended that maintenance guarantees from paving contractors be hereafter required. Several years ago all paving specifications required a two-year guarantee, secured by cash or bond. Bondsmen who guaranteed poor pavements, however, acquired the habit of disappearing when about to be called on for funds for repairs. For the last three years paving contracts have been let without any guarantee. Lower prices were obtained and sometimes poorer work. Now a medium point is sought and a reasonable guarantee proposed. This it is proposed to secure by cash return of 5 per cent of the cost of the work.

Ordinances Regarding Pavement Excavations

Leavenworth, Kan.—An ordinance is under consideration regarding pavement excavations. It first requires that a bond be filed and a permit be obtained before any excavation may be made. The city is released from all liability for damages to persons or property occurring in any manner from the excavation. A particularly important feature of the ordinance is the provision against making excavations within a specified time after a pavement has been laid. Notice shall be given all property owners along a street which is to be paved and they will be required to make water, gas or sewer connections before the pavement is laid. In the case of brick pavement no excavations or cuts shall be made within one year after the pavement is laid. No asphalt pavement may be cut into for five years after the improvement is made. Exception is made, in the case of necessity for repairs. Also excavations must be filled by the one making them. The work must be done under the immediate inspection of the city official designated to have charge of the work. The material shall be of the kind ordered by the city. Barriers must be provided at all excavations, and red lights placed there at night. The details for all provisions are worked out. Any infringement of the ordinance shall be punished by a fine of from \$5 to \$200 upon conviction.

Louisville, Ky.—An ordinance to prevent the tearing up of streets is under consideration by the Board of Public Works and Councils. The Louisville Gas Company challenges the right of the city to pass any kind of legislation telling the company how, when and where it can tear up pavements. The company officials assert that they are operating under a charter granted by the Legislature and that their company is beyond the reach of ordinance-made legislation. The remaining companies do not contest the right of the city to pass an anti-street destroying law on legislative grounds, but maintain that a great and unnecessary hardship would be the result of a law requiring the laying of all pipes and conduits before the placing of a pavement. The Board of Public Works believes the ordinance a necessity to the protection of the city's streets and will send a measure to the General Council. After its passage the corporations may test its legality in the courts if they see fit.

Says State Engineer Controls Road Funds

Sacramento, Cal.—According to an opinion delivered by Attorney-General U. S. Webb, the department of engineering must have entire charge of the expenditure of the \$18,000,000 good roads funds, and the legislature will be unable to create a department of highways, which action is contemplated by a series of bills now in the hands of the committee. Mr. Webb told the roads and highways committee that such a proceeding would be unconstitutional. The committee has been working for a week in an attempt to devise a law which will allow the appointment of a high salaried official to be at the head of the road building work. The attorney-general was asked to give an opinion as to the constitutionality of such an appointment. "The constitutional provision for the passage of the highways act," said Mr. Webb, "expressly forbids the repealing of the act until all indebtedness incurred by the sale of bonds has been paid. To take away any of the power, which the act clearly delegates to the department of engineering, would amount to a repeal of the act. The legislature may do nothing which would remove any of the powers of the engineering board to spend the money and build the highways. As long as no bonds have been issued, there is still the possibility of repealing the act, but the moment a dollar of indebtedness is incurred the act will be irrevocable until 1961, and must stand until that time. The legislature may change the department of engineering in any way it sees fit, within statutory and constitutional limits, but the building of the roads is absolutely in the hands of the engineers and no one else."

Offers Land for Boulevard

Cincinnati, O.—The first donation of land to aid in establishing a boulevard along the course of the canal within the city limits has been made, providing the Association for the Improvement of the Canal succeeds in having a legislative bill passed allowing the city to acquire the waterway for boulevard and interurban road purposes. This donation, conditional only that the land offered is needed to give the boulevard its proper width at a given point was made by Louis B. Reakirt.

Problem of Narrow Roads in Canyons

Los Angeles, Cal.—The Supervisors have been greatly puzzled for some time by offers from owners of new tracts to give the county streets of less than 40 feet width. The law specifies that no public street can be less than 40 feet wide, and it has been a question whether such thoroughfares could be accepted as public highways. For several weeks such an offer from the owners of Beverly Glen, a tract in the hills north of Beverly, has been hanging fire. The offer includes a roadway 40 feet wide running through a canyon in the middle of the tract, but the lots extend up the steep hillsides, where no roads could be built. The lots cannot be sold unless public highways are set aside to reach them, and it is illegal to sell such lots until the plats of them are accepted by the Board of Supervisors and made a matter of record. The Board devised the plan of calling them lanes instead of highways, but Hartley Shaw, the legal adviser, rendered an opinion that they are not properly lanes. Mr. Shaw suggested, however, that inasmuch as they are in a mountainous section, they can be accepted as public trails. Supervisor Butler raised the question whether the country will be compelled to open and improve them if they are accepted as public trails, but Supervisor Nellis, in whose district Beverly Glen lies, said it is his understanding that the county does not have to improve any highway less than 40 feet in width. Whether the supervisors will be personally responsible for an accident on them is still an open question. Supervisor Nellis said it is desirable to obtain a right-of-way for a road through the canyons in that locality that can be improved for the benefit of the San Fernando valley, and for this reason the plat was accepted as a public record, trails and all.

Paving in Louisville in 1910

Louisville, Ky.—During 1910 there was spent out of city revenues a total of \$922,349 for the construction, reconstruction and repair of streets. In 1909 the same item was \$544,585. In addition to this new work paid for by assessment amounted to \$384,902, as compared with \$114,722 for the previous year. This amount includes new sidewalks as well as roadways. The sidewalk work amounted to \$38,505.

Supplemental Contract Declared Void

Philadelphia, Pa.—The Common Pleas Court has declared void the supplemental contract for asphalt pavement repairs which increased the contract with the Filbert Paving & Construction Company from \$50,000 to \$200,000. It further ordered a full accounting and restitution of all sums paid the Filbert Company in excess of the original \$50,000. The three judges unanimously agree that the Filbert Company's bid was submitted on what both the company and city officials knew to be misleading information in the specifications, and that the bid was so grossly unbalanced as to have been sufficient notice in itself that some sort of fraud was contemplated.

Map of Paved City Streets

Rochester, N. Y.—A map of Rochester on which all the paved streets are designated by different colors, according to the character of the pavement, has been prepared for the city by a Philadelphia firm. The maps will be placed in the bound volumes of the report of the City Engineer for the years 1908, 1909 and 1910, for which bids are now being advertised. On the map the streets designated in red are those paved with Medina block; green, Medina stone; blue, asphalt; yellow, brick, and brown, macadam. The unpaved streets, which are mostly in the outlying sections, are white on the map.

SEWERAGE AND SANITATION

Advisory Boards to Improve Public Health

Syracuse, N. Y.—Mayor Schoeneck has named members of two advisory boards created to improve public health conditions. One of these, the Advisory Board for the Protection of Skaneateles Lake, elected Harry W. Jordan chairman. The other, the Advisory Board of Physicians, chose Dr. T. H. Halsted chairman. Deputy Commissioner of Public Safety S. T. Friedrich presides at joint meetings. One of the ideas expressed at the first meeting was that the boards could render important assistance in investigating the methods employed in the bureaus of Health and Water suggesting improvements and helping to create public sentiment in support of reform measures.

Bans Public Drinking Cups

Concord, N. H.—The House last week sounded the death-knell of the public drinking-cup in New Hampshire when, concurring with the Senate, it passed a bill to give the State Board of Health authority to "restrict the use of common drinking-cups in public places." The bill is along the line of the one passed in Massachusetts a year ago.

State Department Takes Control of City Water Supply

Erie, Pa.—Following a serious typhoid outbreak, and analyses of city water showing the presence of intestinal bacteria, the State Department of Health took charge of the city water supply, installed a chloride of calcium plant at water works and issued a notice warning all persons to boil the city water before drinking it. The notice read as follows:

State Department of Health,
Harrisburg, Pa., Jan. 28, 1911.

To the Public in Erie:

During the month of January there have been 24 deaths from typhoid fever in Erie city and 185 cases of the disease. This is certainly an alarming condition.

The state department of health will undertake an exhaustive investigation to ascertain the origin of the fever outbreak and to assist in stamping out the disease.

The Erie board of water commissioners will install apparatus at the pumping station to treat the water chemically and destroy micro-organic life. This treatment will be in use within 24 hours and other precautionary measures will follow. However, it is absolutely essential that the public continue to boil all water used for drinking and culinary purposes.

I am convinced that the public notices to this effect, issued by the Erie city board of health, have not been universally heeded. I hereby warn the citizens of Erie, the hotel, boarding house and restaurant and other proprietors and users of public water that the interests of public health demand all water used for domestic purposes shall be raised to the boiling point and maintained at the boiling point for at least 20 minutes before being used.

SAMUEL G. DIXON,
Commissioner of Health.

House Drains Must be Run to Sewers

Haddonfield, N. J.—All house drains in Haddonfield must be connected with main sewers. This is the order of the Board of Health which has issued a proclamation to that effect. The expense incurred in complying with this sanitary regulation it is said will be small compared with the cost of digging up the drains frequently to clear away refuse which prevents the flow of water.

A Sewerage Dilemma

Kenmore, N. Y.—The village trustees have received a letter from Colonel Ward, Commissioner of Public Works, Buffalo, notifying them that if they do not pay for the use of a Buffalo main sewer into which the Kenmore sewage drains, the service will be discontinued April 17. It seems that the connection with this sewer had never been authorized and when the Buffalo officials discovered it they made a demand for \$12,000 for back charges and \$2,500 annually thereafter. Kenmore can neither raise the money nor do without the sewer.

Sewer Nears Completion

Tonawanda, N. Y.—The Gastown sewer system, which has been a source of trouble from the day the original contract was awarded three years ago, will be completed about February 15th. Contractor Lawrence Schultz of Fredonia, who is doing the work stated last week that he had 50 men working on the job. Only a short stretch on Fillmore avenue remains to be completed, and then the tile pipe, which was laid on East Niagara street instead of iron pipe, will be replaced. Of the \$22,000 raised for the work, \$2,650.74 is left in the fund to complete the job.

New Plan of Franchise for Sewerage Companies

Vincennes, Ind.—Representative Racey has introduced a bill in the Legislature designed to enable municipal corporations to grant franchises to private corporations for the construction and maintenance of sewer systems, as street car, electric light, water or gas franchises are now granted. The peculiar needs of Vincennes prompted him to introduce the bill. If the measure becomes a law, he said, it would be of great benefit to a large number of cities in Southern Indiana, where the State Board of Health has held that the construction of sewers is necessary to the preservation of public health. In Vincennes, Racey said, the city authorities had attempted to construct a sewer system by parts, as the city was not able, financially, to build an entire system at one time. But the topography of the Vincennes site was such that the system could not be built successfully in its entirety. Racey's bill provides that such franchises shall be let only on an election by the voters of the city concerned, and that whatever rental is paid by the city during the control of the franchise right by the holder shall be applied on the purchase price when the city decides to take over the property, a right retained by the corporation by the terms of the bill. Under this bill all a city could grant a franchise to a private person, firm or corporation who would construct a sewerage system and charge property owners for the use of the sewers.

WATER SUPPLY

City Asks State Board for Assistance

Bay City, Mich.—The State Board of Health will be asked to make an investigation and suggestions for the improvement of the water supply. The prevailing theory as to the cause of pollution is this: A number of local factories have been emptying sulphuric acid into the water, which killed the fish. Owing to ice in the river they were not carried out to the lake, but, decomposing, polluted the water.

Give Water for Right-of-Way

Denison, Tex.—The actual construction work on the pipe line from Denison to the new city reservoir, four miles from the city, has commenced. About 100 laborers are engaged in laying pipe. The work was started in the center of the city. A 12-inch main is being laid in the city, but a 14-inch main will be used for a considerable distance. Nearly all of the pipe—about 1,000 tons—necessary for the pipe line has arrived, but the work has been delayed for lack of valves and fittings. The right of way for the line was secured from farmers through whose property the survey passed by contracts to be paid out in water when the line is in operation. Every farmer on the line will be supplied, and all are very much elated over being placed so that they need not fear droughts in the future.

Asks \$6,500,000 for Reservoir

New York, N. Y.—Commissioner Thompson, of the Department of Water Supply, has applied to the Board of Estimate for an appropriation of \$6,500,000 to complete the westerly portion of the Jerome Park reservoir of the Croton Aqueduct system, the construction of a filtration plant being necessary to carry out all the plans. As \$2,200,000 has already been expended on this work the cost of the lower half of the reservoir will be \$8,700,000. The request was referred to a committee with the request from Mr. Thompson for early action, as he is desirous of beginning the work by June 1. If this can be done he figures out that the job can be finished by January 1, 1914.

Sebago Water Pure

Portland, Me.—The Portland Water District has received from Director H. D. Evans, of the State Laboratory of Hygiene, an analysis of the public water supply, and the result is most satisfactory. A copy of Mr. Evans' letter follows:

Augusta, Me., Jan. 23, 1911.

Portland Water District,
Portland, Me.

Gentlemen—The analysis of the winter sample of water from your public supply, sent to me on the 17th inst., shows the water to be in first-class condition to use for drinking and for all domestic purposes. There is neither chemical or bacterial evidence of sewage pollution of this water, while the recent rains and thaw have had no effect on its quality. The analysis shows the water to be practically in identical chemical condition with the samples sent to me the last of November, 1910.

Enclosed are the results of the present analysis.

Very truly yours,
H. D. Evans, Director.

For and Against Water Company

Racine, Wis.—What is said to be the most important Council meeting in 25 years took place on January 23, when representatives of the water company and of citizens discussed Alderman Lange's resolution which called for an investigation of the conditions prevailing in Racine regarding the supply of water. Attorney T. M. Kearney, for the water company, stated that the rates charged for water were in accordance with terms of a contract which expired in 1912. At that time the company would be prepared for a reasonable adjustment to be made by experts. He denied that there had been any failure to supply adequate fire service. Attorney Gillen, speaking for several large consumers of water and individuals, said that the water company was incorporated for \$500,000. It placed a mortgage on the plant for \$1,200,000 and then floated a bond issue of \$1,000,000 drawing 5 per cent interest. He said that the plant originally cost \$360,000, but had been improved and with equipment had increased in value until recently it was appraised by an expert for \$771,000. He said the bonds were floated and sold by the American Water Works & Guarantee Company of Pittsburg, a corporation that guaranteed both principal and interest. The interest alone on the issue amounted to \$50,000 a year which the consumers of the company had to pay in rentals each year. In addition to this the company was getting a lot of velvet on the plant amounting all the way from 5 to 9 per cent. He compared the water rates in Racine with those in Kenosha, where there is a municipal plant, as follows:

Kenosha—500 gallons per day, 12 cents; 500 to 1,000 gallons, 10 cents; 1,000 to 10,000 gallons, 9 cents; 10,000 to 25,000 gallons, 8 cents; 25,000 to 50,000 gallons, 7 cents; 50,000 to 75,000 gallons, 6 cents; 75,000 to 100,000 gallons, 5 cents, 100,000 gallons up, 4 cents.

Racine—Less than 1,000 gallons, 28½ cents; 1,000 and less than 2,000 25 cents; 2,000 and less than 4,000, 20 cents; 4,000 and less than 7,000, 15 cents; 7,000 and less than 10,000, 12 cents; 10,000 and less than 14,000, 10 cents; 14,000 and less than 18,000, 9 cents; 18,000 and less than 23,000, 8 cents; 23,000 and less than 30,000, 7 cents; 30,000 and over, 6 cents.

Improving Water Supply Without Additional Cost

Hyde Park, Mass.—The Board of Water Commissioners has issued a report by their engineer, William S. Johnson, upon the water supply of the town. The engineer reports that a supply sufficient for the town's needs for the next 25 years can be secured by a system of filter beds in connection with the present sources, the Neponset River and Mother Brook. The average daily quantity taken from Neponset River during the last year has been 340,000 gallons, and from the brook 781,000 gallons. The latter supply is generally safe, the former unsafe. At a cost of \$30,000 a supply of 2,000,000 gallons a day of filtered water could be developed from Mother Brook and the Neponset station abandoned. The saving in abandoning this station would be about sufficient to pay the annual charges in the improved plant. The other alternative of taking metropolitan water would cost \$7,000 to \$8,000 a year more.

Injunction Served on Water Commissioners

Canastota, N. Y.—An injunction restraining the Board of Water Commissioners of Canastota or its agents from cutting off the supply of water of the Watson Wagon Company from the village water mains, or from interfering with said supply and from enforcing payment of \$62.50 water rent, as per a resolution passed by the board, and from compelling the Watson Wagon Company to rearrange its water supply pipes to permit of water being metered, was served on the Board of Water Commissioners last week. The injunction was granted by Justice Coman, at Wampsville, and orders the Board of Water Commissioners to show cause why the injunction should not be continued during the pendency of the action now started by the Watson Wagon Company. The present trouble arises over the recent increase in water rents made on certain manufacturers and others by the Board of Water Commissioners, the commissioners now desiring to place meters on certain supply pipes.

Water Pressure Found Too Heavy

Hibbing, Minn.—The water pressure and the coming change in the voltage of the village lighting system were the chief items brought up at the meeting of the Water and Light Commissioners last week. It was mentioned in connection with the water pressure that at a recent fire the pressure was actually greater than could be handled with comfort by the fire fighters, three men being required to manipulate one nozzle. It is probable that for future fires the pressure will be slightly decreased leaving a reserve in case of real need. The approaching change of the voltage from 1,100 to 2,200 was mentioned and the inevitable shutdown of the lights for one or two days while the change is being made, but no definite information was given by the commission as to when this would take place.

Public Wells Ordered Closed

Louisville, Ky.—Two more public wells in suburbs of the county, just south of Louisville, were ordered closed last week by Dr. B. W. Smock, County Health Officer. The county patrolmen were directed to put out of commission pumps at the public wells in Stratton's addition, between the Preston street and the Ashbottom roads. The closing of the wells results from the probe made to ascertain the cause of typhoid fever among the employees of the Louisville & Nashville shops. The analysis of the water used at the shops and the sanitary conditions there showed that the origin of the disease was not at the big plant, and Dr. Smock then directed his attention to the surrounding suburbs where most of the workmen live. Chemical analysis of the water of the suburbs was made by Dr. Albert A. Stoll, county bacteriologist. The water in the two public wells at Stratton's Addition was found to be badly polluted. There are several cases of typhoid fever in that section. A public well at Highland Park containing impure water was closed by Dr. Smock last week. Other reports of polluted water are in the hands of Dr. Smock, but he will not act further until another analysis has been made.

Tests Show Meters in Good Condition

Norfolk, Va.—Chief Engineer Thomas B. Dornin, of the Water Department, has tested 100 meters placed in service three years ago. Of these, one failed to register because it had a lump of solder inside and three were clogged with grit. On full stream test 84 met the standard requirements; on $\frac{1}{4}$ -inch stream test, 85; on the $\frac{1}{2}$ -inch stream test, 88; on $\frac{1}{16}$ -inch stream, 84. These meters had seen service varying from the measurement of 903,000 gallons to 212,000 gallons, the average amount measured being 559,282 gallons. This amount of water would be used ordinarily by the average family in about six years.

Roseau Drinking Water Declared Impure

Roseau, Minn.—An analysis of the water in the local wells received by Dr. Delmore, the village health officer, from the State Board of Health, shows the water more or less impure. Wells that are on level depth with the river show the most germs. One well, which is only 10 feet deep, has the least germs. Dr. Delmore fears that typhoid or some other epidemic will break out in the spring and

Meters Placed in City Buildings

South Bend, Ind.—Approximately 60 water meters have been placed in the school buildings, fire houses and other city buildings. The readings taken so far show that much more water has been used than was estimated.

Temple Water Charge Schedule

Temple, Tex.—The Board of City Water Commissioners has adopted a new schedule allowing patrons of the meter service a total of 9,000 gallons per quarter without increase in price, instead of 6,000 gallons formerly allowed. This practically reduces the rate to 42 cents per 1,000 gallons for the first 9,000, and all in excess of that is 25 cents per 1,000. The commission has also adopted plans for a filtration system to cost about \$30,000, with a capacity of 2,000,000 gallons per day. The plant is owned by the city and since being placed in the hands of a commission the revenues have increased nearly 200 per cent and the efficiency in greater proportion.

STREET LIGHTING AND POWER

Municipal Plant Profitable

Richmond, Ind.—The local foes of municipal ownership have received a severe backset by the annual report of the finances of Richmond's lighting and power plant. The report submitted to the Board of Works shows the total receipts for the year ending January 1 to have been \$77,341. Operating expenses were \$48,649. The administration forces assert that the municipal plant is showing as good returns or better than the plant owned by a private corporation that runs in opposition to the city.

Light Plans Criticized

Cincinnati, Ohio.—Criticism of the new light specifications by Consulting Electrical Engineers Mailloux and Knox, of Columbia University, to whom they were referred by the bureau of municipal research, were handed Service Director Sundmaker last week by Director Miles, of the bureau. The criticism is very lengthy, but, according to Director Miles, the principal criticism is aimed at the 10-year period of the contract, which the experts hold is too long a time and the system of measuring the current by wattmeters, held as inadequate and inaccurate. Other changes recommended are technical.

Advertising Municipal Light

Pasadena, Cal.—Work is nearly completed on an elaborate sign which the municipal light department is planning to place in front of the office building occupied by the department just north of the City Hall on the Fair Oaks side. This big sign will read: "Use City Light." and is about 15 feet up and down, for it is not designed to protrude far over the sidewalk. The sign is a novelty in many respects. The big letters are each cast out of porcelain and house the sockets of the lamps which outline the letters themselves. Using porcelain, the danger from fire is greatly diminished, while weather will not affect the letters or tarnish them in the least.

Racine Gets Dollar Gas

Racine, Wis.—Following a fight of months, the city of Racine won an important victory over the Racine Gas & Light Company, when the State Railroad Commission issued an order requiring the company to reduce its rate on gas for illuminating and fuel purposes. The order requires a flat rate of \$1 per 1,000 feet, the price to decrease according to the amount used. This means a reduction monthly on an average of 15.2 cents per 1,000 feet. Other important features of the decision are the fixing of a minimum charge for installment of fixtures and the elimination of the double meter system; the elimination of the double meter system is especially important, as hereafter the same price will be paid for gas used for lighting and cooking purposes. The new schedule of rates and regulations is to take effect on March 1. The agitation for lower gas rates for the city of Racine was begun about two years ago. Alderman Davis introduced a motion providing for an appeal to the rate commission. Owing to the amount of work which the rate commission had on hand and the voluminousness of the

FIRE AND POLICE

End of "Third Degree"

Anderson, Ind.—Frank Matthews, President of the Police Board, has announced that the Board has ordered Chief of Police Pritchard to abolish the use of the "third degree" in obtaining confessions from prisoners.

"There will be no more of this confession business with the police," President Matthews said, "except where a confession is made fully and willingly in the presence of a third person. No more coercion, threats or promises, held out to obtain a confession, will be tolerated by the Police Board. We have issued orders against it, and the orders will be enforced. It is wrong to get a man or woman into police headquarters and then browbeat or sound them into a confession for the purpose of making a case."

Evolution of a Police Department

Centralia, Wash.—It seems a long step from a town marshal with a corn-cob pipe to a sleek, uniformed police force with a real chief of police, yet that is the state of affairs brought about by the growth of Centralia in a remarkably short time. Not so long ago the city had its marshal and night watch, and was content to let it go at that. Later the size of the city demanded more help in preserving law and order and the marshal blossomed into the dignity of a police chief and uniforms were brought into usage. Now, the City Council is making an effort to have the policemen "slicked up" and the city fathers are debating the question of having either long-tailed coats or short blouses for the officers. They are also planning in order to make each officer shave before going on duty or for the sake of a natty appearance.

To Obviate Collisions of Cars and Fire Apparatus

Ft. Worth, Tex.—The suggestion that street cars stop at corners as they approach certain street crossings instead of on the opposite sides in the business sections to avoid collisions with fire department apparatus meets with the approval of Chief Bideker, but he does not like the idea of fire gongs at street corners to ring when the alarms are turned in and warn vehicles. He says the latter plan has been tried in some large cities and has not proven a success. A conference has already been held between fire department representatives and traction company officials to devise a plan to decrease the probability of collisions and it is believed that the suggestion that cars be stopped before crossing certain cross streets instead of after crossing them will be adopted. The necessity for adopting some measures of safety was emphasized by recent accidents in which fire apparatus suffered collisions, thereby injuring firemen.

Imported Police Dog Arrives

Glen Ridge, N. J.—The new police dog for the Glen Ridge Police Department, which was recently imported from Belgium, arrived in the borough last week and is now under the charge of Police Chief Patrick Higgins. According to Higgins, the animal is considered one of the best dogs that has ever come from Belgium. Its color is brown and black, and the dog is about the same size and weight as "Visky," one of the present police dogs, which will soon be returned to Belgium on account of a defect in one of its front feet, which has incapacitated it from duty. The Belgian police dogs have demonstrated their value in a number of American cities.

Making Chart of Fire Alarm Wires

Perth Amboy, N. J.—A new aid for keeping the fire alarm system in order has been devised by Superintendent Chamberlain, of the Public Service. He has decided to make a chart of the system showing everything in detail. At the present time it is a puzzle. It is difficult to find a break and in attempting to locate one two or three others are sometimes caused. To make the map every part of the system will be tested. Mr. Chamberlain will remain on watch over the apparatus in the City Hall while his men go from box to box. They will attach telephones to the wires, communicate with the City Hall, and thus the location of the wires will be plotted.

Bloodhounds Locate Stolen Jewelry and Catch Thieves

Topeka, Kan.—Former Chief of Police J. J. Creed and his bloodhounds were the central figures in a man hunt which resulted in the recovery of \$500 worth of jewelry and the arrest of two men who are charged with burglary. The dogs were put on the trail, which was several hours old, and soon located the stolen jewelry hidden in a culvert under railroad tracks. The dogs were then turned loose in the crowd and soon picked out two men who were already suspected of the crime.

Age Limit for Policemen

Los Angeles, Cal.—Increase of minimum and maximum ages for applicants for the police force will be recommended to the Civil Service Commission by the Police Commission. Chief Sebastian has presented a report to the Police Board in which he suggested that the minimum be increased from 21 to 25 years and the maximum from 32 to 40 years. The Police Commission feared that the Civil Service Board would not look kindly on the 40-year maximum because of the increased danger to the pension fund, and reduced the age limit to 35 years and to give the 11-year range that now prevails made the minimum 24 years.

Object to Siren Fire Alarm

Ivry, France.—M. Jules Constant, the Mayor of Ivry, is taking precautions for the safety of his jurisdiction against fire which have not received unanimous support. He has set up a powerful siren, not at all unlike, as far as sound goes, those in use on the great liners. The alarm can be heard anywhere within a radius of six kilometres, or nearly four miles. The apparatus is not worked by steam, but by electricity. The principal ground of objection to the Mayor's proposals seems to have been based on prejudice—that the siren sounded at night would disturb the slumberers of Ivry. The Mayor, however, requires some stronger reasons before he gives heed to the malcontents.

Telephone Fire Alarms Go to Central Office

Syracuse, N. Y.—A new system of sending and receiving fire alarms by telephone has been put in operation. Hereafter such calls will go directly to the central office in the City Hall. A telephone operator will be there at all times. He will receive the alarms and transmit them to the engine houses instead of having this done by the operator at the telephone central office.

Approves the "Fire Stops"

Washington, D. C.—Fire Chief Wagner says he would oppose with a great deal of vigor any attempt to abolish "fire stops," as suggested in a statement published in a daily paper. The records of the Fire Department show few accidents arising as the result of collision between cars and fire apparatus, but the accidents which have occurred have been of the hairbreath-escape kind. It is thought by Chief Wagner that with "fire stops" eliminated there would be great danger to apparatus and passengers on the street cars. These "fire stops" are designated by the Commissioners as crossings where street cars must come to a full stop, give the motorman a chance to see whether a fire engine is running or not and then proceed. The stops are recommended by the Chief of the Fire Department according to the location of fire houses, fire plugs and changes in the running cards of engine companies.

New Way to Work Prisoners

Russellville, Ala.—Perhaps one of the most novel plans ever attempted by any city or town in the State for the handling of city convicts is now in force in Russellville, and so far it has worked successfully. When any one is convicted in the court of Mayor W. S. Douglass and given a street sentence in addition to the fine and costs, the fine is made secure with a good security bond, then the convict is allowed to go to his home at night and return the next morning to report for street duty. So far only one man has escaped, and the city authorities are not at any expense in maintaining a stockade or place for caring for the prisoners at night. This unique plan was worked up by Mayor W. S. Douglass and now a regular street force of convicts is maintained at no expense to the city, with the exception of a superintendent of streets.

Apparatus Arrives at Psychological Moment

South Bristol, Me.—A chemical engine, the first piece of fire apparatus the town ever owned, arrived opportunely. The engine had been unloaded from the car and put in the freight shed when a fire was discovered in the annex of a summer hotel at De Grasse Point. The machine was hurriedly unpacked and dragged by volunteers to the scene, where it was effective in preventing the spread of flames to the neighboring cottages.

Citizens to Be Given Patrol Box Keys

Spokane, Wash.—In connection with the new police signal system which it is proposed to instal the police will give out numbered keys to citizens with which the police box near their homes can be opened and direct phone connection with headquarters established. Citizens' keys, however, by an arrangement of the mechanism will not permit a call for a patrol wagon by signal. The citizen must explain why he wants the wagon. Likewise, when he unlocks the box his key cannot be removed till a patrolman releases it. As it is numbered, the police have a check on who uses the police boxes and false alarms can be traced to the persons responsible.

One Vehicle for Ambulance and Patrol Service

Springfield, Mass.—That a combined automobile police patrol and ambulance would save the city several hundred dollars annually and give as good service as is now provided is the belief of a number of city officials who have given the subject some thought. Chief of Police O'Brien has received a picture and description of a similar combination vehicle now in use by the city of Lowell, Mass., and it is reported most successful there.

Annual Report of Nashville Fire Department

Nashville, Tenn.—The annual report of Chief A. A. Rozetta, of the Nashville Fire Department, to the Board of Public Works shows that during 1910 the department responded to 496 alarms and that the total losses by fire amounted to \$217,794.24, on which there was insurance of \$2,288,742. There are now in service 9 steam fire engines, 2 steam fire engines in reserve, 2 aerial hook and ladder trucks, with one service truck in reserve; 2 hose wagons with turret nozzles attached, 6 combination chemical and hose wagons, 4 hose carriages in service with 2 hose carriages in reserve, 1 chemical engine in service, 1 chemical engine in reserve, 1 supply wagon, 1 auto for chief, 1 buggy for assistant chief and 2 buggies in reserve. The department has on its pay roll 144 members, besides the chief, assistant chief, superintendent fire alarm telegraph, etc. There are 15 companies and 62 horses, 58 of which are in service with the various fire-fighting apparatus. The expenses for running the department last year, including pay roll, fuel, repairing, etc., are given at \$145,520.32.

Cost of Auto and Horse Apparatus Compared

Wilkes-Barre, Pa.—Chief Engineer Joseph G. Schuler, of the Fire Department, in his annual report submitted a comparison of the cost of the automobile at No. 2 house and the cost of keeping the engine team in the same house:

Automobile, per month, \$6.80.

Engine team, per month, \$28.

The automobile traveled in that time 51 miles.

The engine traveled in that time 16 miles.

Reorganization of Fire Department Probable

Newark, N. J.—As a result in part of the recent serious fires and loss of life, a reorganization of the Fire Department seems probable. The fire losses of Newark for a number of years have been high as compared with those of other cities. A single headed commission with a view to eliminating politics from the department is probable. It is claimed that in the past, transfer and promotion have been inspired by others than the responsible heads of the department. The need of a drill school, in view of the increasing number of high buildings, is apparent, and one will, no doubt, be established. Whether the system of automobile squad wagons, which has been so successful in Springfield, Mass., and other places, will be adopted, is under discussion, but not yet decided. It is notable that Newark has not until recently had any automobile apparatus. The business section of the city is exceptionally well protected.

GOVERNMENT AND FINANCE

Commission Government Elections

Sterling, Ill.—Commission government was defeated January 27 by a majority of 8—574 for and 582 against. The saloon interests fought the innovation. Only half a vote was polled.

Peoria, Ill.—An election will be held February 28 to decide on the adoption of commission government.

Kewanee, Ill.—Kewanee adopted the commission form of government at a special election in January by a majority of 505 out of a total vote of 1,736.

Quincy, Ill.—At a special election January 24 the proposition to adopt the commission form of government was defeated by 1,800 votes out of a total of over 6,000.

Monmouth, Ill.—The commission form of government proposition was defeated January 24 by a majority of 221. Only about 5 per cent of the normal vote was cast.

Guthrie, Okla.—By a large majority Guthrie voted in favor of a commission form of government.

Town's Water Works Does Away with Taxes

Farmington, Me.—This town doesn't know just what to do with the surplus earnings of the municipal water works system, but one way of disposing of the money, recently announced, will be to use it for city running expenses next year, thus eliminating the levying of any taxes. The water works earn more than \$5,000 annually. The assessors suggested reducing water rates 60 per cent, but as they are low now it was decided against.

Commission Cost the City More

Topeka, Kan.—The expenses of the city of Topeka for December, 1910, under the commission form of government were more than \$4,000 higher than under the old council system in 1909.

The New Municipal Idea

Philadelphia, Pa.—The National Municipal League has issued this summary of what it terms the "New Municipal Idea."

It puts the emphasis on the good of the city, rather than on the interest of a party or a candidate.

It requires that municipal affairs shall receive due consideration on their merits without regard to irrelevant questions, such as State or national politics.

It insists upon directness of nomination, election and responsibility after election.

It demands simplicity of electoral and governmental machinery; the short ballot and responsiveness to the public will; it therefore encourages easy and intelligent voting, checks partisan and factional domination by giving control to voters—if they wish to exercise it.

It believes that thorough publicity insures effective control.

It demands that efficiency and merit shall be the sole basis of all appointments in a democracy.

It demands concentration of authority and responsibility.

STREET CLEANING AND REFUSE DISPOSAL

Rebuilding Garbage Reduction Plant

Bridgeport, Conn.—C. C. Fisher, who has the new contract for the disposal of the city's garbage, has a force of 12 men at work upon the old plant of the Bridgeport By-Products Company, making alterations. New machinery will soon arrive and be installed. He expects to have the plant ready for operations during the second week in March.

Mayor Discusses Garbage Disposal

Schenectady, N. Y.—In the annual message of Mayor Duryee one of the most important paragraphs deals with garbage disposal. At present the individual method costs citizens \$1 a year each. The Mayor would have ashes and garbage placed in separate receptacles and collected by city teams. The garbage would go to an incinerator of a capacity of about 150 tons a day and a maximum of 180 tons a day. The incinerator would be of the Decarie or similar type, which made a favorable impression on a committee that inspected the Minneapolis plant. Such a plant would cost about \$60,000; other items are estimated as follows: Land, \$5,000; 20 wagons, \$8,000; 40 horses, \$8,000; engineering and contingencies, \$4,000; total, \$85,000.

Year's Work of Garbage Crematory

Jacksonville, Fla.—According to the report of William C. West, Superintendent of the Street Cleaning Department, during the year 1910 there was removed by the teams of this department a total of 111,479 loads of an estimated weight in pounds of 161,529,892, equaling 80,765 tons of garbage and other refuse matters during the 12 months. Of this amount 8,702 loads was hauled by city teams and delivered to the crematory, which together with night soil, dead animals, fish, chickens, etc., amounts in the aggregate to 13,157,492 pounds on an estimated weight of 13,157,492, equaling 578 3/4 tons of refuse matter consumed by the crematory during the period embraced in this report. An average of about 18 tons per day of 365 working days. In the destruction of this matter by the crematory there was used 587 cords of wood at a cost of \$1,531.99, an average of approximately \$2.61 per cord. The cost of labor and incidental expenditures amounted to \$2,352.75, making a total expenditure on account of operating the crematory for the 12 months aggregate the sum of \$3,884.75. This indicates an average cost per ton of material destroyed of 60 cents. The average cost per ton would be materially reduced had the crematory been taxed to its full capacity of 50 tons for 24 hours, but the figures herewith submitted show that at no time was that average amount delivered per day. It is expected that it is possible to run the plant to its full estimated capacity for practically the same cost of labor and material herewith stated, if supplied with material to its full capacity the average cost per ton of amount destroyed could be reduced to 22 cents. Considering the character of material delivered at the crematory, especially during the summer months, Mr. West seriously doubts the ability of the present plant to consume or destroy an average daily amount of 50 tons. Certainly not without quite an increase in the cost of fuel.

RAPID TRANSIT

Freight Terminal Improvements Suggested

New York, N. Y.—Dock Commissioner Tomkins has filed supplemental report with Mayor Gaynor on his proposed \$100,000,000 joint railway freight terminal on the west side of Manhattan, in which he goes into greater detail than he has before in his plans. He now suggests the elevation of the Eleventh avenue tracks of the New York Central at the city's expense, and gives three reasons for this, namely: first, the recovery of marine commerce in the port of New York, the west side water front being now unnecessarily used for the storage of car floats by transferring the cars across the marginal street to be loaded and unloaded; second, the existing disorder and congestion on the west side, with its attendant expense, should be terminated and provision made for room to meet the needs of the rapidly expanding railroad and steamship business of Manhattan, incidentally providing additional berths for sound, river and harbor boats; third, the termination of the New York Central surface track nuisance.

October Traffic Heavy

New York, N. Y.—The Public Service Commission has issued a summary of street railway operations in the city of New York for the month of October, 1910, which, in comparison with the figures for the corresponding period of 1909, not only shows a large increase in the number of passengers carried, but also in both gross and net earnings and in surplus after charges. The number of passengers carried during the month was 136,172,103, an increase over October, 1909, of 3,571,328. The revenue from all sources amounted to \$7,085,034, an increase of \$225,621. Operating expenses were \$3,700,584, a decrease of \$54,348, and net earnings \$3,384,450, an increase of \$279,060. After deducting all charges, etc., the companies earned a surplus of \$1,065,533, an increase of \$103,288. The number of passengers carried by the Brooklyn Rapid Transit Co. was 5,496,604; by the Manhattan surface lines 34,040,484; by the Bronx surface roads, 6,402,510, and by the Queens surface lines, 3,124,647. The Brooklyn Rapid Transit showed a surplus for the month of \$191,842; the Metropolitan Street railway of \$198,438; the Third avenue of \$85,242, and the Bronx surface roads of \$31,015.

Favors City Ownership of Tracks on Bridge

Cedar Rapids, Ia.—Councilman Smith has made a proposition said to have the support of a majority of the Councilmen to the effect that the city should own and control the street car tracks on the new Third avenue bridge. Councilman Smith takes the position that if the city owns the trackage on the new bridge opportunity will be afforded for possible interurban companies to obtain entrance to the business district of the city. Not only would Councilman Smith have the city own the trackage on the new Third avenue bridge, but he would also have the city build and own all the trackage from Second street west on Third avenue to Second street east on Third avenue, thus providing a possible down-town loop of such scope as would afford ample street car facilities for every citizen anywhere in the city who wants to reach any portion of the downtown district, east side or west side.

Plan Municipal Railroad Without Cost

Los Angeles, Cal.—It is possible to build a municipal railroad between Los Angeles and the harbor without taking a dollar from the city funds or placing an indebtedness upon this municipality. This is the contention of Attorney Russ Avery, who declares that the road should be built at once, in order that this city may realize the magnificent possibilities of the great proposed terminal for all incoming trans-continental lines, as attractively outlined by T. E. Gibbon in the communication sent to the City Council. Mr. Avery's plan briefly is the organization of a private corporation, in which the only stockholders would be certain public officials, each to have one share of these securities as trustees, the remainder to be held as the perpetual property of the people. The company then would issue bonds in small parcels and at such attractive rate of interest that loyal Los Angeles citizens would purchase the entire issue. The road, under the plan proposed by Mr. Avery, would create sufficient dividends to care for all indebtedness and become a municipal property without incumbrance upon Los Angeles at any time.

Incinerator Bills High

Milwaukee, Wis.—The expenditure for labor at the new refuse incinerator was \$502.13 higher in December than in November, and \$305.75 higher than in October, according to pay rolls in the City Controller's office. During October 70 men were employed at the incinerator. In November the ranks were reduced to 66, but on account of labor troubles the administration decided to reinstate the men let out, with the result that 75 men were employed the last month. The figures were secured by minority party members of the Council who are watching the attitude of the administration on the incinerator proposition.

Statutes Amended to Aid Municipal Road

Sacramento, Cal.—Senator Burnett's bill to amend the civil code relative to the use of the same street or tracks by two lines of street railways so as to afford the city of San Francisco freedom from the present five-block restriction in laying out its municipal railroad, has been passed by the Senate without opposition. Under the terms of the bill the city will not be hampered by the United Railroads franchises in extending its Geary street line to the ferry or in using any streets now occupied by railroad companies.

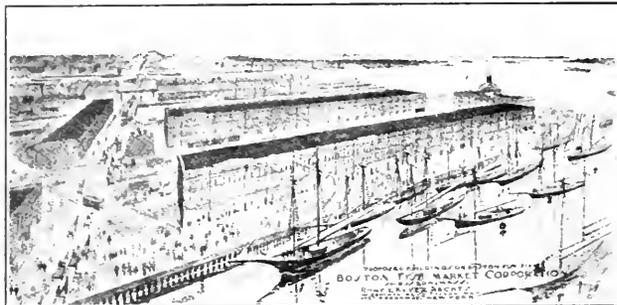

State Law to Provide for Municipal Ownership

Toledo, O.—Immediate municipal ownership of the street railway plant and system in Toledo will be possible if the bill introduced in the State Legislature by Representative Myer Geleerd is passed. Mayor Whitlock and City Solicitor Schreiber will appear later before the committee in favor of the bill. The bill is purposed to amend section 3615 of the General Code relative to power of municipalities, so as to include street railways in addition to the right to establish and operate lighting plants, &c. The right to appropriate property necessary for street railway purposes is provided, also the right to appropriate right of way over existing street railways. This bill gives cities, in order to establish street railway systems, the right to issue bonds, not subject to any limitations as to amounts, such as governed the issue of other city bonds.

MISCELLANEOUS

Boston Harbor Improvements

Boston, Mass.—The Boston Chamber of Commerce has been instrumental in bringing about two harbor improvements of great importance. The larger of these is the improvement of the East Boston flats, for which the Legislature has authorized the expenditure of \$3,000,000. The other is the new T wharf for fish dealers. The State is

BOSTON'S NEW WHARF FOR FISH DEALERS

spending \$500,000 in building a new pier on the South Boston shore. When it is completed the fish dealers will erect buildings of concrete and brick which will cost another half million. This latter improvement accomplishes these valuable ends, it enables the fish dealers to move from cramped and un-sanitary quarters to a location where they can greatly increase their industry, one of the most important in Boston: it makes the T wharf, right on the city water front, available for improvement for the use of some coastwise steamship service; it secures for the State a tenant who will pay a reasonable return on a large amount of property which has been idle for many years.

Smoke Costly in Chicago

Chicago, Ill.—Smoke costs the citizens of Chicago \$21,830,000 a year, or about \$10 per capita, according to statistics given out by City Smoke Inspector Bird. Because of smoke, Mr. Bird says, the laundries are reaping a harvest, and the clothing merchants, dyers, house renovators and painters and operators of vacuum cleaning machines are rapidly becoming millionaires. "The idea of determining just what smoke costs each Chicagoan every year came to me when a similar experiment was made in Cleveland," he said. "I found that in Chicago our loss is \$10 per capita, or a little matter of \$21,830,000 a year. This condition could be remedied in three or four years if we had the men and the money to go ahead. As the matter stands now, we are able to make some headway against the violators and have a host of suits in the courts all the time."

Municipal Drink Cure

Chicago, Ill.—A municipal drink cure is planned by Mayor Busse, Chief of Police Steward and Superintendent Whitman, of the House of Correction. A note or a sentence from any judge of the municipal courts will give an entree to any man who desires to be cured. Investigation of records indicates that the troubles of more than 75 per cent of the prisoners are due to drink. Chicago will try to cure its inebriates by engaging the best medical talent and the most successful medicine.

\$70,000,000 London Docks

London, England.—To make London the greatest port of the world in reality as well as in name, the port authorities will expend more than \$70,000,000. Experts have been studying the subject for a year and a half. The scheme includes the dredging of the river channel from Tilbury to London Bridge, the part used by large vessels being widened to 1,000 feet and deepened to 30 feet. Half a million pounds already has been expended in a dredging plant. Other striking features of the scheme are the construction of three new docks at Tilbury of 65, 126 and 138 acres, respectively, to accommodate the largest vessels afloat or projected, which will be "capable of dealing with any possible growth in the size of vessels for very many years to come."

No More Standing in Theaters

New York, N. Y.—There will be no more standing room in New York theaters. Theatrical managers were notified by Fire Commissioner Waldo that the prevalent practice of allowing patrons to stand in the passageways back of the seats is as much a violation of the law as the prohibited standing in aisles. He bases the ruling on a recent decision of the Supreme Court.

Park Receives Shrubbery

Oklahoma City, Okla.—Another donation of shrubs and plant cuttings has been received by the Board of Park Commissioners from the Topeka Park Board, which makes about 15,000 pieces that the Topeka Board has given to Oklahoma City. The donations were received by C. Pohl, landscape gardener, for the Park Board here. Mr. Pohl says that the addition gives Oklahoma City's nursery about 50,000 shrubs and plants.

Plans for Toledo Municipal Exhibit

Toledo, O.—Plans for the municipal exhibit which will open at Memorial Hall March 6 are being worked out in detail by the various departments. There will be a moving picture show illustrating the scenes inside a fire house when an alarm rings at night. The Board of Education will demonstrate manual training and show models of the new high school. The street department will illustrate the magnitude of its work by interesting comparisons. The visitor will be told that there are enough sidewalks in Toledo to reach as far as New Orleans and roadway pavements to reach to Pittsburg. The Harbor Department will show how enough river front has got away from the city to pay the cost of putting up all the group buildings so far suggested.

Employment for Idle

Topeka, Kan.—Arrangements have been made to provide work for all who need it. When the plan is in full operation no one need be idle. It is Mayor J. B. Billard's idea. He has arranged with the Provident Association so that any one out of work will be given the job of trimming and cutting down trees where needed throughout the city. The tree limbs will be cut up into fire wood. This is to be distributed among the destitute or to be sold. The proceeds will go to pay the hire of the laborers and to maintain a relief fund for the needy.

Trimming of Boulevard Trees Called Vandalism

Jersey City, N. J.—Arthur Bradshaw, an expert landscape gardener, recently appeared before the Bergen Improvement Association and made a strong denunciatory address concerning the trimming of the trees on the Hudson boulevard. In part he said: "Trees on the boulevard are being

APPEARANCE OF TREES ON BOULEVARD

trimmed in a manner that is simply killing them. The trees are in perfect condition and to cut them to pieces, to butcher them, as is happening to them now, means their extinction. We have a Shade Tree Commission and as soon as we get shade a lot of vandals are turned loose on our trees and we have no shade. Are we going to allow our shade trees to be thus wantonly destroyed? We should not, and some immediate steps should be taken to end the slaughter."

LEGAL NEWS

Summary and Notes of Recent Decisions—Rulings of Interest to Municipalities

Initiative and Referendum Provisions

Kiernan vs. City of Portland et al.—Constitution, article 1, section 2, as amended June 4, 1906, provides that corporations may be formed only under general laws, but shall not be created by the legislative assembly by special laws, and, further, that "the legislative assembly shall not enact, amend or repeal any charter or act of incorporation for any municipality, city or town," and that "the legal voters of every city and town are hereby granted power to enact and amend their municipal charter subject to the Constitution and criminal laws of Oregon." Held, that the first sentence of section 2 places no restriction on the Legislature as to the enactment of general laws, except that no special laws creating or affecting municipalities shall be enacted by the legislature, the exception reserving to the legislative department the right, whether by the people directly through the initiative or indirectly through the Legislature, to enact general laws on the subject, indicating that the inhibition in the next sentence has reference only to special laws.

The term "republican," as used in the Federal Constitutional provision guaranteeing to every State a republican form of government means a government by the citizens in mass acting directly, though not personally, according to rules established by the majority.

Constitution, article 1, as amended June 4, 1906 (section 2), provides that initiative and referendum powers reserved in the people are also reserved to the legal voters of any municipality and district, as to all local, special and municipal legislation. Section 2 provides that the legal voters of every city and town are granted power to enact and amend their municipal charter, subject to the Constitution and criminal laws of Oregon. Held, that such provisions did not deprive the State of a republican form of government in violation of Constitution United States, article 4, section 4, in that they were a deprivation of legislative power to enact, amend or repeal a city charter or act of incorporation, since the sovereign power to legislate residing in the people may be exercised either directly by the initiative or referendum or indirectly by the Legislature without in any way endangering the republican form of government.—Supreme Court of Oregon, 112 P. R., 402.

Assessment of Benefits—Revision

City of Spokane vs. Gilbert et al.—Rem. & Bal. Code provides that it shall be the duty of eminent domain commissioners to apportion the benefit from the taking of property for a street between the property owners and the city. One of the sections provides that on the hearing of an objection the trial shall be by the court, and if it shall appear that the objector is not properly assessed a proper judgment shall be entered. Another section provides that the court before whom such proceedings are pending shall at any time have power to modify, etc., any assessment returned. Held, that the assessment by the commissioners is not conclusive, and the court has power to modify the apportionment of the assessment as between the city and the property owners, and to that end may hear evidence.—Supreme Court of Washington, 112 P. R., 380.

Municipal Indebtedness—Public Sewer

Southworth et al. vs. Mayor, Councilmen and Citizens of City of Glasgow et al.—A "public sewer" is not necessarily one to accommodate a whole city, but is one which serves the public and not an individual, and which connects with and receives the discharges from district sewers and the surface water which falls on the street near to or under which they run. Taxpaying citizens of a city could not object to an ordinance to increase the city's indebtedness \$4,000 to construct public sewers within the city limits on the ground that such amount would not construct a public sewer; plaintiff's right to complain not accruing until the council by ordinance undertakes to use the funds for a sewer other than a public sewer.—Supreme Court of Missouri, 132 S. W. R., 1168.

Sewer Contract—Construction

Borough Construction Company vs. City of New York.—A contract for the construction of a sewer provided that Portland cement should be used when directed by the city engineer in such portions of the sewer as were wholly or in part below the city's high water line, and that the contractor during the progress of the work and until final acceptance was to keep the sewers, basins, culverts and connections clean. The city engineer demanded that the contractor should use Portland cement in portions of the sewer which were above the high water line, and, in order to facilitate inspection by city officials, that he should clean and illuminate the sewer throughout and prepare a lift by which to lower automobiles into it. Held, that the requirement as to cement was not so clearly outside the provisions of the contract that the contractor was required to refuse to comply therewith, and on acceding to the demand he could treat the contract as broken and recover damages therefor, but the requirements as to illumination and automobile lift was so obviously beyond the terms of the contract that compliance would afford no cause of action. Where a judgment for damages might be sustained as to some of the items proved, but the jury were permitted to take into account other items which were not proper for its consideration, and where it is not possible to determine from the verdict which ones they made the measure of damages, the judgments must be reversed.—Court of Appeals of New York, 93 N. E. R., 481.

Dumping Ground—Non-Compliance with Contract—Remedy by Injunction

City of Bozeman vs. Bohart.—A city leased its land, reserving the use thereof for the burial of dead animals and for a dumping ground for garbage and required the lessee to superintend the disposition of garbage and the burying of dead animals. The lessee failed to bury dead animals, and permitted many of them to remain unburied for many days. In other instances dead animals were buried with only light covering, and though the city demanded compliance with the contract he refused to do so. The city could not acquire any other place to make proper disposition of the garbage and dead animals. Held, that under Rev. Codes authorizing an injunction when during the litigation the continuance of some act will produce irreparable injury, and authorizing an injunction to enjoin a nuisance, the city suing for unlawful detainer was entitled to a temporary injunction restraining the lessee from interfering with the city's use of the property since there was no proper measure of damages by which the city could be compensated for the unlawful interference with its rights by the lessee and since his act created a nuisance.—Supreme Court of Montana, 112 P. R., 389.

Obstructions in Street—Evidence

Huffman vs. City of Crookston et al.—In an action to recover for personal injuries, in which defendants were jointly charged with negligence in obstructing a public street, defendant bridge company, in placing building material on and across a sidewalk and the city, with knowledge of the fact, permitting the same, it is held that the evidence presented questions of fact, both with reference to the alleged negligence of defendants and the contributory negligence of plaintiff and sufficiently supports the verdict.—Supreme Court of Minnesota, 120 N. W. R., 210.

Defective Streets—Instructions—Liability

City of Montgomery vs. Wyche.—Where, in an action for injuries to a driver on a defective street, the evidence conclusively showed that the street had been out of repair for many years prior to the injury because of the maintenance of a ditch on the side of the street, and that plaintiff fell into the ditch, an instruction that it was the duty of a city to erect a barrier along the ditch and its failure to do so was negligence, provided the ditch into which plaintiff fell was a dangerous place, was not erroneous as assuming facts. Where a street had been out of repair because of the existence of a ditch on the side of it for many years, there was a presumption of notice to the city of the defect and an opportunity to repair.—Supreme Court of Alabama, 53 S. R., 786.

Changing Grade of Street—Damages

City of Rome vs. Selman.—Where it was admitted that a written notice had been served under Act December 20, 1890, claiming damages on account of injury to a lot arising from grading by a municipal corporation and the description, including boundaries by streets and other lots, showed clearly that the notice claimed damages on account of the lot described in the plaintiff's petition beginning the suit, a mere misdescription, by which the lot was referred to in the notice as on the "northwest" side of a named street, while the petition alleged it to be on the southwest side thereof, was immaterial; it not appearing that the plaintiff owned or was claiming damages on account of any other lot.—Supreme Court of Georgia, 69 S. E. R., 706.

Streets—Rights of Abutting Owners

Crawford vs. Town of Marion et al.—Where a town obstructed by a sidewalk an alley over a person's lot to a street forming a means of ingress and egress and adopted an ordinance prohibiting citizens from driving across the sidewalk did not prevent the person from suing in equity for the removal of the obstruction, since the suit was not one to restrain the enforcement of the ordinance, and since, notwithstanding the pendency of the suit, criminal prosecutions could be brought for violations of the ordinance.—Supreme Court of North Carolina, 69 S. E. R., 763.

Opening Highway Through Railway Embankment

Cincinnati, Indianapolis & Western Railway Company, Plaintiff in Error, vs. City of Connersville.—The expense of constructing a railway bridge over a highway, made necessary by the action of the municipality in opening such highway through the railway company's embankment, may be cast upon the railway company without denying the due process of law guaranteed by the Federal Constitution, which requires that compensation be made when private property is taken for public use.—United States Supreme Court, 31 S. C. R., 93.

Contractor—Liability for Negligence

Froelich vs. City of New York et al.—An independent contractor for the whole of an improvement for a city and a subcontractor doing a part of the work are not servants or agents of the city reserving the right to supervise and inspect the work, and it is not liable for the negligence where the plan for the work is reasonably safe, and there is no interference therewith by the city which results in injury, whether a subcontractor, to relay a water main, negligently failed to relay it in a workmanlike manner. Held, under the evidence, for the jury.—Court of Appeals of New York, 93 N. E. R., 79.

Removal of Dead Animals

Smith et al. vs. City of New Albany.—An ordinance prohibiting any one but the city contractor from removing any carcass of a dead animal unless the contractor fails for six hours after notice to remove such carcass, in which case any person may lawfully remove it, refers only to such carcasses as are or are likely to become nuisances as detrimental to health or offensive to the senses, and, so construed, the ordinance is valid as protecting the public health.—Supreme Court of Indiana, 93 N. E. R., 72.

Contract for Water Supply—Performance

Mayor, etc., of Jersey City vs. Flinn et al.—The contract between a water supply company and a city, under which water works were constructed by the former for supplying water to the city, provided that the operation of sewage and disposal works constructed by the company shall not be an expense to the city, and further provided that if the water works were purchased by the city under its option to purchase, they should be delivered to it "as a completed, operating plant, free from pollution as aforesaid." The city claimed, in a suit to compel the transfer of the water works under its option to purchase, that the annual cost of operating a device for removing germs should be capitalized, and, as capitalized, be deducted from the contract price. Held, that the company's contract was to deliver a plant, and not the money with which to operate it, and the cost of operating such device should be borne by the city; such cost not being a part of the completed plant.—Court of Chancery of New Jersey, 78 A. R., 391.

Officers—Statutory Duties—Mandamus

Attorney-General vs. Common Council and Mayor of City of Adrian.—While Public Acts 1909, requiring the council of a city to provide for the expenses of a charter revision and for the election of charter commissioners, gives to the council discretion as to fixing the date of the election of the commissioners, the amount of their compensation and the total expenses of the commission, yet where there is a refusal to take the action required, mandamus lies to compel the council to proceed in compliance with the law, though it does not lie to compel the adoption of a particular resolution on the subject.—Supreme Court of Michigan, 129 N. W. R., 44.

Injunction—Malicious Suing Out—Damages

Doyle vs. City of Sandpoint.—A municipal corporation cannot be held for the malicious suing out of a writ of injunction without probable cause, for the reason that such an act would be ultra vires and beyond and without the scope of authority of the municipal officers, and would become the personal and individual act of the officers so acting.—Supreme Court of Idaho, 112 P. R., 204.

Personal Injuries—Notice

Donaldson vs. Village of Dieterich.—Acts 1905 require one about to sue a city, village, etc., for personal injuries to within six months, etc., file in the office of the city attorney (if there be one), and also in the office of the city clerk, a written statement, giving the name of the person injured, the date and place where the accident occurred, etc. Section 3 provides that, if the notice is not filed, the suit shall be dismissed and the action be forever barred. Held, that the city or village attorney referred to must be a licensed attorney having an office or place of business, and where a village has no such attorney the notice may be served on the village clerk.—Supreme Court of Illinois, 93 N. W. R., 366.

Regulating Telephone Rates—Jurisdiction of Courts

City of Memphis, Appellant, vs. Cumberland Telephone & Telegraph Company.—A suit to enjoin the enforcement of a municipal ordinance regulating telephone rates is not one in which the Constitution or law of a State is "claimed" to violate the Federal Constitution, within the meaning of the act of March 3, 1891, governing direct review in the Federal Supreme Court of decrees of circuit or district courts, where the first and only reference to the Federal Constitution is in the opinion of the circuit judge on final hearing, holding that the rates are confiscatory and destructive of the telephone company's rights under that Constitution, the case as made by the bill being that the ordinance was passed without legislative authority, and its further allegations as to the confiscatory character of the ordinance being referable only, if consistency with its other provisions is to be observed, to the State Constitution, which would be violated if such allegations were true.—United States Supreme Court, 31 S. C. R., 115.

Excavations in Street—Liability

Allen et al. vs. Town of Minden.—It is negligence for a town in making repairs to leave a pit in a public street with no railing around it, nor any lights, or danger signs, to warn people using the street. A municipality making excavations in a public street is held to the same degree of care to prevent injury as any individual, and the public has a right to believe that a municipality will not expose them to danger and that it will do everything to make their passage along the public street reasonably safe.—Supreme Court of Louisiana, 53 S. R., 666.

Street Improvements—Petition

Shank et al. vs. City of Asheville.—Upon a petition filed with the Mayor and Board of Aldermen purporting to be signed by the owners of a majority of front feet on a certain street, the Mayor and Board, under Private Laws, passed an order that such street should be paved. The abutting owners were given the notice as required by statute. Held, that an owner who did not appeal could not later claim an assessment levied thereunder to be void upon the ground that the petition had not been actually signed by a majority; that being a prerequisite, but not a jurisdictional requirement. Supreme Court of North Carolina, 69 S. E. R., 681.

MUNICIPAL APPLIANCES

Turbo-Impeller Pump for Discharging Water Against Pressure

The Columbus Impeller Pump has been placed on the market by the Roth Manufacturing Company, Indianapolis, Ind., to meet the demand for a pump that would elevate water from a deep well and discharge it to any height above the ground or against a pressure. The device of an impeller pump placed in the well to lift the water, a centrifugal member at the top of the well, capable of delivering against a pressure, and a steam turbine engine which drives both.

The Columbus impeller pump is of the same construction as that which has been on the market for several years. It consists of a shaft suspended in the well, provided with impellers as shown in the illustration. For convenience in installing, it is built in 10-foot sections. Each impeller has an annular cast integral with it; surrounding this impeller and carried by three stationary bars is a steel protecting shield. Below each impeller are three retarder blades, secured to the stationary bars. Each 10-foot section has three impellers, three sets of retarders and three stationary bars. This constitutes a cage section. Any number of cage sections up to 20 can be coupled together, thus lifting water from any depth up to 200 feet.

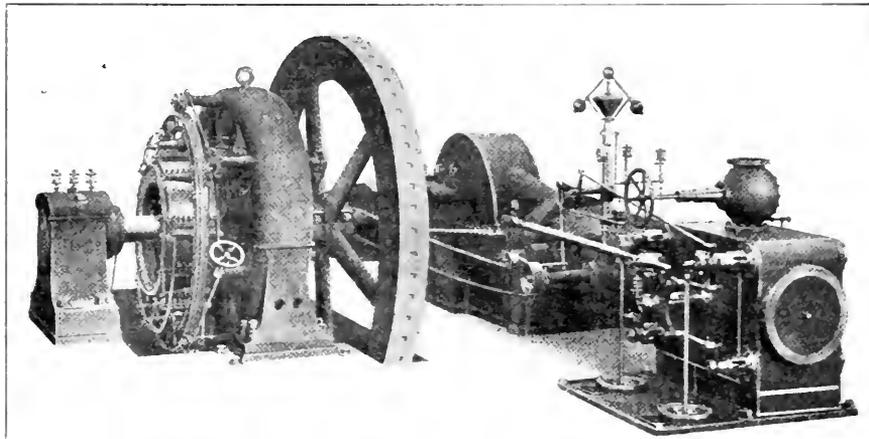

In the turbo-impeller combination the water unit and the steam turbine are arranged in alignment with the impeller sections, and when connected up form a concentric unit which will elevate water from a deep well and discharge it against pressure. The engine is arranged to run condensing or non-condensing. When running condensing the steam discharges with the water pumped. The pump and impellers may be driven by motor or belt, if circumstances make such an arrangement preferable. The maximum lift is 100 feet and the maximum discharge 100 pounds pressure for the turbo-impeller pump.

Some of the advantages claimed for the impeller pump are that the expense of digging a well pit are avoided; that it will lift more water than any other system; it has no wearing parts below the ground such as pistons, valves and packing; it increases the capacity of a low-producing well.

Direct Connected Reynolds-Corliss Engines

The first Allis-Chalmers heavy duty Reynolds-Corliss direct connected engine was made fifteen years ago. Since then more than one thousand of the type have been manufactured and are to be found in electric light and power stations the world over. Many of the first engines have had hard and continuous service, often overloaded, in fact, ever since they were built, and have given good satisfaction. However, as steam pressures, speeds and capacities

REYNOLDS-CORLISS HEAVY DUTY DIRECT CONNECTED ENGINE AND GENERATOR

have increased, improvements in design have been made.

The manufacturers, the Allis-Chalmers Company, Milwaukee, Wis., claim the following merits for the engines:

(1) Their great strength, rigidity and ability to withstand all strains resulting from the highest pressures and the most severe shocks to be met in the hardest kind of service.

(2) Their reliability and durability in

operation and the small cost of repairs and maintenance, due to correct design, great care in the selection of material and the employment in their construction of the best mechanical equipment and the most skilled labor.

(3) Their economy in steam consumption, which has not been equaled by engines of any other build under like conditions of operation.

(4) Their high mechanical efficiency, due to superior design, liberal proportions, careful selection of materials and high grade workmanship.

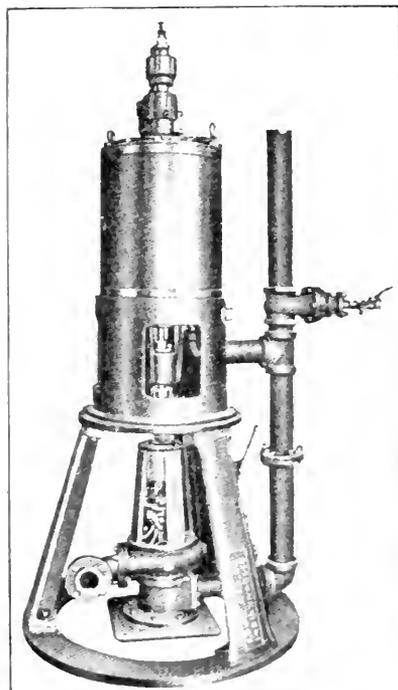

(5) Their adaptability to all the various requirements and conditions of electric service. An extensive line of patterns for both horizontal and vertical machines affords ample opportunity for selection to meet any specified condi-

tions of capacity, location and operation.

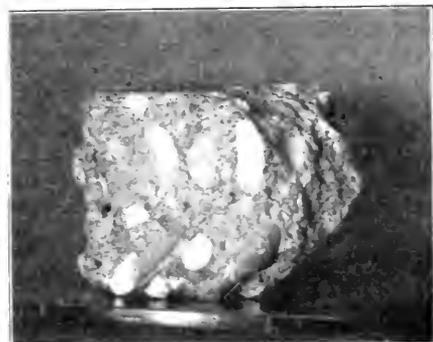

Concrete of Bank-Run Gravel

The sample of concrete shown in the illustration was made in Asbury Park, N. J., with the Coltrin mixer. The material was placed during the week of October 14, 1910. The proportions were one part of Atlas Portland cement to six parts of bank run gravel, shoveled directly from the car into the mixer, sufficient water being added to render the concrete mass of pasty consistency. The bank run of gravel contained a slight percentage of clay and some fine sand, the balance running from coarse sand to gravel the size of a chestnut. Repeated tests prove that the aggregate was about two volumes of sand.

The sample of concrete is uniform in texture and very dense. The lines of fracture run through the gravel stones, showing that the mortar is as hard as the pebbles and that the adhesion of cement and mortar is perfect.

STEAM TURBINE AND CENTRIFUGAL PUMP FOR DEEP WELLS

CONCRETE MADE OF BANK-RUN GRAVEL WITH COLTRIN MIXER

Sieben Sewer Cleaner

ALL of the appliances and attachments to clean, scrub and disinfect sewers, used by the Sieben System of Sanitation Co., Eighteenth and Central streets, Kansas City, Mo., are shown in the accompanying cut. The cleaner itself consists of a nozzle supported on runners which discharges through a small turbine water motor, causing one or two sets of hook-shaped blades to revolve rapidly. In so doing they stir

full of mud, rocks, brick, etc., and no water was going through to the east. A deposit of 10 inches of mud and rocks showed at the manhole, No. 4, at Brooklyn avenue. The distances between manholes were: From No. 1 to No. 2, 371 feet; from No. 2 to No. 3, 134 feet; from No. 3 to No. 4, 591 feet. The Sieben machine was to clean the sewer from manhole No. 1 to No. 2. The average depth of sediment in this sewer was about 12 inches. At 12.30 p. m. the Sieben crew, consisting of four laborers, one foreman and one team, began the work of stringing hose to the nearest fire plug, 1,250 feet distant, and getting rods through the stretch of sewer between No. 1 and No. 2 preparatory to running the machine through. All preparatory work was done, water turned on and the machine started from manhole No. 2 at 3 p. m. A few minutes after the machine was started a length of hose burst, which caused a delay of 12 minutes while a new length

Length of sewer cleaned.....371 feet
 Cost per foot of sewer by Sieben machine2.52c

Rambler Motor Combination Wagons

The first public exhibition of Rambler service cars and the initial public announcement of the intention of the Thomas B. Jeffery Company to build municipal service cars will be made at the opening of the Commercial Vehicle Show, at the Chicago Coliseum. The first car to be shown will be the Rambler combination chemical and hose truck. A special chassis, built in its entirety in the Rambler factory at Kenosha, Wis., will be a distinguishing feature. The car is 45 horse-power, has a speed of from five to forty miles an hour on high gear, and will accommodate six men in addition to a thousand feet of 2½-inch water hose, including regular chemical equipment. This consists of a 40-gallon chemical tank, 200 feet of chemical hose, one 12-foot roof ladder with folding hooks, one 22-foot extension ladder, two 8-foot combination pike poles and plaster hooks, two fire department lanterns and holders, two axes, one combination door opener and hose shut-off, two nozzle plugs, and extra acid bottles and receptacles. The Rambler Spare Wheel will give this car an advantage over other service cars, owing to the fact that it is exclusively carried on the Rambler, and in truck equipment will undoubtedly be important. In addition to chemical trucks, the Rambler Company will also build chiefs' cars, insurance and salvage patrols, police patrols and ambulances.

RAMBLER AUTO COMBINATION CHEMICAL WAGON

up the dirt and sediment in the sewer to a thin grout, which the waste water from the turbine carries out. The machine is drawn slowly through the sewer by means of cables operated by windlasses. The attachments shown in the cut include a forcing jack and quick coupling rods, which are used when a sewer is so clogged that it is impossible to run a cable or rope through it. Four men are necessary to operate the machine, two on the windlass pulling it through the sewer and two feeding in hose at the manhole.

A report on the operation of the Sieben sewer cleaner on a clogged sewer in Kansas City last December was made by Theodore Naish, Engineer in Charge of Comprehensive Sewer System, which is substantially as follows:

Part of the Westport 18-inch sanitary sewer, between Woodland and Brooklyn avenues, on or near Forty-seventh street, was chosen for the test. This sewer is an interceptor from the 4-foot sewer flowing into Brush Creek at Lydia avenue, and runs from there to intercept the sewage from the Flora avenue 6-foot sewer at Woodland avenue, running thence between Forty-sixth and Forty-seventh streets to intercept the Garfield avenue sewer at Garfield avenue and emptying into Brush Creek about 100 feet east of Prospect avenue. The interceptor in Flora avenue sewer at Woodland was entirely stopped up and no water was going through the sewer east of Woodland avenue. The first manhole east of Woodland avenue, called hereafter manhole No. 4, showed an 8-inch deposit of mud and gravel with no water running. In the next manhole, No. 3, a deposit of 11 inches of mud was found. In the next, or Garfield interceptor No. 2, while the Garfield avenue sewage was emptying into the manhole and being carried off by the storm overflow pipe south to Brush Creek, the interceptor sewer was

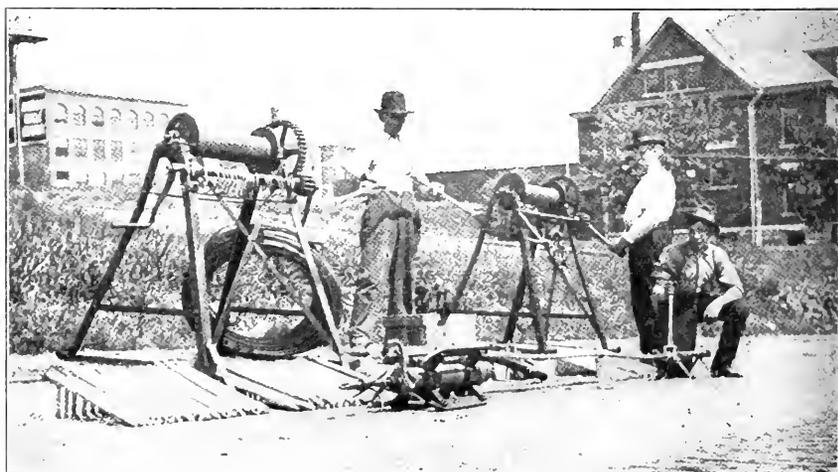

being put in. The machine was taken out at manhole No. 1 at 3.42 p. m., having traversed the 371 feet of pipe in 42 minutes, or, deducting the 12 minutes' delay for repairing hose, the actual time of cleaning the sewer was 30 minutes. The hose was then taken up and rolled, and everything was cleaned and put away by 5.30 p. m. That this sewer was actually cleaned was shown by running a Shannon bucket through the sewer after the Sieben machine had gone through. In the whole length of the sewer only about one-third of a cubic foot of dirt was gathered in the bucket. The cost of cleaning the section of sewer, after the machine was on the ground, was as follows:

Foreman, 5 hours, at 37½c.....\$1.85
 Team, 5 hours, at 50c..... 2.50
 Labor, 20 hours, at 25c..... 5.00

Total labor cost.....\$9.35

Pipe and Boiler Insulation.

The H. W. Johns-Manville Co., 100 William street, New York, manufacture many types of pipe and boiler covering which they have developed during their fifty years' experience in the manufacture of asbestos and magnesia products. High-class insulation is imperative, owing to the present high cost of fuel and the growing demand for the reduction of unit costs. Among the types of sectional pipe covering illustrated and described are: Asbestos-sponge felted; asbestos fire felt; magnesia; vitribestos; indented; safety blow-off; asbesto-til; air cell; molded asbestos; perfection; eureka; wool felt. Each of these types has its special use in economical insulation.

SIEBEN SANITARY SEWER CLEANER AND ACCESSORIES

NEWS OF THE SOCIETIES

Ohio Engineering Society.—The third-second annual convention of the society was held in Columbus, O., January 24-26. The report of the Secretary-treasurer showed a gratifying increase in membership and a sound financial condition. The President, E. G. Bradbury, Columbus, occupied the chair throughout the sessions. Much interest was shown in the excellent programme, and considerable time was devoted to consideration of the proposed bill providing for the registration and examination of civil and mining engineers and surveyors, which was introduced in the late Legislature following its indorsement by the society. H. S. Holton, Director of Public Service, Columbus, addressed the society, welcoming its members to the city and referring briefly to its recent great public improvements. The President, in his address, pointed out some of the causes of unsatisfactory professional conditions, especially calling attention to the frequency with which engineers permit themselves to be handicapped by insufficient force, and the evils of price competition.

The construction of bituminous macadam roads was treated at length in a paper read by James T. Vo-hell, Assistant Engineer, Office of Public Roads, United States Department of Agriculture. Will P. Blar, Secretary of the National Paving Brick Manufacturers' Association, presented a paper on the manufacture of paving brick and their use in street and road construction. Both of these papers were illustrated with lantern slides and were followed by interesting discussions led by James C. Wonders, J. M. Harper, A. J. Horton and D. W. Seitz.

W. J. Watson, Consulting Engineer, Cleveland, gave an illustrated description of the famous bridges of history.

The road laws of Ohio were outlined by James C. Wonders, State Highway Commissioner, who also described proposed legislation controlling the location, construction and maintenance of township and county roads, prepared by him under instructions of the Legislature and soon to be introduced. The location of roads is to be placed in the hands of the County Surveyor and a highway superintendent will be placed in charge of all completed roads. The superintendent, by the aid of a patrol system, will detect and repair defects. The County Surveyor shall act as such superintendent on county roads and an elected official on township roads, under the supervision of the Surveyor.

D. W. Seitz, Assistant State Highway Commissioner, presented a paper on the maintenance and repair of macadam roads. A novel through arch concrete bridge near Cincinnati was described in a paper by E. A. Gast. The bridge has a span of 73 feet, with 31 feet roadway and 50 feet over all width. The concrete floor slab is supported on transverse reinforced girders hung from two reinforced hingeless arches built entirely above the floor level. Thrust is provided for by tension steel in the floor slab, thus relieving the abutments. The bridge is designed to carry two 40-ton traction cars. The floor and haunches were built on falsework and the arches constructed last. The cost of the bridge was about \$7,200.

Professor C. E. Sherman, of Ohio State University, described the methods of the United States Geological Survey in determining the area of Ohio, and stated the correct area to be 41,240

square miles, exclusive of water surface in Lake Erie and its estuaries. Inland lakes have an area of 50 square miles. The figures given are projected on sea level.

Paul Hansen, State Sanitary Engineer of Kentucky; Wm. H. Dittoe and R. W. Ferris, Assistant Engineers Ohio State Board of Health, presented a symposium on the operation of sewage purification works, dealing respectively with general considerations, small sprinkling filter plants and plants comprising intermittent sand filters and contact beds. Mr. Hansen urged the employment of competent men, the keeping of records, the use of measuring devices and careful attention regarding neatness and appearance. Mr. Dittoe discussed in detail the operation of sedimentation tanks and sprinkler nozzles, and called attention to the intelligence and care necessary for their maintenance. Mr. Ferris treated the operation of the intermittent sand filter and contact bed in a comprehensive manner.

The province of disinfection was discussed in a paper by Mr. Clyde Potts, consulting engineer, New York. Mr. Potts considers sodium hypochloride preferable to calcium hypochloride for use in connection with water supplies, but believes that chloride of lime at \$30 per ton is cheaper than sodium hypochlorites where electric currents can be obtained for 1 cent per k. w. hour. The use of hypochlorites is recommended as an emergency measure in case of epidemic and in small proportions for the treatment of filtered water, thereby avoiding the necessity of overdosing with alum to secure bacterial efficiency. Disinfection of sewage effluents discharged into potable waters or waters containing shellfish is also advised.

Philip Burgess, consulting engineer, Columbus, read a paper entitled "Some Features of the Design of Infiltration Plants," in which he called special attention to the fact that water drawn from sand or gravel deposits beneath the bed of a river frequently proves to be ground water flowing to the river rather than filtered river water, and outlined the studies and tests necessary for proper design of a plant of this type. Brief descriptions of several such installations were given. Where a permanent supply can be thus obtained Mr. Burgess considers infiltration plants very satisfactory and economical, assuming that disinfection be resorted to when necessary to produce proper bacterial results. Discussion followed the reading of the papers on sewage disposal and water supply, in which A. Elliot Kimberly, Wm. R. Copeland, Paul Hansen, Prof. C. E. Sherman and others participated. An excursion to the Columbus garbage reduction plant and the State experimental road was fairly well attended despite the inclement weather.

The following officers were elected for the ensuing year: President, Hugh K. Lindsay, Columbus; Vice-President, Frank R. Landor, Cleveland; Secretary-Treasurer, C. J. Knisely, New Philadelphia.

Among the resolutions adopted was the following:

Whereas, In the conduct of municipal affairs it becomes frequently desirable to employ the services of expert engineers in consultation with the regularly employed engineer of the municipality or for the performance of work for which the office of such regularly employed engineer is not equipped, and

Whereas, It has been brought to the attention of this society that such expert or consulting engineer is frequently employed by city officials without regard to the wishes of the regularly employed City Engineer, and

Whereas, Such condition is contrary to professional courtesy and ethics and to the universal practice among other professions and tends to create discord and an undesirable relationship among the members of our profession; now, therefore, be it

Resolved, by the Ohio Engineering Society, in convention assembled, That it is the sense of this society that the employment of any expert or consulting engineer by any municipality having a regularly employed engineer should be only undertaken on recommendation of such regularly employed engineer, and that the selection of such consultant or expert should be by him, and that the Committee on Legislation be instructed to consider the feasibility of preparing and introducing such measures before the General Assembly of the State of Ohio as will render the procedure herein outlined mandatory upon the officials of any municipality within the State.

A resolution was also passed indorsing a legislative bill providing for the creation of a State board of registration and examination for civil and mining engineers and surveyors and for the issuance of certificates to competent persons entitling them to practice such professions.

National Electric Light Association.—The Executive Committee, at a meeting held in New York, January 12, adopted resolutions urging that a joint commission of Congress be appointed at this session to investigate fully the situation pertaining to the public lands of the United States in connection with the development of water powers. The association represents about \$2,000,000,000 invested in central stations for electric light and power and the apparatus they employ, with 100,000 employees, and includes within its ranks 90 per cent of the investment and capacity for public service thus represented. It therefore speaks as an authority. Secretary T. C. Martin, of the association, says: "There are already nearly 1,000 central stations in this country using water power, but, under the present conditions that have tied up such development, very few new water-power plants can be undertaken, and the result is that for lack of such utilization of such water power the consumption of coal and other fuel goes on at a rapidly increasing rate. It is to relieve this deadlock that Congress is invited to investigate fully at once all the aspects of the matter with the idea that a great many communities, particularly in the West, which are seeking to enjoy electric light, power and traction, through the development of unused water-power sites, may be enabled to gratify their natural wishes in this respect.

Association of Manufacturers of Corrugated Steel Culverts in the Northwestern States.—The first annual convention was held in Minneapolis, Minn., December 28. The purpose of the association is to standardize the gauge and weight of the material used in culverts, to obtain adequate transportation facilities and proper freight rates, to educate the public to the value and efficiency of metal culverts and for general publicity purposes. Officers of the association are: President, T. M. Thompson; Vice-President, B. W. Harris; Secretary-Treasurer, N. V. Lux.

Wake County Good Roads Association.—The association has issued an invitation to all the counties and cities along the line of the proposed "Central Highway" from Beaufort to Marshall to send delegates to the convention to be held in Raleigh, N. C., on February 14. The following are the counties and principal cities through which this great highway will pass as it winds from the sea to the top of the mountains at Marshall: Cartaret; Craven, New Bern; Lenoir, Kinston; Wayne, Goldsboro; Johnson, Smithfield; Wake, Raleigh; Durham, Durham; Orange, Hillsboro; Alamance, Graham; Guilford, Greensboro, High Point; Davidson, Thomasville, Lexington; Rowan, Salisbury; Iredell, Statesville; Catawba, Hickory, Newton; Burke, Morganton; McDowell, Marion; Buncombe, Asheville, and Madison, Marshall. The idea of having a great "Central Highway" from the ocean to the mountains has the endorsement of the high officials, and with the proper co-operation between the counties and cities along this line it can easily be built. The Mayors of all cities and towns, organizations, and counties along this proposed road are urged to appoint not less than five delegates each to attend this convention, which will be held in the court house in Raleigh.

Municipal Art Society of Baltimore.

—The annual meeting of the society was held at McCoy Hall, January 12. Francis K. Carey described the proposed Jones Falls improvement. William L. Ellicott advocated the establishment of a national forest between Baltimore and Washington. The following officers were re-elected: President, Theodore Marburg; Vice-Presidents, Henry D. Harlan, W. W. Spence, R. Brent Keyser and Mendes Cohen; Treasurer, S. Davies Warfield; Secretary, Josias Pennington; Counsel, John E. Semmes.

Engineers' Society of Western Pennsylvania.—The thirtieth annual banquet of the society was held at the Fort Pitt Hotel on January 21. Most of the 960 members of the society were present. The speakers were: James Mapes Dodge, of Philadelphia, an honorary member of the society and past president of the American Society of Mechanical Engineers; Col. H. P. Bope, vice-president of Carnegie Steel Company; Robert Kennedy Duncan, professor of industrial chemistry at University of Pittsburgh. Charles F. Scott, consulting engineer of Westinghouse Electric Company, a member of the society, was toastmaster.

State Firemen's League of Rhode Island.—At the meeting at Pawtuxet the following officers were elected: President, Thomas H. Rhodes, of Pawtuxet; First Vice-President, John A. Hamilton, of Arlington; Second Vice-President, William A. Brown, of Wakefield; Third Vice-President, Capt. John J. Mullen, of East Providence; Fourth Vice-President, Everett E. Fiske, of Fiskeville; Fifth Vice-President, Daniel M. Patt, of Providence; Secretary and Treasurer, Frederic W. Cady, of East Providence.

Minneapolis Engineers' Club.—R. B. Fanning was elected President of the Engineers' Club, at a meeting January 16, in the Building Exchange. Other officers: Vice-President, Arthur Overholt; Secretary, George Anderson, Librarian, W. W. Redfield. Papers were read by G. H. Schofield and R. B. Fanning.

Civic League of St. Louis, Mo.—For the convenience of voters the league has prepared an abstract of forty pages from the old and new charters. The original documents comprise over 125 printed pages each. The abstract, besides saving citizens time in merely reducing the number of pages, by its contrasts and arrangement of headlines and parallel columns, is a great help in bringing to the reader's attention the essential differences. The abstract is valuable to students of charters not locally interested.

Water Works Manufacturers' Association.—In connection with the approaching convention of the American Water Works Association, to be held at Rochester, N. Y., the association has appointed the following committees: Membership—O. B. Mueller, Chairman; C. R. Wood, W. C. Sherwood, W. H. Van Winkle, R. E. Milligan. Entertainment—C. R. Wood, Chairman; W. H. Van Winkle, B. C. Little, F. A. Smith, E. A. Fisher, Local Chairman; G. H. Bliven, R. E. Milligan. Exhibit—F. S. Bates, Chairman. Transportation—R. E. Milligan, Chairman; W. H. Van Winkle, E. F. Walker.

Michigan Association of Drain Commissioners.—At a meeting in Lansing, January 23, the following officers were elected: President, Leonard Alger, Saginaw; Vice-President, L. F. Green, St. Johns; Secretary-Treasurer, Walter Carven, Mason.

Albany Society of Civil Engineers.—The annual meeting was held at the Hampton, January 24. The report of the Secretary showed a membership of 111, an increase of twenty during the year. The speakers were: Mortimer G. Barnes, D. R. Cooper, A. F. Hunting, C. V. Merrick, James R. Watt, Mr. McCullough and William R. Horton. The following officers were elected: President, Russell S. Greenman; First Vice-President, James R. Watt; Second Vice-President, David R. Cooper; Third Vice-President, Emory E. Brandow; Secretary, Rupert Sturtevant; Treasurer, Robert F. T. Wilke; Librarian, Clark Brown.

Calendar of Meetings

- February 6-11.**
National Brick Manufacturers Association.—Annual Convention, Louisville, Ky. T. A. Randall, Secretary, Indianapolis, Ind.
- February 14-15.**
Iowa Drainage Association.—Convention, Mason City, Ia.—W. H. Stevenson, Secretary.
- February 14-15.**
Connecticut Society of Civil Engineers.—Annual Meeting, New London, Conn.—J. Frederic Jackson, Secretary, New Haven, Conn.
- February 15.**
New England Association of Gas Engineers.—Annual Meeting, Boston, Mass.—N. W. Gifford, Secretary, 26 Central Square, East Boston, Mass.
- February 16.**
Fourth Annual Chicago Cement Show, Coliseum, Chicago, Ill.
- February 28-March 1.**
Northwestern Cement Products Association, West Hotel, Minneapolis, Minn.—Henry B. Smith, Secretary, 834 Security Bank Building, Minneapolis, Minn.
- May.**
City Commission Congress.—Meeting, Galveston, Tex.—Mayor Lewis Fisher, Chairman of Committee, Galveston, Tex.
- May 29-June 3.**
National Electric Light Association.—Annual Convention, Engineering Societies Building, New York, N. Y.
- June 6-10.**
American Water Works Association.—Thirty-first Annual Convention, Powers Hotel, Rochester, N. Y.—John M. Diven, Secretary, 14 George street, Charleston, S. C.

TRADE NOTES

Cast Iron Pipe.—Chicago quotations 4-inch, \$25; 6 to 12-inch, \$24; 16-inch and up, \$23.50. Birmingham—Manufacturers report fair tonnage placed. Quotations: 4 to 6-inch, \$20; 8 to 12-inch, \$19.50; over 12-inch, average \$18. San Francisco—The tonnage ordered is larger than usual for the season. Inquiries indicate an active spring market. New York—Municipalities are generally slow in making their contracts. Some manufacturers are feeling firmer in their views as a result of booking considerable business, but others are taking low priced contracts. Quotations: 6-inch, carloads, \$21.50 to \$22.

Lead.—New York, 4.50c.; St. Louis, 4.32c.

Heated Stone and Bitumen Roads.—The Ruggles-Coles Engineering Company, No. 50 Church street, New York, who manufacture a carefully designed portable rotary stone heater, call attention to the fact that the process of heating stone, sand or gravel for bituminous roads is not wholly an immediate economic loss. So far as quality is concerned, everyone knows that heated material only admits of perfect mixture and that therefore a road made of heated material must be better than one made of cold stone, over which hot bitumen is poured. If bituminous roads were guaranteed this point would be brought out more clearly. There is, however, an economy in the use of heat in that less bitumen is required. This item may be greater or less than the cost of the heating, depending on differences in specifications and, in no small part, on the skill of the superintendent in charge of the work. If heating of the stone were specified the knack of doing the work economically in this way would soon be acquired. In all cold processes there is a waste of bitumen. The additional thickness of bitumen resulting from its chilling as it is poured over the stone is an absolute waste without any benefit. All experience with bituminous mixtures goes to show that a thin coating is as good and probably better than a thick one—the complete covering of each particle with a coating of bituminous paint being the one essential requirement.

Concrete in Parks.—The Universal Portland Cement Company, No. 115 Adams street, Chicago, Ill., in their January bulletin, illustrate and describe the use of cement in the Chicago city parks. The views are of seats, lighting pillars, flower vases and a pergola.

Steam Turbines.—The De Laval Steam Turbine Company, Trenton, N. J., have issued a catalogue of 120 pages which contains a discussion of the practical thermodynamics of the steam turbine and of the bearing of various types of construction upon ultimate efficiency. Illustrations are included of the applications of steam turbines in driving alternating and direct current generators for belt and rope drives, for direct connection to centrifugal pumps, blowers, etc. There is a chapter on low-pressure and mixed flow turbines for the utilization of exhaust steam and of low pressure vapors from industrial processes.

Rubber Tires.—R. J. Firestone, sales manager of the Firestone Tire and Rubber Company, is authority for the statement that Firestone solid truck tires were in the lead at the recent New York Automobile Truck Show and that 26 vehicles were equipped with them.

THE MUNICIPAL INDEX

Which Are Listed and Classified by Subjects All Articles Treating of Municipal Topics Which Have Appeared During the Past Month in the Leading Periodicals

It is our purpose to give in the second issue of each month a list of all articles of any length or importance which have appeared in all the American periodicals and the leading English, French and German ones, dealing more or less directly with municipal matters. The index is kept up to date, and the month of literature covered each time will be brought up to within two or three days of publication. Our chief object in this is to keep our readers in touch with all the current literature on municipal matters. In furtherance of this we will furnish any of the articles listed in the index for the price named after each article, except that where an article is continued in two or three issues of the paper, the price given is for each of said issues. In addition to the titles, where these are not sufficiently descriptive or where the article is of sufficient importance, a brief statement of its contents is added. The length also is given, and the name of the author when it is a contributed article.

ROADS AND PAVEMENTS

Good Roads. By A. McGillivray, Highway Commissioner for Manitoba. Illustrated. 41-2 pp., Western Municipal News, January. 15 cts.

Good Roads Train in Pennsylvania. 1-4 p., Municipal Journal and Engineer, Feb. 10 cts.

The Road Problem. Paper by R. O. Wynne-Roberts before Institute of Cleansing Superintendents at Surbiton. 2 1-2 p., Surveyor, Dec. 30. 15 cts.

Highway Construction in the Borough of Richmond. Illustrated. 3 pp., Good Roads, January. 10 cts.

Maine, What State Aid Has Done in. Paper by Paul D. Sargent, State Highway Commissioner, before American Road Builders' Association. 2-3 p., Good Roads, January. 10 cts.

North Dakota, Progress of Good Roads Movement in. Paper by T. R. Atkinson, Chief Engineer, before American Road Builders' Association. 2-3 p., Good Roads, January. 10 cts.

Michigan, Progress of Road Building in. Paper by Frank F. Rogers, Deputy Highway Commissioner, before American Road Builders' Association. 1 1-2 pp., Good Roads, January. 10 cts.

Legislation, Highway. Paper by L. W. Ge, Director U. S. Office of Public Roads, before American Road Builders' Association, Indianapolis. 2 pp., Engineering-Contracting, Jan. 11. 10 cts.

Some Notes on Highway Law as Affecting Property Owners. From paper by E. H. Lake before Surveyors' Institution. Surveyor, Jan. 13, 2 1-2 pp.; Jan. 20, 3 1-2 pp., cts. Surveying, Jan. 13, 3 pp.; Jan. 20, pp. 15 cts. 3-4 p., Contract Journal, n. 18. 20 cts.

Highway Law, The. Editorial, 1 p., Surveying, Jan. 13. 15 cts.

Traffic Regulations, English and American Highway. Paper by Prof. Arthur H. Archard, of Brown University, and Henry B. Drowne, Asst. Engineer of Rhode Island and Board of Public Roads, before American Association for the Advancement of Science. 2 pp., Engineering Record, n. 14. 10 cts.

Hygiene des Routes. By Dr. Melchior. 50 p., La Technique Sanitaire, January. 50 s.

Bituminous Binder and Aggregate. Importance of aggregate too often overlooked; detecting road by cushion coat; grades used in St. Louis for surface treatment. From paper before American Association for Advancement of Science. By James C. Cavilla. 1-2 p., Municipal Journal and Engineer, Jan. 18. 10 cts.

Experimental Asphalt Macadam Pavement at Washington, D. C. 1-2 p., Engineering-Contracting, Jan. 4. 10 cts.

Bituminous Concrete and Macadam Details. 1-4 p., Municipal Journal and Engineer, Jan. 25. 10 cts.

The Physical and Chemical Characteristics of Bituminous Road Materials. By Rev. Hubert, Asst. Chemist, U. S. Office of Pub. Roads, Washington. 3 pp., Surveying, Jan. 20. 15 cts.

Massachusetts Method of Bituminous Road Construction. By Harold Parker, chairman, State Highway Commission, paper before American Road Builders' Association. 1 1-2 pp., Good Roads, January. 10 cts.

Certain Considerations Affecting the Section of Bitumens and Mineral Matter in Road Construction and Road Surface Treatment. Paper by Jas. C. Travilla, street Commissioner, St. Louis, Mo., before American Association for the Advancement of Science. 2-3 p., Engineering-Contracting, Jan. 18. 10 cts.

Materials, Experiments With Road Binding. Supplementary Report of Ohio Highway Department. 1 p., Surveyor, Dec. 30. 10 cts.

Present System of Laboratory Tests and Use of Materials in Road Construction. Paper by Maj. W. W. Crosby, Chief Engineer, Maryland Geological and Economic Survey, before American Association for the Advancement of Science. 1 p., Engineering-Contracting, Jan. 18. 10 cts.

Cost per Mile, Average, of "State Reward" Gravel and Macadam Roads in Michigan. 1-2 p., Engineering-Contracting, Jan. 4. 10 cts.

Road Construction. Notes On Steam Rolling in. Paper by Walton Maughan at Meeting of Municipal Engineers of Great Britain. 1 p., Engineering-Contracting, Jan. 18. 10 cts.

Road Construction Methods in Semi-Arid Regions. By Chas. M. Thomas, Highway Engineer, Abilene, Tex. 1-2 p., Engineering-Contracting, Jan. 25. 10 cts.

Maintenance, The Remedy for the Worst Places in the Road. By W. S. Gearhart, State Highway Engineer of Kansas. From address before American Road Builders' Association. 2 pp., Good Roads, January. 10 cts.

Men in Highway Work, Opportunity for Technically Trained. Paper by A. N. Johnson, State Highway Engineer of Illinois, before American Association for Advancement of Science. 1 1-3 pp., Engineering Record, Jan. 21. 10 cts.

U. S. Office of Public Roads, Work of the. From Report of the Secretary of Agriculture. 2 pp., Good Roads, January. 10 cts.

Street Surfaces and Motor Traction. Are old conditions suited to the new? 2 pp., Surveying, Jan. 20. 15 cts.

Straw Road, Florida. 1-4 p., Municipal Journal & Engineer, Jan. 25. 10 cts.

Concrete Roads in Wayne County, Mich. 2 1-2 pp., The Contractor, Jan. 15. 20 cts.

Bridge Specifications, Relation of, to Highway Improvement. Paper by Prof. Albert Smith before Indiana Engineering Society. 1 p., Engineering Record, Jan. 21. 10 cts.

Pavements, Selection and Maintenance of. By George W. Tillson, Chief Engineer of Highways, Manhattan. 2 pp., Bulletin of the League of American Municipalities, November. 25 cts.

Pavements of German Cities. From semi-official German report. 1 1-2 pp., Engineering Record, Jan. 21. 10 cts.

Notes on Roadways for Residence Streets and Thoroughfares in and About New York City. 6 1-2 pp., Engineering News, Jan. 19. 15 cts.

Wood Blocks in England, Crosetting. 1-4 p., Municipal Journal and Engineer, Jan. 25. 10 cts.

Laying Wood Paving with Cement Grout Cushion along Street Car Tracks. 1-3 p., Engineering News, Jan. 12. 15 cts.

Wood Preserving with Asphalt Oils. Illustrated. 3-4 p., Municipal Journal and Engineer, February 1. 10 cts.

Brick Paving Applied to the Roads of Allegheny County, Pa. Progress made during past year. Half tones and drawings. 2 pp., The Clay Worker, January. 25 cts.

Brick as Paving Material. Editorial, 1 p., Surveyor, Jan. 20. 10 cts.

Cushion, Cement Grout, in Street Railway Pavement Construction. 1 p., Engineering-Contracting, Jan. 25. 10 cts.

Sidewalk Construction, Some Notes on. From paper by Jerome B. Landfield, before National Association of Cement Users. 2 pp., Cement Age, January. 15 cts.

SEWERAGE AND SANITATION

Sewer Systems, Water and, at Wetas-kiwin. Interesting features--problems encountered. Illustrated. 1 1-2 pp., Contract Record, Jan. 18. 10 cts.

Sewerage of Sea Coast Towns. By Henry C. Adams. With drawings. 3 pp., Surveying, Jan. 6. 3 pp., Jan. 13. 15 cts.

Sewer Construction at La Porte, Ind. By Ezra C. Shoecraft, city engineer. With half-tone and drawings. 1 p., Engineering Record, Jan. 28. 10 cts.

New Type of Excavator Used on the North Shore Drainage Canal, Chicago. With half-tones and drawings. 1 p., Engineering-Contracting, Jan. 18. 10 cts.

The Richmond Hill Trunk Sewer, Long Island. Details of construction. Drawings. 2 pp., Engineering Record, Jan. 28. 10 cts.

Wet Trenches, Methods of Laying Sewers in. From information collected for the American Society of Municipal Improvements. With drawing. 1 p., Engineering-Contracting, Jan. 11. 10 cts.

Pumping Station, Sewage, and Siphon at Wichita. Drawings. 1-2 p., Engineering Record, Jan. 21. 10 cts.

Sewage Disposal Works, Ponnypack Creek, Philadelphia. With drawings. 3 pp., Engineering Record, Jan. 14. 10 cts.

Operating Sewage Plants. Instructions Issued by Ohio State Board of Health. Screens, sedimentation tanks, sludge beds, filters, form for records. 1 1-2 pp., Municipal Journal and Engineer, Jan. 25. 10 cts.

Sewerage and Sewage Disposal in 1910. Editorial, 1 p., Contract Journal, Dec. 28. 20 cts.

Purification of Industrial Wastes. "L'Épuration des Eaux Résiduaires Industrielles." 2 pp., La Technique Sanitaire, January. 50 cts.

Russian Trickling Filter Plant. 1-2 p., Municipal Journal and Engineer, Feb. 1. 10 cts.

Sewage Sludge Disposal. Foreign and American methods. By W. B. Ruggles, New York. 1 p., Engineering Record, Jan. 21. 10 cts.

River, Purifying the Ohio. 1-4 p., Municipal Journal and Engineer, Jan. 25. 10 cts.

Sanitation of Villages and Premises without Sewers. By John W. Hill, member Ohio State Board of Health. 2 1-2 pp., Canadian Engineer, Jan. 26. 15 cts.

Mayors and Municipal Health. By John A. Kingsbury, Asst. Secretary, New York Charities Aid Association. 3 pp., The American City, January. 15 cts.

WATER SUPPLY

Waterworks Engineering in 1910. 1 1-2 pp., Surveying, Jan. 13. 15 cts.

Report, Minneapolis Water Works, 1 p. Municipal Journal and Engineer, Jan. 18. 10 cts.

Cincinnati Water Works Efficiency. 1-4 p., Municipal Journal and Engineer, Jan. 25. 10 cts.

Co-operation in Rural Water Supplies, Advantages of. From paper by F. Graham Fairbank, before Association of Water Engineers. Surveyor, Jan. 6, 3 pp.; Jan. 13, 3 pp., 20 cts.

Structural Features of the Vancouver Water-Works, with General Construction Costs. With drawings. 2 pp., Engineering-Contracting, Jan. 4. 10 cts.

Concrete Pipe, Method and Cost of Molding and Laying Reinforced, for an Aqueduct, Monterey, Mexico. Waterworks. From "Waterworks and Sewerage of Monterey, N. L., Mexico," by G. R. G. Conway. With drawings. 1 1-2 pp., Engineering-Contracting, Jan. 11. 10 cts.

Water Tower in Holland, Concrete. 1-2 p., Municipal Journal and Engineer, Feb. 1. 10 cts.

Reservoirs, Some Methods Employed in Constructing Two Reinforced Concrete. From "Water-Works and Sewerage of Monterey, N. L., Mexico," by G. R. G. Conway. With drawings. 3 1-2 pp., Engineering-Contracting, Jan. 11. 10 cts.

Dams On Sand Foundations. Some principles involved in their design. Paper to be presented March 15, before American Society of Civil Engineers. Drawings. 15 pp., Proceedings of American Society of Civil Engineers, January. \$1.

Design and Construction of the Dam at St. Andrew's Rapids, Manitoba. By A. H. Harkness. With half-tones and drawings. 5 pp., Canadian Engineer, Jan. 26. 15 cts.

Flow of Water Over Dams, by Gardner S. Williams, professor of Civil, Hydraulic and Sanitary Engineering, University of Michigan. With drawings. 1 p., Engineering News, Jan. 12. 15 cts.

Use of the Pitot Tube. "Methode du Tube de Pitot. Pour Mesurer Le Debit des Masses Liquides." With drawings. 3 pp., La Technique Sanitaire, January. 50 cts.

Deduction of a General Formula for Determining the Most Economic Size of Pipe to Carry Pumped Water. A technical discussion. 2 pp., Engineering-Contracting, Jan. 25. 10 cts.

Purification Plant of the Rochester and Lake Ontario Water Co. Paper read by James M. Caird before New England

Waterworks Association. Illustrated, 1 p., Jan. 25, 10 cts.

Water Purification and Sanitation at Panama, 11-2 pp., Engineering Record, Jan. 14, 10 cts.

Methods and Cost of Constructing Water Purification Works at Springfield, Mass. Paper by Charles R. Gow, before American Society of Civil Engineers. With drawings, 6 pp., Engineering-Contracting, Jan. 18; Drawings, 5 1-2 pp., Jan. 25, 10 cts.

Mechanical Filtration Plant at Bangor, New. Half-tones and drawings, 2 pp., Engineering Record, Jan. 21, 10 cts.

Coagulating Non-alkaline Water, 1-4 p., Municipal Journal and Engineer, Feb. 1, 10 cts.

Washington Filtration and Typhoid, 3-4 p., Municipal Journal and Engineer, Jan. 18, 10 cts.

Operation of Washington Filtration Plant. Replacing washed sand by ejectors; amount of sand removed by scraping; cost of all items of maintenance; experiments in preliminary filtration; sedimentation and rapid filtration. Illustrated, 5 pp., Municipal Journal and Engineer, Feb. 1, 10 cts.

Methods and Costs of Operating the Washington, D. C., Slow Sand Filter Plant; with Particular Reference to Handling Sand. From "Water Purification Plant at Washington, D. C., Results of Operation," by E. D. Hardy, 11-2 pp., Engineering-Contracting, Jan. 4, 10 cts.

Velocity of Flow Through Filter Beds. From paper by W. R. Baldwin Wiseman in Proceedings of the Institution of Civil Engineers. With table, 2 pp., Engineering Record, Jan. 28, 10 cts.

Hypochlorite at Harrisburg, 1-4 p., Municipal Journal and Engineer, Feb. 1, 10 cts.

Use of Hypochlorite of Lime in Filtration. Illustrated, 1 p., Fire and Water Engineering, Jan. 4, 10 cts.

Plant for Applying Hypochlorite. Illustrated, 1-2 p., Municipal Journal and Engineer, Feb. 1, 10 cts.

Corrosion by Hypochlorite Solutions, 1-2 p., Municipal Journal and Engineer, Jan. 25, 10 cts.

Chlorine. The Effect of, upon the Micro-organisms of a River Water. By Leslie C. Walker. Illustrated. With tables, 11 pp., Journal of the Royal Institute of Public Health, January, 2 pp., Water and Gas Review, January, 20 cts.

Meters in Service, Care and Maintenance of. From paper before American Waterworks Association, by A. W. Cuddeback, 21-2 pp., Water and Gas Review, January, 20 cts.

Effect of the Installation of Water Meters in Cleveland. By John C. Beardsley, 3 pp., Bulletin of the League of American Municipalities, November, 25 cts.

Are Water Meters Advantageous or Otherwise? By Edward W. Bemis, 2 pp., Engineering Record, Jan. 28, 10 cts.

Recent Waste-Detection and Meter Work in the New York City Water Department. By Edward W. Bemis, 21-2 pp., Engineering News, Jan. 12, 15 cts.

The Metering of Fire Lines. Correspondence between President of Terre Haute Water Works Co. and Water Commissioner of Kalamazoo, Mich., 1 p., Water and Gas Review, January, 20 cts.

Management, Some Comments Upon Water Works, Suggested by the Recent Special Reports of the U. S. Commerce and Labor Department. Paper by Leonard Metcalf before Pennsylvania Water Works Association, 21-2 pp., Water and Gas Review, January, 20 cts.

Water Waste and General Inefficiency in the Water Department of New York City, 1-2 p., Engineering News, Jan. 12, 15 cts.

Cost of Furnishing Water, with Reference to Rates and Rate Making. From paper by Daniel W. Meade before American Waterworks Association, 4 pp., Water and Gas Review, January, 20 cts.

Life of Water Works Construction. From paper before New England Water Works Association. By Leonard Metcalf, 3-4 p., Municipal Journal and Engineer, Feb. 1, 10 cts.

Liability for Water Supply, 1-4 p., Municipal Journal and Engineer, Feb. 1, 10 cts.

STREET LIGHTING AND POWER PLANTS

Street Lighting, Recent Progress in, 2-3 p., Engineering Record, Jan. 21, 10 cts.

Companies, Cultivation of Friendly Relations Between the Public and the Lighting. Paper by Wm. J. Clark before American Gas Institute, 11-2 pp., American Gas Light Journal, Jan. 20, 10 cts.

Conduit Work, Methods on Difficult. Contract recently completed at Salt Lake City. Illustrated, 2 pp., The Contractor, Jan. 15, 20 cts.

Electrolysis, Effect of, on Metal Embedded in Concrete. Paper by Cloyd M. Chapman before National Association of

Cement Users, 11-2 pp., Engineering-Contracting, Jan. 25, 10 cts.

Gas Mains, Laying a 48-inch and Two 36-inch, under the Harlem River. With half-tones and drawings, 21-2 pp., American Gas Light Journal, Jan. 16, 2 pp., 10 cts.

Power Plant Records, Keeping. By Warren O. Rogers. With drawings and specimen sheets, 61-2 pp., Power, Jan. 24, 5 cts.

Point du Bois Hydro-Electric Development. Outline of design, construction and progress of Winnipeg enterprise. Illustrated, 21-2 pp., Contract Record, Jan. 18, 10 cts.

STREET CLEANING AND REFUSE DISPOSAL

Snow, Magnesium Chlorate for Removing, 1-4 p., Municipal Journal & Engineer, Jan. 25, 10 cts.

Removing Snow from Roads and Streets by Spreading Coal or Earth upon the Snow, 1-2 p., Engineering-Contracting, Jan. 25, 10 cts.

Garbage Collection. Only dry garbage wrapped in paper collected in Minneapolis; can does not become offensive; less frequent collection required. Paper before American Public Health Association. By Dr. P. M. Hall, 1 p., Municipal Journal and Engineer, Jan. 25, 10 cts.

Refuse Crematory at Houston, Tex. Illustrated, 1 p., Municipal Journal and Engineer, Jan. 18, 10 cts.

Montgomery Refuse Destructor, 1-2 p., Municipal Journal and Engineer, Jan. 25, 10 cts.

Waste Disposal during 1910, Progress of City. By Wm. F. Morse, 3 pp., The American City, January, 15 cts.

Garbage Disposal at Pasadena, 1-4 p., Municipal Journal and Engineer, Jan. 25, 10 cts.

Clinker in Concrete, Use of Destructor. Experiments at Staten Island, 1-3 pp., Engineering Record, Jan. 14, 10 cts.

Plant for Handling and Storing Destructor Clinker. With half-tone and drawing 1 p., Engineering Record, Jan. 21, 10 cts.

TRAFFIC AND TRANSPORTATION

Transportation Problem, City, 1-4 p., Municipal Journal and Engineer, Feb. 1, 10 cts.

Overcrowding Street Cars, 1-2 p., Municipal Journal and Engineer, Feb. 1, 10 cts.

Rapid Transit Problem, Report of Citizens' Committee on the New York, 21-2 pp., Engineering News, Jan. 12, 15 cts.

Twelve Years' Development of Rapid Transit in Boston. The extensions and additions of the Boston Elevated Railway Co. With maps, 1 p., Engineering News, Jan. 26, 15 cts.

The City's Subway Problem. Report of joint committee appointed at request of Mayor, 18 pp., Proceedings of the Merchants' Association of New York, January.

Social Aspects of Subway Plans. By John Martin, 3 pp., Survey, Jan. 28, 10 cts.

Subway System, The Paris. With special reference to franchise terms and conditions. With map, 5 1-3 pp., Engineering News, Jan. 17, 15 cts.

Boston Subway Extensions. Editorial, 1-2 p., Engineering Record, Jan. 14, 10 cts.

Constructing the Land Section of the La Salle Street Tunnel, Chicago. Methods of. With half-tones and drawings, 41-2 pp., Engineering-Contracting, Jan. 11, 10 cts.

Rebuilding the La Salle Street Tunnel Under the Chicago River. With half-tones and drawings, 41-2 pp., Engineering News, Jan. 12, 15 cts.

Valuation of Interurban Street Railways, Logical Basis for. From paper by C. G. Young before Central Electric Railway Association, 21-3 pp., Electrical Review, Jan. 28, 10 cts.

Railway Terminal Situation in St. Louis and the Municipal Bridge. Abstract of address before St. Louis Railway Club, Nov. 11, by Edgar E. Rombauer, Speaker of the House of Delegates, 2 pp., Engineering News, Jan. 26, 15 cts.

'MATERIALS OF CONSTRUCTION

Cement, Experience with Portland, Blended by Grinding with Tufa for Making Concrete for the Los Angeles Aqueduct. With drawings, 11-2 pp., Engineering-Contracting, Jan. 18, 10 cts.

Tests to Determine the Values of Clay and Ground Cement for Securing Impermeable Concrete. From Bulletin No. Y, Iowa State College, Ames. With drawings, 1 p., Engineering-Contracting, Jan. 25, 10 cts.

Sands for Mortar and Concrete, Proper. By R. P. Davis. With charts and tables,

10 pp., The Cornell Civil Engineer, January, 20 cts.

Broken Stone, Reducing the Cost of, 1 p., Engineering News, Jan. 12, 15 cts. New Stone Crushing Plant of Tomkins Cove Stone Co., Tomkins Cove, N. Y. Description with half-tones and drawings, 6 pp., Engineering News, Jan. 12, 15 cts.

Concrete Practice, General. Abstract of paper by Thos. Potter before Concrete Institute, 2 pp., Canadian Engineer, Jan. 25, 15 cts.

Some Tests to Determine the Effect of Varying Percentages of Mixing Water on the Impermeability of Concrete. Paper by Cloyd M. Chapman before National Association of Cement Users. With drawings, 1 p., Engineering-Contracting, Jan. 18, 10 cts.

Complete Floating Concrete Plant. Extract from Professional Memoirs, by Lt. L. M. Adams. With drawings, 2 pp., Contractor, Jan. 15, 20 cts.

Some Thermal Properties of Concrete. From paper by Prof. Chas. L. Norton, Mass. Institute of Technology, before National Association of Cement Users, 6 pp., Cement, December, 20 cts.

Comparison of the Initial Cost of Concrete and Wood Piling. By Phillip J. Kealy, 1 p., Engineering-Contracting, Jan. 25, 10 cts.

Comparative Tests of Concrete in Tension and Compression. By A. P. Mills. Half-tones and tables, 8 pp., The Cornell Civil Engineer, January, 20 cts.

Waterproofing with Water. Paper by Cloyd M. Chapman before National Association of Cement Users. With charts, 3 pp., Cement, December, 20 cts.

MISCELLANEOUS

Commission Government, Cities Having, 1-4 p., Municipal Journal and Engineer, Jan. 18, 10 cts.

Red Deer's System of Government by Commission. By Commissioner A. T. Stephenson, 2 pp., Western Municipal News, January, 15 cts.

Commission Form of Municipal Government. By Charles R. Lane, 31-2 pp., Bulletin of the League of American Municipalities, November, 25 cts.

Commission Government in New Jersey, 1-4 p., Municipal Journal and Engineer, Feb. 1, 10 cts.

City Government by Commission. Issued by the Allied Bodies of Pennsylvania, 11-2 pp., Bulletin of the League of American Municipalities, November, 25 cts.

Simplified City Government. By Samuel A. Carlson, Mayor of Jamestown, N. Y. From address before League of American Municipalities, 3 pp., The American City, January, 15 cts.

Home Rule for Cities. By J. Barry Mahool, Mayor of Baltimore. Paper before League of American Municipalities, 5 pp., The American City, January, 15 cts. Municipal Journal and Engineer, Jan. 25, 10 cts.

Organization, Municipal. Illustrated, 3 pp., The Municipal World, January, 15 cts.

Civil Service Reform in Municipalities. By Albert de Roode, Asst. Secretary, National Civil Service Reform League, 3 pp., The American City, January, 15 cts.

Records, Unreliability of City, 1-2 p., Municipal Journal and Engineer, Jan. 25, 10 cts.

Fire Alarm Systems. "Creiger" Equipment at Los Angeles. Illustrated, 8 pp., Insurance Engineering, January, 25 cts.

New York Fire College, 1-2 p., Municipal Journal and Engineering, Jan. 25, 10 cts.

New Central Fire Station for Hornell. By Otis Dockstader, architect. Illustrated, 2-3 p., Fire and Water Engineering, Jan. 25, 10 cts.

Newark Fire Horror. Illustrated, 10 pp., Insurance Engineering, January, 25 cts.

City Planning in Practice. What it comprises; plan never finished but growing with the city; special department or official desirable. Paper before American Civic League. By F. L. Olmsted, 11-2 pp., Municipal Journal and Engineer, January 25, 10 cts.

Housing and Town Planning. From Presidential address of Robert Green before Institute of Sanitary Engineers, 11-2 pp., Surveyor, Dec. 30; 11-2 pp., Jan. 6, 20 cts.

The Development of German Cities and the Dusseldorf City Planning Exhibit. By Horatio M. Pollock, 21-2 pp., The Albany Citizen, Year Book of Civic League, 1911.

Housing Awakening; Reform in Cold Storage. By Edward T. Hartman, Secretary, Massachusetts Civic League, 21-2 pp., The Survey, Jan. 21, 10 cts.

Parks and Boulevards, St. Louis. City planning to have the finest park system in the country; now constructing the Kingshighway, a park boulevard connecting all the large parks. Details of plan. By C. C. Casey, Illustrated, 3 pp., Municipal Journal and Engineer, Jan. 18, 10 cts.

Forestry Department, Work of Buffalo's in charge of City Forester and Board of Park Commissioners; has operated for three seasons; sixty thousand quarts of egg masses purchased from children; spraying and pruning. 23-4 pp., Illustrated, Municipal Journal and Engineer, Jan. 25. 10 cts.

Public Comfort Station in Genoa. 1-2 p., Municipal Journal and Engineer, Jan. 25. 10 cts.

Abbatolr, Model, by Dr. M. A. Walker. Bulletin of Texas State Board of Health, pp., December.

Zoological Park, A Great. New York's remarkable collection of animals. By Walter L. Beasley. Illustrated. 4 pp., Scientific American, Jan. 7. 10 cts.

Improvements. The Rejuvenation of Poughkeepsie. By M. V. Fuller. Illustrated. 8 pp., The American City, January. 15 cts.

Improving Poughkeepsie's Main Street. Illustrated, 3-4 pp., Municipal Journal and Engineer, Jan. 25. 10 cts.

What May Be Done in Waterloo. From report of Charles Mulford Robinson on civic improvement possibilities in Waterloo, Iowa. Illustrated. 3 pp., The American City, January. 15 cts.

The Cities of the Future. By E. Henard. Illustrated, 5 pp., The American City, January. 15 cts.

Libraries, Municipal Reference. Preventive for repeating mistakes in municipal government and work; what some cities have done. Paper before National Municipal League. By Dr. Horace E. Flack. 2 pp., Municipal Journal and Engineer, Jan. 8. 10 cts.

Building Codes. New ordinance for Newark, N. J. Action prompted by fire of Nov. 26. Insurance Engineering, 2 pp., January. 25 cts.

Engineering Work in Public Buildings. By R. Owen Allsop. With drawings. 21-2 pp., Surveying, Jan. 20. 15 cts.

Telephone, Philadelphia Municipal. Six hundred local stations; special service for police department; messages recorded; patrol boxes. Illustrated, 11-4 pp., Municipal Journal and Engineer, Feb. 1. 10 cts.

An Unreasonable Reduction of Telephone Rates. Editorial, Electrical Review. 1 p., Jan. 28. 10 cts.

Subsurface Structures, Locating. Work of Division of Sub-Structures of Brooklyn, N. Y. Method of making field measurements; value of existing records; method of mapping and filing records; value of the work. Illustrated, 41-2 pp., Municipal Journal and Engineer, Feb. 1. 10 cts.

Retailing Walls, A Discussion of Experiments on, and of Pressures on Tunnels. By William Cain. Drawings, 46 pp., Proceedings of American Society of Civil Engineers, January. \$1.

Specifications, Standard. 1-4 p., Municipal Journal and Engineer, Jan. 18. 10 cts.

Contractors' Construction Camps. By Daniel J. Hater. 2 pp., The Contractor, Jan. 1; 2 rp., Jan. 15. 20 cts.

Transit, Shaft, for Tunnel Alignment. -3 p., Engineering Record, Jan. 14. 10 cts.

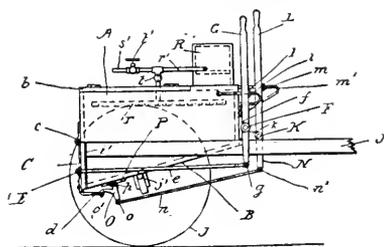

Data, Furnishing, on Request. 1-4 p., Municipal Journal and Engineer, Feb. 1. 10 cts.

Periodical, Value of a. 1-3 p., Municipal Journal and Engineer, Jan. 18. 10 cts.

PATENT CLAIMS

981,653. GARBAGE-CART. William Nepean-Hutchison, Victoria, British Columbia, Canada, assignor of one-half to Alexander M. Sinclair, Victoria, Canada. Serial No. 527,369.

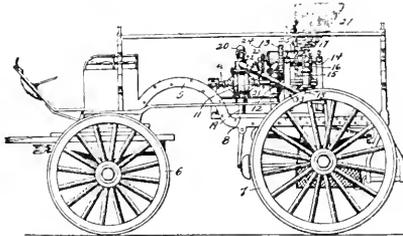

In a garbage cart, the combination, with a receptacle having a hinged discharge door at its rear; of a rock-shaft journaled at the front end of the receptacle, an operating lever secured to the said rock-shaft, an arm secured to the rock-shaft and projecting downwardly, an eye secured to the middle part of the discharge door and pro-

jecting under the bottom of the receptacle when the door is closed, a catch lever having its upper end pivoted to the bottom of the receptacle and having a hook which projects from its middle part and which engages with the said eye, and a rod pivoted to the said arm and to the lower part of the catch lever below the hook, said door being pressed against the receptacle by the said hook when the said rod is pulled upon.

983,006. CHEMICAL-ENGINE. John A. Thomas, Zanesville, Ohio, assignor of one-half to Samuel A. Weller, Zanesville, Ohio. Serial No. 571,812.

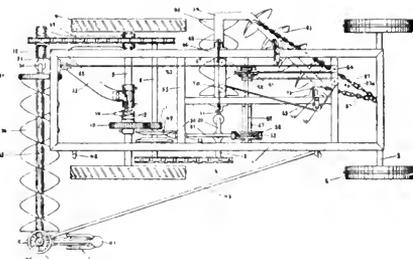

A water motor comprising a pair of rotative shafts arranged side by side and in parallel relation to each other, a force pump driven from one of said shafts, a

conveyer driven from the other of said shafts, a casing in which said conveyer is located, a hopper for containing a chemical to be conveyed by said conveyer, a mixing chamber into which said chemical is delivered by the conveyer, a suction line from the force pump to said mixing chamber, and a delivery line from said force pump to the discharge line of the water motor.

982,944. ROAD-GRADER. John Brown Fender, Kaufman, Tex. Serial No. 523,462.

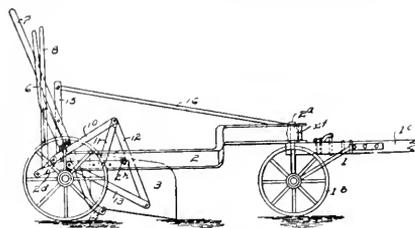

In a road grader, the combination with the frame, axles and transporting wheels thereof, of a plurality of rotatably mounted disk plows, carried by said frame, having their axes in alignment, a spiral conveyer rotatably mounted behind said plows,

adapted to remove the dirt from the ditch which the plows excavate, means by which said conveyer and plows may be raised or lowered, means by which the conveyer and the center line of the plows may be adjusted at an angle with the ground, a second spiral conveyer adapted to receive the dirt ejected from the first-named conveyer and to spread it upon the road, and mechanism by which the power generated by the motion of the machine is applied to rotate the two conveyers.

983,065. WHEEL-SCRAPER. Jefferson Kindleberger and Andrew J. Granville, San Diego, Cal. Serial No. 528,956.

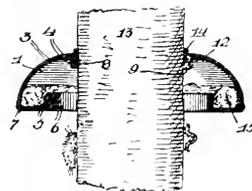

A wheel scraper comprising a front truck, a main frame pivotally mounted thereon, said frame mounted upon suitable rear wheels, a scoop mounted on said frame by means of four bars pivoted at each of

their ends, and two of them pivoted on said frame, one of said bars being pivoted upon a rocker arm which in turn is attached to a rocker lever, and all adapted to raise and lower said scoop and to lock it in its raised and lowered positions, a double pivoted lever pivoted on said scoop and upon an upright arm upon said frame adapted to dump said scoop, all substantially as set forth.

983,114. VERMIN AND BUG SHIELD FOR TREES. Alphonse M. Barry and Robert D. Barry, Pittsburg, Pa. Serial No. 586,728.

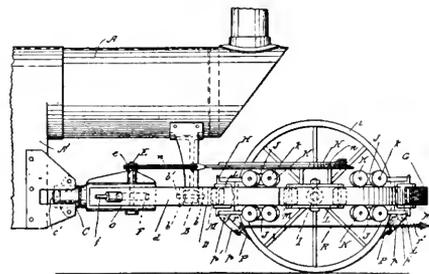

A tree shield comprising two adjustable telescopic sections having the lower edges

thereof shaped to provide pockets and the upper edges thereof shaped to interlock.

983,197. STEERING MECHANISM FOR ROAD-ENGINES. Gustaf Arvid Anderson, Waynesboro, Pa., assignor to The Geiser Manufacturing Co., Waynesboro, Pa. Serial No. 534,710.

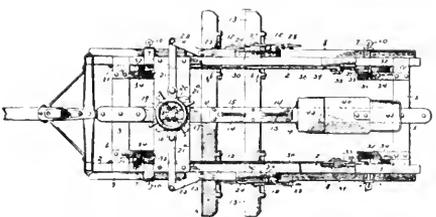

In a steering mechanism, the combination, with a support, of a main frame piv-

oted at one end and at its middle part to the said support and provided at its free end with a turntable track, said frame and track being arranged to rock on a horizontal axis, of a turntable-frame mounted on the said track and free to turn on a vertical axis, a steering road-wheel journaled in the turntable-frame, and steering mechanism for oscillating the turntable-frame and road-wheel.

982,319. SCRAPER AND GRADER. William H. Violett, Fruita, Col. Serial No. 570,476.

A scraper and grader comprising side runners, a scraper frame pivotally connected with the runners, a scraper blade

carried by said frame, a seat frame pivotally mounted upon the runners and carrying a seat, and a lever fulcrumed with relation to the runners and operatively connected with the seat frame and the scraper frame.

PERSONALS

BASS, J. W., was elected Mayor of Whiteville, Tenn.

CARTER, H. E., was elected Mayor of Bolivar, Tenn., by a majority of one over D. E. Bishop.

Lafayette, Ind.—Building macadam road in Fairfield Township, to Wm. F. Frey, \$6,231.

Lebanon, Ind.—Building brick roadway and curb on North Lebanon st., to Geo. I. Miller, \$6,432.

Peru, Ind.—Building two gravel roads in Washington Township, to H. C. Modlin & Co., \$11,492.

Richmond, Ind.—Building sidewalks, to A. F. Hoelen, D. Schneider Bros. and Daniel Burkhardt.

Terre Haute, Ind.—Constructing a gravel road in Sugar Township, to Thomas Glynn, \$12,290; other bidders: Hawkins Bros., \$12,589; M. C. Lloyd, \$13,000; O. T. Piety, \$13,400; J. P. Peters, \$12,000; W. C. Dorsey, \$13,040; Joseph McGuire & Son, \$13,021.

WilliamSPORT, Ind.—Graveling road in Jordan Township, to W. W. Crane, Hedrick, \$5,000.

Jennings, La.—To De Jersey & Barnard for construction of eight or ten miles of sidewalk and curbing.

New Orleans, La.—To Roach & Manigan, Memphis, Tenn., for laying about 6,000 yds. of asphalt paving, about \$18,000.

Bainbridge, N. Y.—Improving Dugway road, to Newport Construction Co., Newport, N. Y.

New York, N. Y.—Repairing sheet asphalt pavements in Borough of Manhattan, to Uvalde Asphalt Co., 1 Broadway, \$266,800; repairing asphalt pavement along North, East and Harlem Rivers, to Sicilian Asphalt Paving Co., 41 Park Row.

Akron, O.—To W. W. Hatch & Sons Co. for building of section 4 of public road to be paved between Akron and Cuyahoga county line, \$80,000; brick is to be used.

Cincinnati, O.—Improving Dayton pike, to Wm. P. Flynn, \$5,634.

Fostoria, O.—To Modern Construction Co., Fremont, for 21,000 sq. yds. of brick paving.

Erie, Pa.—Paving Parade st. with Bessemer brick, to J. & M. Doyle, \$7 per sq. yd.; base, 40c.; curbing, 30c.; inlets and spills, \$5 each; 9-in. pipe, 80c. per ft.; 6-in. pipe, 60c.

Memphis, Tenn.—To Koehler & Co. for paving three streets, about \$10,000.

Beaumont, Tex.—County Commissioners have purchased \$25,000 worth of oyster shells from Walter A. Myrick at 75c. per cu. yd.

Fort Worth, Tex.—To the Texas Bitulithic Co. for paving North st., \$2.08½, and to General Construction Co. for paving East 16th st., \$2.11½.

Hillsboro, Tex.—To Ockander Bros., Temple, for paving streets within business district with Hassam pavement, \$1.95 per sq. yd.

San Antonio, Tex.—By Los Angeles Heights Improvement Co., George Hogelstein, President, to C. E. Miller for 1,000,000 ft. of cement sidewalks on Los Angeles Heights.

Everett, Wash.—Improvement of Hoyt ave., to Atlas Construction Co., \$10,945.

Pasco, Wash.—Grading business section and a part of the residence section, to Jordan & Wright, Ellensburg, 38c. per cu. yd. and 1½c. for overhaul.

Seattle, Wash.—Replanting 6th ave. South, to Elmer Johnson, 1018½ Franklin ave., \$3,090.90.

Tacoma, Wash.—To Warren Construction Co. for street paving in Districts 27 and 28, \$23,448.

BIDS RECEIVED

Stockton, Cal.—Improving Cherokee lane, lowest bidders: For bridges, F. H. Martin, \$4,695; for repairing, W. J. O'Brien, \$41,771.65.

Springfield, Ill.—Paving (a) 16,750 sq. yds. brick pavement on Edward st., asphalt fill, 6-in. rock foundation, 2-in. sand cushion, (b) 10,860 lin. ft. sandstone curb, (c) 6,100 sq. yds. brick pavement on Jackson st., (d) 3,750 lin. ft. sandstone curb; John E. Bretz, city, (a) \$1.54, (b) and (d) 47c.; (c) \$1.57; R. P. Egan, city, (a) \$1.54, (b) 52c., (c) \$1.515, (d) 51c.; Henry Neich & Son, city, (a) \$1.525, (b) and (d) 48c., (c) \$1.495; John Striffler, 215½ S. 5th st., city, (a) and (b) \$1.64, (c) and (d) 53c.

New Bedford, Mass.—Furnishing paving blocks: (a) 200,000 blocks, small, (b) 300,000 blocks, large; Flavia Cote, (a) \$1.50 per sq. yd., (b) \$1.58; Buzzards Bay Pink Granite Co., (a) \$1.50, (b) \$1.65; John B. Sullivan & Son, (a) \$1.65, (b) \$1.65; N. B. & Dartmouth Granite Co., (a) \$1.65, (b) \$1.65; New England Granite Co., Westery, (a) \$1.57½, (b) \$1.57½; Smith Granite Co., Westery, (a) \$1.58, (b) \$1.58; Simpson Bros. Corp., Boston, (a) \$1.69; F. A. Mallory, North Chelmsford, (a) \$1.79, (b) \$1.79.

SEWERAGE

Attalla, Ala.—City will soon open bids for installation of sewer system; \$30,000 bonds have been authorized.

New Decatur, Ala.—City will expend \$9,000 for storm sewers of brick and pipe.—M. A. McCala, Decatur, Engineer; Henry Artung, City Clerk.

Fordyce, Ark.—No contract was let by the Commissioners of Sewer District No. 1 for construction of approximately six miles of sanitary sewers and two septic tanks.—M. J. Parks, Main st., Pine Bluff, Engineer.

Los Gatos, Cal.—Town Engineer R. B. Chandler has prepared profile and plans for proposed septic tank, filter bed and outlet sewers; cost \$30,000.

Oakland, Cal.—Plans and specifications for the extension of the big storm sewer of Lake Shore ave. to Lake Merritt and from its commencement northeast to Mandana rd. have been prepared and work on the project will be rushed by City Engineer urner.

Winters, Cal.—Trustees have awarded to W. Jasper contract for making surveys or proposed sewer system.

Colorado Springs, Col.—City is considering \$40,000 expenditure for sewers.

Aurora, Ill.—Plans for sewers in District 0, 7 and Pigeon Hill have been prepared by City Engineer Myron Tarble.

Kokomo, Ind.—Bids will be received about pril for sewer construction, at cost of 0,000.—Jackson Morrow, Engineer.

Westfield, Ia.—Installation of septic sewer system is being considered.

Donaldsonville, La.—Mayor Maurin has been authorized to secure engineer to estimate cost of installing sewer system.

New Iberia, La.—City is considering installation of sewer system.

Cassapolis, Mich.—Village will issue \$30,000 bonds for installation of sewer system.

Manistee, Mich.—City is considering installation of sewers on six streets with laterals on Elm, Spruce and Pine sts.

Mankato, Minn.—City is considering construction of one mile of sewer.—John Wiln, City Engineer.

St. Cloud, Minn.—Bids will be received out May 1 for sewer work; cost about 1,000.—S. S. Chute, City Engineer.

Paris, Mo.—Preliminary plans are being prepared by Engineers Rollins & Westover, 215 Bldg., Kansas City, for system of sewers.

Sparks, Nev.—Consulting Engineer Louis Ke-sey, 402 Dooly Bldg., Salt Lake City, has recommended reconstruction of nitary sewerage system at estimated cost \$33,476.06; report has been adopted by council; bonds will be issued, when bids ill be asked for construction.—W. J. Stin-n, Mayor.

Bogota, N. J.—City instead of joining th Hackensack and other municipalities matter of a sewage disposal plant will ill plant of its own.

Cliffside, N. J.—Plans have been com-eted for a sewer system for Cliffside Park; st about \$50,000.

Hightstown, N. J.—Town has decided to pend \$40,000 for sewer system; work will gin at once. Address Mayor Blauvelt.

bonds to defray the expenses of construction of such an outlet sewer.

Wilmington, N. C.—Plans for sewer system are being considered by State Board of Health; cost about \$140,000.

Flasher, N. D.—C. F. DeLamere, Consulting Engineer, Bismarck, N. D., is preparing plans and estimates of cost of installation of sewage system.

Cincinnati, O.—City Engineer Shipley has submitted to Service Director Sundmaker estimate of cost for new sewer to be built in McKeone, Schiff and Lewis sts. at \$34,378.70.

Muskogee, Okla.—Citizens will vote Feb. 16 on \$650,000 bond to improve sewerage and water systems and construct garbage incinerator.

The Dalles, Ore.—Plans are being prepared for proposed sewer system.

Hastings, Pa.—Bids will soon be asked for construction of sewage disposal plant.

Millersburg, Pa.—City will expend \$2,000 for sewers.—W. L. Reidenbach, Engineer; S. Franks, City Clerk.

Springdale, Pa.—Borough is considering election on \$12,000 for construction of sewers.—R. M. Sample, President.

Uniontown, Pa.—Engineer J. B. Hogg has prepared plans and specifications for construction of \$150,000 sewage plant.

West Chester, Pa.—Borough Council is discussing other plans for proposed sewage system and disposal plants.

Madison, S. D.—Citizens will vote April 18 on bonds for construction of sewers.

Dallas, Tex.—Municipal Commissioners have decided to construct storm sewer on Columbia st. at cost of \$9,068.72.

Houston, Tex.—Plans and specifications have been submitted by Consulting Engineer Frank L. Dormant for storm sewer in Sawyer st., Decatur st. to Washington ave.

Pecos, Tex.—Citizens have defeated proposed bond issue for sewerage system; new election will be called.

Davenport, Wash.—Council will ask bids at once for construction of sewer system through main part of city at cost of \$6,000.

Esquimalt, B. C., Can.—Plans have been prepared for construction of \$250,000 sewer system.—J. H. Mohun, Victoria, Engineer in Charge.

Hamilton, Ont., Can.—Tenders for supply of concrete pipe for sewers in west end will be called.

London, Ont., Can.—Engineer Van Cleve has recommended storm sewer system for city.

Nelson, B. C., Can.—City Engineer G. C. Mackay has recommended sewer construction in south of city at once at cost of \$4,703.

New Westminster, B. C., Can.—Plans for sewerage systems in the west and east end of the city will be prepared by the City Engineer.

Porcupine City, Ont., Can.—Plans for sewers are being considered.

St. Lambert, Que., Can.—Citizens will vote on \$225,000 sewers and street debentures.

CONTRACTS AWARDED

Denver, Col.—Building sewers, North Side Improvement District No. 12, to Denver-Pueblo Construction Co., \$29,333; Capitol Hill Improvement District No. 6, to Clinton Construction Co., \$29,291.

Richmond, Ind.—Building sewer between Chestnut st. and Pennsylvania Railroad, to Philip Hipskind, Wabash, \$4,200.

New York, N. Y.—Sewers in Buena Vista ave., to John C. Rodgers, Jr., 121 W. 125th st., \$15,403.

Dallas, Tex.—Building storm sewer on Haskell st., to C. W. Ocott, \$8,516.40; other bidders: Dallas Home Improvement Co., \$8,870.20; Tarrant Construction Co., \$8,622.21; Dallas Lime and Gravel Co., \$9,153.79.

Auburn, Wash.—Constructing 8,000 ft. sewers, to Hicklin Plumbing and Heating Co., city, \$4,150.

BIDS RECEIVED

Chicago, Ill.—Furnishing necessary lead pipe during year; Gardiner Metal Co., 1374 W. Lake st., lowest bidder, 5.04c. per lb.; furnishing sewer pipe, Wm. E. Die & Co., 108 La Salle st., lowest bidder, 30,000 ft. of 4-in., 3 2-5c. per ft.; 600 ft. 6-in., 5c.; 600 ft. 9-in., 10c.—B. J. Mullaney, Commissioner of Public Works.

Louisville, Ky.—Contract 77, sewers on 2d st.; Jas. Ferry & Sons, Inc., Pittsburg, Pa., lowest bidder, as follows: 1,425 lin. ft. earth excavation and refill, \$9.30; 1,005 lin. ft. earth excavation and refill, \$7.10; 30 lin. ft. earth excavation, branch sewers, \$10; 800 cu. yds. concrete masonry, \$11.50; 21 cu. yds. concrete in branch sewers and concrete in manholes, \$15; 5 sq. yds. brick masonry, \$3.50; 10 cu. yds. excavation below masonry, \$3; 10 cu. yds. gravel refill below masonry, \$3; vit. pipe, \$276; 300 lin. ft. 8-in. underdrain, 35c.; cleaning up, lump sum, \$500; total, \$31,161; totals of other bidders: Henry Bickel Co., city, \$32,541; C. T. McCracken & Co., Columbus, O., \$32,792; L. W. Hancock Co., city, \$33,241; B. C. Milner & Sons Co., city, \$47,275.

Elizabeth, N. J.—Repairing sewer on Washington ave., extending from Edgar road to Garden st., T. Foster Callahan, \$1,229.50; John C. O'Neil, \$1,149; James Jacques, \$999.99.

WATER SUPPLY

Morgan Hill, Cal.—Citizens are considering construction of water works.

Riverside, Cal.—City will consider purchase of domestic water system.

Sacramento, Cal.—National Board of Fire Underwriters has recommended installation of two additional pumps of 10,000,000 gals. each and two 250-h.p. boilers at pumping station; also installation of additional gate valves and pumps.

Grand Junction, Col.—Citizens will vote March 28 on either purchase of Kannab Creek water rights or for artesian water system.

Tampa, Fla.—Residents of Palmetto Beach section have asked for extension of water mains.

Chicago, Ill.—Finance Committee of Council has voted \$151,000 appropriation to enlarge pitometer system of Water Bureau in order to stop waste of city water.

Herrin, Ill.—Bids will be received about April 1 for construction of reservoir; cost about \$75,000.—R. L. Adams, Engineer.

Adair, Ia.—Contract will be let in March for proposed water works from plans of W. K. Palmer Co., Kansas City, Mo.; cost about \$20,000.—J. J. Hayden, City Clerk.

Altoona, Kan.—Plans are being prepared by Engineers J. S. Worley & Co., Reliance Bldg., Kansas City, Mo., for system of water works.

Coldwater, Kan.—Final plans are being prepared by Engineers J. S. Worley & Co., Reliance Bldg., Kansas City, Mo., for system of water works and electric light plant; cost \$30,000.—W. E. Baker, City Clerk.

Englewood, Kan.—Citizens have voted bonds for the construction of system of water works.—J. S. Worley & Co., Reliance Bldg., Kansas City, Mo., Engineers.

LaCygne, Kan.—Preliminary plans are being prepared by Engineers J. S. Worley & Co., Reliance Bldg., Kansas City, Mo., for system of water works and electric light plant; cost \$30,000.—C. L. Potter, Mayor.

Luray, Kan.—Town is considering installation of water and electric lights.

Mound City, Kan.—Plans have been completed by Engineers J. S. Worley & Co., Reliance Bldg., Kansas City, Mo., for system of water works.

Sylvan Grove, Kan.—Town is considering installation of water and electric lights.

Donaldsonville, La.—Council is considering installation of 1,000-ft. extension to water system.

Lunenburg, Mass.—Town has petitioned State Legislature for permission to issue \$60,000 bonds for water supply system.

Columbia, Mo.—City will have plans and specifications prepared by H. B. Shaw, city, for drilling two deep wells.

Marionville, Mo.—Lawrence County Water, Light and Cold Storage Co. has secured franchise to construct water works and electric light plant; cost about \$40,000.

Helena, Mont.—Bids will be received about April 20 for the construction of water works; cost about \$600,000; bids for bonds will be received April 12.—W. Heimick, City Engineer.

Chappell, Neb.—Citizens will vote on bonds for installation of water works system.

Camden, N. J.—City has engaged consulting engineer to prepare plans and submit estimate for separate water supply for commercial and manufacturing purposes; laying of 16-in. mains on four streets is being considered.

Camden, N. J.—Stockton Water Co. is considering installation of additional stand-pipe.

Crainford, N. J.—Consulting Engineer Jas. H. Fuertes, 140 Nassau st., New York, is preparing preliminary plans for system of water works; pumping station will be built.

Florence, N. J.—Committee recently appointed to look into ways and means of building water plant is nearly ready to report.

Hightstown, N. J.—Installation of filtration system has been decided. Address Mayor Blauvelt.

Ithaca, N. Y.—Bids will be received Feb. 8 by City Comptroller for \$157,000 water bonds.

Lyons, N. Y.—Village Board has adopted resolution permitting expenditure of not over \$300 to investigate possibility of obtaining pure water supply for village.

Watervliet, N. Y.—Mayor Hanratta is favorable to city water works.

Reidsville, N. C.—E. W. Myers, Engineer, Greensboro, has recommended construction of water plant at Troublesome Creek; cost \$42,500.

Flasher, N. D.—C. F. De Lamere, Consulting Engineer, Bismarck, is preparing plans and estimates of cost on installation of water works system.

Cincinnati, O.—Board of Water Works Commissioners has recommended construction of additional reservoir.

Elyria, O.—Council has selected the Aetna Engineering Co., Chicago, Ill., to examine and report on water works.

Oakwood, O.—Village has voted \$31,000 bonds to lay pipes through which water will be pumped from Detroit water works.

South Charleston, O.—Citizens are considering installation of water works plant.

Wooster, O.—Wayne County National and Citizens National Banks, Wooster, have jointly purchased \$25,000 water works bonds.

Oklahoma City, Okla.—Fire Chief M. H. Kesler will recommend building of ten reservoirs, each holding 500 bbls. of water.

Snyder, Okla.—Citizens will vote Feb. 7 on \$15,000 bonds to enlarge water system.

Bandon, Ore.—Bids will be received Feb. 15 for \$60,000 bonds for construction of water system.

Etna, Pa.—Plans have been prepared by J. R. Jommer, for \$50,000 pumping station and electric lighting plant.

Springfield, Pa.—Borough Council is considering construction of a municipal water supply system; cost \$50,000.

Westerly, R. I.—Robert P. Thorne, new owner of Wakefield Water Co., is planning to build pumping station near Rocky Brook and install 4,000,000-gal. pump.

Charleston S. C.—Rudolph Hering, Engineer, New York, has been selected to investigate construction of water works and submit recommendations with estimate of cost.

Davton, Tenn.—City is considering construction of water works.—K. McNenson, Mayor.

Kingsport, Tenn.—City is having plans prepared for construction of water works.

Kirbyville, Tex.—J. W. Fleming and J. Morton are considering construction of water works.

Lometa, Tex.—J. E. Parker, Killeen, new owner of water works, will improve system.

Lott, Tex. City has decided to construct water works.

Lexington, Va.—Citizens have voted \$75,000 bonus for additional water supply.

Romney, W. Va.—Bids will be received March 1 by A. N. McKeever, Mayor, for \$15,000 water bonds.

Seattle, Wash.—Board of Public Works has approved plans for steel water tower on Magnolia Bluff.

Marysville, Wis.—City is considering construction of water works system.

Harriston, Ont., Can.—Citizens have voted \$35,000 bonds for following water works improvements: Water tower and foundations, \$1,100; driven wells, \$1,000; pumping station, \$1,500; power plant and pump, \$6,000; concrete reservoir, \$2,000; distribution system, \$18,055; real estate, \$5,000; engineering and incidentals, \$1,845.—Herbert J. Bowman, Toronto, Consulting Engineer.

CONTRACTS AWARDED

Douglas, Ariz.—Construction of municipal water system, to M. F. Discus, city, \$45,000; work includes the construction of the building, laying of pipe and the reservoirs; to Chicago Bridge and Iron Works, for water tower, \$11,950; power equipment, to the De La Vergne Machinery Co., \$19,945; bids of M. F. Discus were as follows: \$1,450 for pump house complete; concrete sump, oil reservoir and well tunnels, \$880; 10-in. 70-lb. pipe, \$1.63 per ft.; 10-in. 64-lb. pipe, \$1.47 per ft.; 8-in., 47-lb. pipe, \$1.12 per ft.; 10-in. gate valves, \$42.60 each; 8-in. gate valves, \$33.40 each; 5-in. hydrants, \$41.50 each; 4-in. hydrants, \$39.50 each.

Pasadena, Cal.—By North Pasadena Land and Water Co., to John Lee, 415 Galena ave., for excavating for 5,000,000-gal. reservoir to be constructed on bank of the Arroyo Seco; bids will be taken for the concrete work later.—Willis Eason, Union Savings Bank Bldg., President; Allen Bros., N. Raymond ave., Engineers.

Vallejo, Cal.—Furnishing cast-iron bell and spigot water pipe, bids opened Jan. 23, to U. S. Pipe Co., San Francisco, for \$24,587.—W. J. Torney, City Clerk.

Atlanta, Ga.—By Water Board and Bond Commission, to General Pipe and Foundry Co., city, for c.-i. water pipe, about \$25,000; to Sanitary Co., Cleveland, O., for brass, \$3,367; to National Lead Co., Cincinnati, O., for lead pipe, \$5.60 per cwt.

Louisville, Ky.—Installing hydrants: 34 to L. R. Figg & Co.; 26, to G. W. Gosnell & Co., and 4 to Stancel & Riddle Co.

Marblehead, Mass.—Installing \$15,000 pump at water plant, to Landlaw-Dumagan-Gordon Co., Boston.

Kansas City, Mo.—Construction, delivery and erection of a horizontal shaft centrifugal pump, direct-connected to a vertical cross-compound engine, of a capacity to deliver 300,000 gals. of water 50 ft. high at a speed not exceeding 150 r.p.m., to Allis-Chalmers Co., Milwaukee, Wis., \$21,036 for one unit, and \$42,072 for two units; furnishing 2,000 tons of pipe and specials, to U. S. Cast Iron Pipe and Foundry Co., \$23.80 per ton for pipe and \$50 per ton for specials.

Trenton, Neb.—To P. A. Strayer, for laying pipe for Trenton water works system.

Somerville, N. J.—Borough officials have about closed contract with Somerville Water Co. for 20-year supply of water.

Hudson, N. Y.—Furnishing 10-in. iron pipe for enlarging water main in Second Ward, to Chas. Miller, Utica, \$21.60 per ton; fillings, \$50 per ton.

Youngstown, O.—Water supply requirements: Water pipes and pipe specials, to United States Cast Iron Pipe and Foundry Co., 600 tons of pipe, \$21.70 per ton; valves, to Darling Valve and Mfg. Co., 6-in. valves, \$10.40 each; corporation cocks, 5½-in., to Monarch Brass Co., 55c. each; hydrants, to D. R. Wood Co., \$24 each; curb boxes, 5½-in., to Farnam Brass Co., \$265 each; valve boxes, to Morgan Mfg. Co., \$2.75 each; lead, 25 tons, to Wilkins-Leonard Hardware Co., \$4.60 per hundred pounds; hauling pipe and specials, to W. S. Dennison, \$1.08 per ton; alum for the year, 100 lbs. in bags, to Central Chemical Co., 90c.

Heavener, Okla.—To the T. C. Brooks & Sons Co., Jackson, Mich., for constructing water works, \$40,699.

Guthrie, Okla.—Furnishing c.-i. water pipe, standard bell and spigot, to American Cast Iron Pipe Co., Birmingham, Ala., as follows: 1,600 ft. 10-in. and 2,800 ft. 12-in., \$25.20 per ton, and 4,000 ft. 6-in. at \$25.30 per ton.

Astoria, Ore.—Rebuilding 7½ miles of 18-in. main conduit of water system, to C. G. Palmberg, city, \$68,117.

Johnson City, Tenn.—To W. C. Swanwick, Joplin, Mo., to install water works system; cost \$165,000; United States Foundry Co., Chattanooga, will furnish water pipes, which will be laid from this city to Big Blue Springs, Union County, distance of 12 miles; Council recently purchased entire distributing system of the Watauga

Water Co. for \$150,000, which will be utilized in connection with the new water works.

Austin, Tex.—Constructing filtration trench at lower water works, to Ray McDonald, \$8,500.

Taylor, Tex.—Andrew J. Zilkner, Austin, owner of Taylor water works and service, has contracted with H. B. Seiders, of this city, for building of new water supply reservoir for storage of water for fire and domestic uses during the time that will be consumed in enlarging two main reservoirs to four times their present capacity.

BIDS RECEIVED

Lordsburg, Cal.—Construction of additions to the municipal water works, Braun & Russell, Redondo Beach, lowest bidder, \$35,000 for all work or \$37,054 if the 8-in. wrought-iron pipe is changed to cast-iron pipe and surface reservoir added.—Olmsstead & Gilletten, Wright & Colender Bldg., Los Angeles, Engineers.

LIGHTING AND POWER

Dothan, Ala.—City will construct electric plant and water works, erect building and install equipment.—R. W. Lisensy, Clerk.

Troy, Ala.—Plans are being prepared for improving electric light and water plant, including installation of one electrically driven pump, having a capacity of 2,500 gals. per hour, a 150-h.p. boiler, one 250-kw., 3-phase, 60-cycle generator, direct-connected to steam unit.—A. B. Campbell Superintendent.

Enson, Ariz.—R. G. Arthur has secured franchise from County Supervisors for electric light and power plant.

Colton, Cal.—City Trustees will at once let contract for 600 cu. ft. per minute air compressor, three 6-in. air lifts, two electric motors and two transformers.

Los Angeles, Cal.—Mayor Geo. Alexander has recommended establishment of electric lights.

Needles, Cal.—E. H. Rose, Los Angeles, has acquired the property of Needles Light and Power Co. and will improve and enlarge plant.

Redlands, Cal.—Plans have been prepared by City Engineer and bids will be asked shortly for ornamental and electric lighting system for business section of the city, to be extended from Olive ave. to Cajou st., to Citrus ave. and State st., to Orange st. and to the Casa Loma Hotel; cost \$14,000.

Santa Ana, Cal.—Newport Beach is to vote on \$55,000 bonds to purchase gas and electric plants.

Groton, Conn.—City is considering adding 500 kw. within year to the municipal electric light plant.—T. A. Graves, Superintendent.

Milton, Del.—Bids will be received March 1 for the purchase of \$20,000 bonds for construction of proposed plant for Milton Light and Power Co. O. S. Betts, city, is interested.

Wilmington, Del.—Mercantile Committee of Board of Trade is considering establishment of "White Way" on Market st.

Atlanta, Ga.—Georgia Power Co. has secured sites to furnish 200,000-h.p. to city and surrounding territory.—C. Elmer Smith President.

Malad City, Ida.—The Idaho Light and Power Co. is considering extending transmission lines to Downey and St. John, distance about 15 miles; company also proposes to increase capacity of plant by about 500 h. p.

Gibson, Ill.—Plan of Gibson Electric Light and Power Co. will be improved and engaged under direction of F. J. Postel Consulting Engineer, Chicago.

Fort Wayne, Ind.—Henry B. Monning and John F. McCarthy, Ft. Wayne, will soon ask for bids for construction of a central heating plant in business districts.

Vincennes, Ind.—The Vincennes Electric Co. has incorporated to establish and equip a plant for generation of current for heating lighting and power purposes.—Albert J. Heintz, Wm. T. Barnes and Charles W. Sherman, Directors.

Centerville, Ia.—Lighting of town by electricity is being considered.

Independence, Ia.—Plans are being considered for enlarging the municipal electric light plant, including addition to the power house and the installation of a 250-kw. generator and engine.—E. R. Stanard, Superintendent.

Iowa Falls, Ia.—Oscar F. Peterson, Des Moines, has petitioned for heating and lighting franchise for Peterson Heat and Light Co.

Webster City, Ia.—City has secured site for erection of \$50,000 light and power plant.

Coldwater, Kan.—Engineers J. S. Worley & Co., Reliance Bldg., Kansas City, Mo. are preparing final plans for electric light plant.

LaCygne, Kan.—Preliminary plans are being prepared by Engineers J. S. Worley Co., Reliance Bldg., Kansas City, Mo., for electric light plant.—C. L. Potter, Mayor.

Luray, Kan.—Town is considering installation of electric lights and water.

Sylvan Grove, Kan.—Town is considering installation of electric lights and water.

Wanago, Kan.—Plans are being considered for installation of 200-kw. single-phase generator, direct connected to Corliss engine, in municipal electric plant next spring.—D. A. Course, Superintendent.

Springfield, Mass.—Superintendent Gaslight Co. is planning to expend \$250,000 in installation of new apparatus chiefly of German make.

Durand, Mich.—Citizens have authorized 2,000 bond issue for extensions to the municipal electric light plant and water works system, including 200-kva. generator and one 75-kva. generator and a 275-h.p. engine and alternating current motor of 50 to 20-h.p. to operate pumps.—H. F. Rosenkrans, Manager.

Delano, Minn.—City is considering building and equipping of entire new electric light plant next summer.—Nels G. Sanberg, Superintendent and City Electrician.

Farmington, Minn.—L. Larson has asked Council for franchise to install electric light plant.

Grand Rapids, Minn.—Village Electric Light Commission is planning extension of line to La Prairie.

Minneapolis, Minn.—Minneapolis General Electric Co. has decided to erect relay power station of 10,000-kw. power; cost \$1,000,000.—A. W. Leonard, Local Manager.

Cnappell, Neb.—Citizens will vote on installation of electric light plant.

Camden, N. J.—Business Improvement Association is considering establishment of independent electric light plant.

Jamesburg, N. J.—Jamesburg Electric Co. has been incorporated to supply the borough with electric light; capital, \$10,000.—Louis Rafello, Philadelphia, Pa.; Merritt W. Haro, Tuckerton, and Milton I. Voorhees, N. Y., Incorporators.

Las Cruces, N. M.—Las Cruces Electric Light and Gas Co. has asked Board of Trustees for franchise.

Sodus, N. Y.—Sodus Gas and Electric Co. is considering extension of its transmission lines east to Wolcott, N. Y., to supply electric service for lamps and motors in Alton, Wallington, North Rose, Butler, Rose, Red Creek, Wolcott and surrounding country.

Murphy, N. C.—George A. Browning, H. Regal, has formed company to construct water power and electrical plant to develop 600-h.p.

Grove, Okla.—W. T. and O. W. Killam are interested in construction of electric light system; have applied to Council for franchise.

Snyder, Okla.—Citizens will vote Feb. 7 \$25,000 to equip light plant.

Waukomis, Okla.—A. Williams, Ames, is considering construction of electric plant; \$5 applied for franchise.

Eugene, Ore.—Council is favorable to 5,000 bond issue for installation of series incandescent street lighting system.

Etna, Pa.—Plans have been prepared by R. Jommer for \$50,000 electric lighting plant and pumping station.

Charleston, S. C.—Rudolph Herring, Engineer, New York, has been selected to investigate construction of electric light plant and submit recommendations with estimate cost.

Newberry, S. C.—Southern Power Co. has asked for 60 years' franchise to furnish power.—Albert Millmore, Charlotte, Engineer.

Henry, S. D.—Henry Light and Power Co. has been granted franchise to install electric light system.

Menno, S. D.—Franchise has been granted to Peter A. Orth to install electric light system.

Mobridge, S. D.—Tanner Bros., Webster, and Hill & Smith, Mobridge, have applied for franchise for installation of electric light plant.

Waubav, S. D.—Boyle & Weller, Webster, are petitioned for franchise for installation of electric light plant.

Tellico Plains, Tenn.—Tellico Power Co. has been granted franchises by Blount and Monroe County Commissioners to extend its power line from Tellico Plains into Knoxville, having a capacity of 6,000 h.p., power will be generated by means of a waterfall on Tellico River.

Kirbyville, Tex.—J. W. Fleming and Julius Morton are planning to supply town with electric lights.

Lometa, Tex.—J. E. Baker, Killean, new owner of electric light plant, will enlarge and improve.

Springville, Utah.—Plans are being considered for installation of municipal electric plant with output of from 250- to 500-kw., to include new pipe line, pressure pipe, water wheel, generators, switchboard, etc.—Myron Manwaring, Superintendent.

Pasco, Wash.—Pacific Power and Light Co. has petitioned Council for vacation of a portion of Riverside addition, which will be used as site for \$400,000 electric substation and gas plant.

Spokane, Wash.—Spokane Falls Gas Light Co. will spend about \$500,000 in improvements.—A. N. Cantril, General Manager.

Mosinee, Wis.—Establishment of electric light system is being considered.

Kingston, Ont., Can.—City will expend about \$13,000 for improvements to the electric light plant.—C. C. Felger, Engineer.

Ottawa, Ont., Can.—Municipal Electrical Commission is having plans prepared to place all wires on St. J. St. underground.

Fortage La Prairie, Man., Can.—Council is considering installation of municipal electric lighting plant.

Strathcona, Alta., Can.—City will at once ask for bids for furnishing machinery for the electrical plant to cost \$72,000.

Victoria, B. C.—Ratepayers have passed \$25,000 electric lighting by-law.

auto formerly used by Street Department is under consideration; chemical tanks being proposed for machine.

Albert Lea, Minn.—Fire Chief Mitchell has recommended purchase of 500 ft. of hose.

Clayton, Mo.—Fire Department is considering purchase of 1,000 ft. of hose.

Fair Grove, Mo.—Fire Department has been organized with J. T. Smith as Chief.

Manchester, N. H.—Purchase of aerial truck and auto ambulance is being considered.—Edw. C. Smith, Mayor.

Camden, N. J.—City is considering purchase of combination wagon, 80-ft. aerial truck, auto for Chief and motor-propelled combination hose wagon; additions to fire alarm system are also contemplated.

Collingswood, N. J.—Plans are being considered for installation of modern fire and police alarm system.

Millville, N. J.—Fire Commissioners are considering purchase of auto chemical engine.

Moorestown, N. J.—E. F. Penners, Relief Engine Co., and John C. Bradford, Moorestown Hose Co. No. 1, are interested in proposed purchase of two auto hose trucks.

Albany, N. Y.—Erection of fire house for Steamer No. 2 is being urged.

Conces, N. Y.—City has asked permission to issue \$16,000 bonds for improving fire department.

Tuckahoe, N. Y.—Citizens will vote Feb. 16 on \$8,000 expenditure for purchase of motor fire engine for Waverly Engine and Hose Co.

Cleveland, O.—Purchase of several fire engines and auto truck is being considered.—Geo. A. Wallace, Fire Chief.

Martin's Ferry, O.—Council is considering auto trucks for two companies.

Portland, Ore.—J. W. Wood, Naval Architect, Chicago, has been chosen by Fire Committee of City Executive Board to prepare the plans and supervise construction of steel fireboat.

Woodlawn, Pa.—Fire Department has been organized with C. E. Miller as Fire Chief; type of apparatus not yet decided.

Lakewood, R. I.—Firemen are looking for first-class hand engine.

Columbia, S. C.—City desires to purchase 100-ft. tower for fire bell.—G. F. Cooper, Clerk.

Mount Pleasant, Tex.—Site at Depot St. and Kauffman ave. has been selected for erection of combined fire station and city hall.

Texarkana, Tex.—City is in the market for two auto combination chemical and hose wagons, 35-gal. hammered copper chemical tank hose body partitioned, capacity 1,200 ft. 2 1/2-in. hose, dual ignition system electrically lighted, regulation artillery wheels, each wagon to have in addition to standard equipment one 30-ft. extension ladder, one 12-ft. roof ladder, one plaster hook, August patent.—A. B. DeLoach, Mayor.

Lynchburg, Va.—Fire Chief Sandidge has recommended purchase of chief's motor car, comb. chemical, hose wagon and 75-ft. aerial truck; also 2,000 ft. 2 1/2-in. rubber-lined cotton hose.

Norfolk, Va.—Board of Control has recommended appropriation of \$25,000 for erection and equipping fire station at corner of Williams ave. and 12th St.

Petersburg, Va.—Plans for a larger and better equipped fire department, including number of new men, modern alarm system and extension of the present number of boxes, with other features looking toward increased efficiency, have been presented to Joint Finance Committee of Council by Chairman N. T. Patterson, of Fire Commission.

Seattle, Wash.—Bids have been rejected by Board of Public Works for erection of fire station No. 28; revised plans will be prepared.

Spokane, Wash.—Council has asked for additional \$34,000 appropriation for fire department improvements.

Spokane, Wash.—Erection of fire station at Stone St. and Glass av. is being urged.

Edmonton, Alta., Can.—City Commissioners will shortly purchase the following apparatus for the fire department: Motor chemical and hose wagon, motor car, one aerial ladder, 3,000 ft. of hose and a life saving net.

FIRE EQUIPMENT

Gentry, Ark.—Council has decided to purchase chemical fire engine.

Modesto, Cal.—City will purchase auto chemical engine and hose wagon.

Sacramento, Cal.—National Board of Fire Underwriters has recommended purchase of two first size engines, autos for Chief and Assistant Chief, fuel wagon, 75 ft. motor-driven aerial truck and auto combination wagon carrying two 35-gal. tanks and 500 ft. of 2 1/2-in. hose; also minor equipment.

Ansonia, Conn.—City is considering establishment and equipment of fire station in Fourth Ward.

Bridgeport, Conn.—Council has purchased site on Putnam St. for erection of fire house.

Waterbury, Conn.—Bids will be asked at once for alterations to East Main St. engine house.—Theo. B. Peck, Architect.

East St. Louis, Ill.—City is considering erection of two engine houses.—T. Brucks, Chief Fire Department.

Moline, Ill.—Fire and Light Committee will recommend purchase of auto hose truck with engine equipment.

Rockford, Ill.—Fire Chief F. Thomas has recommended purchase of engine and aerial truck, rebuilding of present truck and erection and equipment of two stations with motor apparatus.

Poseville, Ill.—Village Council is considering purchase of fire engine.

Sterling, Ill.—Council has authorized purchase of 5 play pipes or patent nozzles, 3 hydrant valves, 1 smoke helmet, 1 cellar pipe or distributing nozzle, fireman's axes and wire cutters.—Savona Stril, Chief.

Fort Wayne, Ind.—Fire Chief Henry Hilbrecht has recommended installation of at least 50 more fire alarm boxes and purchase of 5,000 ft. of hose.

Richmond, Ind.—Fire Chief Ed. Miller has recommended purchase of auto chemical truck.

Knoxville, Ia.—Architects Kraetsch & Kraetsch, Des Moines, have prepared plans for erection of fire station.

Haverhill, Mass.—Fire Chief Gordon has recommended repairing of hand tubs in outlying district with hand-drawn chemicals; also purchase of auto engine and hose truck.

Haverhill, Mass.—Equipping of Station No. 6 is being considered; rebuilding of

Hand-Wiped Joint

or lead flange, in from one to eight branch.

BRIDGES

Torrington, Conn.—Town has rejected proposition to build bridge across Naugatuck River to connect with proposed extension of Prospect st.

Jacksonville, Fla.—Board of Health is asking for bids for erection of temporary emergency hospital for contagious diseases, which will be built on grounds of present St. Luke's Hospital.

Boise, Ida.—State Senate has passed bills for bridges across the Snake River between Canyon County, Ida., and Malheur County, Ore., near Payette, Ida.; cost \$25,000; across Salmon River in Custer County, \$10,000, and across Snake River, near Glenn's Ferry, \$15,000.

Fort Wayne, Ind.—Replacing of State st. bridge by modern cement structure is being considered.

Rockville, Ind.—Construction of bridge over Big Raccoon River is being considered; cost about \$7,000.—H. Davies, Marshall, Engineer; Jas. E. Elder, County Auditor.

Cedar Rapids, Ia.—Bids will be asked about March 1 for construction of \$150,000 concrete bridge.—T. F. McConley, City Engineer.

Newton, Kan.—Butler County Board of Commissioners has rejected bids for construction of bridge.—J. A. Hunter, County Clerk.

St. Paul, Minn.—City Engineer has estimated cost of constructing Earl st. bridge at \$57,000.

Boonton, N. J.—Morris County Board of Freeholders has made an appropriation of \$8,000 for purpose of building new bridge to span Rockaway River.

Montclair, N. J.—Board of Freeholders, Newark, has been petitioned to aid in construction of viaduct of the Lackawanna Railroad Co. across Bloomfield ave.; total cost will be about \$70,000, of which railroad company will pay about \$45,000.—Ernest C. Hinck, Mayor.

Monaca, N. Y.—Citizens are considering erection of bridges over Elkhorn and Black's Run on Monaca and Aliquippa road.

Warsaw, N. Y.—Construction of bridge over Oatka Creek is being considered.—I. G. Botsford, Village Clerk.

Drayton, N. D.—Commissioners of Pembina County, Pembina, are considering construction of bridge over the river.

Cincinnati, O.—Council has passed ordinance authorizing city and the P., C. C. & St. L. Railway Co. to proceed with construction of the Rockwood crossing viaduct and subway.

Washington Court House, O.—Fayette County is considering construction of five concrete and steel bridges this year.

Ivyland, Pa.—Residents of Warminster and Ivyland have presented petition to County Commissioners of Bucks asking for county bridge over stream near Ivyland Borough.

Wilkes Barre, Pa.—Work on plans for a steel and concrete bridge to cross South st. has been started by Architects Torren & Taylor, New York; City Engineer Finch is engaged in furnishing data concerning the grades and dimensions of proposed structure.

Seattle, Wash.—City Engineer R. H. Thomson has estimated cost of the construction of overhead foot bridge on Pike

st., between 1st ave. and the water front, at \$6,000.

Spokane, Wash.—Board of Public Works is about to let contract for constructing a concrete bridge over Hangman Creek at 6th ave.

Spokane, Wash.—Mayor Pratt will sign ordinance passed by Council authorizing \$415,000 bonds for two proposed concrete bridges over Latah Creek.

CONTRACTS AWARDED

Peoria, Ill.—Building bridge, to Milwaukee Bridge Co., \$166,896.50.

Des Moines, Ia.—Construction of Melan bridge, to Clinton Bridge Co., Clinton, \$25,000.

Dubuque, Ia.—To Spolin-Rose Lumber Co., city, for furnishing lumber to repair and build bridges during year.

Grundy Center, Ia.—By County Commissioners, to L. F. Volberding, Hudson, for construction work and repairs and cement work on steel bridges during 1911.

Newton, Kan.—To B. H. Northcott & Son, Hesston, for construction of two iron and concrete bridges in Butler County.

Minneapolis, Minn.—Building bridge over Lake Minnetonka, to Minneapolis Steel and Machinery Co., city, \$38,500.

MISCELLANEOUS

Little Rock, Ark.—Erection of \$250,000 annex to court house is being considered.

Redlands, Cal.—Citizens have voted \$82,000 bonds to purchase land for two parks.

Augusta, Ga.—City will at once rebuild hospital for negroes destroyed by fire.—Thos. Barrett, Jr., Mayor.

Chicago, Ill.—Bion J. Arnold has about completed plans for construction of subway system.

Mayfield, Ky.—Council has ordered numbering of all houses of city.

Whitesburg, Ky.—Perry County will erect \$12,000 jail and \$25,000 court house.

Donaldsonville, La.—Cost of repairing present market house has been estimated at \$3,500.

New Bedford, Mass.—Mayor Ashley has recommended purchase of auto for use of City Committee; purchase of auto truck for use of drain men is also being considered.

Grand Rapids, Mich.—Council will expend \$200,000 in purchase of park and playground sites.

Grand Rapids, Mich.—Council has adopted block system of numbering houses.

Grand Rapids, Mich.—Cost of building east side flood wall along Grand River has been estimated at about \$385,000 by City Engineer McCutcheon.

Manchester, N. H.—Committee on Lands and Buildings, Alderman V. W. Roy, Chairman, will recommend erection of annex to city hall.

Newton, N. J.—Board of Freeholders has voted appropriation of \$10,000 for repairing and remodeling court house damaged by fire.

Toms River, N. J.—Board of Freeholders is considering election on bonds for County Clerk's office.

West Orange, N. J.—Necessity of auto apparatus for both police and fire departments is being urged in annual reports of respective chiefs.

Binghamton, N. Y.—Purchase of auto police patrol is being considered.

Lockport, N. Y.—Bids will be asked by Chairman Burke, of Street Committee, for street cleaning; one, two and three-year contracts; contract to begin March 1.

Lockport, N. Y.—Street Superintendent Johnson has been directed to purchase 300 ft. of hose for the use of Street Department.

New York, N. Y.—Park Department will soon begin work on \$25,000 model playground building at Amsterdam ave. and 59th st. from plans by Architect Vidette, of Park Department.

Rochester, N. Y.—Board of Contract and Supply will soon ask bids for sprinkling 600 streets during coming season.

Watervliet, N. Y.—Mayor Hanratta is favorable to erection of city hall.

Cincinnati, O.—Council is considering purchase of \$3,100 40-h.p. auto for Water Works Superintendent Laidlaw.

Lexington, O.—R. M. Chatterton, Chairman Building Committee, is receiving information concerning building of town hall; planned to have business stores on first floor, with council rooms and executive offices in rear; also hall on second floor with seating capacity for 600 people, with stage; committee will be pleased to hear from architects who can send literature and information concerning such building.

Altoona, Pa.—Department of Health has recommended installation of modern 40-ton garbage incinerating plant at cost of \$25,000.

Franklin, Pa.—Board of Visitors to County Farm has recommended erection of workhouse.

Columbia, S. C.—City is considering installation of garbage destructor.—J. McNeal, City Engineer.

Dillon, S. C.—Architect W. A. Edwards Candler Bldg., Atlanta, Ga., has prepared plans for erection of two-story \$15,000 jail.

Corsicana, Tex.—W. G. Clarkson, city will prepare plans for remodeling and repairing jail; cost \$6,000.

San Antonio, Tex.—All bids have been rejected for remodeling Bexar County jail.

Brewster, Wash.—Erection of town hall will be considered.—W. M. Allen, Mayor.

Seattle, Wash.—Board of Public Works has approved plans for refrigerating plant alterations and enlargements at municipal hospital.

Milwaukee, Wis.—City has obtained option on from 500 to 600 acres of land on both sides of Milwaukee River for establishment of public park.

CONTRACTS AWARDED

Lexington, Ky.—To Henry Vogt, for collecting the garbage and operating city crematory.

Fall River, Mass.—Mayor Thos. F. Higgins has signed order revoking contract for collecting garbage awarded to Timothy Reagan and relieving him of bond, and awarding contract for a term of one year to Representative Isaac E. Willets, agent for A. H. Barnev, of Seekonk.

Philadelphia, Pa.—Building superstructure of Vine st. pier, to W. S. P. Shields, \$339,000.

Plainview, Tex.—Erecting city hall, to McRae Building Co., \$10,000.

Municipal Garage, Showing also a Number of City Automobiles

MUNICIPAL GARAGE AND AUTOMOBILE SERVICE

Louis Keeps Fifteen Machines in the City Garage at the Street Department Stables—Controlling Use of Automobiles to Prevent “Joy Riding”—Economies Effected by their Use in the Several Departments

By CHAS. CLAUDE CASEY

Motor conveyances are becoming popular for municipal work in St. Louis. In the last two years more than a dozen automobiles have been added to the city service, and a garage has been equipped with all modern conveniences for the care and housing of these machines.

The street department is using seven machines, two of them seven-passenger American Mors, and five one-seat Buicks. The water department is using two large machines, the president of the Board of Public Improvements uses one, the building commissioner one, public service commission one, fire chief one and the police department two. In addition, the fire department is using a motor fire engine, the hospital department is using three auto ambulances and the police department has one motor patrol wagon. The police department also uses a dozen motorcycles in its speed squad.

All of the machines, except those in the police and fire departments, are housed and cared for at the city garage. The

garage is in the yards of the street department stables on Forest Park boulevard at Vandeventer avenue. It is modern in every respect, houses the 15 machines without crowding, and provides for emergency repairs, cleaning, etc.

During the last few months Street Commissioner James C. Travilla, who has control of the garage, has worked out a system of reports which seems to have suppressed the “joy riding” tendency of some city officials and chauffeurs. A daily report is made in triplicate and signed by the man in charge, covering every machine, showing the exact times of the departure and return, miles traveled (as shown by register), number of gallons of gasoline and oil used, etc. Copies of the report go daily to the commission, the city comptroller and the president of the Board of Public Improvements. If a machine does not reach the garage as soon after it is released by an official as it should, or if it goes out when the official has not ordered it out, the record shows it, and if it goes out of its way to or from its destination the mile gauge tells the story.

B. J. TAUSSIG, Comptroller

FORM FOR DAILY AUTOMOBILE REPORT

All machines in the city service now bear the name of the department in plain letters, so that citizens may also see if the machines are used for carrying others than officials. Some months ago a machine which had been assigned to the department of the supervisor of city lighting, carrying two women, was damaged in an accident after midnight in a public park and the department head seriously injured. Soon after the accident the official tendered his resignation. The new department head stated he did not need a machine and it was transferred to the president of the Board of Public Improvements. Another machine from the water department ran over a boy while in charge of a chauffeur and while out of the garage without authority. These two accidents brought about the lettering of the machines and strict regulations at the garage to prevent joy riding.

The assistant street commissioner uses one machine in general inspection work, and carries a plain clothes police officer, instructed to make arrests for littering, obstructing or damaging streets, or other violations of laws likely to come to his attention. Wagons hauling dirt, ashes, etc., which have cracks or are so overloaded as to permit scattering of the material along the street are particularly watched. The occupants of this machine also keep a close watch on sprinkling contractors to see that they carry out their contracts. Fines last year aggregated about \$30,000, deducted from sprinkling contract bills, for failure to sprinkle as frequently as required.

The superintendent in charge of garbage collection, two sprinkling inspectors, the engineer of construction and the superintendent of street cleaning, all under the street commissioner, have one-seat Buick runabouts. It was found that these

machines would save enough in salaries of men whose services could be dispensed with to more than pay for all of the machines the first year. This argument proved so strong that objections which had been made by the city comptroller were withdrawn and the machines were purchased a year ago.

The health department last year saved the salaries of three ambulance drivers and the expense of feeding from four to six horses by the purchase of one motor ambulance, and liked the better service and the saving so well that two additional ones have recently been added. It is the intention of the hospital commissioner to replace all of the eighteen horse-drawn ambulances with motor-driven ones, probably six or eight machines being required. The police department has had the same experience with patrol wagons, the number of machines required being so much less that one or more sets of men, three shifts, were saved for each motor wagon added. The up-keep of the machines has also been found less than the expense of feeding and caring for horses.

The motor ambulances are kept at the city garage, which is located at about the center of the city, and answer all the long runs. The police department houses its own machines, as does also the fire department.

Construction work on the municipal bridge across the Mississippi river, big additions to the city sanitarium, city infirmary, and city hospital and other scattered public work have kept the machine of the Board of Public Improvements pretty busy. The Public Service Commission's Ford runabout has been used mostly by the engineers in gathering data in connection with the Union Electric Light & Power Company rate investigation and the service report on the street railways.

Inspection work requiring the presence of the building commissioner, where the individual inspectors could not serve the purpose, was the reason given for the purchase of the building department machine.

Many other machines have been asked for from time to time but have been refused so far. The hospital commissioner, the assistant health commissioner, the fumigating corps and others are among those who claim they could save the cost of machines in time and salaries.

Besides the regular work of the city machines, each one belonging to a certain department, all are occasionally used for special inspection work. The Municipal Assembly formerly had large livery bills to pay every year for taking committees to inspect streets in connection with street vacation, grade crossing and other legislative problems, but during the past year all of these trips have been made in city machines. Last summer when a campaign was being made for the outer park reservation district, several city machines carried parties of city officials, newspaper men and others on a number of whole-day tours

STREET DEPARTMENT STABLES AND MUNICIPAL GARAGE. ALSO FOREST PARK BOULEVARD, NEWLY PARKED

ound the hundred-mile circle to the west of the city. City officials also have frequently had occasion to entertain visiting officials who wished to see parks or street improvement work. and city machines have frequently been used for that.

Since the purchase of the water department machines, Columbia Bottom road, north of the city to the Chain of Rocks water works plant, has been improved by the city until it now rivals some of the city boulevards as a pleasure drive. The drive is about three miles long, extending from the end of Broadway, eight miles north of the Court House, to Chain of Rocks park.

SAMPLING FUEL GAS

In making a complete test of steam plants connected with pumping stations, lighting stations and other power plants, or the coal used in such plants, one of the important steps is the sampling of the flue gas. A method of collecting such samples which is simple and at the same time is believed to furnish fair average samples even for large flues is described in a Bulletin of the Bureau of Mines, in which Messrs. D. T. Randall and Henry Kreisinger described experiments conducted by them in the use of North Dakota lignite as a fuel for power plant boilers.

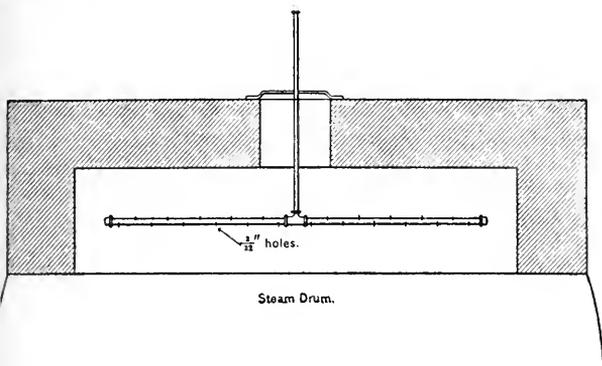

FIG. 1.—SECTION THROUGH UPTAKE SHOWING LOCATION OF FLUE GAS SAMPLER

The general features of this simple contrivance and its location are shown by the accompanying illustration, the device being placed in the uptake about 18 inches below the damper. The gas sampler is a standard 3/4-inch iron pipe closed at both ends with caps and having two rows of small (3-32 inch) holes four inches apart drilled in a staggered way on two sides of the pipe. This 3/4-inch pipe is connected at the middle to a 1/2-inch pipe, which extends out of the setting and leads down to within three feet of the floor, where it is connected to a steam ejector, as shown in Fig. 2. The sample of gas for chemical analysis is taken through the petcock shown. The object of the steam ejector is to induce a continual stream of gas to flow

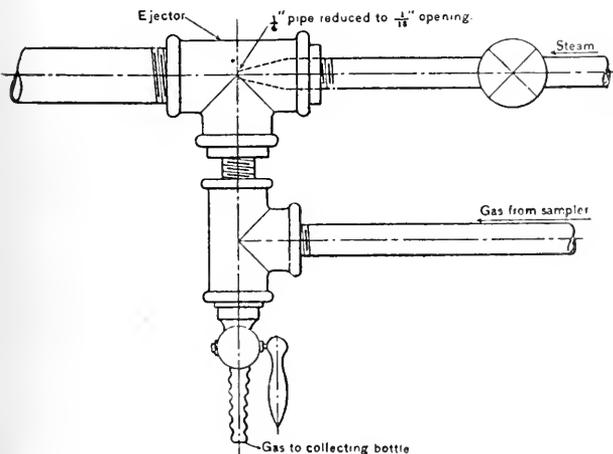

FIG. 2.—STEAM EJECTOR AT END OF PIPE FROM GAS SAMPLER

from the uptake through the sampling apparatus. The construction of the 3/4-inch pipe placed in the uptake permits of drawing the gas from a large area, so that the sample drawn represents fairly well the average composition of all the gases passing through the uptake.

During a test regular samples were taken through the sampling device during a period of about 30 minutes, the analyses of the samples determining the average chemical composition of the gases during that time.

THE MAYOR'S CABINET

By DARIUS A. BROWN, MAYOR OF KANSAS CITY

The inauguration in Kansas City, Mo., of what has come to be known as the "Mayor's cabinet" was prompted by a desire to accomplish several purposes. In the first place, where there are several branches or departments of the city government there has always been a tendency for each department to consider itself an independent body, and there has been lack of co-operation by the various departments, and it was thought that in order to have the greatest efficiency there must be, as nearly as possible, perfect co-operation by these departments.

In the next place, it is not only essential that the heads of departments should be thoroughly familiar with the service sought to be rendered by that department, but it is also essential that the chief executive should be as familiar with the activities and details of each of the various branches as possible.

It was to realize these objects that on the third Monday after my entering upon the duties of the office of Mayor, I requested the Chief of Police, the City Engineer, one member of the Board of Police Commissioners, the President of the Public Utilities Commission, the City Auditor, the City Comptroller, the Speaker of the Lower House of the Common Council, a member of the Upper House of the Common Council, the President of the Board of Fire and Water Commissioners, the President of the Board of Public Welfare, the President of the Board of Park Commissioners, a member of the Hospital and Health Board, the Municipal Librarian, the President of the Board of Civil Service, the City Counselor and the City Treasurer to meet at the Mayor's office at ten o'clock a. m. At that time I stated to those present that it was my desire to hold these meetings each Monday morning at ten o'clock sharp, and that I desired each member of the conference during the week to make notation of such suggestions as might occur to him in regard not only to the transaction of the business of his particular department but as to the transaction of the business of every other department of the city government. At each of these meetings each member of the conference is called upon to offer for discussion such suggestions as may occur to him. The matters are then thoroughly discussed by all present and the consensus of opinion arrived at as to the best policy to pursue, and then the matter is referred to the particular department having jurisdiction over it, accompanied by the recommendation of the conference.

Many valuable improvements in the municipal service have been secured as the result of suggestions and discussions; many irregularities and abuses have been detected and remedied; there has come to be complete harmony and co-operation between the various branches of the city government, and the executive officer of the city has received invaluable assistance and has become thoroughly familiar with the activities of each branch of the municipal service. Matters of legislation, of municipal service, of public improvements, and of every kind and character connected with the municipal government have been referred to the special committees, who have furnished exhaustive reports as to the law and the facts, on which reports action has been taken.

After about nine months of these conferences it occurred to me that valuable suggestions might be received from men who were entirely disconnected with the city government. In other words, that suggestions, complaints and criticisms should be received from citizens engaged in the civic and industrial life of

the city. For that reason I requested the following civic and industrial bodies of the city to select one of their number as an accredited representative at these weekly meetings: The Commercial Club, City Club, Kansas City Fruit and Produce Exchange, Board of Trade, Industrial Council, Jackson County Medical Society, Kansas City Homeopathic Society, Team Owners' Association, Real Estate Exchange, Master Builders' Exchange, Kansas City Implement, Vehicle and Hardware Club and the Kansas City Press Club. These civic and industrial organizations have very gladly and kindly responded to the request and have selected one of their members to appear at these meetings, offer suggestions and participate in the discussions. In this way not only has the Mayor been able to take advantage of the advice and counsel of the heads of departments and the business men of the city, but the head of each department has had the benefit of the counsel and advice of all of these men.

These conferences have proven of incalculable benefit to every branch of the city service.

WATER RATES IN MANY CITIES

An Analysis of Flat and Meter Rates in Two Hundred and Forty-nine Cities—Very Wide Range of Rates

The water rates charged by companies and municipal plants in a large percentage of the cities of the country have been collected and tabulated by Mr. Frank C. Jordan, Secretary of the Indianapolis Water Company, who has recently presented in a paper a table of such rates revised to November, 1910. These show the rates in more or less detail, but it might be instructive to select two classes of rates, the maximum meter rate (since it is the maximum rate which is ordinarily paid by the majority of consumers) and the rates for a house of six rooms. Taking first the meter rates, we find these ranging from a minimum of 4 cents to a maximum of 60 cents. An inspection of the accompanying table shows the rates pretty well scattered over this extremely wide range, although the lowest rate given by more than ten companies or cities is that of 10 cents per thousand gallons, which rate was reported by seventeen cities. A 15-cent rate was reported by fourteen cities, a 16-cent rate by eleven cities, a 20-cent rate by twenty-nine cities, a 25-cent rate by thirty-six cities, a 30-cent rate by thirty-one cities. A rate lower than 10 cents was reported by twenty cities, between 10 and 15 cents by nineteen cities, between 15 and 20 cents by twenty-nine cities, between 20 and 25 cents by ten cities, between 25 and 30 cents by eleven cities, between 30 and 35 cents by thirteen cities, between 35 and 40 cents by eleven cities, between 40 and 50 cents by eight cities and 60 cents by one city. It is seen that the rates between 15 and 25 cents, both inclusive, seem to represent those most commonly used, 118 cities being found between these limits, or almost one-half of the entire number.

The table of flat rates was compiled using as a unit a six-room house having hot and cold water at the kitchen sink only. Few rate cards agree entirely on any unit of this kind, but an effort was made to reduce all to this common basis as nearly as could be judged from the rates in the several cities. Twenty-seven of the cities in the list sold water by meter only, and twenty-four others did not furnish sufficient data to enable a unit of this kind to be calculated. Of the one hundred and ninety-eight whose rates for this unit were given by Mr. Jordan's table, it is seen that fifty-three charge \$6.00 for such a house, the next being the \$5.00 rate, which is charged in thirty-six cities; and the only other rate common to more than ten cities is the \$4.00 rate, found in fourteen cities. The rates between \$6.00 and \$10.00 contained odd cents and fractions in a number of cases, and in preparing our table from the itemized table we have reduced all rates to the nearest 25 cents and grouped them accordingly.

In the second table about 60 per cent of the cities are found to have rates between \$4.00 and \$6.00, both inclusive. The maximum rate is nine times the minimum. There is still greater

variation in the meter rates, the maximum of these being fifty times the minimum.

In the cities where meter rates only are charged, with no flat rates, the following rates are each found in one city only: 1 cent, 10 2/3 cents, 13 cents, 14 cents, 16 2/3 cents, 19 cents, 21 1/3 cents, 22 2/3 cents, 26 cents, 33 cents, 35 cents, 48 cents. Fifteen cents was found in three cities, 16 in two cities, 20 in three cities, 25 in four cities.

In discussing these Mr. Jordan stated that he found that practically all cities which have installed water filtration plants during the past few years have found it necessary to increase their rates in order to meet the increased expenditures of interest and depreciation on capital investment and the additional cost of operation. This he found to be especially true in the case of Columbus, Ohio, Pittsburg and McKeesport, Pa. The meter rate per 1000 gallons in Columbus is 12 cents maximum and 12 cents minimum; that in Pittsburg is 18 cents maximum and 10 cents minimum; in McKeesport 26 2/3 cents maximum and 9 1/3 cents minimum. These rates have been advanced during the past two or three years from the following maximum and minimum rates previously in force: Columbus, 8 cents straight; Pittsburg, 18 cents and 6 cents; McKeesport, 20 cents and 6.4 cents.

Comparing rates where the water is furnished by a private company with those where the plant is municipal, we find the meter rates to average 30 cents where the water is supplied by private company and 20 cents where supplied by municipal plant. In the flat rates the average rate for a six-room house is \$7.00 where supplied by private company and \$6.05 where supplied by a municipal plant. This would appear to indicate that water can be furnished more cheaply by a municipal plant than by a private company; but we have several times called attention to the unreliability of any such comparisons, owing to the fact that a part of the operating expenses, sinking fund or other overhead charges may not be provided for in the municipal rate; and to the general condition, found in private as well as municipal plants, that the rate is seldom based upon any intelligent and scientific calculation, and that in the case of many private plants but of perhaps the majority of municipal ones, water is furnished for public buildings, street flushing, etc., without an charge against the municipality.

METER RATES IN 249 CITIES

Rate Cents per 1,000 Gals.	No. of Cities.	Rate Cents per 1,000 Gals.	No. of Cities.	Rate Cents per 1,000 Gals.	No. of Cities

SUBSCRIPTION RATES

United States and possessions, Mexico, Cuba.....\$3.00 per year
Other countries..... 4.00 per year
Entered as second-class matter, January 3, 1906, at the Post Office
at New York, N. Y., under the Act of Congress of March 3, 1879.

CHANGE OF ADDRESS

Subscribers are requested to notify us of changes of address,
giving both old and new addresses.

Contributions suitable for this paper, either in the form of
original articles or of letters discussing municipal matters, are
accepted and paid for.

Subscribers desiring information concerning municipal matters
are requested to call upon MUNICIPAL JOURNAL AND ENGINEER,
which has unusual facilities for furnishing the same, and
to do so gladly and without cost.

A Semi-Official Municipal Body

It often happens that more beneficial service is rendered
in governmental affairs by non-official than by official organiza-
tions, especially when it is desirable to lift the affairs out of
the worn ruts. In some cases the non-official organization
not only antagonizes the officials, assuming that they are wrong
in their intentions as well as in their actions. But we doubt if this
assumption is ever correct concerning the majority of officials,
we believe that if the well-intentioned ones should receive as
much active support and encouragement from the citizens as
the others, our city governments would be greatly im-
proved. To criticize and "muck-rake" gains more publicity
and notoriety for a civic organization than to co-operate
with the officials, but the latter is more apt to secure actual re-
sults, besides offering less discouragement to unselfish, capable
men who might be induced to serve the public in official
positions.

There is described on another page a semi-official body con-
nected with the city government of St. Louis which was
organized with the purpose of securing a recognized co-
operation such as we have referred to, but with the difference
that here the citizen organizations and officials advise to-
gether through the initiative of the latter rather than of the
former; and that the conferences, being held regularly, do not
imply an intention to adversely criticize, but merely a willing-
ness to receive and give opinions and advice on any questions
of policy and conduct which may arise.

There are other objects of this "Mayor's cabinet," one of
the most important being the co-operation among the city
departments themselves; and it is probable that this will serve
to increase the effectiveness of the government even more
than will the support of the citizens. But the latter is the
more novel, and should help to stimulate in the officials that
civic patriotism without which no amount of improvement in
methods will prove effective of results.

Water Rates

EVERY few days we receive an inquiry for data concerning
water rates in various cities for water and street lighting from
some subscriber, whose object is to use such figures as a basis
for deciding upon the justness or otherwise of rates charged
or proposed by public service corporations. Such figures are
available, and undoubtedly have their value in arriving at
decisions on this point, but they should be taken as the last
source of information used for this purpose rather than the
chief or only one, being employed for their corroborative evi-
dence only. In fact, owing to the unscientific way in which
most water rates are made up, it is doubtful whether it may
not be dangerous to use them in any capacity at all; since only
a complete investigation of each case can determine whether
the rate in question pays an adequate return upon the investment,
or to what extent the corporation receives other remuneration,
as from hydrant rates or in the form of the franchise granted.
Not only is this method of fixing rates by comparison with those
in other cities inadequate and objectionable because of the
doubtful character of the latter, but the conditions in various
cities on which rates should be based differ so greatly that
there may be excellent and justifiable reasons why rates in one
city should be two or three times those in another.

We can hardly believe, however, that conditions could be
so different as to warrant the rates in one case being fifteen
times those in another. And yet data given on page 226 show
that this is the case with the meter rates listed there; two
cities having a rate of 4 cents per thousand gallons, while one
city has a rate of 60 cents. Moreover, thirty-seven cities are
found to have rates of 10 cents or less, while sixty-six have
rates of 30 cents or more. The wide divergence illustrated
in this table not only shows how useless it is to endeavor to
determine what a corporation ought to charge, by comparing
its rates with those in other cities, but it would seem to offer
almost proof positive that existing rates cannot all of them
have any scientific foundation, but that some must be so low
that the department or company must be operating at a loss,
while others are so high as to be warranted only by extra-
ordinary difficulties and expenses in construction and opera-
tion, if at all.

It would seem from this table that 20 cents was about the
average meter rate in the 249 cities referred to, but we doubt
whether any one in the country is capable of saying whether
this is the average of what should be the legitimate charges in
these same cities. There would seem to be no short cut to
the fixing of proper rates; but the only defensible way is to
adopt the business method of determining what the service costs
(including in this all overhead charges), allowing for a reason-
able profit in the case of a private corporation, and then to ad-
justing rates that they may serve to place and keep the depart-
ment or company on a sound financial basis and at the same
time give as nearly uniform justice to all consumers as is
possible.

EMSCHER TANKS FOR ERIE

For the Classification of Sewage to be Discharged Into Lake Erie—Detail Plans for Fifteen Million Gallon Plant

THE City of Erie, Pa., is quite completely sewered, but the system discharges at present at a number of points along the waterfront, most of them in Presque Isle Bay, a portion of Lake Erie almost entirely surrounded by the city on the south, the peninsula of Presque Isle on the west and north and points of land partly natural and partly artificial at the east end, at which point a channel between breakwaters is provided for the passage of shipping from the lake to the docks along the bay waterfront. There is also considerable filth which finds its way into a stream called Mill creek, which approximately bisects the city into an eastern and western half.

There has resulted from this a very serious condition which makes it necessary for the city to withdraw from Mill creek the pollution which enters it and also to prevent the nuisance now being created in the harbor by sewage discharged among the docks. In working out these problems the solution of the former appeared to be comparatively evident and simple—the construction of an intercepting sewer through the valley of Mill creek. This was decided upon some time ago, and most of this intercepting sewer has already been constructed, beginning from a point about five blocks back from the waterfront and terminating well out toward the limits of the settled part of the city. Plans for the prevention of a nuisance along the waterfront were prepared last year by City Engineer B. E. Briggs, Mr. Rudolph Hering being called in as consulting engineer. These plans were approved (with one or two minor provisions) by the Pennsylvania State Board of Health on December 29 last. From the Board of Health permit and the report of Engineer Briggs, supplemented by additional information from the latter, we have prepared the following description of the proposed plan:

In addition to the intercepting sewer along Mill creek it is proposed to build another interceptor following along the waterfront east and west from Mill creek, to receive the dry weather flow of all of the sewers which at present discharge there. The west waterfront interceptor will join the Mill creek interceptor near the outlet of this creek into the harbor; and an east interceptor will join the short trunk sewer formed by the combination of the two former, a short distance nearer the lake. This east interceptor will drain land so low as to necessitate pumping. Just below the junction of these three interceptors will be located a plant for treating the sewage. The effluent from this plant will be carried by a long sewer outlet, which will be conveyed into the lake to a point where there is 26 feet of water, this point being 3,800 feet off shore and 4,500 feet from the entrance to the harbor, at which point the effluent will be discharged through a number of outlets into Lake Erie.

The site selected for the purification plant is a piece of land bordering the shore of Presque Isle Bay at its eastern extremity and lying between the bay and the junction of the interceptors. The general features of the purification plant are a combination screen and grit chamber and three pairs of settling tanks and sludge drying beds. From the junction of the intercepting sewers a concrete aqueduct will be carried across the creek with a 26-foot span, and the sewage, after passing over this, will flow in a northerly direction through a concrete culvert under the railroad tracks to the grit chamber immediately north of the tanks.

At the entrance to the grit chamber is a screen of bars with 2-inch slots between them. The grit chamber, which is a rectangular trough of concrete 94 feet in length, is divided into three compartments by two partition walls running parallel for almost the entire length, but coming together and forming V-shaped ends to the middle compartment. This arrangement is for the purpose of permitting the sewage to flow into either of

the two outside compartments while the other one is being cleaned and also to provide a middle chamber for taking care of the increased discharge from the sewers during rain storms. At the two ends of the grit chamber, extending from the V-shaped ends just described, there are short partition walls dividing the grit chamber into two compartments only; and at this point at the upper end of the grit chamber there is, in each of these compartments, a $\frac{3}{4}$ -inch bar screen. At the end of the chamber each of these two compartments is 5 feet 1 inch deep by 8 feet 3 inches wide, but narrows to 6 feet 3 inches where the third compartment is introduced; this middle compartment being 3 feet 6 inches wide. During normal flow of sewage the depth in the grit chamber will be approximately 3.3 feet and the velocity 0.9 foot per second.

The object of the grit chamber is to intercept the large floating matters and to collect the sand and gravel which may reach the sewer and which might otherwise find its way into the sludge-collecting wells of the Emscher tanks and interfere with their proper operation. It is proposed to roof over the grit chambers in order to afford protection for the laborers in cleaning them and to prevent a nuisance from the odors.

From the grit chamber the sewage passes through a short length of rectangular trough 4 feet by 3 feet 2 inches, which carries it to the settling basins. Of these basins there are three, each of which is divided into two sections by a submerged baffle wall, which rises to a point $2\frac{1}{2}$ feet below the surface of the sewage in the basin. Each double basin is 28 by 28 feet at the top, with walls slightly battering for a depth of about 20 feet, and a batter of two to nine for an additional 9 feet, below which there is an inverted cone shaped bottom the apex of which is 6 feet below the base. Beginning a short distance below the top in each basin are two slabs, one sloping from each side on a slope of 1 to 1.2, forming a V-shape

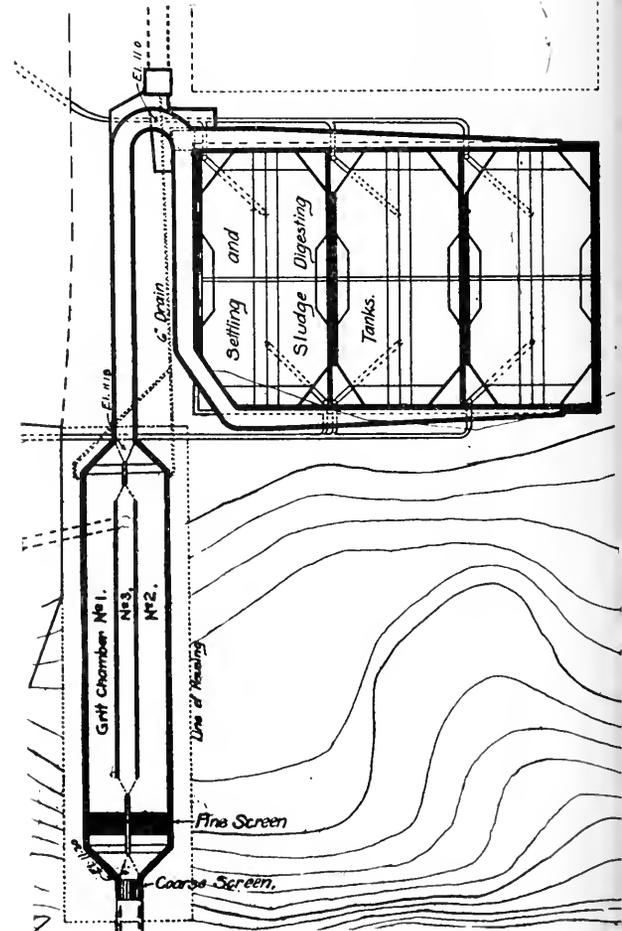

FIG. 1—GENERAL PLAN OF PLANT

ough in the top of the basin. These slabs (which may be constructed of wire glass, or possibly of reinforced concrete) do not entirely come together at the bottom, but their bottom edges are 4 feet 8 inches apart, leaving a slot of this width through the center of the basin. Suspended in this slot is a low horizontal bar of triangular cross-section, with its base horizontal, 5 feet in width and 20 inches below the bottom of the inclined slabs. This leaves a space between the bottom of each slab and the side of the hollow bar of about 1 foot. These

basins are designed to act as Emscher tanks, the principle of which has been described in previous issues of MUNICIPAL JOURNAL AND ENGINEER. The suspended matter in the sewage,

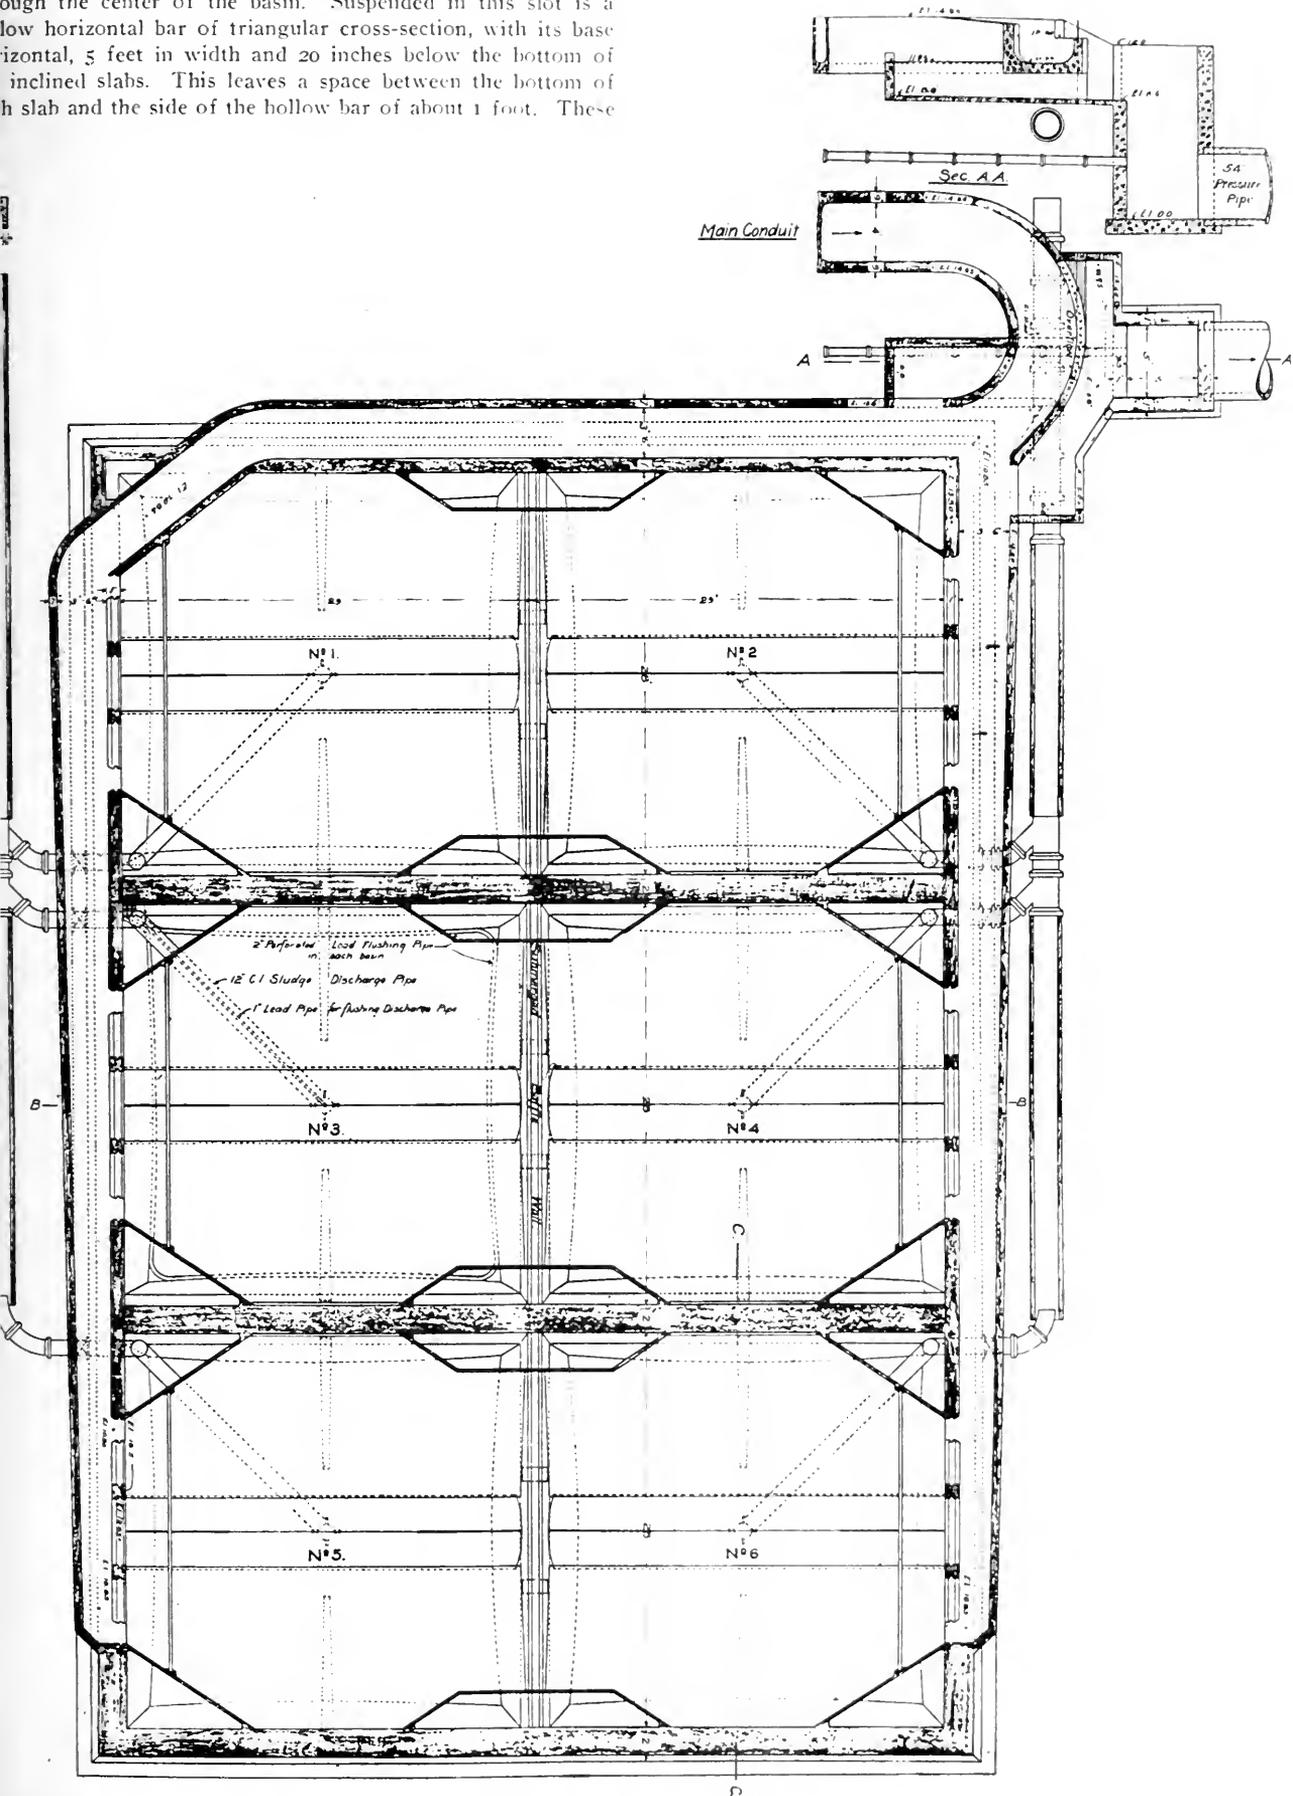

FIG. 2—GENERAL PLAN OF EMSCHER TANKS

in settling down, falls upon the inclined slabs and, owing to the smooth surface and steep pitch of these, slides off of them and through the 1-foot slots at their lower edges into the bottom of the basin, which acts as a sludge well. The purpose of the hollow horizontal bar referred to is to prevent the gases which form in the sludge well from rising up into the trough, this being accomplished through the protruding of the base of the bar 2 inches beyond the bottom edge of each slab; the gases therefore rise up on the under side of the slabs rather than rising through the slot.

Each of the sludge wells (called "sludge digesting tanks" on the plan) has a capacity of 6,850 cubic feet—that is, 13,700 cubic feet to each double basin, or 41,100 cubic feet for the three basins planned for in the first installation. It is estimated that this furnishes sufficient capacity for holding four months' deposit of sludge. The settling flumes, or upper trough-like portions of the tanks, have a total capacity of 54,800 cubic

feet, which would insure a sedimentation period of 40 minutes during normal flow, which is estimated to be 23 cubic feet of sewage per second; and a sedimentation period of 24 minutes during a rain storm, when it is estimated that 38 cubic feet per second will reach the plant. It is not supposed, of course, that this estimate would provide for all of the run-off. In order to limit the quantity of storm water which may enter the intercepting sewers, an overflow is provided at each connection between the existing combined sewers and the proposed interceptors. Also, to guard against excessive floods, it is proposed to provide an overflow in the side of the aqueduct which carries the sewer across the creek and another at the well between the grit chamber and settling basins.

To insure the equal distribution of sludge throughout the entire length of each basin the channel which distributes the sewage to the several tanks is so arranged that, by manipulating gates in this feeder trough, the direction of flow through

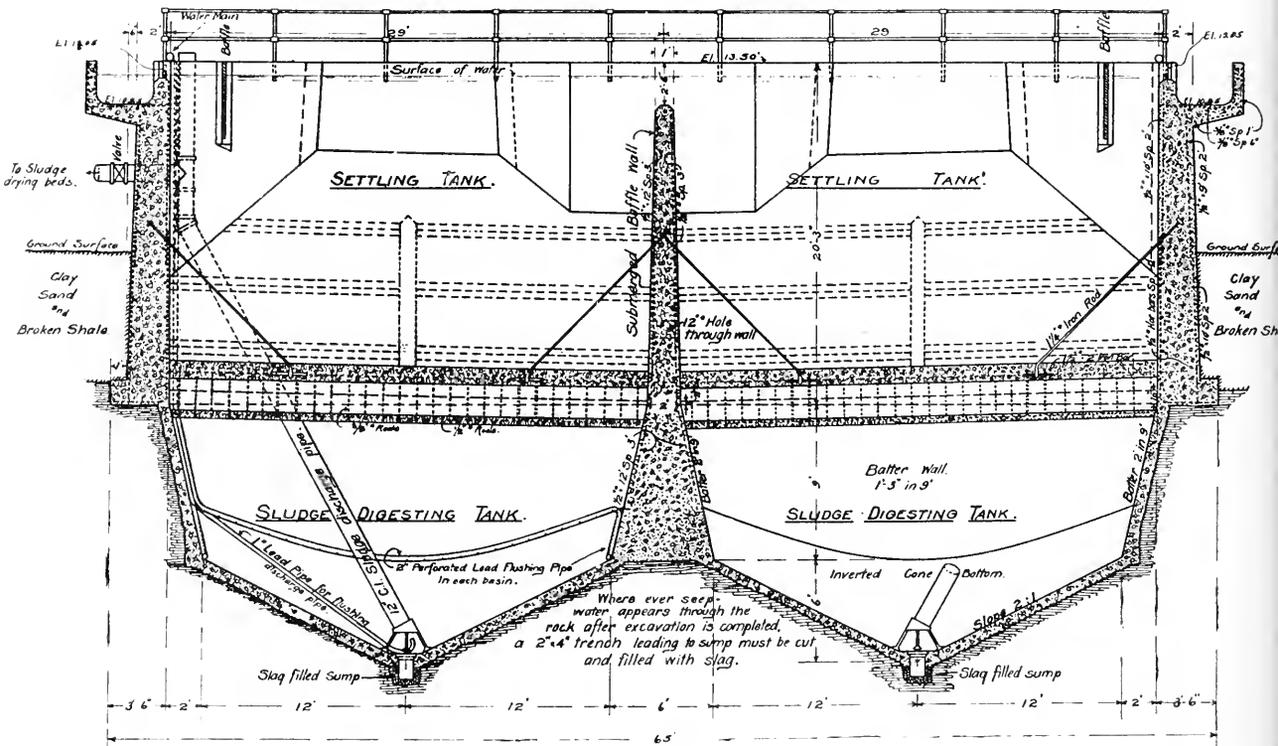

FIG. 3—SECTION ON B B OF FIG. 2

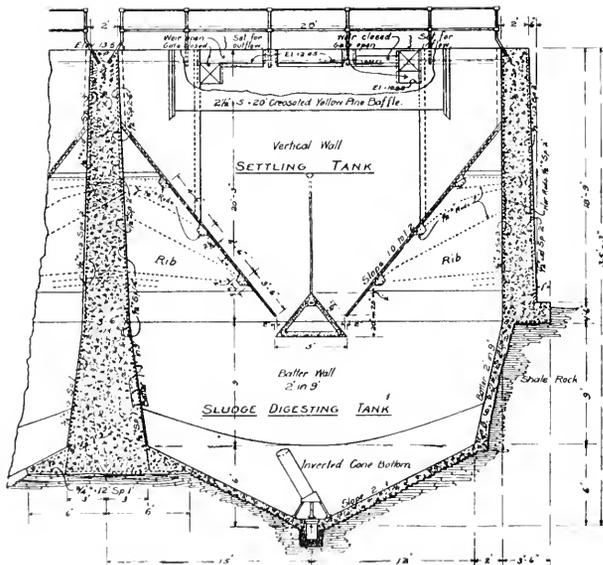

FIG. 4—SECTION ON C C OF FIG. 2

the basins may be reversed, the sewage entering from either end of the tank and discharging at the opposite end. Each tank is provided at each end with gates and weirs for regulating the inflow and outflow of the sewage.

The effluent, after flowing through the settling trough portion of a pair of basins, is discharged into a well from which a 54-inch pipe extends in a northeasterly direction, passing for a distance of 2,500 feet through the grounds of the Soldiers' and Sailors' Home and thence for 5,500 feet under the lake to an outlet in 26 feet of water. At the end of this outfall pipe is placed a cap which can be removed should it be decided any future time to extend its length. At the end this outfall branches into two dispersion pipes, each 40 inches in diameter at the main outfall and tapering to 26 inches at the outlet. One of these dispersion pipes extends 80 feet to the north and contains 53 dispersion orifices in its upper quarter, each orifice being 5 inches in diameter. The other dispersion arm extends to the east 60 feet and contains 40 dispersion orifices.

The sewer invert at the junction of the interceptors is 13 feet above mean lake level, which permits the use of the amount of fall in the purification plant and as a head to force the sewage through the outfall main. This outfall main starts at the well with an invert elevation of zero and is laid on

continuously descending grade to its outer end. Observations conducted by City Engineer Briggs in pleasant weather show that the currents at this point may be in any direction, depending entirely upon the strength and direction of the wind. When the wind is from the west the surface and lower currents travel together; when the wind is from the east they move in opposite directions. This condition would seem to favor general dispersion, and it was concluded that no more favorable point for the discharge of the clarified sewage could be found within a reasonable distance of the disposal plant. The city water works intake is five miles distant and on the inner side of the peninsula known as Presque Isle.

The sediment which collects in the sludge digesting tanks—at least, the bottom portions of the Emscher tanks—will be removed after it has been well digested, a portion from the bottom of the tank being drawn off from time to time onto sludge drying beds. A 12-inch pipe, placed inside the tank, leads from the bottom of each digesting tank, its lower end resting upon a cast iron pedestal at the center of the bottom and its upper end resting against and attached to the upper portion of one side of the tank, where, at a point 5½ feet below the surface of the sewage in the tank, it is continued horizontally through the wall. This is the sludge discharge pipe, and the 5½-foot head suffices to force the sludge through this pipe onto the sludge beds; the discharge through the pipe being controlled by a valve just outside the tank.

The sludge drying beds are designed to occupy an area of 400 square feet; to be underdrained with 3-inch drain tile laid in lengths 6 feet between centers and covered with 1 foot coarse cinders.

The clarification portion of the plant is planned with a view to future extensions which would double its capacity. The layout of the plant, from the junction of the intercepting sewers at the end of the dispersion pipes in the lake, is estimated at \$10,000; which estimate does not include the cost of the four acres of land on which the plant is to be located.

Concerning the disposal of the sludge upon beds, the State Board of Health, in its permit for constructing the plant, states:

The proposed disposal of the digested sludge is looked upon with some apprehension. It is problematical to what extent bacterial activity will destroy the organic matter in the sludge. Experiments have been conducted in Erie to determine the best method for Erie's sewage. If the processes were impeded for some unknown reason there would likely be a nuisance accompanying the proposed drying out of the sludge. The site selected for the sewage works is not over 1,000 feet from the lake. It is in a section of the city devoted to manufacturing pursuits and adjacent to land which in the future will be used for dockage purposes. The only other available site for sewage works is that on Presque Isle, and the cost of works to convey the sewage to this point would be greater than the direct cost of the disposal works proposed. It is feasible to dry out the sludge taken from the digestors in mechanical presses and to dispose of the matter by combustion. The local authorities are now considering the destruction of the city sewage by cremation. The practicability of erecting the crematory on the land bought by the city for the sewage works could be considered in connection with its possible utility as an adjunct to the sewage disposal works. . . . The Emscher process has been tried out in practice in Europe sufficiently to have established it as worthy of careful consideration. However, the degree to which Erie sewage may be treated with success by this process is problematical. The cost of erecting a small experimental station and of conducting analytical tests of the process at Erie would be small and the observations made by the experiment would be of great benefit to the city. Practical results should accrue that would make the design or the application of the design of the tank to Erie's needs one of certainty. The State Department of Health does not wish to discount the merits of the plan now proposed, but believes that the city should go somewhat further with the study of its disposal problem before deciding definitely and finally on definite details for the construction of the works.

It is probable that Council will in a short time arrange for the construction of such an experimental plant early in the coming year and the conducting of such experiments throughout the remainder of the year and possibly longer.

BITUMINOUS CONCRETE ROADWAYS

At the convention on January 24 of the New Jersey State Association of County Engineers the president of the association, Mr. Fred J. Epple, Engineer of Mercer County, discussed the matter of bituminous concrete for road construction and the patents thereon.

As to the desirability of this form of pavement, he stated:

"After due consideration I am prepared to place myself unqualifiedly upon record in stating that a form of construction calling for the use of a mineral aggregate, so proportioned as to size as to give the greatest possible degree of density and which provides for the mechanical coating, while hot, of said aggregate with the required amount of a first-class bitumen of the proper consistency will produce, when laid upon a good base, an ideal wearing surface for either new or renewal construction work. I will not even qualify this statement by referring to the question of initial cost. In my judgment, any reasonable difference in first cost will be more than balanced in a very few years by its superior conditions during all seasons of the year and the undisputed increased length of service it will give; and these advantages will, without doubt, result in the end in an actual saving in total cost when compared with other forms of construction."

It is to be borne in mind that in making this statement Mr. Epple refers to roads and not to city pavements.

The recent decision of the Circuit Court in the case of Warren Brothers against the City of New York, which was reported in our issue of December 21, 1910, is discussed by him. He quotes from the report the statement that "Any one using a Warren pavement will infringe, no matter how the pavement is produced"; the method of production especially referred to by the court being that of using run-of-crusher stone instead of actually proportioning various sizes of aggregate. Mr. Epple states:

"It would seem from this broad and sweeping opinion of the court that any form of pavement composed of mineral aggregate so proportioned as to size as to produce a mass having 21 per cent or less of voids at the time of construction, or which will at any later date constitute a mass having this percentage of voids, even if this latter condition be due to changes of temperature and the action of forces over which the contractor or owner has no control whatsoever, would constitute an infringement upon the Warren patents."

Mr. Epple stated his belief that all engineers would admit that perfection in road paving composed of mineral aggregates would approach perfection in proportion as they approach maximum density, and that the paramount principle was grading to produce such density. If the opinion of the court is upheld by the higher courts, this class of roadway could not be used in anything approaching a condition of maximum efficiency without infringement. The speaker suggested, as a remedy for this, that States and counties should enter directly into agreement with the owners of the bitulithic patents, paying royalties to cover all work in such State or county under such specifications as the several engineers might think best to adopt.

Only in this way, he thinks, can the engineer be free to prepare specifications calling for whatever quantities of binder, sand and stone he may consider necessary to produce the best results; and in road work, as in other engineering work, there is a general feeling that specifications rather than trade names should form the basis of awarding contracts for either materials or construction. In fact, in several States it is required by law that the engineers prepare specifications on which it is possible for more than one or two to present competing bids for all kinds of public work.

Should the decision referred to be sustained by the Court of Appeals and the Supreme Court there is a question as to how far-reaching its effect will be; whether gravel taken directly from the gravel bank and mixed with bituminous filler, for example, would not be an infringement. Considering the vast amount of work of this character which is being constructed and is contemplated in all parts of the country, this decision would seem to be one having the most general importance of any which may be before the court.

NEWS OF THE MUNICIPALITIES

Current Subjects of General Interest, Under Consideration by City Councils and Department Heads—Street Water Works, Lighting and Sanitary Matters—Fire and Police Items—Government and Finance

ROADS AND PAVEMENTS

Sandstone Best Paving for Use on Hills

Beloit, Wis.—“Sandstone paving for steep hills is certainly the best preventive for slipping that I know of,” said Robert Caldwell, City Engineer, after returning from Milwaukee, where he inspected the stone used there. “I rode up a hill about as steep as our own St. Lawrence avenue hill on a wagon with an immense load drawn by three horses and the horses’ feet didn’t slip half an inch before they got a hold on this stone,” he said, pointing to the sample of sandstone with which the Council is contemplating paving certain Beloit hills. The stone is not cheap, says the City Engineer, but it does have the great merit of being the only paving for hillsides on which horses will not slip. Mr. Caldwell suggests that it is not necessary that the entire roadway be covered with the sandstone block, but a strip sixteen or twenty feet wide down the center of a hill could be paved with sandstone and the sides with ordinary brick.

Build Two Miles of Walk in Day

Clifty, Tenn.—In accordance with plans adopted at the mass meeting held here on the night of Jan. 14, the citizens of this place turned out February 1 to build sidewalks over the town. More than one hundred men and a number of boys volunteered to do a good day’s work, and thirteen wagons and teams were gratuitously provided for the project, and the work was vigorously and systematically prosecuted. Most of the men were mine workers, and had their own tools. A rain interrupted the work and it was completed a few days later by the volunteers. As a result, Clifty now has over two miles of sidewalks.

Report of Erie Grade-Crossing Elimination

Erie, Pa.—At a recent Council meeting Consulting Engineer George H. Kimball explained the final plans for the elimination of grade crossings. The main points covered by the report follows:

Total undivided cost, \$1,421,682.36.

Location of new passenger station between Peach and State streets with subway entrance.

Elevation of main tracks at Peach street, nearly eight feet.

Number of tracks—Three main tracks on each side and three tracks for local trains at each end of union station.

Space allotted to railway use—All property between Fourteenth and Fifteenth streets.

Final report placed on record at the city hall is accompanied by plans and includes the preliminary report made to councils Aug. 27, 1910

Much Street Work Done in Wichita

Wichita, Kan.—City Engineer Bert C. Wells advises that 1910 has been a banner year in public improvements in Wichita, and he doubts if any city of equal size—55,000 population—has done so much. The record of the work done is as follows:

Asphalt pavement: 12.88 miles constructed at a cost of \$587,693.55.

Bitulithic pavement: 4.17 miles constructed at a cost of \$195,527.22.

Brick block pavement: 3.13 miles constructed at a cost of \$128,899.42.

Total, with other kinds of pavement and work done on uncompleted contracts, 20.8 miles, and a total cost for pavement work of \$1,018,989.73.

A reinforced concrete dam was completed across the Little Arkansas River at a cost of \$24,469.29.

Thirty-three miles of sidewalk built; 10½ miles of curb built, exclusive of curb built in connection with the pavement; 5.6 miles of gutter built, exclusive of gutter built in connection with the pavement.

Sanitary sewers: 23.6 miles constructed at a cost of \$134,839.86.

Storm sewers: 2.5 miles constructed at a cost of \$43,984.81.

Total expended for sewers in 1910, \$178,824.67.

Total amount expended under the supervision of the Department of Public Improvement for the year 1910 was \$1,299,507.03.

Expenses of the department, \$35,865.24.

Sewer contracts for the coming year, amounting to approximately 50 miles, have already been ordered. Pavement contracts and petitions granted, 20.4 miles of pavement to be built in 1911.

In view of this record, the city’s motto, “Watch Wichita Win,” goes without saying.

Paving in Montgomery in 1910

Montgomery, Ala.—Last year Montgomery laid 4.5 million feet of paving. The amounts in linear feet of roadway of each kind laid is as follows: Asphalt, 17,320; wood block, 90,000; mineral rubber, 446; gravel, 3,900; bitulithic, 849; granite block, 342; gravel roadway, 1,300. The linear feet of curbs laid was 48,379; gutter, 7,248.

New Riverside Drive Section Open

New York, N. Y.—The section of the Riverside Drive extension between 145th and 158th streets has been completed and opened. There was no ceremony to mark the completion of what is one of the most important sections of the work and which has been six years building, under the direction of George Stuart Williamson as chief engineer. It includes the steel cantilever structure which carries the driveway over the New York Central tracks between 153d and 155th streets. The construction work was done by J. C. Rodgers. The total width of the roadway from curb to curb is 60 feet, except where it is divided by six-foot parking into two roadways of equal width. A 22-foot bridle path is built adjacent to the main roadway from which it is separated by parking, and does not always parallel the main road. The cantilever cost \$250,000. The driveway is 100 feet long and 50 feet wide. The handsome masonry supporting it is one of the engineering novelties of the drive. When the drive is completed it will be eight miles long and will have cost \$25,000,000. A resolution has been passed by the Board of Estimate practically discontinuing for the present the extension of Riverside Drive north from 155th street. Plans were drawn for the extension of the drive to Spuyten Duyvil three years ago and part of the work has been done. When the present Board of Estimate came into office, however, it decided that the plans were not what they should be and the work was discontinued. The new resolution provides for the redrawing of the plans. It has been estimated that the cost of the extension, including the proposed Hudson Memorial Bridge, will be about \$13,000,000.

Will Give Patrol System of Maintenance a Trial

Paterson, N. J.—The Road Committee of the Board of County Freeholders of Passaic County have decided to give the patrol system of road maintenance a trial. A beginning will be made by employing three men on this work. Each man will be provided with a horse and cart, or a wheelbarrow, and road materials will be delivered in advance of immediate needs along the road. The man will be paid \$800 for eight months, or \$600 a year. It is expected that he will use about \$200 worth of materials. On roads of light traffic it is believed that one man can take care of nearly 10 miles.

Would Make Concrete Cubes by Prison Labor

Rochester, N. Y.—County Superintendent J. J. McClintock read a paper last week before the Fairport Grange in which he advocated the employment of the labor of the penitentiary in making concrete cubes for road construction. The most practicable material for road making in this county, Mr. McClintock said, is two-inch artificial concrete cubes of gravel concrete made with Portland cement, because it will stand well under ordinary traffic and there is an abundance of gravel and it is the cheapest. These cubes can be made satisfactorily without skilled labor and their manufacture by the convicts in the county penitentiary would be most advantageous to the men and the community.

Roads of Washington County, Pennsylvania

Washington, Pa.—Washington county had up to January 1, 1911, 36.7 miles of county roads improved with macadam or brick at a cost of 85,791. The work under contract, 1.1 miles, is estimated to cost \$152,221. There were also 27.5 miles approved by the Grand Jury but not under contract, estimated to cost \$356,661. Besides this the county had 22.15 miles improved under the State act, costing \$266,911.

New York State Highway Commission Report

Albany, N. Y.—The report of the New York State Highway Commission to the Legislature says that of the original fund of \$50,000,000 appropriated for road improvements, \$10,000,000 remains unspent. When the whole of the appropriation is spent, the system of state and county roads will not much more than half completed and \$40,000,000 will be required to finish. The work now completed and under contract amounts to 2,850 miles, of which 1,787 were built during the ten years preceding January 1, 1909, and the balance during 1909 and 1910. The item of maintenance and repair in 1909 was \$1,500,000, of which \$900,000 went for resurfacing and the balance for less complete repairs. In 1910, the amount was \$1,800,000, including \$725,000 for resurfacing. In this year the mileage maintained was 2,200 miles, and the repairs were ordinary, maintained by patrol and oiling. The amount oiled was about 1,000 miles at a cost of \$350 per mile.

While the number of miles macadamized is a small percentage of the total of 80,000 miles, a sufficient amount has been completed to form continuous improved roads between many of the principal cities of the State. The longest single stretch contemplated is that from New York to Buffalo, 487 miles, which will be the longest continuous State road in the world.

Several interesting comments are made in the report. The use of a top course of bituminous material has been found very satisfactory both in eliminating dust and in standing traffic. The scarcity of labor and materials is noted as causes which have retarded work. The cost of labor is estimated to have increased 25 per cent, while efficiency has decreased. The demand for 16-ft. roads instead of 12 has also increased construction cost. A million dollars has been saved by building reinforced concrete culverts and bridges.

The River Boulevard to Bay City

Saginaw, Mich.—A project of exceptional attractiveness and much promise to the future is the plan to build a boulevard following the course of the river between Saginaw and Bay City. Its practicability lies in the river improvement which is about to be commenced by the federal government. In fact, it is to be made a feature of that improvement. The dredging operations will remove an immense quantity of earth from the bottom of the river which can be deposited without extra cost in the course of the boulevard, where it will make a first-class permanent bed for the road. Practically all of the right of way along the river has been secured, so that it will be seen that substantial progress toward the undertaking has been made. The government has signified its willingness to make its work conform to the enterprise, and will give the two cities reasonable time in which to complete contracts for ground over the complete route. The chief worth of this boulevard enterprise is the fact that it will create a river-side drive between Saginaw and Bay City.

Delaware River Boulevard Proposed

Wilmington, N. J.—If a bill introduced in the Assembly by Hon. J. Meyer, of Sussex County, shall become a law, and the position it involves shall be made a reality, the city of Wilmington will be the southerly terminus of a magnificent Delaware Valley boulevard, which will be a counterpart of the ocean boulevard, already being planned for Eastern Long Beach. The road is to be known as the Delaware River Boulevard. The bill appropriates \$15,000, or as much as may be needed for the expense of designating a route for a continuous improved highway commencing at the boundary between the states of New York and New Jersey in Montague Township, Sussex County, and continuing thence to this city, following, so far as practicable, the available convenient improved roads now constructed. The route is to be as near the Delaware River as practicable. The scenery along this proposed highway is notable for its beauty, and if it were constructed it would unquestionably become one of the most popular automobile roads in the State. It is believed that the increase in property values along it would in itself justify the expenditure. Certainly it would be a valuable addition to the fine road system of New Jersey.

SEWERAGE AND SANITATION

The Sewage Problem in Dallas

Dallas, Tex.—It seems very probable that the question of diverting the city's sewage from the Trinity River, or of otherwise disposing of it, will be made an issue in the approaching municipal campaign. Two of the regularly organized political clubs for the election of Dallas city officers have announced their platforms and in each of them is a plank demanding sewage diversion. The other political organization has not yet announced its platform. In April, 1910, the taxpayers of Dallas expressed their desire for sewage disposal by authorizing at the polls a bond issue of \$650,000 for that purpose. As yet no effort has been made by the present city administration to issue those bonds. Bonds in the same amount were issued for other purposes at the same time and have already been sold, the money now being used for the specified purposes.

Alarm System for Health Department

Milwaukee, Wis.—Extension of the use of fire and police alarm and telephone systems to the Health Department under the proposed consolidation is advocated by the Health Commissioner. He said that the 30 field men of the Department were required to pay every time they used a telephone to report and that this expense could be eliminated by extending the use of the telephone to inspectors. The Department has 15 sanitary, five factory, four milk and six meat inspectors.

Anti-Spitting Ordinance Will Be Enforced

Louisville, Ky.—Dr. W. Ed. Grant, Health Officer, has issued another statement dealing with the anti-spitting law and its enforcement. Dr. Grant's statement is as follows:

"Enforcing the anti-spitting ordinance at the present time is not a farce. The Board of Safety, recognizing the law as one pertaining to the health of the community, has requested the Department of Health to see to its enforcement, and has promised all the aid the Police Department can give in enforcing the ordinance."

"After consulting with the Chief of Police, it was deemed best to have policemen board the cars which carry the workmen from the shops every evening and announce to them that the anti-spitting ordinance was about to be rigidly enforced, in this way giving them an opportunity to avoid arrest. Policemen in plain clothes will be placed upon the cars and in public places to-day. This would have been done at the beginning of this week except for the fact that the end of the month was at hand, when a shift takes place in the police force, and for that reason it was delayed until after the first of the month."

"The Police Bulletin contains the announcement that the anti-spitting ordinance is to be rigidly enforced, and that it is the duty of every policeman on the force to arrest all who violate the law. It is the duty of every citizen of our town to aid us in enforcing this ordinance, and all they have to do is to call on the Chief of Police and give him the name of the offender and testify to the truth of their charge."

Rat-Proof Buildings Recommended

New Bedford, Mass.—The Board of Health, in their annual report for 1910, recommend that all buildings erected in the future in the city be of rat-proof construction. The recommendation to the Council reads as follows: "As rats are carriers of disease, and at times cause terrible plagues, the City Council is respectfully requested by the Board of Health to cause all buildings erected in the future to be of rat-proof construction."

For City Milk Licenses \$25

Albany, N. Y.—Assemblyman James A. Foley, chairman of the Assembly Codes Committee, has introduced in the Assembly a bill to regulate and control the milk traffic in the cities of New York, Buffalo and Rochester. The measure provides for the establishment of a milk commission, consisting of three members to be appointed by the Governor, to have general supervision of all milk dealers, with power to fix standards of quality and purity, together with the maximum prices that can be asked or demanded from consumers for milk of such standards, and also with power to order yearly reports from all milk dealers and to enter and inspect their plants and to examine their books and papers and to subpoena witnesses and take testimony. Every milk dealer would be required to obtain a license from the commission at a yearly fee of \$25, which, it is expected, would defray the expenses of the commission. These licenses can be revoked or canceled by the commission at any time for a violation of any order of the commission.

Water and Sewerage Under State Control

St. Paul, Minn.—A comprehensive bill, giving the State Board of Health supervision over public sewer and water systems has been introduced in the Senate by J. M. Hackney, of St. Paul. A duplicate of the bill was introduced in the House by E. G. Perry, of St. Paul, and Kerry Conley, of Rochester. The bill does not apply to the municipal water and sewer system of cities of more than 50,000, but applies to the systems in all smaller towns, whether owned by the municipality or by private parties. It also gives the board supervision over the plants owned by the State for its institutions. The bill requires every municipality, corporation or individual supplying water to the public to file within six months a certified copy of the plans and surveys of the system, showing the sources of the water supply. No other source of supply shall thereafter be adopted without the consent of the board, nor shall any new plant be constructed without the consent of the board nor shall any new plant be constructed without the consent of the board after the filing of the plans with the board and an inspection by its officers. Whenever written complaint is made that sewage is emptied into any stream, lake, pond or other place, so that it creates a public nuisance, the board, after a hearing, may order the sewer system changed to remedy the nuisance. When the local Board of Health or health officer or ten electors complain that the water supply is dangerous the State Board, after a hearing, may order that it be improved. If any water or sewage purification plant is not working properly the board may order an improvement, and if in five days the effluent is not improved it may employ a capable person to run the plant and charge the cost to the municipality. Whenever there is objection to any order made by the State Board the complainants and the board shall each appoint a sanitary engineer to consider the matter and decide. If they cannot agree they shall appoint a third person. The bill also makes provision for an appeal to the courts. The bill permits the municipality to issue bonds to make improvements made necessary by the order of the State Board, provided they shall not exceed 3 per cent of the assessed valuation of the city or village.

Typhoid May Not Be Due to Water

Wilkes-Barre, Pa.—The report of Health Commissioner Dixon to the Mayor and City Councils on the typhoid situation in the Wyoming valley during the summer of 1910 has been received. He says that there is no reason why water might not have been the vehicle for the transmission of the disease. The Susquehanna River water, the Wilkes-Barre Mountain supply, particularly that of Laurel Run, and the Toby Creek supply are considered dangerous because of the potentiality of these waters to become infected. However, the distribution of the typhoid fever cases does not to a careful observer warrant the conclusion that the public water supply was the absolute cause of the prevalence of the disease.

Typhoid Follows Use of Raw River Water

Bay City, Mich.—An epidemic of typhoid is prevailing. For several weeks raw river water has been turned into the city mains.

Local Health Board Congratulated for Good Report

Huntington, Ind.—Secretary R. F. Frost, of the city Board of Health, has received a letter from Dr. J. N. Hurty, Secretary of the State Board, congratulating the local board on their excellent report and the good sanitary conditions maintained. Dr. Hurty suggests that the city add an anti-fly provision to their sanitary ordinance. In the book of instructions issued by the State Board is a copy of an ordinance which has been found to be effective.

English Expert Likes Columbus System

Columbus, O.—That he had secured more information on municipal utilities in Columbus than any other city he had visited in America was the statement of W. Francis Goodrich of London, England, who spent an afternoon inspecting the sewage disposal plant on which work he is an expert, the light plant, the garbage loading station and the reduction plant. "I am more favorably impressed with the sanitary system here," said Mr. Goodrich, "than I have been by that of any other American city, including even New York and Boston."

WATER SUPPLY

Cuero Has New Water Supply

Cuero, Tex.—The city is rejoicing over the completion of the electric power pumping plant for use in pumping the two recently finished fine artesian wells and now this water fills both the reservoir and standpipe with a combined capacity of nearly 500,000 gallons. It is believed that the city's water problem is now solved for years to come.

Dodge City Water Is Pure

Dodge City, Kan.—The new Dodge City water plant was given a test this week to try out its capacity and power to throw water. Four streams were thrown at the same time in the business district and the force surprised those who witnessed the test. Water was thrown much higher than the business houses and the force so great that the men had difficulty in handling the nozzles. Dodge City now has better fire protection than ever before. In the test, wells were closely watched to note the effect on the supply and it was imperceptible. The water has been analyzed by State chemists and is pronounced pure. The new power house, new machinery, new pipes and mains and other new equipment makes the Dodge City plant one of the very best in the State.

Town Has Profitable Water Works

Kingman, Kan.—Kingman claims to have the best water in the State, and plenty of it. Moreover, the operation of the plant shows a good profit. The receipts for the year were \$6,146; expenses, \$1,878. The number of gallons of water pumped was 47,423,000. The cost of pumping was 4c. per 1,000 gallons. The population of Kingman is about 3,000.

Rush Hudson Water Tunnel

New York, N. Y.—The Board of Water Supply, as constituted by Commissioners Galvin and Chadwick, has passed a resolution authorizing the Chief Engineer, J. Walter Smith, to prepare a contract for the completion of the pressure tunnel under the Hudson at Storm King, which is to bring the new Catskill water supply to the east bank of the river. For five years test borings have been made in search of bed rock, and this means that the commission feels that it has at last found a means of crossing the river. Commissioner Galvin stated that this resolution was prompted by the discovery that the work on the Hudson River pressure tunnel has so far cost the city \$376 per running foot, whereas investigations made by him convinced him that this work done by contract could be completed at a cost not to exceed \$150 per foot. It is expected that the change will save the city over \$600,000. The work of driving the lateral shafts, making experimental borings of the river bed, etc., has already cost the city \$831,390. In order to have the tunnel built as speedily as possible it is planned to have the contract awarded at once.

Cut in Water Rates Will Benefit 12,000

Providence, R. I.—The water rate to the small user will be reduced on Jan. 1, 1912, from a minimum of \$10 to \$5 the first reduction that has ever been made in this city on the meter service. This will affect 12,000 water users in Providence. There will be no change in the rate on the faucet service nor will there be any change in the scales as now charged to large users, manufacturers and business houses.

Storm Supplies Water for Two Years

San Francisco, Cal.—According to an estimate made by G. A. Elliott, superintendent of maintenance for the Spring Valley Water Company, the storm in January has stored up in the company's reservoirs enough water to supply San Francisco for the next two years. Over 2,164,000,000 gallons of water has been added to the company's supply and the water which otherwise would sweep over and flood the valley towns have been stored away for future use in San Francisco.

State Board Orders Water Treated

Edinburg, Ind.—The State Board of Health has ordered the water supply to be treated with copper sulphate. In the meantime residents have been ordered not to use the raw water for drinking purposes.

STREET LIGHTING AND POWER

Tungsten Preferred to Arc Lighting

Eugene, Ore.—The city has decided to adopt tungsten street lighting instead of a system of arc lights. The figures which the decision was based were supplied by Prof. H. Dearborn, and are as follows:

Comparative cost of installation:		
	Arcs.	Incandescent.
Street lines	\$3,103.58	\$3,851.97
Wires and fixtures	6,835.00	10,226.00
Tools and equipment	9,750.00	3,062.00
Engineering	1,630.20	998.26
	639.56	544.15
	\$21,958.34	\$18,682.38

Comparative cost of maintenance per year on basis of per kilowatt hour for electrical energy:

	Arcs.	Incandescent.
Repairs and trimming	\$1,219.00	\$1,636.00
Energy consumed	5,520.00	3,200.00
Totals	\$6,739.00	\$4,836.00

For the city as a whole the ratio of light furnished by arcs is to that given by the incandescents as .0011 is to .0024.

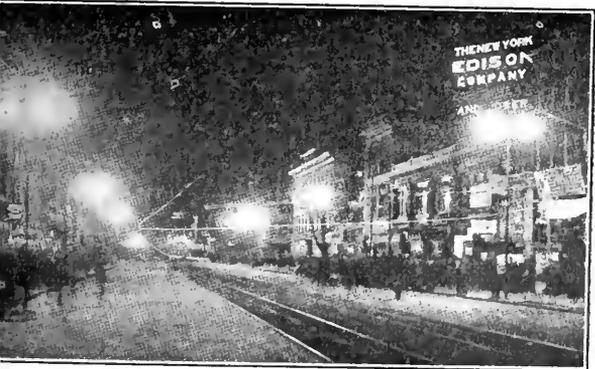

Edison Company Would Purchase Surplus Power

Los Angeles, Cal.—John B. Miller, president of the Southern California Edison Company, in an address before the City Club, outlined a tentative proposition for the purchase of the surplus power from the Los Angeles aqueduct by the California Edison Company. He would have the acceptance of the offer submitted to popular vote.

"I believe that we can offer the city, on a rental of this power, per kilowatt per annum at a consumer's base rate of 7 cents, and per kilowatt per annum if the retail base rate is 8 cents, and investment of the city would be only about \$3,000,000 instead of \$6,500,000; and I believe that Mr. Scattergood, were he to go through these figures carefully, would tell you that this would result as much profit to the city as the city would get if it distributed the electricity itself."

Illumination of 125th Street, New York

New York, N. Y.—The main retail thoroughfare of upper New York, 125th street, will soon be illuminated with a system of twin-lamp white-carbon lighting. The posts will be placed 140 feet apart and the lighting will cost \$3.50 a foot for every foot of frontage. An association will be

PHOTOGRAPH OF SEVERAL SYSTEMS OF ILLUMINATION, 125TH STREET, NEW YORK CITY

which will contract with the Edison Company for the lighting, and with the individual storekeepers and owners of real estate for the payment of the assessments. The decision is the result of an exhibition of different systems of lighting made two months ago by the Edison Company. Six different kinds of arc lighting were demonstrated, and Edison men in attendance explained to all visitors the advantages of each. From time to time the lights were shut off, so that the visitors could compare the illumination supplied by the city with the various other lighting arrangements shown. Automobiles were at hand, and that groups of interested individuals could be taken off to various blocks to view the effects from a distance.

Electric Meters to Be Examined

Paterson, N. J.—The Public Utility Commissioners have directed their electrical inspector to make an inspection of the meter departments of electric lighting companies.

Gas Company Voluntarily Reduces Price

Petersburg, Va.—The Petersburg Gas Company, through its manager, R. A. Goudy, has promised consumers of the city a 10-cent reduction in the price of gas, a 5-cent reduction, January, 1912, and an equal reduction January, 1913. In order to show the relation between prices and per capita sales he submits the following figures:

Town.	Population.	Sales.	Sales per Capita.	Price (net) Per M.
Lynchburg	36,000	40,000,000	1,300	\$1.25
Portsmouth	20,000	56,000,000	2,800	1.15
Richmond	112,000	405,878,000	4,000	.90
Roanoke	22,000	57,216,000	2,800	1.12 1/2
Norfolk	45,000	254,000,000	5,000	1.00
Newport News	27,000	37,102,900	1,500	1.35
Petersburg	23,400	38,400,000	1,700	1.25

Discussing the general question of cost of gas, he says: "It is often stated by people unfamiliar with the cost of manufacturing gas is very low. These people lose sight of the fact that the cost of manufacturing gas in a holder is only one of the four principal divisions that enter into the cost of gas delivered at the consumer's burner. The other three items are distribution of gas, the expenses of the office, and, to perhaps a less extent, the educational or public relations department of the company—the object of the latter department being to teach the people how to get the most out of the gas, how to use it economically in their appliances, and to adjust their appliances and keep them in repair. The use of these four items added together make the cost of gas, and each one of them bears very nearly its proportion of the cost. The sums must be put aside for depreciation and maintenance, and care of the very condition of the Petersburg Gas Company finds itself into-day. This last item that we are used to supply in actual cash should have been taken from earnings in the past."

City to Ask for Conduits

Waterbury, Conn.—Waterbury is to renew its fight in the Legislature this winter for the right to establish conduits under the streets of the city and place the tangled mass of wires now overhead underground, removing the ever-present danger to firemen and also greatly improving the appearance of the center of the city. The bill will be introduced by Senator Lawlor. The satisfactory reports of the working of a system recently installed in New Britain, is furnishing arguments in favor of the measure.

FIRE AND POLICE

Tenants Must Keep Fire Escapes Clear

Atlanta, Ga.—Investigation in consequence of a fire at which twelve women were prevented from getting out of the building by the fire escape because access to it was blocked has developed the fact that the law does not make the tenant responsible for keeping the way clear. The ordinance cites the owner of the building, which is manifestly unfair, as he cannot be expected to be on the premises all the time. Chief Cummins, of the Fire Department, will request the City Attorney to draw up an ordinance placing the responsibility where it belongs, on the tenant.

Fire Protection to Outside Factories

Bridgeport, Conn.—The Fire Commissioners are puzzling over the question of affording fire protection to factories and business concerns just outside the city lines. President Wheeler has asked the City Attorney to define the Board's legal duties in the matter. As a practical question there is much to be said on both sides. Call boxes have been installed for some time in some of the factories, and it would not seem right to withdraw the protection without notice. Then if protection is given one factory how can it be denied to another? A citizen, on the other hand, can argue what protection has his property in the city in case the apparatus is responding to an alarm beyond the limits. The practical answer would seem to be to enlarge the Fire Department and charge the factories for the protection.

Cost of Maintenance of Horse-Drawn and Auto Apparatus

Lynn, Mass.—During the month of January, Chief Harris has kept a strict account of the cost of maintenance of the two combination wagons, one horse-drawn and the other a motor, and also the work done by each. The result of account is: Automobile combination chemical—Number of alarms answered, 21; mileage covered, 683.5; cost of maintenance for the month of January, gasoline, \$4.26; batteries and connections, \$1.88; oil, 8c.; total cost, \$6.88. Horse-drawn combination (three horses)—Number of alarms answered, 2; mileage covered, 4; cost of maintenance, hay, \$15.81; oats, \$9.90; straw, \$1.70; shorts, \$2.15; horseshoeing, \$4.09; medicine for horses, 50c.; total, \$34.15.

Auto Engine Protects District of Low Pressure

Yonkers, N. Y.—The new 90-horsepower, six-cylinder auto engine has been received from the Webb Motor Fire Engine Company. The engine will be housed on Shonnard Terrace, and will serve a large hilly district in which the water pressure is low.

Asks for More Firemen

Troy, N. Y.—Chief Byron, of the Fire Department, in his annual report to Commissioner of Public Safety Mann, recommends ten additional hosemen and two more ladder-men for the paid department. He also recommended that the pay of the paid department be increased and suggested that the salaries be fixed at \$60, \$65 and \$70 a month for first, second and third grades.

Want City to Name Fire Chief

Wilmington, Del.—Wilmington firemen are interested in the proposed legislation, which, if passed, would make the position of Fire Chief and his assistants appointive offices under the control of City Council. Some of the older members of the companies agree that the service might benefit should Councils have control of the appointment of a Chief who in their opinion should be given absolute control of the department. They, however, are not prepared to accept the plan that places both assistants under Council, but think that the assistants should be chosen by the organizations, as is the rule at the present time.

GOVERNMENT AND FINANCE

Municipal Ownership Bill

Albany, N. Y.—Municipal ownership of public utilities is provided for in a bill introduced by Assemblyman O'Connor. It provides that any city by the adoption of a proposition therefor may acquire and operate municipal gas and electric light, heat and power plants and railways. The local legislative body of the city is given full power to make regulations regarding the operation of such plants, including the fixing of rates. The local legislative body may also lease a municipal plant to private parties for not exceeding 20 years.

Five Elections in Two Months

Oklahoma City, Okla.—There will be five elections in Oklahoma City in a period of two months, according to Bob Parman, City Clerk, and the total expense of the five elections will be approximately \$5,000, or \$1,000 each. The first will be February 14, when the voting taxpayers of the city will vote on the question of issuing bonds to the amount of \$1,500,000 for an improved water works system. The second election will be in March, to determine whether Oklahoma City shall have commission form of government or not. The next election will be the regular spring primaries, March 21, when both parties will select candidates for city offices. The fourth will be the regular city election about April 4, and on or about May 20 the charter election will occur. Should the charter carry and the people elect their commissioners in May the newly elected city officials will have served just about a week.

Uniform Accounting for Cities Urged

Providence, R. I.—The Commissioner of Industrial Statistics, in his annual report, recommends the passage of the following law in respect to a uniform system of municipal accounting:

The Commissioner of the Bureau of Industrial Statistics shall annually furnish to the auditor or other accounting officer of each city and town in the State blank forms or schedules, so arranged as to provide for uniform returns giving detailed statements of all receipts classified by sources and all payments classified by objects for its last fiscal year, a statement of the public debt showing the purpose for which each item of the debt was created and the provision made for the payment thereof, and a statement of assets and liabilities at the close of the fiscal year.

The commissioner may prescribe standard forms intended to promote the systematic accounting of financial transactions and the publication of the same in the city and town reports. The commissioner is also authorized to collect from the proper local authorities and to compile and publish such other information pertaining to municipal affairs as in his judgment may be of public interest; and it shall be the duty of all accounting and other officials and custodians of public moneys of cities and towns to fill out properly and return promptly to the said commissioner all schedules transmitted by him to them.

Bill to Protect Civil Service Employees

Albany, N. Y.—Final touches to a bill to extend to State, municipal and county civil service employees the same privileges which are at present enjoyed by veterans are being given by the New York State Competitive Civil Service Employees' Association. This association has been in conference with the civil service organization, covering the employees who are at work in State departments other than those at the capital, and who are holding positions in Greater New York, and an agreement has been reached whereby the forthcoming bill will be endorsed by both organizations, which have a joint membership of over 9,000 persons. The bill in question is expected shortly, and if passed will prohibit the removal of a civil service employee unless as the result of the sustaining of charges presented against such employee.

Grand Rapids' Proposed Charter

Grand Rapids, Mich.—The new Grand Rapids charter, as described by Robert L. Irwin, president of the Charter Commission, at a meeting of representatives of ten Michigan cities who recently met at Lansing to discuss charter reform and commission government, attracted much favorable comment. The government will be divided into administrative and legislative departments. The Council, composed of one man from each ward, will be purely legislative in its functions. The administrative branch will consist of a Mayor, who will be elected, and four chiefs of departments appointed by him. The four departments will be: Public Works; Health and Safety; Finance and Accounting; Parks and Public Property. A comptroller will be elected, who will be responsible for seeing that no fund is overdrawn.

Milwaukee's Socialistic Bills

Milwaukee, Wis.—The city government has sent to the Legislature 36 bills, covering measures which they would like to see enacted. Among those of most general interest are the following:

To authorize the city to establish municipal slaughtering houses.

To empower the city to purchase real estate and to construct and maintain dwellings to be sold or rented.

To enable the city to secure and operate lodging houses.

To permit the city to build and maintain lavatories and rent out the privileges.

To authorize the city to establish a municipal loan bureau.

To permit the city to purchase, lease or acquire or manufacture plumbing apparatus and do plumbing.

To authorize the city to fix rates for wharfage and docks and collect charges.

To provide for the exemption from taxation of village, town, city and county and school bonds.

To enable the city to sell, convey, lease or otherwise dispose of any city-owned property.

To authorize the city to borrow money to purchase park lands by cash payment, and to secure such loans by mortgage.

To enable the city to raise the assessments from \$2.50 to \$3.50 a square yard for street improvements.

To enable the city to exact a municipal license fee for automobiles.

To make second offenses of violations of the automobile speed laws punishable by imprisonment.

To amend the statutes to enable cities to charge license fees for street cars from time to time.

To enable the city to grant franchises through parks and parked ways.

To authorize the city to purchase plants and manufacture and sell ice.

To permit the city to levy assessments for street oiling as well as sprinkling.

To strike out the exclusive clause in the Milwaukee Gas Light Company franchise.

To amend the charters of all cities to legalize compensation for special privileges.

To provide for the forfeiture of street car franchises after two years of non-usage.

Proposed Charter for St. Louis Defeated

St. Louis, Mo.—The proposed charter for the city of St. Louis was defeated at a special election, January 31, by a majority of 40,155. The total vote was 89,937, of which 24,891 were for the charter and 65,046 against. About half of the total registered vote in the city was polled.

The proposed charter provided for a single legislative body, elected at large by all voters, civil service through the merit system and concentrating all executive and administrative power and responsibility in a few officers, answerable directly to the people. It called for a referendum on franchises and would enable the citizens to recall any elective officer after 18 months' trial. The charter would deprive the Mayor of the power to control 7,000 appointments.

Women Help Recall Seattle's Mayor

Seattle, Wash.—Mayor Hiram C. Gill, who was elected last March by a plurality of 3,500 votes, was recalled February 7 for alleged misconduct in office by a plurality estimated at 4,000. The votes of women, who were recently enfranchised in this State, were largely responsible for this result. The total vote was nearly 60,000 out of a registration of 71,000. Mayor Gill, elected for a term of two years, has been in office but little more than ten months. Women ruled absolutely in the election. It is the first time the women have had the privilege of the ballot in this State. The recall election was brought about by an attempt to oust Mayor Hiram C. Gill and to elect George W. Dilling. The women did not have the franchise when Gill was elected a little over a year ago, so that the shrewd politicians in the State, and in fact the whole Northwest, early recognized that the women held the deciding hand in to-day's election.

Bill Providing for Home Rule

Spokane, Wash.—The proposed statute which is intended to remove the last traces of doubt as to the legality of the new Spokane charter has been completed by Attorneys H. J. Stephens and J. T. Burcham. The new act is remarkable on account of its brevity. It repeals all laws relating to the form of organization of cities of the first class and gives them almost total power in drafting their basic law. The bill reads as follows:

An act relating to the form of organization of cities of the first class, and the exercise of the powers of such cities, declaring the provisions of this act, repealing all laws or parts of laws inconsistent therewith, and declaring an emergency.

Section 1. The form of the organization and the manner and mode in which cities of the first class shall exercise the powers, functions and duties which are or may be given by law to such cities, with respect to their own government, shall be as provided in the charters thereof.

Section 2. Any such city may provide in its charter for the recall of elective officers and for direct legislation by the people on any matter within the scope of such powers, functions or duties of any such city by the initiative and referendum.

Section 3. This act shall apply to any charter of any such city heretofore adopted or approved by the electors thereof at an election duly held.

Section 4. All laws or parts of laws inconsistent with this act are hereby repealed.

Section 5. An emergency exists and this act shall take effect immediately.

Chattanooga to Be Under Commission Government

Chattanooga, Tenn.—The Chattanooga commission charter bill has passed the Legislature and been signed by Governor Hooper.

Report on Finances of Rhode Island Cities

Providence, R. I.—According to the report of the Commissioner of Industrial Statistics on municipal finance the total current receipts for the 38 cities and towns of the State, including money received from loans and bonds, amounted to \$16,350,867.06. The current expenditures amounted to \$16,756,337.24. The cash on hand at the beginning of the year was \$1,307,918.70, and the cash on hand at the end of the year, \$932,448.52. The total property valuation of the 38 cities and towns amounted to \$536,544,943; 66,801,270 of which was real and \$129,743,673 personal property. Real estate valuations in 1910 increased \$16,854,499 over those of 1909. Personal increased \$8,465,448.

Municipal Savings Bank Planned

Milwaukee, Wis.—A municipal savings department in connection with the City Treasury may be established in Milwaukee if a bill which was introduced in the State Legislature by Assemblyman Max Binner, Milwaukee, is enacted into law. The plan is to discourage the practice of paying interest money on bonds to Eastern firms and to keep all municipal bonds in Milwaukee. If the law is passed the City Treasury will be placed under the jurisdiction of the State Bank Examiner, who will hold the city bonds as security for deposits made with the City Treasurer in the form of savings accounts. All people who care to open a savings account will be enabled to make deposits from \$5 to \$1,000 and to receive interest from the city. The rate probably will be 3 per cent. The depositors will have the same security as a bank, as the city will stand behind the accounts with the bonds. The entire savings are not to exceed the amount of bonds on deposit with the State.

Cincinnati Mayor Vetoes New Code

Cincinnati, O.—Deeming the increases in the salaries of city employees unnecessary and inadvisable in view of the limited tax rate and objecting to the elimination of the provisions of the old lighting ordinance, which compel electric lighting companies to permit other such companies to use its poles at a fair rental, Mayor Schwab has vetoed the new codification of city ordinances recently passed by council. Mayor Schwab has more than once of late declared his belief that the city soon would find itself hampered for funds to run the departments under the present tax limit, and in the event that Governor Harmon's ten-mill limit is passed by the legislature the question would become a serious one. The salary increases provided in the code amounted to over \$70,000 a year in the aggregate and affected many of the heads and chiefs of the principal subdepartments.

Ask Change in City Salaries

Cleveland, O.—Believing that the salaries of city employees need adjustment, a meeting was held last week at the office of the Civil Service Commission to outline a plan for bringing about the change. Representatives of the Chamber of Commerce joined in the conference.

Commission Government Elections

Pontiac, Mich.—Commission government was adopted January 30 by a vote of 824 to 494. Only about half the normal vote was polled.

Guthrie, Okla.—Commission government was adopted January 30 by a unanimous vote.

Jacksonville, Ill.—By a vote of 1,471 for to 837 against Jacksonville adopted the commission form of municipal government January 31. The total vote was about 75 per cent of the vote cast at the last city election.

STREET CLEANING AND REFUSE DISPOSAL

Cities Having Cleanest Streets

Albany, N. Y.—Albany, Poughkeepsie and Newark, N. J., according to a statement made by Gus H. Hanna, of Cleveland, Ohio, have the cleanest streets of the hundred cities which he has visited in the past few months. Mr. Hanna was superintendent of the Street Cleaning Department of Cleveland during the administrations of Tom L. Johnson, and transformed that city from one of the dirtiest to one of the cleanest in the country. He is now sales agent for the Tiffin Wagon Works and is introducing their street-flushing machines.

Clean-up Day for Lodi

Lodi, Cal.—At a near date "Clean-up Day" will be carried out by the Women's Improvement Club of Lodi. Scores of boys will be paid to pick up tin cans and other rubbish in the residential sections. A number of citizens have offered to donate the services of their teams to haul the debris away, and the general public is with the club in the progressive movement. On this day the club will have neglected palms and trees trimmed and mudholes in sidewalks filled. The surplus gravel which the city has on hand will be used at street crossings which have worn low.

Street Sweepers Organize

Pittsburg, Pa.—The 800 street sweepers of Pittsburg have organized. Their union is to be known as the Street Sweepers' Union No. 13,123, with headquarters at Union Labor Temple. The following officers have been elected to serve for the present year: President, Patrick Murphy; vice-president, William Robinson; secretary, George Haney; recording secretary, William H. Murray; treasurer, Joseph Waters.

Dr. Paul Franklin, chairman of the Finance Committee of Council, has asked Council to increase the street sweepers' wages from \$2 per day to \$2.25. It is contended that in other cities street sweepers are paid \$2.50 and \$3. Many of the street sweepers in this city get only three days' work out of the week, and say they are unable to support their families on this meager earning.

Using Flushing Machines in Winter

Albany, N. Y.—According to Mayor McEwan, Albany streets were cleaned for the first time this year in the middle of the winter. The occasion was a spell of warm weather. The flushing machines were called out and did effective work.

RAPID TRANSIT

Chicago Subway Plans About Ready

Chicago, Ill.—Plans are near completion by Bion J. Arnold which will give the city the most elaborate subway systems in the world. No authorized statement of details has been given out by Mr. Arnold, but he is quoted as saying: "I will say that I am in favor of a 'double decker' subway. The bottom of the subway, as I plan it, will be on two levels, so there will be no grade crossings below the ground. My plans are exceptionally comprehensive. They are prepared in such a way that the city can do exactly as it chooses in the matter of construction. If the city wishes to build itself my plans provide for that; if it wishes the traction companies to build my plans also contemplate that." Details to the effect that the bottom of the subway is to be forty feet below the street level, to extend from building line to building line rather than from curb to curb, and similar minutiae Mr. Arnold characterized as "guesswork." He intimated that certain details mentioned may be approximately correct, but stated that his plans are not ready for publicity as yet.

Railways Compelled to Pay for Culverts

Pasadena, Cal.—City Attorney William Carr has given an opinion to Council to the effect that street railroads should pay the entire cost of constructing culverts under their rights of way when the necessity for their construction depends upon the occupancy of the street by the railway. It is said that in the past the city has paid out many thousand dollars for the construction of culverts which should have been built at the expense of the street railway.

MISCELLANEOUS

Council Favors Home Union Labor

Cincinnati, O.—Council committee on track elevation has gone on record as favoring the employment of home labor at union wages in the construction of the grade crossing viaducts for which a recent bond issue provides. The committee directed Legal Clerk Buchwalter to incorporate the requirement as part of the enabling ordinance and specifications of the Ludlow avenue crossing viaduct.

Anti-Lunch Cart Agitation Started

Lynn, Mass.—Providing he has the support of the other members of the Municipal Council, Commissioner Bayrd intends to put every lunch cart within the fire limits of the city of Lynn out of commission. He started on this crusade by causing N. K. Hamel, who wanted to transfer a lunch cart from one location to another on Exchange street, to be given leave to withdraw. Not only does he intend that licenses shall be withheld from new petitioners but that as those lunch cart owners who have been enjoying this privilege for years come before the Municipal Council for the renewal of their licenses they will also be told to fold up and go out of business. Mr. Bayrd's point is that too much valuable land in the central part of the city is not serving its proper purpose. He asserts that the owners of this class of property ought to receive more stimulus to erect taxable buildings on the sites and thus provide a greater source of revenue for the city. From an esthetic standpoint also, Mr. Bayrd claims that the lunch carts are objectionable. He has the same feeling concerning billboards, against the erection of any more of which he proposes to interpose objections.

Start Municipal Vaudeville

Milwaukee, Wis.—Not satisfied with giving a weekly municipal Sunday afternoon concert in the city auditorium, at which a high-priced orchestra discourses classical music and ragtime melodies alternately, the Socialist administration has decided to inaugurate a series of Sunday afternoon professional vaudeville entertainments. The Socialists believe they have a better chance of making the vaudeville affair a success than they have with the concerts. The concerts are losing \$100 each. The vaudeville may meet opposition from the Theatrical Trust. Only a small admission fee will be charged.

Southern Cities Would Segregate Races

Baltimore, Md.—City Councilman Samuel L. West, on hearing the Court's decision against his segregation ordinance, said that he would immediately make plans for the introduction of a new segregation ordinance "that will hold water." "We have been shown the way in the trial of these test cases," he said, "and instead of being discouraged I feel much encouraged over the prospect of having adopted an ordinance that will meet the situation in every respect. With this object in view, I shall consult with the best constitutional lawyers in the city in a day or so, and we will draft an ordinance that will overcome the defects which, as the Court pointed out, prevail in the first ordinance." In all probability Mr. West will have incorporated in the new ordinance the provisions he had intended as an amendment to the present ordinance covering the cases of the mixed streets, leaving it discretionary with the residents in the mixed streets to decide whether or not a white man or a negro can occupy a vacant house, and the provisions of the ordinance will not affect such a street.

Birmingham, Ala.—Alderman George Huddleston's bill providing for segregation of the races has been approved by City Attorney Romaine. The bill provides that a negro shall be guilty of a misdemeanor and punished by a fine not exceeding \$100 and imprisonment of six months, one or both, if he shall hereafter move into or take up his residence in premises not now occupied by persons of the negro race, in any block in which the majority of persons then therein residing are of the white race, such residence being within 400 feet of the residence of any white persons, providing, however, that domestic servants residing on the premises of their employers shall be excepted from the provisions of the ordinance. It also provides the same punishment for any white person who shall move within 400 feet of a negro residence.

Richmond, Va.—The city of Richmond is to enact a color-line residential ordinance, which will be as rigid as the Baltimore ordinance. The demand for the law is due to the advance of negroes into what has for years been the center of the residential section for the whites. The result of this has been to reduce the value of the property to less than half its former value, causing losses to the owners. The ordinance will prohibit any white person from occupying any house on any block where the majority of the residents are colored people, and likewise the colored population is prohibited from moving into any premises on a block where the majority are white residents.

Art and Economy in Civic Beauty

Toledo, O.—"Toledo has an opportunity for a civic center surpassed by no other city in America, and the same may be said of the possibilities of beautifying her water front. Toledo's civic center must be not only American, but suitable to the needs of Toledo. Civic art is an asset to any city. With fine parks included, it builds up the health of a city, and this is a greater asset. In the building of a city it is a crime not to plan for the future. A scheme for the future means economy."

These were some of the thoughts advanced by Arnold W. Brunner, federal architect, of New York, before a representative body of business men and citizens in Memorial Hall Annex. Mr. Brunner spoke informally for half an hour, and then devoted the rest of his time to a display of stereopticon views dealing mainly with the civic plans of European cities, including Paris, Dresden, Vienna, Hamburg, Berlin and London, with just a glimpse of the architecture of old Toledo in Spain, and two or three views of Rome. His American views were limited to Cleveland's group plan, a similar plan of Baltimore and the beauties already existing and those planned in Washington. In all of these Mr. Brunner sought to show that the most beautiful and costly buildings would lose their value unless given the proper setting. Mr. Brunner pleaded for many small parks, showing how they not only added to the value of surrounding property, but contributed to the health and happiness of the community, and he showed how railroads could be brought into a city in a dignified way without hurting their business in the least. This he illustrated with views of European railways running directly through beautiful gardens.

Little Money for Parks This Year

Milwaukee, Wis.—The task of carrying out \$80,520 in improvements with but \$27,819 available, which amount may be reduced to \$15,819.90 when all parks and playgrounds placed under the jurisdiction of the park board by the Common Council, is the problem confronting that board announced when the tentative budget and 1911 improvement plan was submitted. While there is no hope of carrying out much improvement work this year with the limited funds on hand an attempt will be made to reach an agreement whereby the present year will show some progress in the park and recreation activity of the city. The reason the park board will be able to make but few improvements in 1911 is the action of the Council in forcing the board to pay \$15,712.98 for water in 1909; the probable payment of \$708 for water used in 1910 and the possible expenditure of \$12,000 when 14 smaller parks and playgrounds are taken from the control of the Department of Public Works and placed under the jurisdiction of the park board.

Ask for Compulsory Spraying Law

Columbus, O.—J. W. Rodgers, former park superintendent of Cincinnati, is in Columbus to urge the enactment of a law for compulsory spraying of ornamental and fruit trees. He conferred with officials of the State Board of Agriculture and Governor Harmon, and they approved of his idea. He will appear before the House and Senate agricultural committees to push the proposition. Mr. Rodgers says that the spraying process is the only salvation of the trees.

Most of the trees in cities are weakened by the sulphurous fumes, and are so badly devitalized by the pests which attack them that they do not recover," said Mr. Rodgers. "The trees are the greatest assets of the land and by spraying them they can be preserved. Spraying should be compulsory and the law should be so that if cities do not spray this could be done at a small expense by the State. People do not spray because they know little about it."

Lid Is on in Tacoma

Tacoma, Wash.—Henceforth Tacoma will be a "closed town" in all that the phrase implies. The municipal commission at its last session unanimously adopted a resolution instructing the police department to suppress all prize fights, gambling, the sale of liquor in any place without license and enforce the operation of a restricted district. Commissioner L. W. Roys of the Department of Public Safety announced that he would obey the resolution to the letter.

Can't Agree on Sharing Expense

Waterson, N. J.—At a conference between the members of the Board of Trade committee on grade crossing elimination and the members of the Boards of Finance and Public Works it developed that the Mayor and the Board of Finance, while favoring the elimination of grade crossings, are not willing to enter into any arrangement by which the city is to pay part of the cost of the work. This means that there is no immediate likelihood of the elimination of grade crossings in this city, unless the railroad companies decide that they are willing to do the work at their own expense, or unless there is legislation that will compel them to eliminate their grade crossings in cities on some basis as to cost to be fixed by the Legislature. General S. V. S. Muzzy was spokesman at the conference of the Board of Trade committee. He stated that the city had agreed to eliminate the crossings along its lines in this city, according to plans submitted, which it was estimated would cost \$1,200,000, provided the city would agree to pay one-third of the cost, the Erie to pay two-thirds. In addition to this the Erie wanted the city to guarantee the sale of the necessary bonds for the work.

To Muffle Motor Boat Noise

St. Augustine, Fla.—Alderman Usina has proposed the passing and passage of an ordinance requiring all launch owners to use mufflers on their boats, while plying the St. Johns river in front of the city. This action was suggested on account of numerous complaints received from residents and owners of property along the bay front about the noises caused by launches, especially at night.

Contractors Ask Interest on Certified Checks.

Spokane, Wash.—Eslick & Hartnett, contractors, have made a demand on the city for \$91.70 interest on a certified check for \$16,500 which accompanied their bid on the Lincoln Heights reservoir, and which has not been returned by the Board of Public Works. This is the first claim of the kind ever presented to the city. The contractors claim that the Board has no right to hold certified checks which accompany bids without paying interest on them, and have signified their intention of suing the city if their claim is not allowed. The Board of Public Works has been in the habit of receiving bids and delaying sometimes for months the awarding of the contract, retaining the checks for that length of time. If these contractors are successful it may mean that the Board will have in the future to either throw out all bids or award a contract immediately to save interest on the checks accompanying bids. The Board sometimes has as much as \$100,000 in certified checks on its hands.

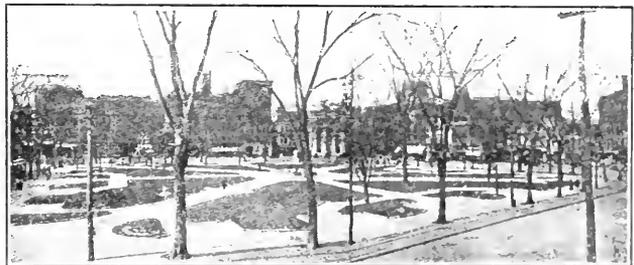

Transformation of Public Square

Wilkes-Barre, Pa.—About a year ago the Public Square was vacated by the County Commissioners, the old Court House removed and the ground reverted to the city. In planning the improvements to the grounds two factors had

PUBLIC SQUARE BEFORE REMODELING. OLD COURT HOUSE OBSTRUCTING PEDESTRIANS

to be considered, the preservation of the trees and the use of the park as a thoroughfare for the public. The work was completed just before winter set in. Within the limits of the park are 25,852 square feet of granolithic work. The footwalks around the park contain 4,994 square feet. The coloring of the walks, which is grayish brown, has been

PUBLIC SQUARE IMPROVED WITH CEMENT WALKS, COURT HOUSE REMOVED—TREES PRESERVED

the subject of much favorable comment. The work was done by Zeiser Bros. The plans and specifications were drawn by the Sturdevant Engineering Company.

Wilmington to Have Chief Forester

Wilmington, Del.—A bill which provides for the appointment of a chief forester and as many assistants as are deemed necessary, by the Street and Sewer Board, has been drafted by the municipal committee of the Board of Trade and is now ready for presentation to the Legislature. The proposed bill gives the Street and Sewer Department authority over all trees and tree planting in the streets, highways, lanes, alleys, parks or other public property of the city, and also specifies that the department is to have all authority over their care, removal, spraying and whatever else might be considered necessary for the care of the trees. The bill provides for a chief forester, to be appointed by the Street and Sewer Directors, who must be an expert in the work of training and culturing trees.

LEGAL NEWS

A Summary and Notes of Recent Decisions—Rulings of Interest to Municipalities

Illegal Ordinance—Refusal of Mayor to Sign

State ex rel. Case vs. Wilson et al.—The mayor of a city of the fourth class properly refused to sign an ordinance providing for a depository for the general funds of the city, where such depository had not been provided for by statute, so that his removal from office therefore was illegal, under the city charter providing that he cannot be removed by the council without cause.—Springfield Court of Appeals, 132 S. W. R., 625.

Limits of Indebtedness—Determination

Ex parte City of Newport.—Constitution limits the maximum indebtedness of cities of the first, second, and third class having a population exceeding 15,000 to 10 per cent of the value of their taxable property, to be estimated by the assessment next before the last assessment prior to the incurring of the indebtedness, provided that nothing shall prevent the issue of renewal bonds and bonds to refund the floating indebtedness of a city, etc. Held, that where a city included an independent school district, which was an independent corporation, the indebtedness of the school district was not to be treated as a part of the city's indebtedness in determining whether the city had reached its maximum constitutional debt limit, so as to preclude the issuance of further bonds.—Court of Appeals of Kentucky, 132 W. R., 580.

Paving Contract—Rock Excavation—Extra Work

Dunn vs. City of New York.—Plaintiff contracted with a city to pave certain streets, the contractor to excavate the subsoil to a specified depth, and if rock should be encountered, it was to be removed for at least 3 inches deeper. Several years before, the city had let contracts for grading the streets in question under which all rock was to be excavated to a depth of two feet below the curb line and the excavation then refilled with soft filling to the street level. Under such previous contracts, the contractors had received payment in full upon proper certificates that the work had been fully performed. Such contracts were on file as public records with the certificates showing the full performance of the work and payments therefor. When plaintiff undertook to excavate the streets, he found that the rock had, in fact, been removed to a depth of only about a foot below the curb instead of two feet and was required, over his protest, to remove the rock which should have been removed under the former contracts. Held, that the parties to the contract did not contemplate that the contractor would have to remove the rock which was supposedly removed under the former contracts, and the contractor being compelled to make such excavation to perform his contract, there could be a recovery therefor as for additional work.—New York Supreme Court, 126 N. Y. S., 61.

Defects in Streets—Evidence

Willard vs. City of Detroit.—In an action against a city for personal injuries received through an alleged defect in the sidewalk along the street, evidence held sufficient to go to the jury, on the question of plaintiff's contributory negligence.—Supreme Court of Michigan, 129 N. W. R., 32.

Care of Sidewalks—Delegation to Individuals

Severa vs. Village of Battle Creek.—A municipal corporation cannot delegate the construction and care of its sidewalks to a private individual or corporation and thereby evade its responsibility for such care and supervision and thus escape liability for any damage resulting from the failure of the person or corporation, to whom such care and supervision are delegated, to use that reasonable care and diligence to keep such sidewalks in a reasonably safe condition for travel which devolve primarily upon the municipal corporation itself.—Supreme Court of Nebraska, 129 N. W. R., 186.

Injury from Broken Electric Wire—Evidence

Johnson vs. Bay City.—In an action for personal injury sustained by a child of about five years of age, as a result of contact with a broken electric wire hanging from a pole constructed and maintained by defendant, and in which several theories of the cause of the broken wire were submitted to the jury, evidence held sufficient to sustain a verdict holding defendant liable.—Supreme Court of Michigan, 129 N. W. R., 29.

Polluted Water Supply—Liability

Keever vs. City of Mankato, Flanagan vs. Same.—Complaint charged that defendant city negligently allowed the supply in its water works system to become polluted with poisonous substances, and large quantities of filth and sewage to escape into and saturate its water supply, the reason whereof plaintiffs' intestates contracted typhoid fever and died as a consequence. On demurrer it is held:

(1) The municipality was liable for its negligence in its private or corporate capacity, and was not exempt because it was carrying out a governmental function.

(2) Under section 4503, Rev. Laws 1905, an administrative act of a person whose death was due to the wrongful act of a municipality may maintain an action for damages consequent thereon.—Supreme Court of Minnesota, 129 N. W. R., 158.

Water Works Contract—Validity

Savage vs. City of Tacoma.—A prior judgment in a suit to restrain a city and a contractor from proceeding with a contract made under an ordinance of the city for extension of a water works system on the ground of invalidity of the contract, which sustained its validity, is no bar to a later action by the contractor against the city for damages for breach of the contract, in which the city alleged the invalidity of the ordinance under which the contract was made.—Supreme Court of Washington, 112 P. R., 7.

Sewers—Overflow—City's Liability

Hayes vs. City of Vancouver.—A city, having permitted a sewer to become obstructed, attempted to remove the obstruction by turning a large and powerful stream of water into the sewer. The water did not flow through, but stopped at the obstruction, backed up into and overflowed water-closet connections in the basement of a building in which plaintiff had stored a large quantity of goods, resulting in injury thereto. The city's representatives were warned beforehand of the probable damages that would result from such act. Held, that the city in such operations did not act in a governmental capacity and was liable for the injuries sustained.—Supreme Court of Washington, 112 P. R., 498.

Street Paving—Liability for Intersections

O'Leary vs. City of Glens Falls.—Where a village, empowered by village law to apportion, between itself and the landowners, the cost of paving a street, assumed half the expense of paving the entire street, its half being in excess of the cost of paving street intersections, which such section prohibits being imposed on the landowners, should be deducted from the total cost of paving the street, and the balance should be assessed pro rata on the lands of the abutting owners according to the feet frontage of the respective lots.—Court of Appeals of New York, 93 N. Y. R., 513.

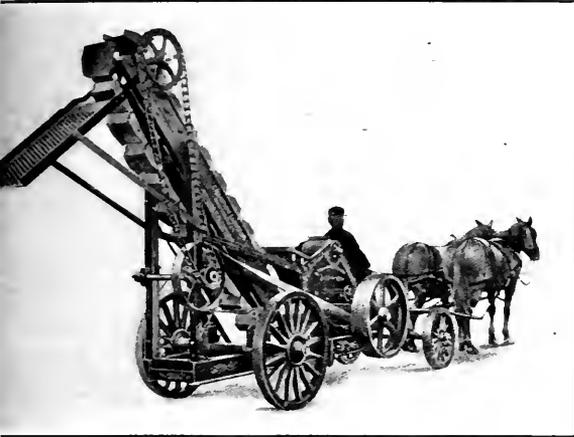

Transfers—Duty to Grant

City of Shreveport vs. Shreveport Traction Company.—It cannot be deduced, from the adjudged cases or from any other premise, that in the case of a contract with a municipality, which, though authorized or evidenced by an ordinance, involves mere conventional obligations, and does not involve the exercise by the municipality of its law-making power, a subcontractor can be held to have assumed the obligations of the contractor. The obligation to grant universal transfers could be imposed on a street railway company by the city of Shreveport only as a matter of contract; and as the defendant has not, either expressly or impliedly, given its consent to such contract, it cannot be compelled to grant the transfers.—Supreme Court of Louisiana, 53 S. R., 863.

MUNICIPAL APPLIANCES

Portable Crushing Plants

The illustration of a Champion portable crushing outfit made by the American Road Machine Company, Kennett Square, Pa., suggests to the contractor municipality doing its own work a good way of starting out the road building season, now almost upon us.

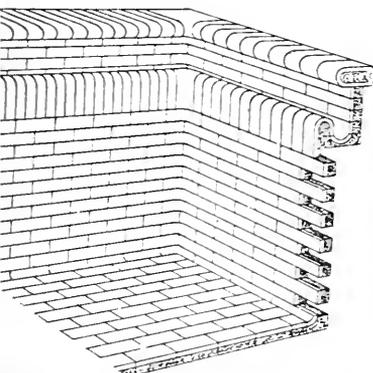

PORTABLE CRUSHING PLANT

The Champion mounted crushing outfits moved on the road exactly as shown in the illustration, without taking down either elevator or screen. The machine can be operated just as it is by blocking the wheels, these being made particularly heavy and strong for that purpose. A better plan, however, because it affords a more solid foundation, is to place two wooden blocks which should be kept with the outfit, under the I-beam sills to which the crusher is attached. The rear end of the machine is then lowered by slightly turning two screws with a light iron rod attached to screws for that purpose until the I-beam sills rest on the wooden blocks; the front end of the machine is then lowered by removing the front trucks, the whole operation requiring but very little time. When the crushing is finished and it is desired to move the machine, the operation is reversed, and the plant is on the road.

Glass Brick for Swimming Pools

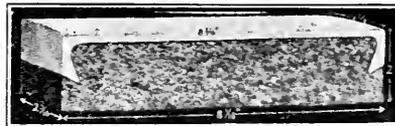

The glass-faced brick with filling of concrete which is suitable for use in the construction of swimming pools, for the lining of garbage crematories, fire engine houses and lining of tunnels and

SWIMMING POOL OF GLASS BRICK, SHOWING SCUM GUTTER

subways is made by the National Glass Brick Company, Connellsville, Pa. The use of these brick in a swimming pool is shown in the illustration. The ease with which special shapes are made aids materially in the design of the scum gutters. Fresh water in a swimming pool is let in from the bottom and the overflow is all round the basin at the top. The glass surface and close joints between the brick make the washing down process easy.

The construction of the brick is as follows: To a glass facing $\frac{1}{4}$ inch thick at its thinnest part is attached a well-proportioned concrete back. The concrete backing is attached to the glass front by three separate means, each entirely sufficient to secure the union of the two materials: (1) The cement of the concrete adheres to the glass. (2) Both ends of the glass face are returned by greater than a right angle, thus imprisoning the concrete mass. (3) A dove-tailed rib of glass traverses the entire length of the back of the facing, at once strengthening the glass face and also securing it to the concrete body. The glass face is 1.16 of an inch larger all around than the concrete body, thus

GLASS FACED BRICK—CONCRETE BACKING

making possible a good mortar bond, notwithstanding that the mortar between the faces of the glass may be nearly entirely pressed out. The glass-faced brick is laid in exactly the same way as any finished brick. They are bonded to the wall, being faced in like manner also. A wise plan is to lay up four courses of two-inch depth brick and then one of four-inch depth. This will be an effective binder and preserve the symmetry of the courses exposed to view. All colors of which glass is capable can be produced in glass brick. White, however, is standard stock.

Willson Flare Light

The Willson Flare Light, manufactured by the International Marine Signal Company, Limited, No. 172 Broadway, New York, is an acetylene light specially adapted for use in all kinds of construction work. The light is brilliant and the cost is low. The candlepower is 8,000 and the cost of operation 5 cents an hour. The light is steady and wind does not extinguish it. The weight of the No. 1 light, shown in the illustration, is 95 pounds; it contains a carbide charge of 18 pounds and 112 pounds of water, making the total weight charged 225 pounds. A smaller

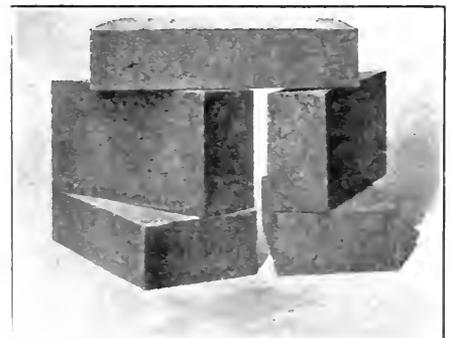

size has a candlepower of 1,000, weighs 225 pounds charged and is estimated to cost 2 cents per hour to operate. By

the use of a flexible hose an extension light may be obtained which can be put in places where it is impossible to locate the generator.

Cork Brick

Cork brick are recommended for the barn floors of sanitary dairies and for stall floors of fire houses by the manufacturers, the Armstrong Cork Company, Pittsburg, Pa. The brick consist of finely granulated cork and a special grade of tough asphalt, heated and thoroughly mixed, then molded into pressure into brick form. The bricks measure 9 by 4 by 2 inches and are laid flat so that four will cover one square foot of surface. The brick is the result of a number of years' efforts in selecting the best bitumen. The merits of the brick for use in sanitary dairies are that they are non-absorbent, easy to clean, are never uncomfortably cold for animals to stand or lie on, are

SAMPLES OF CORK BRICKS

easy on the feet, give a sure foothold and have long life in service.

The blocks are laid on any firm foundation, concrete, broken stone or wood, and are set in Portland cement mortar, in a thin layer of hot asphalt or pitch or in a bed of sand.

NEWS OF THE SOCIETIES

American Institute of Consulting Engineers.—An amended constitution was adopted at the annual meeting, January 17, at the Engineers' Club, New York City. The objects of the institute are stated to be the promotion of ethical standards and practical efficiency in all branches of engineering as a profession. The institution will not deal with technical papers and discussions, but with matters affecting the status of the engineer as a professional man, as legislation affecting practice of engineering, rules of professional conduct and standard charges for engineering service. The officers for the coming year are Alfred P. Boller, president; Gustav Lindenthal, vice-president; E. W. Stern, 103 Park avenue, New York, secretary and treasurer. Committees on legislation were appointed as follows: Gen. J. A. Bingham, S. O. Miller and S. Whinery; on professional practice and ethics: John F. Wallace, H. W. Hodge, F. A. Molitor, L. B. Stillwell, George F. Swain, W. J. Wilgus.

Western Society of Engineers.—At a meeting, Chicago, February 1, a paper on the "Public and the Public Service Corporation" was presented by John M. Ewen and A. Bement. At a meeting of the Hydraulic, Sanitary and Municipal Section, January 30, C. D. Hill presented a paper on the "Sewage System of Chicago." Langdon Pearse read a paper on the "Sewage Disposal Problem."

Municipal Engineers of the City of New York.—The following officers were elected, January 25: President, Henry W. Vogel; vice-presidents, Sidney W. Hoag, Jr., and Frederick C. Noble; secretary, C. D. Pollock; treasurer, Herman K. Endemann; directors, A. L. Schaeffer, E. M. Law, Jr., D. L. Turner, E. A. Miller and E. J. Fort.

Engineers Club of Philadelphia.—The club has elected the following officers for the coming year: President, James Christie; vice-president, W. L. Plack; secretary, W. Purves Taylor; treasurer, F. H. Stier.

International Municipal Congress and Exposition.—Definite plans for the international municipal congress and exposition to be held in Chicago from September 18 to September 30 of this year were announced by the Chicago Association of Commerce, upon the return of John MacVicar, commissioner-general of the affair, from a tour of observation and arrangement in the Eastern cities.

"Two distinct features—the congress and the exposition—will mark the event," explained H. F. Miller, business manager of the Chicago Association of Commerce. "Municipal exhibitions will be opened to the public inspection while the congress is in session. Delegates from cities all over the world will be present. Public bath, playgrounds, park systems and city plans generally will be shown at the exhibition, together with appliances made by manufacturers for sale to municipalities. Much of the space allotted to the latter has already been spoken for by the manufacturers."

The show will be held in the Coliseum, the First Regiment Armory and in some vacant lot already rented by the Chicago Association of Commerce, under whose auspices the event is to be held. The congress will be held in the Coliseum annex or wherever the committee on arrangement can find sufficient space.

County Road Engineers of West Virginia.—At the second convention of the organization, which ended January 28, at Charleston, the following resolution was adopted:

Be it Resolved, By the County Road Engineers' Society of West Virginia, here assembled, that after more than one year's experience with the new road laws, as enacted by the last Legislature, we express to the present Legislature our recognition of the superiority of the present laws over the old laws and approval of the present laws, in general, and recommend to the Honorable Legislature the amendments to said laws, as suggested by the Commissioner of Public Roads in his report.

The officers for the coming year are W. J. Alexander, of Wetzel County, president; Robert D. Hennen, of Monongalia County, vice-president, and Henry A. Gentry, of Fayette County, secretary-treasurer.

Virginia Peninsula Good Roads Association.—The meeting on January 24, which resulted in the formation of the association, was the largest, most representative and most enthusiastic gathering ever held on the peninsula in the interests of good roads. That a sand-clay highway along the peninsula from Newport News to Richmond will be built—and built before the coming Summer is over—seemed to be a certainty at the conclusion of the enthusiastic good roads rally held in the historic old court house. And while the new road is under construction a definite movement will be started looking to the establishment of an adequate ferry service across Hampton Roads to connect the Peninsula pike with the Jamestown boulevard between Sewall's Point and Norfolk. This organization begins its existence with a charter membership of about sixty, including representatives from Richmond, Williamsburg, Newport News, Hampton, Old Point, Norfolk and all of the counties of the peninsula, and has as its avowed object the construction of the Richmond-Newport News highway. The officers are as follows: President, F. W. Darling, Hampton; first vice-president, Henry T. Wood, president of the Richmond Chamber of Commerce; second vice-president, H. B. Goodridge, Norfolk; third vice-president, J. B. C. Spencer, Williamsburg; secretary, W. E. Cottrell, secretary of the Newport News Chamber of Commerce; treasurer, George F. Adams, Old Point Comfort.

League of Utah Municipalities.—At the annual meeting of the league in the city hall at Sandy, Utah, in January, the following resolutions were adopted:
